THE OFFICIAL GAZETTE OF THE United States Patent Office.

Vol. 374—No. 1. TUESDAY, SEPTEMBER 4, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,539,063, J. R. Snyder, Rebound controller, decided June 26, 1928, claim 10.

Pat. 1,598,000, Nilson and Prince, Radio condenser adjustment, decided Aug. 15, 1928, claim 2.

NOTICE.

Additional Claims.

U. S. Patent Office, *Washington, Aug. 18, 1928.*

My attention has just been called to an application filed with 64 claims and a filing fee of $64.00, as required by statute. Six days after the application was filed the applicant presented an amendment adding 84 additional claims, without the extra fee of $1.00 per additional claim, as would have been required by the statute had the claims been presented six days earlier. In cases in which claims in excess of the number corresponding to the filing fee are presented before the first official action on the case, the Examiners will place the amendment in the file and enter it on the file wrapper, but will defer action on the claims presented in the amendment. In his first action the Examiner should act on the claims originally presented and for which the appropriate fee was paid. If, after the official action is made, the applicant believes that any of the claims presented by the amendment are patentable, he can have them entered and considered in the next action, but only by specifically pointing out wherein the claims presented in the amendment are patentable over the references cited by the Examiner.

THOMAS E. ROBERTSON,
Commissioner.

Interference Notice.

U. S. Patent Office, *Washington, Aug. 11, 1928.*

Union Baking Company, Incorporated, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Fischer Baking Co., of Rose and Livingston Streets, Newark, N. J., for registration of a trade-mark and trade-mark registered September 16, 1924, No. 189,190, to Union Baking Company, Incorporated, of Fifth and Columbia Streets, Vancouver, Wash., and a notice of such declaration sent by registered mail to said Union Baking Company, Incorporated, at the said address having been returned by the post-office as undeliverable, notice is hereby given that unless said Union Baking Company, Incorporated, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Supreme Court of the United States.

L. P. Larson, Jr., Company *v.* Wm. Wrigley, Jr., Company.

Decided May 14, 1928.

Trade-Marks — Infringement — Computation of Profits—Federal Income Tax Not Excluded.

In an accounting for the infringement of a trade-mark the Federal income and excess-profits taxes can not be deducted from the defendant's profits with which it is to be charged.

On writ of certiorari to the Circuit Court of Appeals for the Seventh Circuit.

Mr. Chas. H. Aldrich and *Mr. Geo. I. Haight* for L. P. Larson, Jr., Co.

Mr. Isaac H. Mayer and *Mr. Wallace R. Lane* for Wm. Wrigley, Jr., Co.

Mr. Justice Holmes delivered the opinion of the Court.

There has been long litigation between the parties in this suit, the last stage of which appears in 20 F. (2d) 830. The Wrigley Company was ordered to account for net profits on sales of its "Doublemint" gum in a package dress that infringed the Larson Company's "Wintermint" gum package. During the accounting questions arose that were decided by the circuit court of appeals. To review one of these questions a writ of certiorari was granted by this Court. That question is whether, as held below with modifications that need not be mentioned, the Wrigley Company should be allowed to deduct the Federal income and excess-profits taxes from the profits with which it is to be charged.

No doubt there are cases in which such a deduction would be proper. But the question can not be answered by the merely formal reply that if the Larson Company chooses to make the Wrigley Company its agent or trustee ex maleficio and to demand the profits made by the agent it must take the burden with the benefit and can have no more than the agent made in fact. To call the infringer an agent or trustee is not to state a fact but merely to indicate a mode of approach and an imperfect analogy by which the wrongdoer will be made to hand over the proceeds of his wrong. Circumstances will affect the conclusion, including in them the knowledge and the conduct of the party charged. It would be unjust to charge an infringer with the gross amount of his sales without allowing him for the materials and labor that were necessary to produce the things sold, but it does not follow that he should be allowed what he paid for the chance to do what he knew that he had no right to do. That is the position of the Wrigley Company as we understand the findings in the successive stages of this suit. 253 Fed. Rep. 914, 916; 275 Fed. Rep. 535, 537, 538; 5 F. (2d) 731, 739; 20 F. (2d) 830, 831. Even if the only relief that the Wrigley Company can get is a deduction from gross income when the amount of its liability is finally determined, the Larson Company will have to pay a tax on the Wrigley profits when it receives them, and in a case of what has been found to have been one of conscious and deliberate wrongdoing, we think it just that the further deduction should not be allowed.

Decree as to allowance of Federal taxes reversed.

Court of Appeals of the District of Columbia.

In re Riedel.

No. 1,971. Decided March 5, 1928.

Patentability—Stimulation of Plant Growth by Carbonic Acid.

Claims for a process of stimulating plant growth by enriching the surrounding atmosphere with carbonic acid derived from the waste products of combustion of an industrial operation, the chemical impurities which would be injurious to such growth having been removed, *Held* unpatentable in view of the prior art.

Appeal from the Patent Office. Affirmed.

Mr. Hans v. Briesen for Riedel.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before Martin, Chief Justice, Van Orsdel, Associate Justice, and Smith, Judge of the U. S. Court of Customs Appeals.

Smith, *J.:*

This is an appeal from the decision of the Commissioner of Patents affirming a decision of the Examiners in Chief which affirmed the action of the Examiner rejecting the claim of the application for a patent made by Friedrich Riedel.

The subject matter of Riedel's application for a patent is a process which has for its purpose the enriching with carbonic acid of the atmosphere which envelops plants by using carbonic acid containing the exhaust gases resulting from combustion after the removal therefrom of dust, soot, oil, tar, unconsumed hydrocarbons, sulphur compounds, and the like. The application contains seven claims of which the following are typical:

1. The process of utilizing waste products of combustion of an industrial operation, which consists in leading said products, freed from mechanical and chemical impurities which in themselves would be directly injurious to plant life, into the direct vicinity of growing plants.

3. The process which consists in artificially supplying to the atmosphere enveloping growing vegetable matter and in volumes sufficient to elevate the carbon dioxide content of the air adjacent to said growing matter, gases, the ordinary products of combustion of such as result from an industrial operation, relatively rich in carbon dioxide, but freed from mechanical constituents which in themselves would be injurious to vegetable growth.

7. The process which consists in artificially supplying to the atmosphere enveloping growing vegetable matter, at points adjacent to said growing matter, persistent volumes of carbon dioxide accompanied by gases which are neutral, inert or harmless in their action on plant life, said gas mixture being derived from otherwise waste products of combustion.

Riedel's specification and claims make it evident that he bases his right to a patent on the utilizing for plant growth of carbon dioxide derived from

the products of combustion and diluted with nitrogen, oxygen and neutral or inert gases after the elimination from such products of constitutents thereof injurious to plant life.

Removal from the products of combustion of gases and other matter deleterious to health or vegetation is nothing new and indeed methods and means for accomplishing that result were known and patented by Gilliland and Lambert long prior to the filing of Riedel's application. Development of a new process and method for the purification of combustion gas products may still be the objective of inventive endeavor but a careful reading of Riedel's specification and claims fails to reveal any purpose on his part to compete in that field of action. Indeed his specification affirmatively indicates that he relies on known mechanisms for the removal of dust, soot, oil, tar, unconsumed hydrocarbons, sulphur compounds and other injurious constitutents of combustion products. The product which Riedel uses for the promotion of plant growth is not that which comes directly from the chimney or flue but a product produced by removing from the original material most of its components. The substance so produced contains as its principal elements *carbon dioxide*, nitrogen, oxygen and inert or neutral gases. Those constituents, after all is said and done, are the principal components of pure air which contains carbon dioxide, oxygen, nitrogen, and such inert neutral gases as argon and helium. What is the proportion of carbon dioxide, nitrogen, oxygen and neutral gases in the purified substance "led to the vicinity of growing plants" is not disclosed by the specifications or set out in the claim. For all that appears from the application the mixture of gases conducted to the plants does not differ materially from purified air and, so conducted, brings to the air surrounding the plants nothing more than carbon dioxide, oxygen, nitrogen, argon and helium, which are the components of air.

Riedel claims that his product is rich in carbon dioxide but how much carbon dioxide that product contains he fails to state. He does not pretend to say that there is in the gaseous substance produced by his process any element other than carbon dioxide, which beneficially affects plant growth. That carbon dioxide promotes plant development has long been known and Riedel expressly admits that the increase of plant growth by such means was not originated by him. Riedel's process at best accomplishes nothing more than the bringing of *additional* carbon dioxide to the air enveloping plants. The furnishing of additional carbon dioxide to plants was not first conceived by Riedel but by Schroder, who as early as March, 1897, secured a patent for supplying plants with a mixture of carbon dioxide and air and devised the means for regulating the supply of the mixture.

Of course, if Riedel had discovered a *new* combination or mixture of substances which would permit the use of a larger percentage of carbon dioxide without detriment to plant development or which would obviate dangers to plant life by the use of such larger percentage, it might be well argued that his conception was novel and patentable. As we read Riedel's application, however, no such conception can be deduced from his specification or claims.

The decision of the Commissioner of Patents is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

OLDROYD *v.* MORGAN.

Nos. 2,018 and 2,019. Decided March 5, 1928.

INTERFERENCE—PRIORITY—CONCURRENT DECISIONS OF THE PATENT OFFICE.

It is the established rule that ordinarily three concurrent decisions of the Patent Office will be accepted by the court of appeals as conclusive and will not be reversed except in extreme cases where palpable error has been committed.

APPEAL from the Commissioner of Patents. Affirmed.

Mr. Cyrus Kehr for Oldroyd.

Mr. C. M. Nissen and *Mr. A. J. Crane* for Morgan.

Before MARTIN, Chief Justice, VAN ORSDEL, Justice, and SMITH, Judge U. S. Court of Customs Appeals.

MARTIN, *C. J.*:

These are interference proceedings. The appeals have been submitted together, but appeal No. 2,018 will be taken up first.

The invention relates to coal-mining machinery, and the issue is defined by a single count which reads as follows:

In a machine of the nature described, the combination of a body turnable horizontally, means for turning said body, a tool rotatable on a horizontal axis, mechanism for effecting rotation of said support, a cutting tool, members supporting said tool on said support for movement toward and from the axial line of said support, means on said rotatable support for actuating said supporting members for moving said tool toward and from the axial line of the rotary support, and means extending along the axis of said support for actuating said cutting tool, substantially as described.

Morgan is the senior party, his application having been filed on June 23, 1913. Oldroyd's application was filed on January 8, 1921, on which a patent was granted on June 26, 1923. No testimony was taken by either party.

Oldroyd, the junior party, filed a motion to dissolve the interference on the grounds that Morgan was not entitled to make the claim because it is not supported by his disclosure, and also that Morgan is estopped from making the claim because of his delay in prosecuting his application. The Law Examiner denied the motion as to the first ground, and the Examiners in Chief dismissed Oldroyd's appeal as to both grounds. The Examiner of Interferences accordingly awarded priority to Morgan. This decision was affirmed by the Examiners in Chief, and their decision in turn was affirmed by the Commissioner of Patents; and priority of invention was awarded by the Commissioner to Morgan. This appeal was then taken.

It thus appears that Morgan's right to make the claim in issue has been affirmed by three concurring decisions of the Patent Office, and it is the established rule that ordinarily such decisions will be accepted by this court as conclusive, and will not be reversed except in extreme cases where palpable error has been committed. In *Beechman* v. *Southgate*, 127 O. G. 1254, 28 App. D. C. 405, this court said:

Ordinarily, where the point has been raised whether the application of one of the parties was broad enough in the terms of its specification and claims to embrace the invention of the other, and especially where the invention is one of elaborate and complicated mechanism, the decisions of the expert tribunals of the Patent Office in respect of identity have, for obvious reasons, been accepted as conclusive.

In *Leonard* v. *Everett*, 52 App. D. C. 90, this court said:

Where the tribunals of the Patent Office unite in a conclusion as to the right to make the counts of an interference relating to a technical matter, the court of appeals will not disturb their action, unless manifestly wrong.

This rule acquires emphasis by reason of its repeated reaffirmance. See *Stone* v. *Pupin*, 100 O. G. 1113, 19 App. D. C. 396; *Flora* v. *Powrie*, 109 O. G. 2443, 23 App. D. C. 195; *Seeberger* v. *Dodge*, 114 O. G. 2382, 24 App. D. C. 476; *Podlesak* v. *McInnerney*, 120 O. G. 2127, 26 App. D. C. 399; *Kilbourn* v. *Hirner*, 128 O. G. 1689, 29 App. D. C. 54; *MacMulkin* v. *Bollee*, 130 O. G. 1691, 30 App. D. C. 112; *Lindmark* v. *Hodgkinson*, 137 O. G., 228, 31 App. D. C. 612; *Healy* v. *Inwood*, 176 O. G. 275, 38 App. D. C. 78; *Thomas* v. *Weintraub*, 177 O. G. 772, 38 App. D. C. 281; *Grabowsky* v. *Gallaher*, 191 O. G. 835, 39 App. D. C. 548; *Hathaway* v. *Colman*, 261 O. G. 413, 46 App. D. C. 40; *Lautenschlager* v. *Glass*, 249 O. G. 1223, 47 App. D. C. 444; *Blaine* v. *White*, 277 O. G. 787, 50 App. D. C. 38; *Ruth* v. *Groch*, 296 O. G. 839, 51 App. D. C. 226.

The invention involved in this appeal consists of complicated mining machinery, and the case justifies a careful observance of the foregoing rule. We have carefully examined the record and do not find in it any manifest ground for a reversal of the decisions appealed from. We have reached the same conclusion as to appeal No. 2,019. We may add that we find no ground for an estoppel against Morgan because of delay in prosecuting his application.

The decision of the Commissioner of Patents awarding priority to Morgan in each appeal is affirmed.

Court of Appeals of the District of Columbia.

POSTUM CEREAL COMPANY, INC., *v.* FARMERS MILL & ELEVATOR ASSOCIATION.

No. 2,021. Decided March 5, 1928.

TRADE-MARKS—SIMILARITY—"WHEAT-NUT" AND "GRAPE-NUTS."

The words "Wheat-Nut," as a trade-mark for a cereal breakfast food, *Held* deceptively similar to the term "Grape-Nuts" previously used as a trade-mark for the same goods.

APPEAL from the Commissioner of Patents. Reversed.

Mr. Edward S. Rogers for Postum Cereal Co., Inc.

Mr. C. A. O'Brien and *Mr. B. F. Garvey* for Farmers Mill & Elevator Association.

Before MARTIN, Chief Justice, VAN ORSDEL, Justice, and SMITH, Judge U. S. Court of Customs Appeals.

VAN ORSDEL, *J.*:

Appellant, Postum Cereal Company, the owner of the registered trade-mark "Grape-Nuts," used as a name for cereal breakfast foods, filed an opposition to the registration by appellee, Farmers Mill & Elevator Association, of the words "Wheat-Nut" as a name for cereal breakfast foods. From the decision of the Commissioner dismissing the opposition, this appeal is taken.

It appears that since 1897 appellant company and its predecessor have been manufacturing and putting on the market the breakfast food made of wheat and barley under the trade-mark name of "Grape-Nuts." An enormous business has been built up by this company, and it is claimed that it will be damaged by the registration of the word "Wheat-Nut" because of the similarity of the marks.

In considering the matter of confusing similarity, we think it important to examine into the character of the goods on which the marks are used. The goods are both largely wheat products. The users of grape-nuts are familiar with the fact that the cereal sold under that name is chiefly produced from wheat; hence the adoption of the word "wheat" as part of appellee's mark is merely the name of the product on which the marks are used. This we deem important in determining whether or not the marks are so similar as to lead to confusion. The purchasing public seeking a wheat cereal might easily be misled by the similarity of the marks applied to the same product.

This case can be distinguished from the case of *Postum Cereal Company* v. *California Fig Nuts Company*, 54 App. D. C. 285, 297 Fed. 544, where it was held by the Commissioner that the marks "Fig-Nuts" and "Grape-Nuts" were not confusingly similar. This court refused to entertain an appeal in that case, on the ground that the Trade-Mark Act of 1920 does not provide for appeals from the decision of the Commissioner. While we are not called upon now to review the Commissioner's decision, it will be noted that the goods on which the marks in that case were used were dissimilar. "Fig-Nuts" is composed of figs and nuts. Besides the marks are much more dissimilar than in the present case.

We think that the present case is in line with the decision of the Commissioner of Patents in *Postum Cereal Company* v. *Hillis*, opposition No. 2,098, where the question involved was the similarity of the marks "Grape-Nuts" and "Bran-Nuts." There, as here, the marks were applied to goods composed largely of a wheat product, and the user of one might readily be confused by the other.

This case is not without difficulty, but applying the rule we have many times announced, that "where there is a doubt about the identity of two marks, the doubt will be resolved against the one last in the field" (*Aunt Jemima Mills Company* v. *Blair Milling Company*, 50 App. D. C. 231) we think the opposition should be sustained.

The decision of the Commissioner is reversed.

Court of Appeals of the District of Columbia.

DOWNS *v.* ANDREWS.

No. 2,044. Decided May 7, 1928.

INTERFERENCE—PRIORITY—REDUCTION TO PRACTICE.

Priority *Held* properly awarded to A. on the ground that the testimony on behalf of D. did not establish the treatment of the materials specified in the counts in the manner specified therein.

APPEAL from the Commissioner of Patents. Affirmed.

Mr. W. B. Morton and *Mr. R. K. Stevens* for Downs.

Mr. B. G. Foster and *Mr. Robert A. Norton* for Andrews.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

MARTIN, *C. J.*:

Andrews is the senior party, his application having been filed on February 27, 1918. He has taken no testimony, but relies upon his filing date for conception and constructive reduction to practice. Downs's application was filed on July 2, 1919, and a division of it was filed on April 4, 1921. A patent was granted to Downs on August 14, 1923, but the claims of the patent as well as of the divisional application are involved in this interference. The burden rests upon Downs to prove his case by a preponderance of the evidence. Downs relies for his proofs upon testimony taken by him in another case between the same parties, which was made part of the record by order. The controlling question is whether that testimony is sufficient to discharge the burden of proof which rests upon Downs in the present case.

The invention relates to a process of fractional sublimation whereby a mixture of several substances may be vaporized into a flowing current of heated gas and passed through a plurality of cooling zones maintained at successively-decreasing temperatures, in which the vapor condenses to a solid state. That is to say, the process provides that a mixture of vaporizable solid materials shall be melted and the mixture then vaporized into a flowing current of inert gas, such as air, and the vapors then passed into and through a series of cooling and crystallizing compartments in which the vaporized material having the highest boiling point crystallizes in the first compartment, and the substances having lower boiling points severally condense in the succeeding compartments as the gas currents pass successively through the several compartments. The process may be called a fractional sublimation of solids, and is comparable to the fractional distillation of liquids.

The issue in interference is defined in 9 counts, of which counts 1 and 5 are illustrative, reading as follows, to wit:

1. The process which comprises subliming a mixture containing a polynuclear aromatic hydrocarbon and an oxidation product of the same in a hot gas and slowly cooling the mixture in successive stages.

5. A method of separating oxidation products of condensed benzene nuclei hydrocarbon from other materials contained in the oxidation product, which comprises vaporizing into a gas current at a temperature above the melting point of the highest melting ingredient of the mixture a part at least of such mixture, and fractionally condensing into crystals at different locations the ingredients from such gas current in the inverse order of their volatility.

The Examiner of Interferences held that Downs's testimony was sufficient to establish his priority as to claims 5, 6 and 8, but not to any of the other claims. The Examiner accordingly awarded priority to Downs as to claims 5, 6 and 8, and to Andrews as to claims 1, 2, 3, 4, 7 and 9. Cross appeals were taken from this decision, and the Examiners in Chief reversed it in part, and awarded priority to Andrews as to all of the claims in issue. This decision was affirmed by the Commissioner of Patents; and the present appeal was taken.

The decisions of the Examiners in Chief and the Commissioner are both placed upon the ground that Downs's testimony fails to disclose a reduction to practice of the invention in issue, inasmuch as each count contains limitations not disclosed thereby; the tribunals holding that every limitation in a count must be regarded as material. In count 1 the mixture which is to be treated is defined as "mixture containing a polynuclear aromatic hydrocarbon and an oxidation product of the same"; in counts 2 and 3 similar provisions appear; in count 4 specific mention is made of the separation of phthalic anhydride from naphthalene at a temperature of about 200 C.; and similar specifications and limitations appear in the remaining five counts of the issue. The Board of Examiners in Chief and the Commissioner agree that Downs's evidence fails in respect to all of these limitations, while the Examiner of Interferences holds likewise as to six of the nine counts.

It is contended in behalf of Downs that—

all of the conditions and limitations set forth in the claims were either testified to by the witnesses directly as taking place in the plant manufacture and laboratory operations which they described, or are the necessary and inevitable results of performing the process described in the apparatus described.

This contention however was held below to be untenable; and that Downs should have proven his process in the treatment of the specified materials in the specified manner, and that he had failed to do so.

We think that great weight should be given by us to the practically concurring decisions of the Patent Office, and especially so when reviewing the force and effect of testimony relating to a technical issue such as this. We have also examined the evidence and find that the conclusions reached below are justified by it.

The decision of the Commissioner of Patents is accordingly affirmed.

TRADE-MARKS

OFFICIAL GAZETTE, SEPTEMBER 4, 1928.

[VOL. 374. No. 1.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1.

Raw or Partly-Prepared Materials.

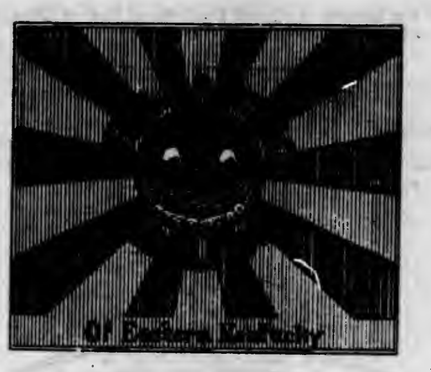
Ser. No. 264,038. MOLER PRODUCTS LIMITED, London, England. Filed Mar. 30. 1928.

FOSALSIL

For Raw or Partly-Prepared Vegetable, Animal, and Mineral Substances Used in Manufactures—Namely, Asbestos, Stone, Bitumen, Charcoal, China Clay, Coal, Coal Tar, Coke, Corundum, Uncut Granite, Uncut Limestone, Uncut Marble, Mica, Chrome Ores, Graphite, Infusorial and Like Earth, Including Diatomaceous Earths Containing from 8 to 10% of Alumina, Rendering it Plastic and Binding by Nature, and Raw or Calcined Pulverized Diatomaceous or Infusorial Earth Capable of Being Mixed to form an Insulation Compound.

Claims use since about Apr. 16, 1924.

Ser. No. 265,052. MIDLAND COAL SALES COMPANY, Cincinnati, Ohio. Filed Apr. 18, 1928.



The lining in the drawing indicates shading.

For Coal.

Claims use since January, 1925.

Ser. No. 265,055. MIDLAND COAL SALES COMPANY, Cincinnati, Ohio. Filed Apr. 18, 1928.

The words "Of Eastern Kentucky" are disclaimed apart from the mark as shown in the drawing.

For Coal.

Claims use since January, 1925.

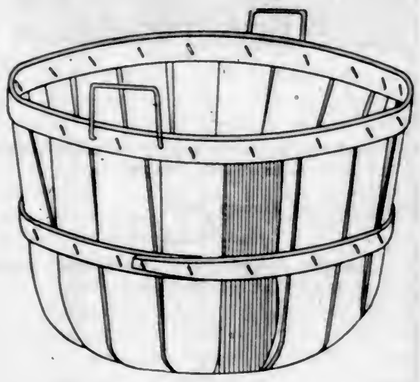
Ser. No. 265,082. AMERICAN NUPLAX CORPORATION, Wilmington, Del. Filed Apr. 19, 1928.

Nuplax

For Nonconductive Plastic Material.

Claims use since Mar. 26, 1928.

Ser. No. 268,837. AMERICAN BROADTAIL CORPORATION, New York, N. Y. Filed June 29, 1928.

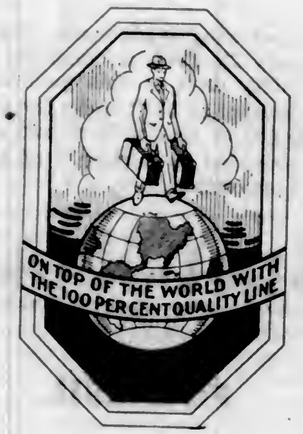


For Sheared or Clipped Lamb Skins, Raw or Dressed.
Claims use since Aug. 23, 1926.

CLASS 2.

Receptacles.

Ser. No. 267,660. THE MARSHALL MANUFACTURING COMPANY, Marshall, Tex. Filed June 7, 1928.



The representation of a basket per se is disclaimed. The mark consists of a red stave in a basket and is applied to each basket by coloring one of the staves thereon red.
For Shipping Baskets.
Claims use since Apr. 5, 1927.

CLASS 3.

Baggage, Animal Equipments, Portfolios, and Pocketbooks.

Ser. No. 268,610. THE HORTON & HUBBARD MFG. CO., East Somerville, Mass. Filed June 25, 1928.

Exclusive use of the phrase "100 Per Cent Quality Line" is disclaimed apart from the mark shown in the drawing.
For Suit Cases.
Claims use since May 24, 1927.

CLASS 4.

Abrasive, Detergent, and Polishing Materials.

Ser. No. 242,100. PAUL PETER MÜLHENS, doing business as Die Eau de Cologne- & Parfümerie-Fabrik "Glockengasse No. 4711" gegenuber der Pferdepost von Ferd. Mülhens, Cologne-on-the-Rhine, Germany. Filed Dec. 29, 1926.

The ground color of the trade-mark is greenish blue with gold and black. The words appearing in the drawing except the name Ferd. Mülhens is hereby disclaimed.
For Soaps Including Shaving Sticks.
Claims use since March, 1926.

Ser. No. 258,148. THE THORO PRODUCTS COMPANY, Denver, Colo. Filed Nov. 28, 1927.

THORO

Applicant is owner of trade-mark registration No. 150,141.
For Dry Cleaners for Cleaning White Kid, Canvas-Colored Suede or Buckskin Shoes, White Kid, Silk and other Gloves, Kid and Satin Slippers, Silks, Satins, Broadcloths, Woolens, Coat Collars, Hatbands, Fancy Vests, Felt Hats, Feathers, Garters, Carpets, Fine Laces, Furs, etc.
Claims use since Sept. 15, 1916.

Ser. No. 263,297. WILSON-IMPERIAL COMPANY, Newark, N. J. Filed Mar. 16, 1928.

Imperial

For Detergent Compound Especially Prepared for Cleaning Cars.
Claims use since Apr. 10, 1900.

Ser. No. 266,620. I. ROKEACH & SONS, INC., Brooklyn, N. Y. Filed May 18, 1928. Under 10-year proviso.

רזקח

The translation of the Hebrew word appearing on the drawing is "Rokeach."
For Aluminum Cleanser, Scouring Powder, Steel Wool, and Soap.
Claims use since 1891.

Ser. No. 268,310. F. AD. RICHTER & CO. OF NEW YORK, Brooklyn, N. Y. Filed June 19, 1928.

For Soap.
Claims use since about 1869.

Ser. No. 268,508. NOCK CHEMICAL LABORATORY, Pittsburgh, Pa. Filed June 22, 1928.

NOCK-O

For Metal-Cleaning Compound.
Claims use since about Dec. 20, 1927.

Ser. No. 268,624. NANNT, INC., Long Island City, N. Y. Filed June 25, 1928.

SAVON NANNT
FOR THE WOMAN
WHO CAN AFFORD A BETTER SOAP

The wording "Savon" and "For the Woman Who Can Afford a Better Soap" is disclaimed apart from the mark shown.
For Soap.
Claims use since Apr. 30, 1928.

Ser. No. 269,072. AMORSKIN CORPORATION, New York, N. Y. Filed July 5, 1928.

AMOR SKIN

No claim is made to the word "Skin" apart from the mark shown.
For Soaps.
Claims use since June, 1927.

Ser. No. 269,363. NORUB COMPANY, Ossining, N. Y. Filed July 10, 1928.

The word "Norub" is disclaimed apart from the mark shown.
For Shaving Powder.
Claims use since Nov. 1, 1927.

CLASS 5.

Adhesives.

Ser. No. 239,826. SAFETY GLASS AND XETAL PRODUCTS, LIMITED, Stapleford, England. Filed Nov. 8, 1926.

XETAL

For Adhesives of India Rubber or India-Rubber Latex and Adhesives of which India Rubber or India-Rubber Latex is the Base.
Claims use since November, 1920.

Ser. No. 270,237. CONGOLEUM-NAIRN, INC., Kearny, N. J. Filed July 27, 1928.

SEALEX

For Cement and Paste for Laying Linoleum.
Claims use since July 16, 1928.

CLASS 6.

Chemicals, Medicines, and Pharmaceutical Preparations.

Ser. No. 257,878. HIDEZO KIMURA, Sakagoye Sakagoye-Mura Akogun Hyogoken, Japan. Filed Nov. 21, 1927.

For Magnesium Carbonates.
Claims use since July 8, 1904.

Ser. No. 264,377. ELI LILLY AND COMPANY, Indianapolis, Ind. Filed Apr. 5, 1928.

The trade-mark consists in the general border design as shown, with the cross panel near the top of the design for bearing the name of the product, the cross panel substantially at the bottom of the design, and the name "Lilly" enclosed in a narrower panel resting upon such lower panel. The name "Lilly" is printed in red. The design as a whole varies in size and proportion upon the various labels upon which it is used. The upper and lower lines defining the first-named cross panel are double lines, each including one light line and one heavy line, and the vertical side lines of the design are similar double lines, each including one light and one heavy line. The top and bottom of the border are each defined by two spaced horizontal lines, with a series of short vertical lines in the space between said two horizontal lines.

For Various Chemical and Pharmaceutical Products—Namely, Liver Extract, Rubbing Alcohol Compounds, Preparations of Calcium Lactate and Ephedrine Sulphate, Medicinal Mineral Oil, Rectal Analgesia, Lime for Use in Making Lime Water, Combinations of Cod-Liver Oil with Malt and an Extract Rich in B Vitamin, Calcium Carbonate, and Glutamic Acid Hydrochloride.
Claims use since Dec. 9, 1927.

Ser. No. 265,575. SALOL CHEMICAL CO., Chicago, Ill. Filed Apr. 28, 1928.

Klen-a-Sol

For Disinfectant and Cleanser.
Claims use since Sept. 1, 1927.

Ser. No. 266,371. HAIR & SCALP INSTITUTE, INC., Chicago, Ill. Filed May 14, 1928.

All wording contained in drawing and specimens except the letters "H & S" and the word "Vita" constitutes descriptive matter. Claimant disclaims a trade-mark in any of said descriptive wording.

For Granular Effervescent Preparation Consisting of a Combination of All the Mineral Elements of the Body Necessary for the Proper Function or Health of the Skin and Hair.
Claims use since Jan. 1, 1928.

Ser. No. 266,628. STANCO INCORPORATED, Wilmington, Del., and New York, N. Y. Filed May 18, 1928.

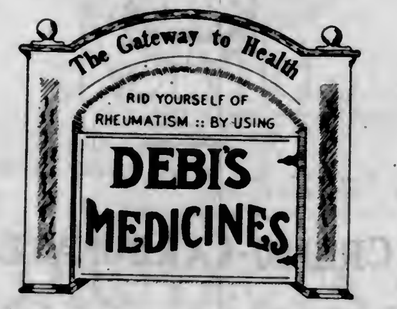
The portraits shown on the drawing are fanciful. The drawing is lined for shading only. No claim is made to the representation of a carton per se and no claim is made to the printed matter other than the words "Mistol" and "Stanco Incorporated."

For Nose and Throat Spray.
Claims use since Apr. 9, 1928.

Ser. No. 266,793. FRANCIS E. DANIEL, doing business as The Cido Germ Co., Eden, Tex. Filed May 22, 1928.

Cido-Germ

No claim is made to the word "Germ" except in the association shown.



For Healing Antiseptic.
Claims use since Jan. 1, 1924.

Ser. No. 266,979. PIERRE DE LA MONTANYA, doing business as Alta Vista Company, San Francisco, Calif. Filed May 25, 1928.

ALTA VISTA

For Medicinal Tonic Having a Wine Base.
Claims use since May 14, 1928.

Ser. No. 267,125. DEBI AND MCDANIEL, doing business as Joe Debi, Big Spring, Tex. Filed May 28, 1928.

The words "Rid Yourself of Rheumatism by Using" and "Medicines" are disclaimed apart from the other features of the mark shown in the drawing.

For Medical Preparation Used in the Treatment of Rheumatism.
Claims use since about Apr. 1, 1928.

Ser. No. 267,127. ISABEY PARIS, INC., Wilmington, Del., and New York, N. Y. Filed May 28, 1928.

parfums d'Isabey

No claim is made to the word "Parfums" apart from the mark as shown in the drawing. Applicant is the owner of registered Trade-Mark No. 239,915.

For Cold Cream, Vanishing Cream, Rouge, Skin Astringent, and Talcum Powder.
Claims use since Jan. 31, 1924.

Ser. No. 267,128. ISABEY PARIS, INC., Wilmington, Del., and New York, N. Y. Filed May 28, 1928.

parfums d'Isabey

No claim is made to the word "Parfums" apart from the mark, as shown in the drawing. Applicant is the owner of registered Trade-Mark No. 239,915.

For Bath Powder, Compacts, Lip Sticks; Cleansing, Nourishing, Tissue, Bleaching, and Hand Creams; Eau de Cologne, Skin Lotion; Hand, Eye, Hair, and Cleansing Lotions.
Claims use since Jan. 31, 1924.

Ser. No. 267,573. "GETS-IT" INC., Chicago, Ill. Filed June 6, 1928.

GETS-IT

The lining on the outer band of the drawing indicates the color red and the lining on the second band indicates the color green.

For Preparation for Corns, Calli, Warts, Bunions, and for Allaying Inflammation of the Skin.
Claims use since Aug. 4, 1927.

Ser. No. 267,933. CHEMISCHE FABRIK VON HEYDEN, A. G., Radebeul, near Dresden, Germany, assignor, by mesne assignments, to Winthrop Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed June 13, 1928.

Antimosan

For Medicinal Preparation in the Form of a Sterile Solution for Intramuscular and Intravenous Injections in cases of Venereal and Tropical Disorders and Febrile Diseases of the Temperate Zones.
Claims use since Feb. 16, 1925.

Ser. No. 268,204. BALFOUR, GUTHRIE & CO., San Francisco, Calif. Filed June 18, 1928.

NICONA

For Insecticides Used as Garden and Orchard Sprays.
Claims use since Mar. 19, 1928.

Ser. No. 268,313. AUGUST W. ROSSOW, doing business as Rossow Research Laboratories, Portland, Oreg. Filed June 19, 1928.

TIS-GON

For Depilatory.
Claims use since Jan. 2, 1928.

Ser. No. 268,458. NU-GAS-EX COMPANY, Hackensack, N. J. Filed June 21, 1928.

Nu-Gas-Ex

For Antacid and Digestant.
Claims use since Feb. 20, 1928.

Ser. No. 268,506. R. H. MACY & CO., INC., New York, N. Y. Filed June 22, 1928.

FLY-D-PART

For Insecticide.
Claims use since May 22, 1928.

Ser. No. 268,554. MICHIGAN ALKALI COMPANY, Wyandotte, Mich. Filed June 23, 1928.

For Calcium Chloride.
Claims use since January, 1928.

Ser. No. 268,634. THE RUMIDOR CORPORATION, Union City, N. J. Filed June 25, 1928.

VINODOR

For Moistening and Flavoring Products Used with Cigars, Cigarettes, and Tobacco.
Claims use since January, 1927.

Ser. No. 268,984. THE INVERTOSE LABORATORIES CO., Minneapolis, Minn. Filed July 2, 1928.

INVERTOSE

For Sclerosing Solution for the Treatment of Varicose Veins.
Claims use since June 30, 1927.

Ser. No. 269,293. PAUL BURKE JACOBS, doing business as Jaynard Cie, New York, N. Y. Filed July 9, 1928.

JAYNARD

For Astringents, Astringent Cerates, Bleach Creams, Beauty Creams, Cold Creams, Cleansing Creams, Obesity Creams, Refreshing Creams, Obesity Astringents, Dry Rouges, Liquid Rouges, Face Bleaches, Face Packs, Eyebrow and Eyelash Grower, Eye Drops, Hand Lotions, Skin Lotions, Face Powders, Talcum Powders, Sachets, Hair Salves, Hair Elixirs, Hair Tonics, Hair Oils, Shampoos, Hair Dyes, Bath Salts, Smelling Salts, Lip Sticks, Incense, Tooth Powders, Mouth Washes, Dentifrices, Tooth Pastes, Nail Powders, Nail Creams, Nail Bleaches, Witch-Hazel, Peroxide, Petroleum Jellies, Witch-Hazel Salves, Camphor Creams, Foot Powders, Deodorants, Disinfectants, Bay Rum, Perfumes, and Toilet Waters.
Claims use since July 5, 1928.

Ser. No. 269,518. NENA ENGE, doing business as Nena Lax Co., New York, N. Y. Filed July 13, 1928.

U-ME-LAX

For Laxative.
Claims use since June 20, 1928.

Ser. No. 269,542. H. K. MULFORD COMPANY, Philadelphia, Pa. Filed July 12, 1928.

CREMO-CARBONATES

No claim is made to the exclusive use of the word "Carbonates" apart from the mark shown in the drawing.
For Antacid and Corrective for Digestive Disturbances.
Claims use since May 4, 1928.

Ser. No. 269,935. THE BARRETT COMPANY, New York, N. Y. Filed July 21, 1928.

ARCADIAN

For Organic and Inorganic Chemicals—Namely, Sulfate of Ammonia, Nitrate of Soda, Ammonium Chloride, Ammonium Nitrate, Ammonium Phosphate, Calcium Nitrate, and Urea.
Claims use since 1914 as to sulfate of ammonia; June, 1928, as to nitrate of soda, ammonium chloride, ammonium nitrate, ammonium phosphate, calcium nitrate, and urea.

Ser. No. 269,970. H. A. METZ LABORATORIES, INC., New York, N. Y. Filed July 21, 1928.

SPINOCAIN

For Local Anesthetic.
Claims use since May 2, 1928.

Ser. No. 270,007. SAMUEL BONAT & BRO., New York, N. Y. Filed July 23, 1928.

SUNGLOW

For Nail Polish.
Claims use since June 20, 1928.

Ser. No. 270,083. KALI MANUFACTURING CO., Philadelphia, Pa. Filed July 24, 1928.

Kalpinol

For Soluble Phie Oil Used as a Disinfectant and for Cleaning Purposes.
Claims use since January, 1928.

Ser. No. 270,090. WILLIAM C. NEILLY, New York, N. Y. Filed July 24, 1928.

Narvita

For Preparation for Beautifying the Skin and Complexion Used Internally and Externally.
Claims use since July 19, 1928.

Ser. No. 270,107. ELIZABETH ARDEN, INC., New York, N. Y. Filed July 25, 1928.

PROTECTA

For Face Creams and Lotions.
Claims use since June 1, 1928.

Ser. No. 270,125. THE GRASSELLI CHEMICAL COMPANY, Cleveland, Ohio. Filed July 25, 1928.

HYDROTAN

For Tanning Compositions.
Claims use since about June 21, 1928.

Ser. No. 270,161. AMERICAN DRUGGISTS SYNDICATE, Long Island City, N. Y. Filed July 26, 1928.

ADSINE

For Astringents, Astringent Cerates, Bleach Creams, Beauty Creams, Cold Creams, Cleansing Creams, Obesity Creams, Refreshing Creams, Obesity Astringents, Dry Rouges, Liquid Rouges, Face Bleaches, Face Packs, Eyebrow and Eyelash Grower, Eye Drops, Hand Lotions, Skin Lotions, Face Powders, Talcum Powders, Sachets, Hair Salves, Hair Elixirs, Hair Tonics, Hair Oils, Shampoos, Hair Dyes, Bath Salts, Smelling Salts, Lip Sticks, Incense, Tooth Powders, Mouth Washes, Dentifrices, Tooth Pastes, Nail Powders, Nail Creams, Nail Bleaches, Witch-Hazel, Peroxide, Petroleum Jellies, Witch-Hazel Salves, Camphor Creams, Foot Powders, Deodorants, Disinfectants, Bay Rum, Perfumes, and Toilet Waters.

RENCENTRATE

For Concentrate of the Water-Soluble Constituents of the Fresh Animal Kidney Freed from Connective Tissue, Associated Lipoid and Protein, and Designed for Use in the Treatment of Anemia.
Claims use since June 12, 1928.

Ser. No. 270,240. EASTMAN KODAK COMPANY, Rochester, N. Y. Filed July 27, 1928.

Athenon

For Photographic Developers.
Claims use since February, 1928.

Ser. No. 270,251. KNOX COMPANY, Kansas City, Mo. Filed July 27, 1928.

Adolex

For Medicine to be Taken Internally for the Treatment of Nervousness and as a General Tonic.
Claims use since July 7, 1928.

CLASS 10.

Fertilizers.

Ser. No. 268,594. FORD MOTOR COMPANY, Fordson, Mich. Filed June 25, 1928.

Ford

The applicant is the owner of trade-mark registrations Nos. 74,530, dated July 20, 1909; 74,765, dated August 10, 1909; 115,500, dated February 20, 1917; and 125,702, dated June 3, 1919.
For Ammonium Sulphate Fertilizer.
Claims use since Jan. 1, 1921.

CLASS 12.

Construction Materials.

Ser. No. 262,705. THE DENVER FIRE CLAY COMPANY, Denver, Colo. Filed Mar. 7, 1928.

PLASTOFRAX

For Refractory Fire Brick Material in Plastic Form—Namely, Ground Fire Clay Mixed with Calcined Clay and Water so as to Form a Plastic Fire-Clay Material for Construction Purposes.
Claims use since Apr. 11, 1924.

Ser. No. 264,039. MOLER PRODUCTS LIMITED, London, England. Filed Mar. 30, 1928.

FOSALSIL

For Manufactures from Mineral and Other Substances for Building or Decoration—Namely, Calcined Bricks, Slabs, Partitions, Pipes, Floors for All Constructional Works Used for Insulating Purposes.
Claims use since about Apr. 16, 1924.

Ser. No. 265,069. SCHUMACHER WALL BOARD CORPORATION, Los Angeles, Calif. Filed Apr. 18, 1928.

The words "Against Heat and Cold" are disclaimed apart from the mark as shown.
For Construction Material—Namely, Wall Board, Plaster Board, Lath Board, Building Paper, and Roofing Paper.
Claims use since Mar. 22, 1928.

Ser. No. 267,325. STRUCTURAL GYPSUM CORPORATION, Linden, N. J. Filed June 1, 1928.

The representation of the goods shown in the drawing is disclaimed.
For Materials for Use in Partition Blocks or Tile, Floor, Roof, and Ceiling Blocks or Slabs, Plaster Board, and Wall Board.
Claims use since Apr. 19, 1928.

Ser. No. 268,299. MINERAL-LAC PAINT CO., INC., Philadelphia, Pa. Filed June 19, 1928.

Applicant disclaims the notation "Stop-A-Leak" apart from the mark shown in the drawing.
For Plastic Roof Coating.
Claims use since Oct. 25, 1927.

Ser. No. 268,418. BRADLEY LUMBER COMPANY OF ARKANSAS, Warren, Ark. Filed June 21, 1928.

No claim is made to the word "Brand" appearing on the drawing apart from the mark shown.
For Hardwood Flooring and Trim.
Claims use since 1919.

Ser. No. 269,112. GILMORE OIL COMPANY, Los Angeles, Calif. Filed July 5, 1928.

ROOFAMITE

For Asphalt, Asphaltic Binder, Asphalt Cement, Roofing Asphalt, Bitumen, Emulsified Asphalt.
Claims use since May 18, 1928.

CLASS 13.

Hardware and Plumbing and Steam-Fitting Supplies.

Ser. No. 267,048. INTERSTATE RUBBER COMPANY, New York, N. Y. Filed May 26, 1928.

The words "Medico-Filtered" are not claimed apart from the other features of the mark as shown in the drawing.
For Spray Devices comprising Rubber Tubing and Attachments Designed to be Applied to Spigots and Faucets.
Claims use since Apr. 1, 1928.

Ser. No. 267,310. MCKINNEY MANUFACTURING COMPANY, Pittsburgh, Pa. Filed June 1, 1928. Under 10-year proviso.

McKINNEY

For Hinges, Hinge Straps, Corner Irons, Shelf Brackets, Door Hangers, Entrance-Door Handles, Door Pulls, Push Buttons, Push Plates, Drop Rings, Door Knobs, Lever Handles, Door Knockers, Cabinet Knobs, Shutter Straps, Shutter Dogs, Foot Scrapers, Trolley-Track Garage-Door Sets, Flat-Track Garage-Door Sets, Garage-Door Hinge Sets, and Garage-Door Holders.
Claims use since on or about Jan. 1, 1873.

CLASS 14.

Metals and Metal Castings and Forgings.

Ser. No. 261,194. THE INTERNATIONAL NICKEL COMPANY, New York, N. Y. Filed Feb. 4, 1928.

ELECTRO SQUARES

The word "Squares" is disclaimed apart from the mark shown.
For Pieces of Nickel.
Claims use since Jan. 19, 1928

Ser. No. 268,569. WM. J. SWEET FOUNDRY CO., Irvington, (Newark), N. J. Filed June 23, 1928.

SWEETALOY

For Ferrous and Nonferrous Metal Alloys and Castings.
Claims use since about October, 1926.

CLASS 15.

Oils and Greases.

Ser. No. 254,413. MIDWAY CHEMICAL COMPANY, Chicago, Ill. Filed Sept. 8, 1927.

For Machine Oil Packed in Small Containers for Household Use.
Claims use since Aug. 14, 1926.

Ser. No. 254,874. THE TRINIDAD LAKE PETROLEUM COMPANY, LIMITED, Brighton, Trinidad, British West Indies, assignor to The Trinidad Lake Asphalt Operating Company, Limited, Brighton, Trinidad, British West Indies, a Corporation of Trinidad, British West Indies. Filed Sept. 17, 1927.

TRINPETRO

For Road Oil.
Claims use since about January, 1923.

Ser. No. 259,444. HERCULES OIL CO., Cleveland, Ohio. Filed Dec. 29, 1927.

For Motor Fuel Oils.
Claims use since on or about Nov. 15, 1923.

Ser. No. 260,359. SIMON OIL COMPANY, INC., Niagara Falls, N. Y. Filed Jan. 19, 1928.

No claim is made to the word "Gasoline" apart from the mark shown in the drawing.

For Gasoline, Kerosene, Distillate Furnace and Lubricating Oils.

Claims use since June 1, 1927.

Ser. No. 264,188. THE PATAPSCO OIL & GREASE CO., Baltimore, Md. Filed Apr. 2, 1928.

For Lubricating Oils and Greases.

Claims use since Jan. 1, 1928.

Ser. No. 269,124. LUBRITE REFINING COMPANY, St. Louis, Mo. Filed July 5, 1928.

Sky-Hy

For Gasoline.

Claims use since June 29, 1928.

CLASS 16.

Paints and Painters' Materials.

Ser. No. 260,786. THE AMERICAN CRAYON COMPANY, Sandusky, Ohio. Filed Jan. 28, 1928.

PERMATITE

For Wood-Finishing Solution in the Nature of a Filler and Sealer.

Claims use since Mar. 1, 1926.

Ser. No. 263,871. GENERAL COLOR PRODUCTS CO., Chicago, Ill. Filed Mar. 28, 1928.

For Ceramic Enamels, Ceramic Colors, and Ceramic Coatings for Use on Ceramic Materials Such as Glass, Pottery, Metals, Etc.

Claims use since January, 1928.

Ser. No. 267,389. RED SPOT PAINT & VARNISH CO., also doing business as Evansville Paint & Varnish Co., Evansville, Ind. Filed June 2, 1928.

The drawing is lined to indicate the color red.

For Dry and Ready-Mixed Paints, Fillers for Wood, Paint and Varnish Remover, Prepared Shellacs, Thinners (Paint and Varnish), Primers, Bronze Enamels, Structural Paint, Graphite Paint (Liquid), Barn Paint, Auto Finish, Paint Enamel, Brushing Lacquers, Enamels (Paint), Distemper Colors (Paint); Wax Polish for Floors, Furniture, and Automobiles; Sienna Paint Pigments, Oil Stains; Stack, Boiler, and Breeching Paint; Bituminous Paint Enamel, Oil Colors, Japan Colors, Show-Card Colors, Acidproof Battery Paint, Varnishes, Tire Paint, Leads (Blue), Heatproof Paint Enamels, White Lead, Putty, Kalsomine, Stucco and Cement Coater, Glass Frosting—Namely, Clear Varnish Containing a Paint Pigment, and Wood Dyes.

Claims use since June 1, 1912.

Ser. No. 269,665. WILLIAM R. KNOTT, Rochester, N. Y. Filed July 16, 1928.

ALUSIL

For Silver Paint Preparation.

Claims use since June 25, 1928.

CLASS 17.

Tobacco Products.

Ser. No. 252,471. JOHN COTTON LIMITED, Edinburgh, Scotland. Filed July 23, 1927. Under 10-year proviso.

JOHN COTTON'S

Finest

SMOKING TOBACCO

No. [ ]

MANUFACTURED BY EDINBURGH, SCOTLAND

For Smoking Tobacco.

Claims use since Aug. 18, 1870.

Ser. No. 266,050. THE SAVARINS, INC., New York, N. Y. Filed May 7, 1928.

For Cigars and Cigarettes.

Claims use since July 1, 1927.

CLASS 19.

Vehicles, Not Including Engines.

Ser. No. 269,222. THE BUCKEYE STEEL CASTINGS COMPANY, Columbus, Ohio. Filed July 7, 1928.

QWC

For Railway-Truck Bolsters, Truck Side Frames, and Spring Planks.

Claims use since July 8, 1926.

CLASS 20.

Linoleum and Oiled Cloth.

Ser. No. 259,893. BON A FIDE PRODUCTS CORPORATION, New York and Brooklyn, N. Y. Filed Jan. 10, 1928.

Petitioner disclaims ownership of or application for the descriptive matter "Bon-A-Fide" in the said mark.

For Linoleum and Oilcloth Floor Covering and Felt-Base Floor Covering.

Claims use since Jan. 1, 1928.

CLASS 21.

Electrical Apparatus, Machines, and Supplies.

Ser. No. 245,942. WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY, East Pittsburgh, Pa. Filed Mar. 17, 1927.

Rectox

For Contact Rectifiers for Changing Alternating Electric Current to Direct Current.

Claims use since Dec. 30, 1926.

Ser. No. 256,590. TWIN COUPLER COMPANY, INC., Poughkeepsie, N. Y. Filed Oct. 25, 1927.

TWIN COUPLER

The expression "Twin Coupler" is disclaimed apart from the mark shown in the drawing.

For Radio Reception Elements—Namely, Inductances Including Loose Couplers, Variable Inductances, Solenoid Coils, Basket-Weave Coils, Pancake Coils, Space-Wound Coils, Double Coils, Short-Wave Kits Comprising Unassembled Parts of Radio Receiving Sets, Insulating Tubes for Winding Coil Elements, Assembled Detector and Amplifying Units, and Panels and Subpanels.

Claims use since Aug. 24, 1927.

Ser. No. 256,591. TWIN COUPLER COMPANY, INC., Poughkeepsie, N. Y. Filed Oct. 25, 1927.

VIKING

For Radio Receiving Sets and Parts Thereof, Particularly Radio Inductance Units, Radio Frequency Subpanels and Kits Including Unassembled Elements Forming a Radio Receiving Set.

Claims use since July 29, 1927.

Ser. No. 256,929. GRAY AND MURDOCK MFG. CO., Salt Lake City, Utah. Filed Nov. 2, 1927.

ELECTRO-MATIC

For Electric Stokers.

Claims use since July 1, 1927.

Ser. No. 261,374. MICO-PRODUCTS, INC., Ampere-Newark, N. J. Filed Feb. 8, 1928.

"TRAV-E-LITE"

For Electric Switches, Signals, and Solenoids Used on Light Signals for Attachment to Vehicles for Indicating Changes of Direction Thereof.

Claims use since about Jan. 8, 1928.

Ser. No. 262,967. LANDERS, FRARY & CLARK, New Britain, Conn. Filed Mar. 10, 1928.

UNIVAC

For Electrically-Driven Vacuum Cleaners.

Claims use since Feb. 25, 1928.

Ser. No. 265,340. MUELLER ELECTRIC COMPANY, Cleveland, Ohio. Filed Apr. 24, 1928.

24-A

For Connection Clips.

Claims use since July 8, 1918.

Ser. No. 266,879. PER-CON MANUFACTURING COMPANY, Richmond, Ind. Filed May 23, 1928.

Per-Con PERFECT CONTACT

No claim is made to the words "Perfect Contact" apart from the mark shown in the drawing.

For Radio Accessories—Namely, Ground Rods, Antenna, and Antenna Poles.

Claims use since Dec. 1, 1927.

Ser. No. 267,335. JOHN A. BARTKUS, doing business as B & J Electrical and Radio Engineering Laboratories, Chicago, Ill. Filed June 2, 1928.

RADIO ENGINEERING B&J LABORATORIES

For Radio Panels for Radio Receiving Sets.

Claims use since Nov. 1, 1927.

Ser. No. 267,625. THE AIR-CHROME STUDIOS, INC., Irvington, N. J. Filed June 7, 1928.

THE AIR-CHROME SPEAKER

No claim is made to the words "The" nor "Speaker" apart from the mark shown.

For Radio Loud Speakers.

Claims use since May 16, 1928.

Ser. No. 267,834. CHICAGO FLEXIBLE SHAFT COMPANY, Chicago, Ill. Filed June 11, 1928.

The trade-mark consists of the characteristic arrangement of contrasting colors woven in the fabric covering of a conductor cable, the ground color of the fabric being black and having woven therein two strands of red immediately adjacent each other at either side of which red strands and immediately adjacent thereto two strands of yellow or gold are disposed, the whole forming upon the black ground of the cable a spiral of red and yellow or gold dots arranged as described. For Portable Electric Appliances Consisting of Electric Flatirons, Toaster Stoves, Grills, Heating Pads for General Purposes, and Conductor Cables.

Claims use since December, 1924.

Ser. No. 268,333. THE ACME WIRE COMPANY, New Haven, Conn. Filed June 20, 1928.

PUSHBAK

For Radio Hook-Up Wire.

Claims use since May 9, 1928.

Ser. No. 268,654. UNIVERSAL ELECTRIC LAMP CO., Newark, N. J. Filed June 25, 1928.

No claim is made to the words "Radio Tube" and "$" apart from the mark shown on the drawing. The lining on the drawing represents the color green.

For Radio Electron Tubes.

Claims use since 1925.

Ser. No. 268,655. UNIVERSAL ELECTRIC LAMP CO., Newark, N. J. Filed June 25, 1928.

No claim is made to the words "Radio Tube" apart from the mark shown in the drawing. The lining on drawing represents the color blue.

For Radio Electron Tubes.

Claims use since 1924.

Ser. No. 268,755. TEMPLE, INC., Chicago, Ill. Filed June 27, 1928.

TEMPLE

For Loud Speakers and Parts Thereof for Use in Connection with Radio Receiving Sets.

Claims use since July 5, 1925.

Ser. No. 268,905. AUTOMATIC SIGNAL CORPORATION, New Haven, Conn. Filed June 30, 1928.

ELECTRO-MATIC

For Automatic Electric Traffic-Control Systems.

Claims use since May 23, 1928.

CLASS 22.

Games, Toys, and Sporting Goods.

Ser. No. 261,077. MARION D. SHAKESHAFT, doing business as St. Nick's Toy Company, Topeka, Kans. Filed Feb. 2, 1928.

JOY-JUMPER

The descriptive word "Jumper" is disclaimed apart from the mark shown on the drawing.

For Children's Jumping or Seesaw Amusement Device.

Claims use since Nov. 1, 1927.

Ser. No. 267,728. SHAKESPEARE COMPANY, Kalamazoo, Mich. Filed June 8, 1928.

Applicant disclaims the representation of the goods. The mark consists of a red strand or thread embodied in the core of the fishing line.
For Fishing Lines.
Claims use since about Aug. 1, 1927.

CLASS 23.

Cutlery, Machinery, and Tools, and Parts Thereof.

Ser. No. 247,782. DAVIS & THOMPSON COMPANY, West Allis, Wis. Filed Apr. 21, 1927.

DAVIS ROTOMATIC

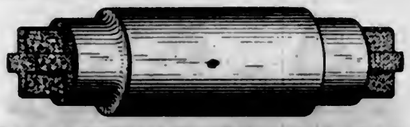
No claim is made to the word "Davis" except in the combination as shown.
For Continuous Rotary Metal-Drilling Machines.
Claims use since Oct. 20, 1923.

Ser. No. 259,226. JOSEPH R. TORREY and BELLE M. TORREY, doing business as J. R. Torrey & Company, administrators under the will of Lewis H. Torrey, Worcester, Mass. Filed Dec. 21, 1927.

Sharpenizer

For Blade Holders and Mechanical Stropping Devices for Safety-Razor Blades.
Claims use since Sept. 1, 1927.

Ser. No. 264,247. MESTA MACHINE COMPANY, West Homestead and Pittsburgh, Pa. Filed Apr. 3, 1928.



The representation of the roll shown in the drawing is disclaimed. The mark consists in painting the wabblers of the roll white in contrast to the body of the roll as indicated in accompanying drawing.
For Rolling-Mill Rolls.
Claims use since Jan. 28, 1928.

Ser. No. 264,248. MESTA MACHINE COMPANY, West Homestead and Pittsburgh, Pa. Filed Apr. 3, 1928.

The mark comprises the color blue applied to the wabblers of the roll as indicated by the lining shown in the drawing. The representation of the roll shown in the drawing is disclaimed.
For Rolling-Mill Rolls.
Claims use since Oct. 10, 1927.

Ser. No. 264,249. MESTA MACHINE COMPANY, West Homestead and Pittsburgh, Pa. Filed Apr. 3, 1928.

The representation of the roll shown in drawing is disclaimed. The mark consists in painting the wabblers of the roll orange as indicated by the lining shown in the drawing.
For Rolling-Mill Rolls.
Claims use since Dec. 30, 1927.

Ser. No. 264,793. BOHN ALUMINUM & BRASS CORPORATION, Detroit, Mich. Filed Apr. 14, 1928.

RING TRUE
BOHN
BEARINGS

Applicant claims certificates of registration No. 114,064, issued Nov. 21, 1916, and No. 114,880, issued July 25, 1928. No registration rights are claimed for the word "Bearings" apart from the rest of the mark.
For Bearings for Machinery.
Claims use since Jan. 3, 1928.

Ser. No. 268,045. SOUTHGATE L. LOHMAN, doing business as The Cyano-Art Co., Norfolk, Va. Filed June 14, 1928.

Cyano-Art

The word "Art" is disclaimed apart from the mark shown.
For Blue-Printing Apparatus.
Claims use since Oct. 1, 1927.

Ser. No. 269,006. THE TOBRIN TOOL COMPANY, Plantsville, Southington, Conn. Filed July 2, 1928.

The dotted outline of a screw-driver blade and the figure "4" is disclaimed as parts of the mark.
For Screw Drivers.
Claims use since Sept. 15, 1923.

Ser. No. 269,221. BOSTON GEAR WORKS, INC., Norfolk Downs (Quincy), Mass. Filed July 7, 1928.

PYRAMID

For Gears and Pinions.
Claims use since Dec. 9, 1926.

Ser. No. 269,305. MISSOURI AGRICULTURAL PUBLISHING COMPANY, St. Louis, Mo. Filed July 9, 1928.

PERMARK

For Tattooing Device for Marking Poultry and Other Live Stock with Indelible Ink.
Claims use since June 1, 1928.

Ser. No. 270,009. ISAAC BRAITHWAITE & SON, Engineers, Limited, Kendal, England. Filed July 23, 1928.

IBIS.

For Sewing Machines, Felling Machines, Dyeing Machinery, Bleaching and Scouring Machines, Vats, Troughs, and Tanks Equipped with Crutchers or Other Machinery and Tressels Built into Any of the Aforesaid Machinery.
Claims use since January 20, 1896.

CLASS 24.

Laundry Appliances and Machines.

Ser. No. 269,459. OLIVER P. GREENSTREET, doing business as American Device Mfg. Company, Owensville, Mo. Filed July 12, 1928.

Vacu-Clean Washer

The words "Washer" and "Clean" are not claimed apart from the other features of the mark.
For Laundry Washing Machines.
Claims use since May 8, 1928.

CLASS 25.

Locks and Safes.

Ser. No. 268,596. FORD MOTOR COMPANY, Fordson, Mich. Filed June 25, 1928.

Ford

The applicant is the owner of trade-mark registrations Nos. 74,530, dated July 20, 1909; 74,765, dated August 10, 1909; 115,500, dated February 20, 1917; and 125,702, dated June 3, 1919.
For Locks, Ignition Switch Locks, and Keys.
Claims use since Jan. 6, 1913.

CLASS 26.

Measuring and Scientific Appliances.

Ser. No. 261,094. ANSCO PHOTOPRODUCTS, INC., Binghamton, N. Y., assignor to Agfa Ansco Corporation, Binghamton, N. Y., a Corporation of New York. Filed Feb. 3, 1928.

CRAFTSMAN CAMERA

Exclusive use of the word "Camera" is disclaimed.
For Photographic Cameras.
Claims use since 1924.

CLASS 27.

Horological Instruments.

Ser. No. 269,014. EMIL BORNSTEIN INC., New York, N. Y. Filed July 3, 1928.

CHATEAU
CADILLAC

For Watches.
Claims use since June 1, 1928.

CLASS 28.

Jewelry and Precious-Metal Ware.

Ser. No. 258,707. J. R. WOOD & SONS, New York, N. Y. Filed Dec. 9, 1927.

FLOWER OF LOVE

For Finger Rings.
Claims use since Nov. 22, 1927.

Ser. No. 265,296. S. M. & H. COMPANY, New York, N. Y. Filed Apr. 23, 1928.

For Finger Rings, Ornamental Pins, and Other Kinds of Jewelry for Personal Wear, Not Including Watches.
Claims use since Mar. 1, 1928.

Ser. No. 266,485. SAMUEL SCHNELLING, Chicago, Ill. Filed May 16, 1928.

S.r.S

For Finger Rings, Bracelets, Broaches, Sautoirs, and Platinum Shells or Cases Set with Jewels for Personal Wear, but Not Including Watch Movements or Cases.
Claims use since Mar. 27, 1927.

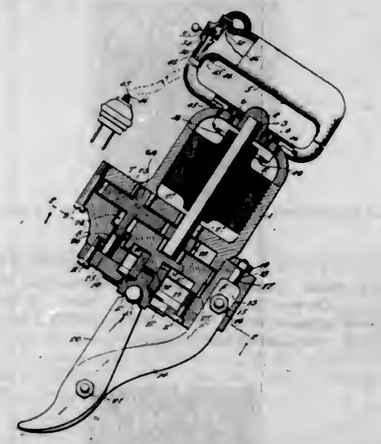
REISSUES

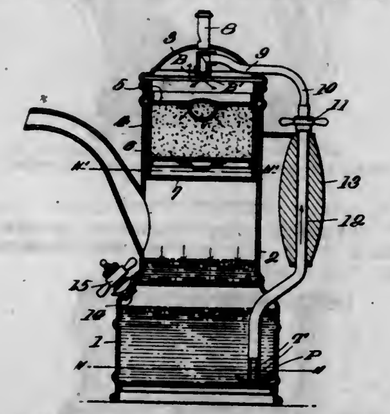


SEPTEMBER 4, 1928.

17,074. IGNITION SYSTEM. JOHN H. HUNT, Detroit, Mich., assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 27, 1928. Serial No. 250,025. Original No. 1,590,827, dated June 29, 1926, Serial No. 636,007, filed May 1, 1923. 14 Claims. (Cl. 123—117.)

1. In ignition apparatus for internal combustion engines, the combination with a breaker lever element and a cam element; of means for moving one of the elements relative to the other in response to engine suction, said means including a suction chamber having a movable wall; and means for manually moving said element, said manual means including the suction chamber through which motion is transmitted from the operator to said element.

17,075. MOTOR SHEARS. ALVIN S. REICHEL, Matamoras, Pa., assignor, by direct and mesne assignments, to Hayes Mfg. Co., Inc., Port Jervis, N. Y., a Corporation of New York. Filed Apr. 14, 1928. Serial No. 270,067. Original No. 1,613,126, dated Jan. 4, 1927, Serial No. 57,919, filed Sept. 22, 1925. 9 Claims. (Cl. 164—74.)



1. A device of the character described, including a gear casing, a power shaft projecting into the gear casing, a fixed shear blade, a movable shear blade, a rocker arm mounted in the casing, a socket member operatively engaging the rocker arm and movably connected to the movable shear blade, a gear wheel located in axial alinement with the drive shaft, a crank pin on the gear wheel operatively connected to the rocker arm, and a gear train transmitting motion from the power shaft to the said last mentioned gear.

17,076. GOLF CLUB. CHARLES J. JAHANT, Akron, Ohio, assignor to The General Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 10, 1928. Serial No. 245,713. Original No. 1,636,514, dated July 19, 1927, Serial No. 148,221, filed Nov. 13, 1926. 2 Claims. (Cl. 273—80.)

1. A golf club comprising a shaft, a driving head formed with a tapered neck connecting portion having a bore for receiving one end of the shaft, windings wrapped around the neck portion of the head and the base of the shaft, and a removable thin walled rubber protecting sleeve entirely encasing the winding and protecting the winding, said protecting sleeve being of relatively thin, high grade rubber with beaded ends to prevent injury thereto during installation.

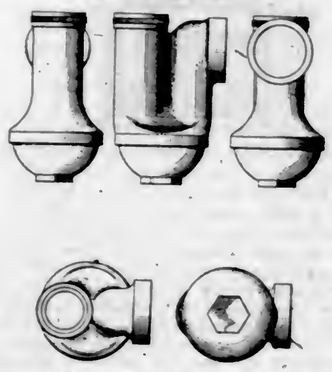
17,077. APPARATUS FOR USE IN MAKING EXTRACTS, INFUSIONS, DECOCTIONS, AND THE LIKE. LOUIS MARCEL POUGET, Vallieres, France. Filed Oct. 7, 1927. Serial No. 224,708. Original No. 1,556,026, dated Oct. 6, 1925, Serial No. 648,756, filed June 30, 1923, and in France Nov. 22, 1922. 8 Claims. (Cl. 53—3.)

1. A boiler, a receptacle detachably mounted therein, a filtering receptacle in the first named receptacle and having a cover which also forms the cover of said first named receptacle, a tube comprising two members, one leading from the bottom of the boiler and the other leading from the first to the upper portion of the filtering receptacle and including a portion arranged without the boiler and first named receptacle and also including a coupling joint, the said members being respectively attached to the boiler and to the first named receptacle and a handle having a bore through which that portion of the first named tubular member which is arranged with the boiler extends.

DESIGNS

SEPTEMBER 4, 1928.

76,215. FLAME SHIELD. ROBERT C. ANGELL, Prince Bay, N. Y., assignor to The S. S. White Dental Manufacturing Company, a Corporation of Pennsylvania. Filed June 16, 1928. Serial No. 27,159. Term of patent 14 years.

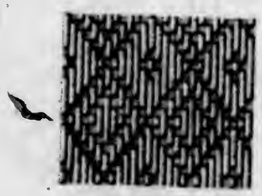


The ornamental design for flame shield as shown.

76,216. LEG OF A CHAIR OR SETTEE. CARL BAUER, Chicago, Ill., assignor to Doetsch & Bauer Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 24, 1927. Serial No. 24,633. Term of patent 3½ years.

The ornamental design for a leg of a chair or settee as shown.

76,217. PLUMBER'S TRAP. FREDERIC D. BLAUVELT, Montclair, N. J. Filed Mar. 30, 1926. Serial No. 17,121. Term of patent 3½ years.

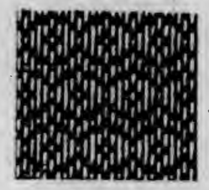


The ornamental design for a plumber's trap as shown.

76,218. OVERSHOE. EDGAR S. BOTT and ARTHUR S. FUNK, La Crosse, Wis. Filed Apr. 4, 1928. Serial No. 26,125. Term of patent 7 years.

The ornamental design for an overshoe, as shown.

76,219. TEXTILE FABRIC. JOHN S. BOYD, Williamstown, Mass., assignor, by mesne assignments, to Boyd Textile Corporation, Williamstown, Mass., a Corporation of Massachusetts. Filed Nov. 4, 1927. Serial No. 24,007. Term of patent 7 years.



The ornamental design for a textile fabric, as shown.

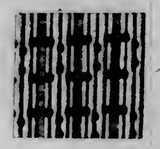
76,220. TEXTILE FABRIC. JOHN S. BOYD, Williamstown, Mass., assignor, by mesne assignments, to Boyd Textile Corporation, Williamstown, Mass., a Corporation of Massachusetts. Filed Nov. 15, 1927. Serial No. 24,130. Term of patent 7 years.

The ornamental design for a textile fabric, as shown.

76,221. TEXTILE FABRIC. JOHN S. BOYD, Williamstown, Mass., assignor, by mesne assignments, to Boyd Textile Corporation, Williamstown, Mass., a Corporation of Massachusetts. Filed Nov. 15, 1927. Serial No. 24,132. Term of patent 7 years.

The ornamental design for a textile fabric, as shown.

76,222. TEXTILE FABRIC. JOHN S. BOYD, Williamstown, Mass., assignor, by mesne assignments, to Boyd Textile Corporation, Williamstown, Mass., a Corporation of Massachusetts. Filed Nov. 15, 1927. Serial No. 24,134. Term of patent 7 years.



The ornamental design for a textile fabric, as shown.

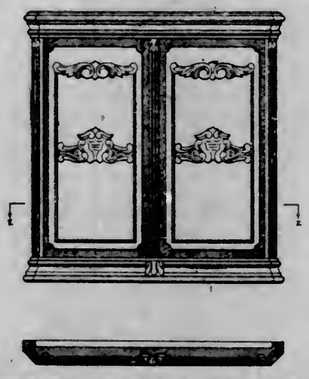
76,223. TEXTILE FABRIC. JOHN S. BOYD, Williamstown, Mass., assignor, by mesne assignments, to Boyd Textile Corporation, Williamstown, Mass., a Corporation of Massachusetts. Filed Nov. 15, 1927. Serial No. 24,135. Term of patent 7 years.

The ornamental design for a textile fabric, as shown.

76,224. TEXTILE FABRIC. JOHN S. BOYD, Williamstown, Mass., assignor, by mesne assignments, to Boyd Textile Corporation, Williamstown, Mass., a Corporation of Massachusetts. Filed Apr. 20, 1926. Serial No. 17,345. Term of patent 7 years.

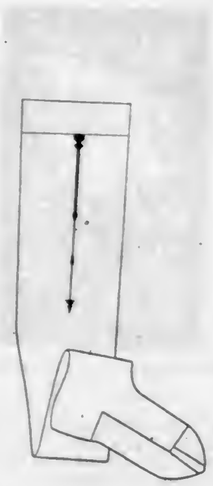
The ornamental design for a textile fabric, as shown.

76,225. RUG. STELLA BRANDT, New York, N. Y., assignor to Waite Carpet Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed June 11, 1928. Serial No. 27,075. Term of patent 7 years.



The ornamental design for a rug, as shown.

76,226. RUG. STELLA BRANDT, New York, N. Y., assignor to Waite Carpet Company, Oshkosh, Wis., a Corporation of Wisconsin. Filed June 11, 1928. Serial No. 27,076. Term of patent 3½ years.



The ornamental design for a rug, as shown.

76,227. COVER FOR AN ELECTRICAL SWITCH BOX. OSCAR A. BRONSON, Minneapolis, Minn. Filed Apr. 4, 1928. Serial No. 26,123. Term of patent 3½ years.

The ornamental design for a cover for an electrical switch box, as shown.

76,228. HOSIERY. OBERT W. BURKETT, Dallas, Tex. Filed Oct. 25, 1927. Serial No. 23,873. Term of patent 3½ years.

The ornamental design for hosiery as shown.

76,229. CARD-TABLE-COVER CLAMP. JESSIE R. BURN, San Antonio, Tex. Filed May 31, 1928. Serial No. 26,934. Term of patent 14 years.

The ornamental design for a card table cover clamp, as shown.

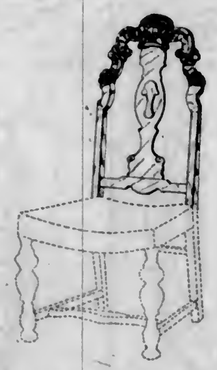
76,230. HARNESS BUCKLE. FRED E. BURRALL, Green Bay, Wis., assignor to McIntyre-Burrall Company, Green Bay, Wis., a Corporation of Wisconsin. Filed Oct. 8, 1927. Serial No. 23,677. Term of patent 14 years.

The ornamental design for a harness buckle substantially as shown.

76,231. BOTTLE. PAUL A. GINTER, Toledo, Ohio, assignor to The American Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 23, 1928. Serial No. 26,428. Term of patent 14 years.

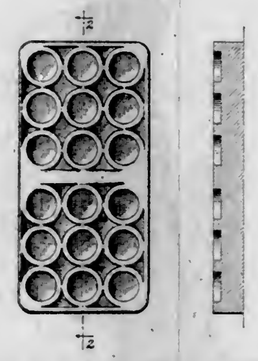
The ornamental design for a bottle, substantially as shown

76,232. BOTTLE. PAUL A. GINTER, Toledo, Ohio, assignor to The American Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 23, 1928. Serial No. 26,429. Term of patent 14 years.



The ornamental design for a bottle, substantially as shown.

76,233. BABY SHOE. LOUIS J. GOLDEN, Chicago, Ill., assignor to B. & B. Shoe Company, Chicago, Ill., a Corporation of Illinois. Filed May 31, 1928. Serial No. 26,931. Term of patent 3½ years.

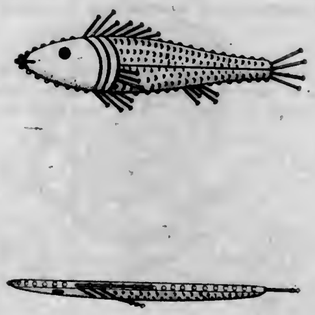


The ornamental design for a baby shoe, as shown.

76,234. CHAIR BACK OR SIMILAR ARTICLE. LAWRENCE E. GORDON, Marion, Va., assignor to Virginia Table Company, Incorporated, Marion, Va., a Corporation of Virginia. Filed June 8, 1928. Serial No. 27,039. Term of patent 3½ years.

The ornamental design for a chair back or similar article as shown.

76,235. DOMINO. TOM C. GRAHAM, Albany, N. Y., assignor to The Embossing Company, Albany, N. Y., a Corporation of New York. Filed June 9, 1928. Serial No. 27,058. Term of patent 14 years.

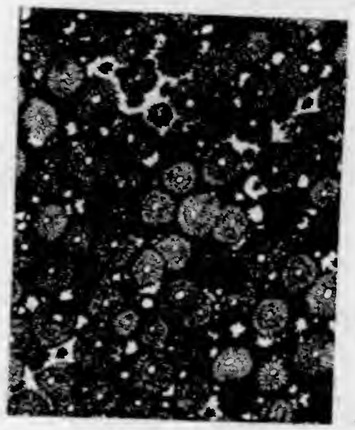


The ornamental design for a domino, as shown.

76,236. BOX. EUGÈNE GSELL, Brooklyn, N. Y., assignor to Wallace & Co., Brooklyn, N. Y., a Corporation of New Jersey. Filed June 9, 1928. Serial No. 27,064. Term of patent 14 years.

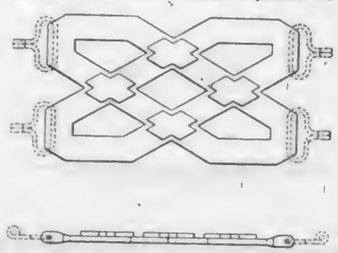
The ornamental design for a box as shown.

76,237. PINCUSHION. ELLEN LINDSEY HARRISON, New York, N. Y. Filed Apr. 28, 1928. Serial No. 26,495. Term of patent 14 years.



The ornamental design for a pincushion substantially as shown.

76,238. BRUSH. OLIVER T. HAZZARD, St. Louis, Mo. Filed Jan. 7, 1928. Serial No. 24,779. Term of patent 7 years.

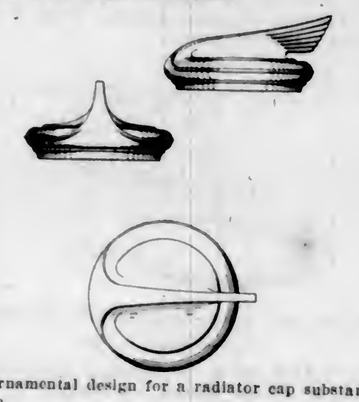


The ornamental design for a brush substantially as shown.

76,239. TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE. ALFRED J. HEINKE, Towaco, N. J., assignor to H. R. Mallinson & Co. Inc., New York, N. Y., a Corporation of Delaware. Filed May 28, 1928. Serial No. 26,875. Term of patent 3½ years.

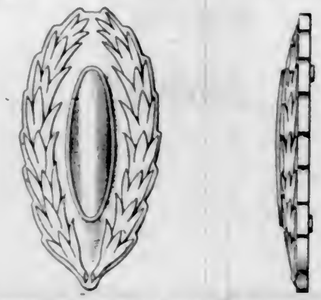
The ornamental design for a textile fabric or similar article of manufacture, substantially as shown and described.

76,240. NONSKID MAT FOR PNEUMATIC TIRES. FRANCIS O. HELTZEL, Youngstown, Ohio. Filed May 7, 1927. Serial No. 21,879. Term of patent 14 years.



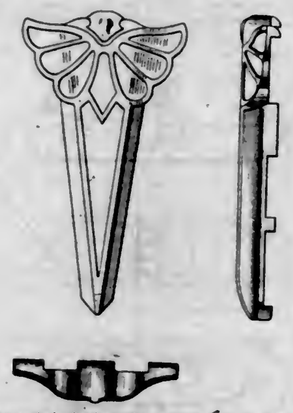
The ornamental design for a nonskid mat for pneumatic tires, as shown.

76,241. TRAFFIC SIGNAL. OLE L. HILDE, Minneapolis, Minn. Filed Oct. 29, 1927. Serial No. 23,926. Term of patent 3½ years.



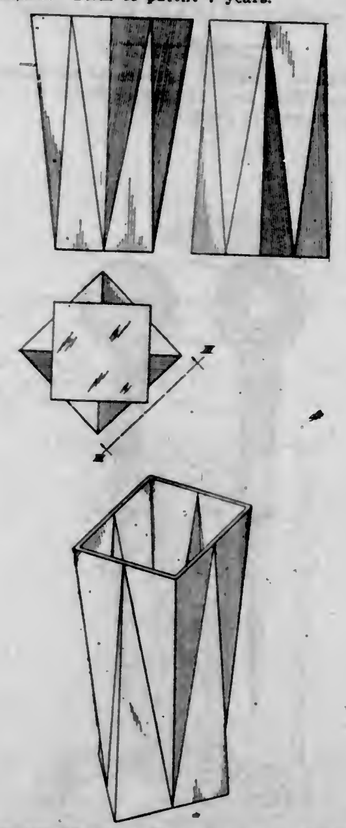
The ornamental design for a traffic signal as shown.

76,242. RADIATOR CAP. JAMES R. HUGHES and WILLIAM H. WEBER, South Bend, Ind., assignors to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Apr. 12, 1928. Serial No. 26,304. Term of patent 14 years.



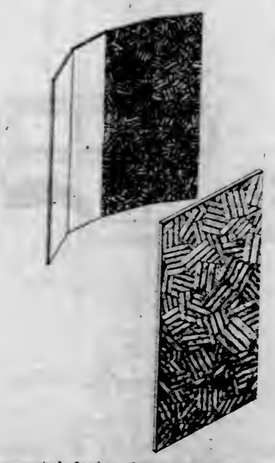
The ornamental design for a radiator cap substantially as shown.

76,243. CLAMP PLATE FOR VEHICLE BUMPERS. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Sept. 9, 1927. Serial No. 23,344. Term of patent 14 years.



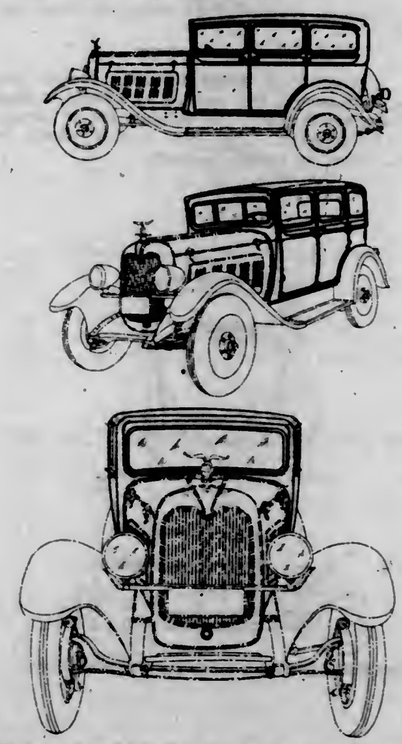
The ornamental design for a clamp plate for vehicle bumpers, substantially as shown.

76,244. CLAMP PLATE FOR VEHICLE BUMPERS. HERBERT S. JANDUS and JOHN RICHARD MORGAN, Detroit, Mich., assignors to The C. G. Spring & Bumper Company, Detroit, Mich., a Corporation of Delaware. Filed Sept. 9, 1927. Serial No. 23,352. Term of patent 14 years.



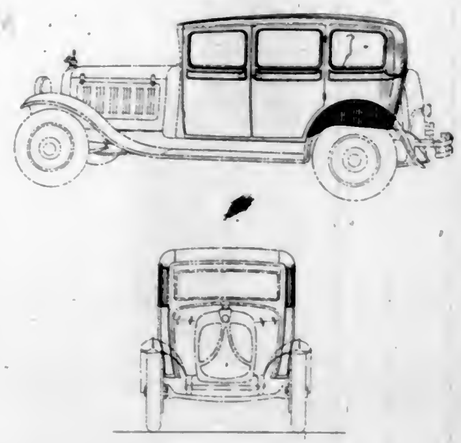
The ornamental design for a clamp plate for vehicle bumpers, substantially as shown.

76,245. GLASS VASE. NICHOLAS KOPP, Pittsburgh, Pa., assignor to Kopp Glass, Inc., Swissvale, Pa., a Corporation of Pennsylvania. Filed Mar. 22, 1928. Serial No. 25,947. Term of patent 7 years.



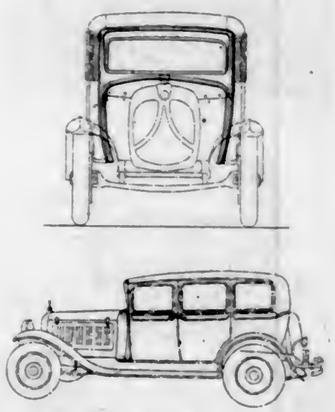
The ornamental design for a glass vase, as shown.

76,246. FOLDING SCREEN FOR A ROOM. HOWARD L. KRATZ, Philadelphia, Pa., assignor to John Wanamaker Philadelphia, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 23, 1927. Serial No. 22,855. Term of patent 3½ years.



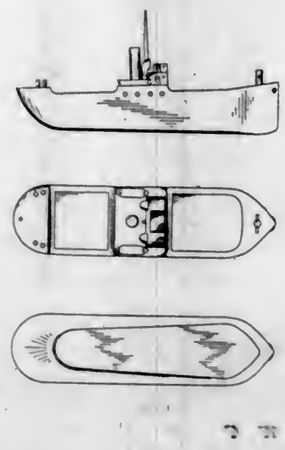
The ornamental design for a folding screen for a room, substantially as shown and described.

76,247. AUTOMOBILE BODY. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 17, 1927. Serial No. 22,469. Term of patent 14 years.



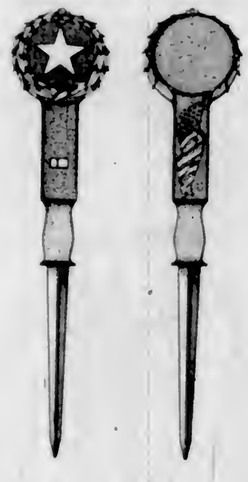
The ornamental design for an automobile body, as shown.

76,248. AUTOMOBILE BODY SIDE. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 23, 1927. Serial No. 23,185. Term of patent 14 years.



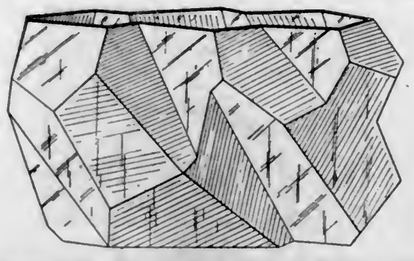
The ornamental design for an automobile body side, as shown.

76,249. AUTOMOBILE BODY FRONT. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 2, 1927. Serial No. 23,277. Term of patent 14 years.



The ornamental design for automobile body front, as shown.

76,250. TOY BOAT. LOUIS LYMAN, Cleveland, Ohio. Filed Dec. 10, 1926. Serial No. 20,008. Term of patent 3½ years.



The ornamental design for a toy boat, as shown.

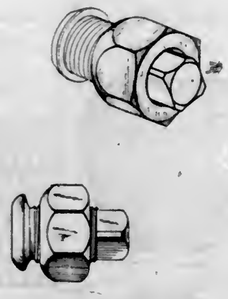
76,251. GRAVE MARKER. ALFRED S. MCCASKEY, Chicago, Ill. Filed Dec. 12, 1927. Serial No. 24,458. Term of patent 14 years.

The ornamental design for a grave marker, as shown.

76,252. FISH BOWL OR SIMILAR ARTICLE. THOMAS W. MCCREARY, Monaca, Pa., assignor to The Phoenix Glass Company, Monaca, Pa., a Corporation of West Virginia. Filed May 10, 1928. Serial No. 26,622. Term of patent 7 years.

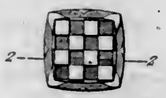
The ornamental design for a fish bowl or similar article, as shown.

76,253. BOOTEE. JACK MELTZER, Brooklyn, N. Y. Filed May 29, 1928. Serial No. 26,902. Term of patent 7 years.



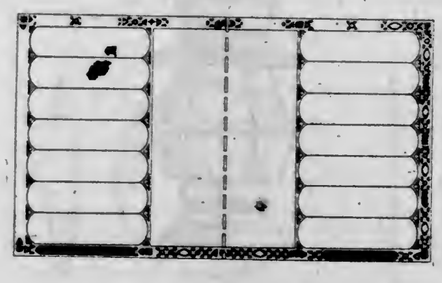
The ornamental design for a bootee substantially as shown.

76,254. BENCH STANDARD. ALICE JEANNETTE MILLER, Chicago, Ill. Filed Mar. 26, 1928. Serial No. 26,012. Term of patent 3½ years.



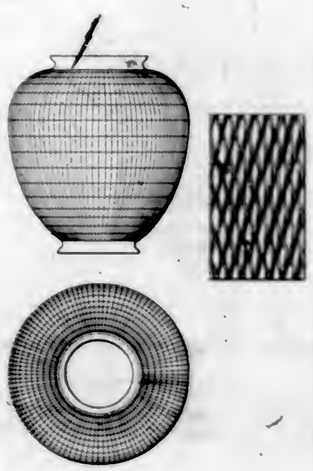
The ornamental design for a bench standard as shown.

76,255. CAP NUT. EMIL A. NELSON, Detroit, Mich., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 5, 1925. Serial No. 15,648. Term of patent 14 years.



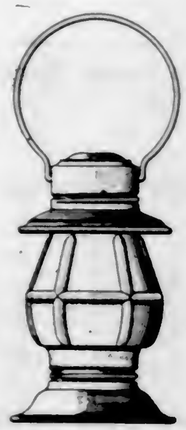
The ornamental design for a cap nut, as shown and described.

76,256. BUTTON. WILLARD A. ORMSBEE, Taunton, Mass. Filed Sept. 25, 1926. Serial No. 19,167. Term of patent 3½ years.



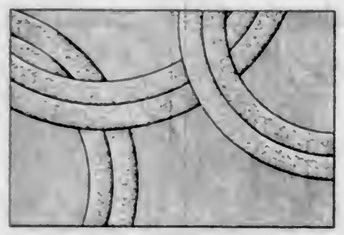
The ornamental design for a button, substantially as shown.

76,257. LEAF FOR A BANK DEPOSIT BOOK. RICHARD F. OUTCAULT, Jr., Chicago, Ill. Filed Jan. 15, 1927. Serial No. 20,391. Term of patent 14 years.



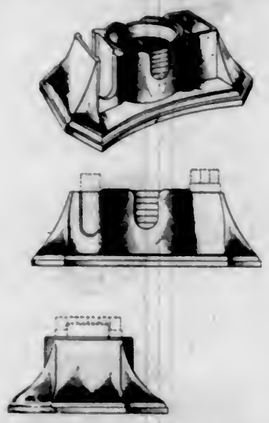
The ornamental design for a leaf for a bank deposit book, as shown.

76,258. LIGHTING-FIXTURE GLOBE OR SIMILAR ARTICLE. RAYMOND V. OWEN, St. Louis, Mo., assignor to The Edwin F. Guth Company, St. Louis, Mo., a Corporation of Missouri. Filed July 28, 1926. Serial No. 18,517. Term of patent 14 years.



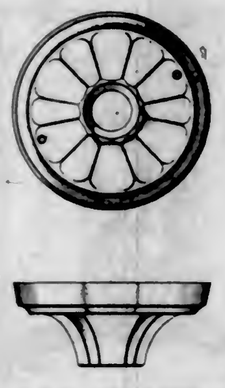
The ornamental design for a lighting fixture globe, or similar article, substantially as shown.

76,259. CANDY CONTAINER. JAMES PAULL and ALBERT A. MILLER, Wellsburg, W. Va., assignors to The Eagle Manufacturing Company, Wellsburg, W. Va., a Corporation of West Virginia. Filed Jan. 13, 1928. Serial No. 24,866. Term of patent 3½ years.



The ornamental design for a candy container, as shown.

76,260. BLANK OF LEATHER. HENRY ROBERT SAMSTAG, New York, N. Y., assignor to Samstag & Hilder Bros., Inc., New York, N. Y., a Corporation of New York. Filed Dec. 15, 1925. Serial No. 15,760. Term of patent 3½ years.

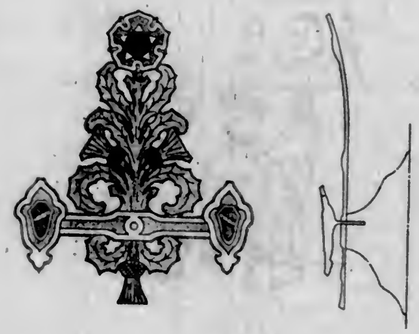


The ornamental design for a blank of leather substantially as shown.

76,261. SMOKER'S TRAY. GUSTAV E. SCHNEIDER and ARTHUR B. SCHNEIDER, Chicago, Ill., assignors to Roto Tray Company, a Corporation of Illinois. Filed June 18, 1928. Serial No. 27,191. Term of patent 3½ years.

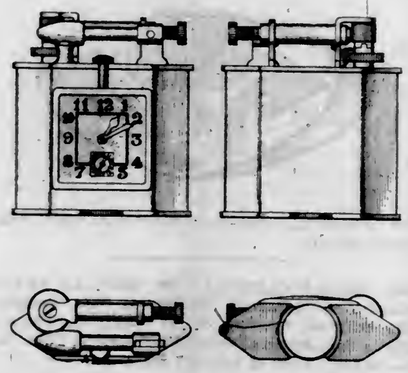
The ornamental design for a smoker's tray as shown.

76,262. LIGHTING FIXTURE. ROY W. SCHWEIKER, Lansdale, Pa. Filed Feb. 15, 1926. Serial No. 16,531. Term of patent 14 years.



The ornamental design for a lighting fixture, as shown.

76,263. LOUD SPEAKER. JOHN E. SEDERHOLM, St. Paul, Minn., assignor to American Hoist & Derrick Company, St. Paul, Minn., a Partnership composed of F. J. Johnson and W. O. Washburn. Filed Apr. 14, 1928. Serial No. 26,321. Term of patent 14 years.

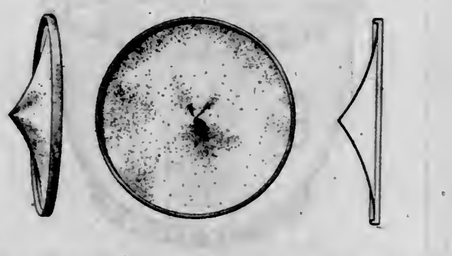


The ornamental design for a loud speaker, as shown.

76,264. ARM FOR WALL BRACKETS OR THE LIKE. ALFRED P. SEIDELL, Bloomfield, N. J., assignor to Orange Lighting Fixture Manufacturing Co., a Corporation of New Jersey. Filed June 8, 1928. Serial No. 27,055. Term of patent 7 years.

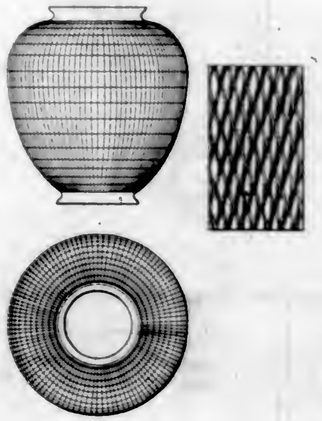
The ornamental design for an arm for wall brackets or the like substantially as shown.

76,265. CIGAR LIGHTER OR SIMILAR ARTICLE. AARON SIMON, Brooklyn, and LOUIS YENTIS, Jackson Heights, N. Y. Filed June 5, 1928. Serial No. 27,008. Term of patent 3½ years.



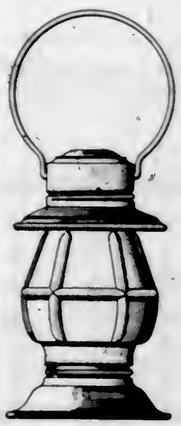
The ornamental design for a cigar lighter or similar article, as shown.

76,266. LOUD-SPEAKER DIAPHRAGM. LESLIE STEVENS, Glen Ridge, N. J., assignor to Stevens Manufacturing Corporation, New York, N. N. Y., a Corporation of Delaware. Filed Feb. 12, 1927. Serial No. 20,731. Term of patent 7 years.



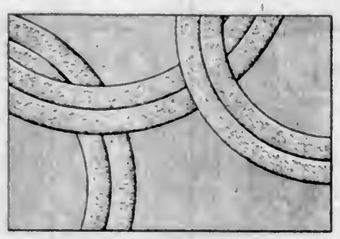
The ornamental design for a loud speaker diaphragm, as shown.

76,267. LOUD-SPEAKER DIAPHRAGM. LESLIE STEVENS, Glen Ridge, N. J., assignor to Stevens Manufacturing Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 15, 1927. Serial No. 20,768. Term of patent 7 years.



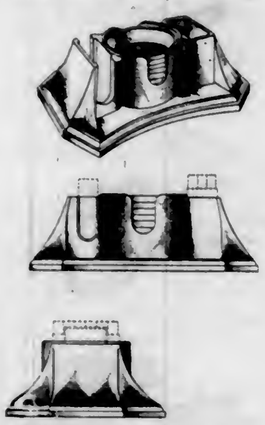
The ornamental design for a loud speaker diaphragm, as shown.

76,258. LIGHTING-FIXTURE GLOBE OR SIMILAR ARTICLE. RAYMOND V. OWEN, St. Louis, Mo., assignor to The Edwin F. Guth Company, St. Louis, Mo., a Corporation of Missouri. Filed July 28, 1926. Serial No. 18,517. Term of patent 14 years.



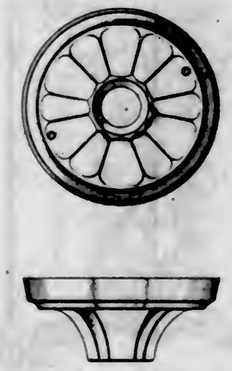
The ornamental design for a lighting fixture globe, or similar article, substantially as shown.

76,259. CANDY CONTAINER. JAMES PAULL and ALBERT A. MILLER, Wellsburg, W. Va., assignors to The Eagle Manufacturing Company, Wellsburg, W. Va., a Corporation of West Virginia. Filed Jan. 13, 1928. Serial No. 24,866. Term of patent 3½ years.



The ornamental design for a candy container, as shown.

76,260. BLANK OF LEATHER. HENRY ROBERT SAMSTAG, New York, N. Y., assignor to Samstag & Hilder Bros., Inc., New York, N. Y., a Corporation of New York. Filed Dec. 15, 1925. Serial No. 15,760. Term of patent 3½ years.

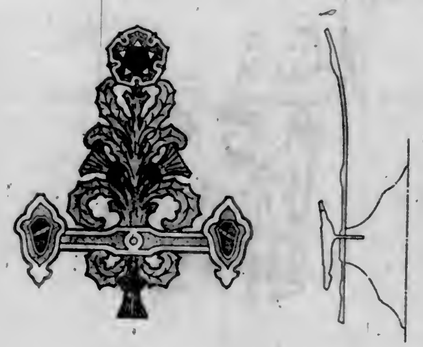


The ornamental design for a blank of leather substantially as shown.

76,261. SMOKER'S TRAY. GUSTAV E. SCHNEIDER and ARTHUR B. SCHNEIDER, Chicago, Ill., assignors to Roto Tray Company, a Corporation of Illinois. Filed June 18, 1928. Serial No. 27,191. Term of patent 3½ years.

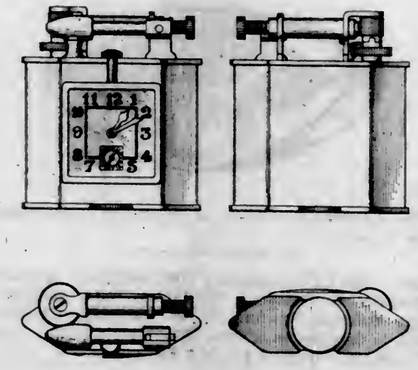
The ornamental design for a smoker's tray as shown.

76,262. LIGHTING FIXTURE. ROY W. SCHWEIKER, Lansdale, Pa. Filed Feb. 15, 1926. Serial No. 16,531. Term of patent 14 years.



The ornamental design for a lighting fixture, as shown.

76,263. LOUD SPEAKER. JOHN E. SEDERHOLM, St. Paul, Minn., assignor to American Hoist & Derrick Company, St. Paul, Minn., a Partnership composed of F. J. Johnson and W. O. Washburn. Filed Apr. 14, 1928. Serial No. 26,321. Term of patent 14 years.



The ornamental design for a loud speaker, as shown.

76,264. ARM FOR WALL BRACKETS OR THE LIKE. ALFRED P. SEIDELL, Bloomfield, N. J., assignor to Orange Lighting Fixture Manufacturing Co., a Corporation of New Jersey. Filed June 8, 1928. Serial No. 27,055. Term of patent 7 years.

The ornamental design for an arm for wall brackets or the like substantially as shown.

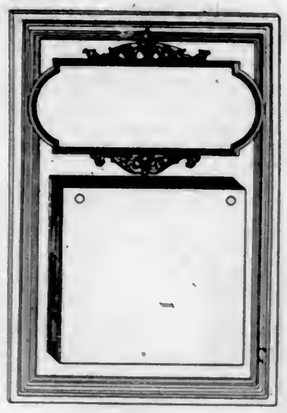
76,265. CIGAR LIGHTER OR SIMILAR ARTICLE. AARON SIMON, Brooklyn, and LOUIS YENTIS, Jackson Heights, N. Y. Filed June 5, 1928. Serial No. 27,008. Term of patent 3½ years.

The ornamental design for a cigar lighter or similar article, as shown.

76,266. LOUD-SPEAKER DIAPHRAGM. LESLIE STEVENS, Glen Ridge, N. J., assignor to Stevens Manufacturing Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 12, 1927. Serial No. 20,731. Term of patent 7 years.

The ornamental design for a loud speaker diaphragm, as shown.

76,267. LOUD-SPEAKER DIAPHRAGM. LESLIE STEVENS, Glen Ridge, N. J., assignor to Stevens Manufacturing Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 15, 1927. Serial No. 20,768. Term of patent 7 years.

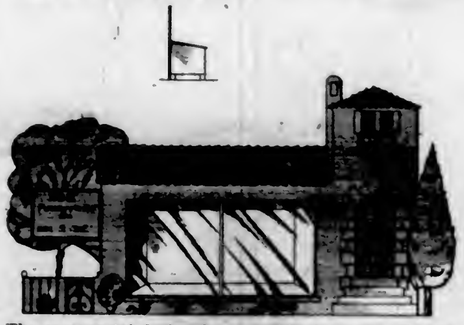


The ornamental design for a loud speaker diaphragm, as shown.

76,268. DIRECTIONAL SIGNAL. PAUL A. STOVER, Racine, Wis., assignor to The Stover Signal Engineering Co., Racine, Wis., a Corporation of Delaware. Filed Apr. 11, 1927. Serial No. 21,542. Term of patent 3½ years.

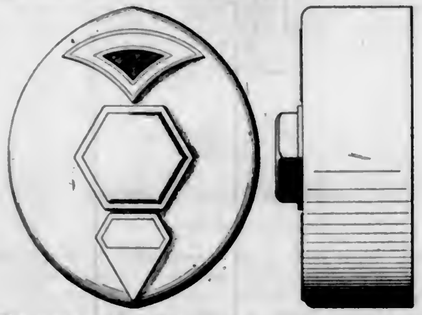
The ornamental design for a directional signal substantially as shown.

76,269. DAILY CALENDAR OR SIMILAR ARTICLE. WILLIAM S. SULLIVAN, Cincinnati, Ohio, assignor to The Sullivan Printing Works Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 18, 1928. Serial No. 26,733. Term of patent 7 years.



The ornamental design for a daily calendar or similar article as shown.

76,270. SELLING BOOTH. ALBERT W. TANDY, Los Angeles, Calif. Filed Mar. 28, 1928. Serial No. 26,043. Term of patent 3½ years.



The ornamental design for a selling booth, as shown.

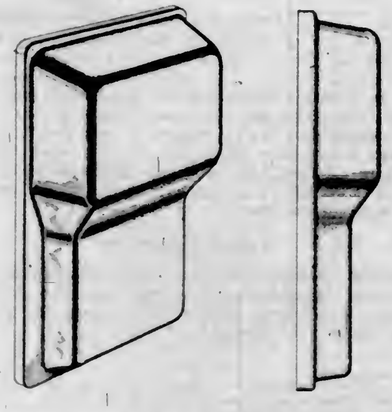
76,271. COMBINED MERCHANDISE DISPLAY CASE AND ADVERTISING SIGNBOARD. CYRUS O. TEETER, Denver, Colo. Filed Apr. 26, 1928. Serial No. 26,471. Term of patent 7 years.

The ornamental design for a combined merchandise display case and advertising signboard, as shown.

76,272. SHOCK-ABSORBER CASING. JOHN WARREN WATSON, Wayne, and ROBERT F. NOWALK, Philadelphia, Pa., assignors to John Warren Watson Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 11, 1928. Serial No. 26,643. Term of patent 14 years.

The ornamental design for a shock absorber casing, as shown.

76,273. ELECTRIC TABLE LAMP. SAMUEL WESTERFIELD, New York, N. Y. Filed Apr. 25, 1927. Serial No. 21,711. Term of patent 3½ years.

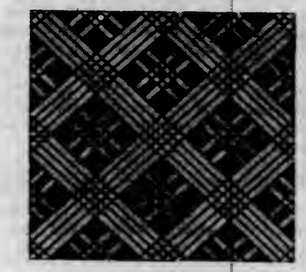


The ornamental design for an electric table lamp, as shown.

76,274. ELECTRIC TABLE LAMP. SAMUEL WESTERFIELD, New York, N. Y. Filed Apr. 25, 1927. Serial No. 21,713. Term of patent 3½ years.

The ornamental design for an electric table lamp, as shown.

76,275. SWITCH-BOX COVER. GUSTAV O. WILMS, Milwaukee, Wis., assignor to The Reliance Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Mar. 1, 1928. Serial No. 25,639. Term of patent 14 years.

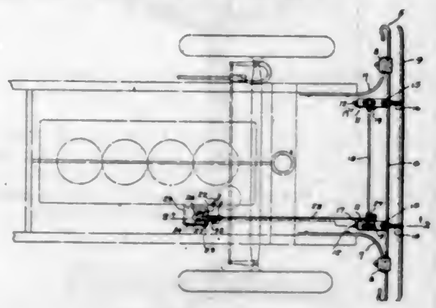


The ornamental design for a switch box cover, as shown.

76,276. LAMP. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Filed June 19, 1928. Serial No. 27,196. Term of patent 7 years.

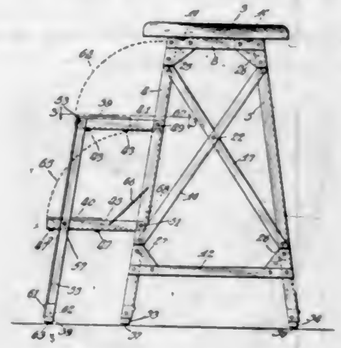
The ornamental design for a lamp, as shown.

76,277. TEXTILE FABRIC. JAMES H. BUNTING, Clifton, N. J., assignor to Susquehanna Silk Mills, a Corporation of New York. Filed May 31, 1928. Serial No. 26,933. Term of patent 3½ years.



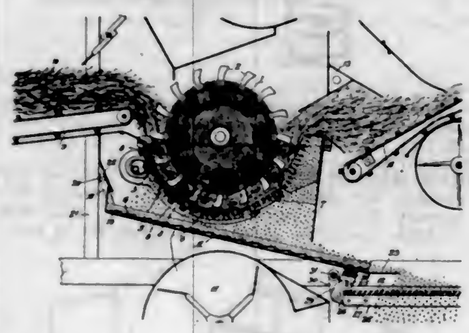
The ornamental design for a textile fabric as shown.

PATENTS



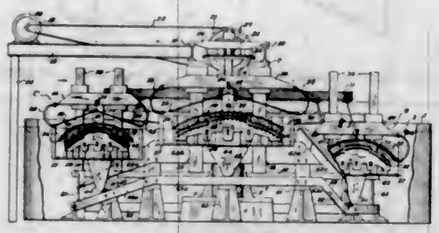
GRANTED SEPTEMBER 4, 1928.

1,682,731. BUMPER-ACTUATED CONTROL MECHANISM. JOHN A. AUSTIN, San Francisco, Calif., assignor, by direct and mesne assignments, of two-thirds to Ernest A. Seyler, Oakland, Calif. Filed Apr. 11, 1927. Serial No. 182,689. 2 Claims. (Cl. 180—83.)



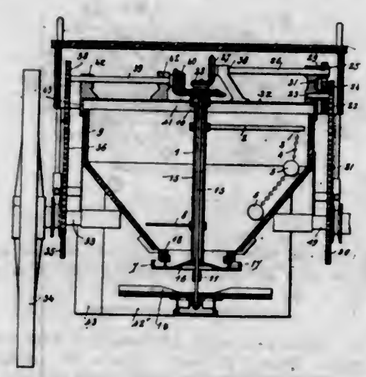
1. In combination with a motor driven vehicle having the motor thereof controlled by an electric circuit, a bumper disposable along a side of the vehicle, a second bumper disposable horizontally outwardly of said first bumper and provided with inwardly extending members at spaced points therealong, brackets mounted on said first bumper and provided with guideways arranged to slidably receive said members for longitudinal reciprocation therein, yieldable means operative to normally position said second bumper in an outer position, a shaft carried on said brackets and provided with crank arms so related to said members that an inward movement of either of the members will independently effect a rotative displacement thereof, a switch in said circuit arranged to be manually disposed to permit the operation of said motor to drive said vehicle, and means operative upon a rotative displacement of said shaft to dispose said switch in an inoperative position.

1,682,732. STEP ATTACHMENT FOR STOOLS. CLEMENT E. BEARD, Columbiana, Ohio. Filed Mar. 20, 1926. Serial No. 96,116. 7 Claims. (Cl. 228—30.)



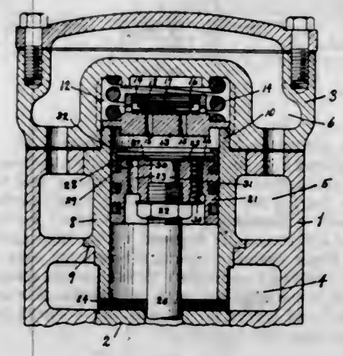
2. The combination with a stool comprising spaced-apart and substantially perpendicular angle-iron legs, of two pairs of spaced-apart angle-iron supports pivoted at their inner ends to said spaced-apart legs, steps mounted on said angle-iron supports, and upright spaced-apart legs pivoted to said angle-iron supports and adapted when extended to rest parallel with the angle iron legs of the stool.

1,682,733. SHAKER MECHANISM IN AGRICULTURAL DEVICES. JAMES T. ASHTON, Battle Creek, Mich., assignor to Nichols & Shepard Company, Battle Creek, Mich., a Corporation of Michigan. Filed Feb. 17, 1926. Serial No. 88,733. 8 Claims. (Cl. 130—24.)



2. In a shaker mechanism for agricultural separating means, connecting means for connecting a pan to a shoe and comprising a bracket secured to said pan, a bracket secured to said shoe, means for pivotally connecting said brackets together, and oscillating means pivotally connected to one of said brackets for oscillating the brackets and said pan and shoe.

1,682,734. SPRING FORMING AND TEMPERING MACHINE. JOHN F. BEANS and BERNARD L. LE ROY, Massillon, Ohio. Filed Sept. 2, 1927. Serial No. 217,144. 14 Claims. (Cl. 266—6.)



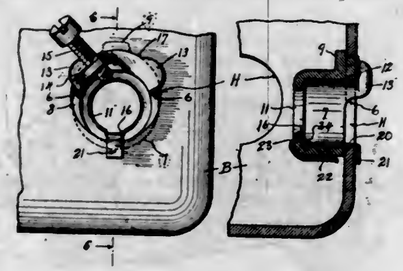
1. A cambering machine including a tempering bath, a rotatable frame mounted above said tempering bath, a series of independently movable upper and lower heads carried by said frame, a cam track in said tempering bath and means upon the heads, cooperating with said track for raising each upper and lower head from the bath and separating the heads at a predetermined point, and for clamping each upper and lower head upon a heated metal blank and returning the heads in clamped position to the bath.

1,682,735. SEED AND GRAIN DISTRIBUTOR. RENÉ BERGERIOUX, Reuilly, France. Filed Apr. 7, 1926. Serial No. 100,460, and in France Oct. 13, 1925. 2 Claims. (Cl. 259—35.)

1. In a machine for stirring and distributing material in the form of fertilizer, grains and powder, a container, a plurality of shafts extending through said container, means for driving said shafts independently of each other, a projector operated by one of said shafts, a distributor operated by the other shaft, and a stirrer in said container simultaneously actuated by the same shaft which operates said distributor.

1,682,736. COMPRESSOR PISTON. HENRY J. BERRY, Detroit, Mich., assignor of one-third to Carl W. Floss, Detroit, Mich. Filed Mar. 5, 1927. Serial No. 173,081. 7 Claims. (Cl. 230—221.)

1. The combination of a piston, formed with circular valve seats, a disk valve on said seats, and circular means to limit the movements of said valve and contacting therewith, the diameters of the lines of contact between said limiting means and of the valve seat nearest its diameter being unequal for the purpose set forth.

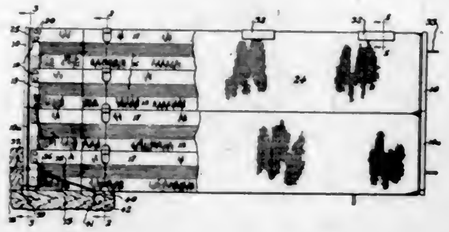


1,682,737. CABLE HANGER. JASPER BLACKBURN, Webster Groves, Mo. Filed Oct. 17, 1925. Serial No. 62,980. 1 Claim. (Cl. 248—33.)

A cable hanger formed of a single strand of spring wire having a hook on one end, a portion integrally formed with said hook and extending under and contacting with the underneath surface of a messenger wire, an arm integral with said portion, a V shaped cable seat formed integral with said arm and adapted to contact with and support a cable at one point of each of two opposite sides of its vertical axis and below its horizontal axis, so as to prevent any lateral movement therein in said seat, a second arm

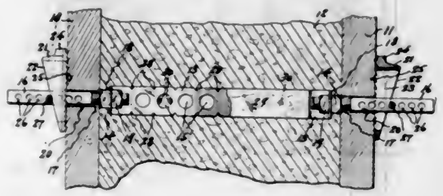
integral with said seat, said arm diverging from the first mentioned arm and extending in an opposite direction thereto, and a hook integral with said last mentioned arm, said hook arranged to extend diagonally across the top of the messenger wire when the hanger is in position, whereby creeping of said hanger in either direction is eliminated.

1,682,738. CABLE CONNECTER. STEPHEN N. BUCHANAN, New York, N. Y., assignor to The Thomas & Betts Co., Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 6, 1927. Serial No. 159,438. 11 Claims. (Cl. 247—25.)



10. A connecter comprising a member which is suitable in size to fit into a box hole and which is shaped and formed to leave a portion of the box hole edge exposed to a cable inserted into the box hole and hence the connecter is unsupported by the cable until the latter is inserted, anchorage means formed on the member to engage that box hole edge portion which is opposite the exposed portion, operating means mounted on the member proximate the anchorage means to tighten upon and grip the cable against the exposed box hole edge portion and seat the anchorage means against the box hole edge; a connecter-support spring including parallel arms embracing the member substantially opposite the anchorage and operating means, one arm being longer than the other end and reaching beyond the member and being bent toward the plane of the other arm to form a hook which overlies and engages the exposed-box-hole edge portion thereby supporting the connecter in the box hole preliminary to insertion of the cable, and the longer spring being narrow so as to not cover any appreciable part of the exposed-box-hole-edge portion; and said member being provided with a depression to receive the spring to hold the latter in place.

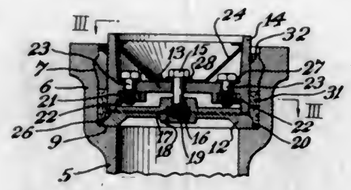
11. A temporary support for a connecter comprising a flat-plate-type spring including a pair of spaced parallel



arms joined by a curved portion which is formed with a shoulder, one arm being longer than the other and having its end bent substantially at right angles toward the plane of the shorter arm to leave a space between the short arm and bent end.

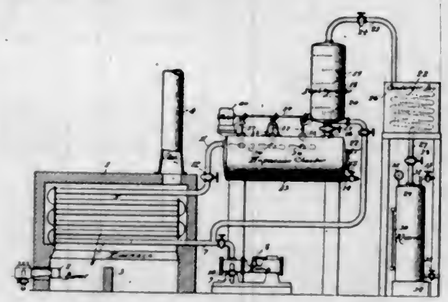
1,682,739. WINDOW VENTILATOR. MARSHALL F. CLAY, Canton, Ohio. Filed Dec. 8, 1927. Serial No. 238,583. 6 Claims. (Cl. 98—99.)

1. A ventilator including upright end pieces, a plurality of slats fixed at one end to each end piece, and ears stamped from the other end portion of each slat and bent over and under the top and bottom edges respectively of corresponding slats upon the other end piece, forming a slidable connection whereby the ventilator may be adjusted in length.



1,682,740. RETAINING MEANS FOR CONCRETE FORMS. SAMUEL S. COLT, Orange, N. J. Filed Oct. 11, 1926. Serial No. 140,740. 19 Claims. (Cl. 25—131.)

2. In combination with form members, adjustable spreader means intermediate said form members to hold the same in predetermined spaced relation, transversely perforate keeper members having threaded shanks at their inner ends, means for detachably securing said shanks with the ends of said spreader means so that said keeper members project exteriorly through said form members, cross-pins engaged through the exterior portions of said keeper members, and retaining wedges engaged intermediate said cross-pins and said form members.

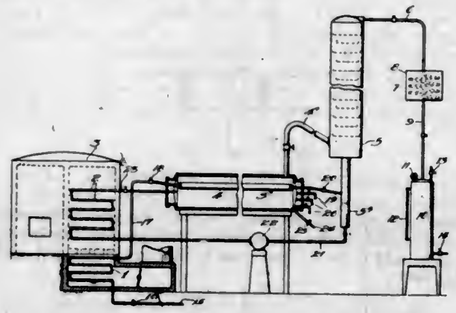


1,682,741. METAL PLUG FOR PIPE JOINTS. EDMUND R. DEARING, Birmingham, Ala. Filed Dec. 27, 1927. Serial No. 242,820. 5 Claims. (Cl. 137—76.)

1. A plug for closing the bell end of a pipe having an internal annular shoulder, comprising a disk member seated on the shoulder, a cylindrical member normally positioned adjacent the disk member toward the outer end of the bell, a transverse member extending across the cylindrical member and having a plurality of openings carrying internally threaded members to coact with forcing screws to separate the cylindrical member and the disk member when desired, and a metallic ring of joint

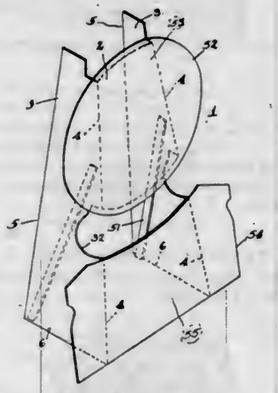
forming material between the cylindrical member and the wall of the pipe and tightly engaging said member and said wall.

1,682,742. PROCESS AND APPARATUS FOR CRACKING OIL. GUSTAV EGLOFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Dec. 31, 1920, Serial No. 434,187. Renewed Jan. 13, 1928. 3 Claims. (Cl. 196—58.)



3. An apparatus for treating hydrocarbon oil, comprising a heating coil, an expansion chamber, means connecting the said coil to said expansion chamber, said expansion chamber having an oil inlet and a vapor outlet, a dephlegmator communicating with the vapor outlet, a plurality of agitating fans disposed within the upper portion of said vapor chamber, means for rotating said agitating fans, a condenser connected to said dephlegmator, a receiver in communication with the discharge side of said condenser and means for maintaining a superatmospheric pressure upon the apparatus.

1,682,743. HALOGEN TREATMENT OF OIL SHALE. GUSTAV EGLOFF, Independence, Kans., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Jan. 14, 1921, Serial No. 437,138. Renewed May 17, 1927. 4 Claims. (Cl. 23—94.)

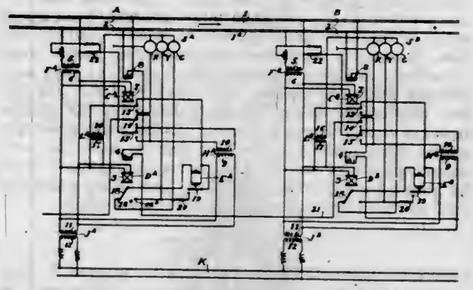


1. A process of treating oil shale having an aluminum content, consisting in introducing the shale to a still, in maintaining the shale in a constant state of motion while in said still by a rotary movement of the still, in subjecting the shale to a distillation heat by directly impinging thereon the heating gases, and in introducing to the still during the distillation of the shale chlorine gas to unite the aluminum content of the shale to form aluminum chloride.

1,682,744. PROCESS AND APPARATUS FOR TREATING PETROLEUM OIL. GUSTAV EGLOFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Jan. 30, 1923. Serial No. 615,941. Renewed Jan. 26, 1928. 8 Claims. (Cl. 196—48.)

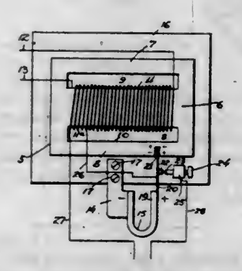
2. A process of treating hydrocarbon oil, consisting in heating the oil to a conversion temperature, in maintaining the oil in a shallow body in a conversion stage, in recycling the unvaporized portions from said shallow body for retreatment under higher temperature conditions than the initial treatment, in passing the recycled heated oil to said conversion stage and in maintaining it in a separate body therein, in dephlegmating the vapors issuing from both of said oil bodies, in condensing the resulting vapors and in collecting the resulting distillate.

1,682,745. DISPLAY DEVICE FOR TIRES AND THE LIKE. JAMES E. FERGUSON, Cleveland, and HENRY L. MOONEY, East Cleveland, Ohio, assignors to The Lake Lithograph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 10, 1923. Serial No. 679,762. 2 Claims. (Cl. 211—24.)



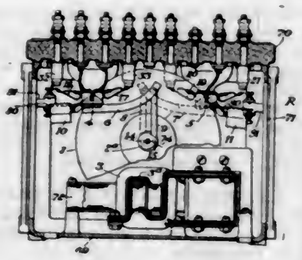
1. In an article of the character described, the combination of a standard comprising a central panel and wing panels foldable thereon, said standard being provided across its lower central portion with an arc-shaped aperture extending entirely across said central panel and having its ends located in said wing panels, said aperture providing a substantially horizontal recess across said standard when said wing panels are disposed at rearwardly extending angles to said central panel, a cutout portion provided at the top of said panel, the top edges of the standard at said cutout portion and at the lower side of said transverse aperture providing seats for supporting an article of merchandise.

1,682,746. TRAIN RETARDER. JAMES E. FINNESSY, Pittsburgh, Pa. Filed Jan. 28, 1928. Serial No. 250,154. 10 Claims. (Cl. 188—250.)



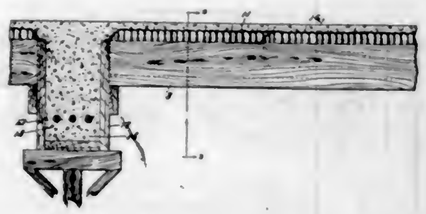
5. A train retarder shoe comprising a metallic backing member having a seating face and associated flanges, lugs on said seating face, a facing of rubberoid material having in the under region thereof indentations arranged to engage the lugs on the seating face, and a detachable side member arranged to be attached to the remainder of the backing member after attachment of the rubberoid facing.

1,682,747. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. CHARLES W. FAILOR, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 22, 1926. Serial No. 143,404. 8 Claims. (Cl. 246—34.)



1. In combination, a section of railway track, a loop circuit for said section including the track rails in multiple and a winding of a line relay, and a checking relay and a signal controlled jointly by said line relay.

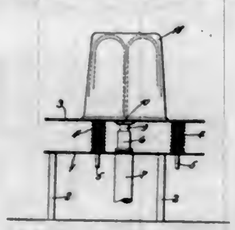
1,682,748. RECTIFYING TRANSFORMER. CHARLES FAYER, Flushing, and FREDERICK H. WAPPLER, Elmhurst, N. Y., assignors to Wappler Electric Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed July 27, 1922. Serial No. 578,017. 3 Claims. (Cl. 175—365.)



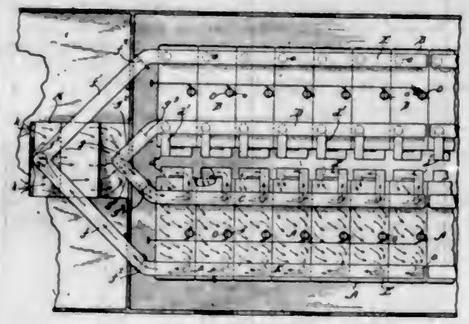
1. A device of the character described comprising a closed core made of magnetic material and provided with a slot, a winding mounted upon said core for energizing the same periodically, a spring armature extending into said slot and therein movable by magnetic action of said core, contact mechanism connected with said spring armature and controllable by movements thereof, connections from said winding to said contact mechanism, and means for energizing said winding and said contact mechanism.

1,682,749. ELECTRICAL RELAY. ROBERT M. GILSON, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Jan. 8, 1923. Serial No. 611,275. 19 Claims. (Cl. 200—91.)

1. A relay comprising two rocker arms each biased to one position, an operating member pivotally mounted to swing in opposite directions from a middle position, two links operatively connected with said two rocker arms respectively and each provided with a slot, two pins moving said operating member and projecting into said two slots respectively and so arranged that when the member moves in either direction from its middle position one pin or the other pulls its associated link to move the associated rocker arm in opposition to its biasing force while the remaining pin slides idly in the slot of its associated link, and contacts controlled by said rocker arms.



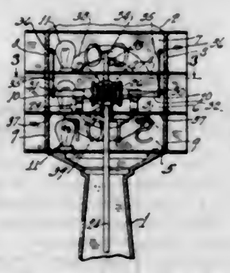
1,682,750. CONCRETE-FLOOR MOLD. WALTER S. HALDEMAN, Chicago, Ill., assignor, by mesne assignments, to The Berger Manufacturing Company, Canton, Ohio, a Corporation of Ohio. Filed Feb. 10, 1922. Serial No. 535,586. 2 Claims. (Cl. 25—131.5.)



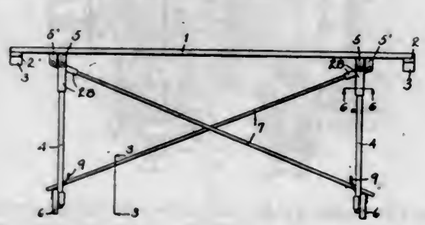
1. A mold for concrete floor joist and the like made of soffit and side planks, and flat-arched sheet-metal core plates for a concrete slab spanning the space between the side planks of adjacent joist molds, each core plate having a transverse depending web on one end overlapped by the opposite end of an adjoining plate.

1,682,751. METHOD AND APPARATUS FOR APPLYING COATING TO THE INSIDE OF PAINT BUCKETS. FRANK W. A. HALLERMAN, St. Louis, Mo., assignor to National Lead Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 18, 1924. Serial No. 693,513. 2 Claims. (Cl. 91—44.)

1. An apparatus for coating the interiors of metal paint buckets with oil, comprising, a support, spring members mounted on the top thereof, a table surface mounted on said springs adapted to position an inverted bucket, and depressible thereagainst by said bucket, a nozzle connected to receive oil from a source of oil supplied under pressure, and attached to said table surface at a depressed portion thereof, for movement therewith and arranged to direct the oil against the bottom of the inverted bucket so as to flow along the side walls thereof, and drain on said table surface, openings through said surface to permit drainage therethrough, and a valve rigidly connected to said nozzle and to said table for operation by movement of said nozzle and table.

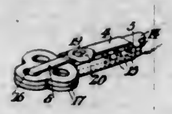


1,682,752. METHOD OF CONDITIONING COATED MATERIALS. GORDON D. HARRIS, Freeport, N. Y., assignor to The Industrial Dryer Corporation, Stamford, Conn., a Corporation of Connecticut. Filed Jan. 27, 1925. Serial No. 5,036. 11 Claims. (Cl. 34—39.)



1. In the art of conditioning coated materials, the process which consists in circulating into contact with the coated surfaces an oxidizing atmosphere conditioned by the presence therein of volatile constituents emanating from such coatings, and thereafter flowing fresh atmospheric air conditioned as to its moisture content into contact with such coated surfaces.

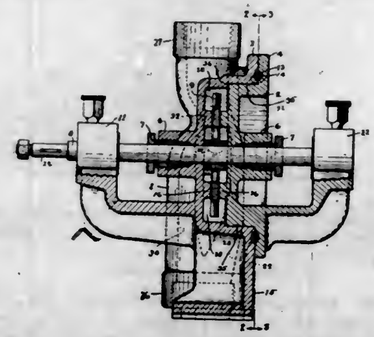
1,682,753. TRAFFIC SIGNAL. GUSTAV L. HARRIS, St. Louis, Mo. Filed Nov. 2, 1925. Serial No. 66,236. 1 Claim. (Cl. 177—337.)



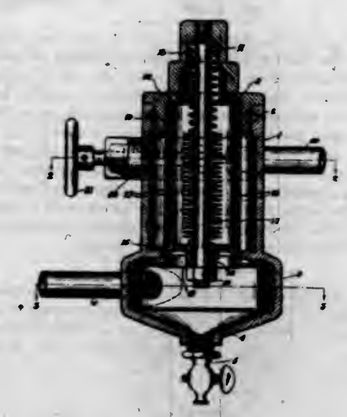
In a traffic-signal, in combination, a housing, transverse partitions within the housing dividing the housing into a plurality of superposed compartments, said partitions being slotted for communication one with another, traffic indications upon an end wall of said compartments, electrical means including a rotating contact-drum for illuminating said indications in sequential periods of predetermined duration, an indicator having its axis of rotation located within the central compartment and adapted for travel in a circular path consecutively through said communicating slots and over the traffic indicating end walls of all said compartments, and means comprising shafts and gearing intermediate the indicator and the drum for effecting synchronized rotary movement of the indicator with the rotary illuminating movement of the drum for visually signalling the effective duration and gradual expiration of the respective periods.

1,682,754. FOLDING TABLE. HENRY L. HASKELL, Ludington, Mich., assignor to The Carrom Company, Ludington, Mich. Filed Sept. 18, 1923, Serial No. 663,446. Renewed June 9, 1928. 12 Claims. (Cl. 45—11.)

12. In a folding table, the combination with a top member, pairs of legs pivotally mounted on said top member to collapse upon the underside thereof, cross members at the lower ends of said legs, braces pivotally mounted on said top member to collapse between the pairs of legs against the underside of the top member, and keepers mounted on said cross members to coact with said braces, said braces having sliding engagement with said keepers and being provided with catch members adapted to automatically engage said keepers when the legs are in erected position.



1,682,755. KEY ENVELOPE. WILLIAM H. HOLLAR, Jr., Drexel Hill, and WALTER G. UHLMAN, Philadelphia, Pa. Filed Aug. 3, 1926. Serial No. 126,813. 9 Claims. (Cl. 70—16.)

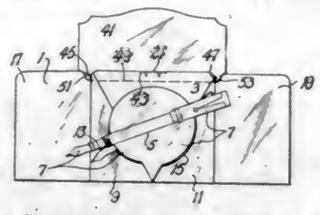


1. An envelope formed of a primarily flat sheet of flexible material adapted to be wrapped around a key and conceal the bitting thereof, and having a member, in unitary relation therewith, adapted to extend in a hole in said key.

1,682,756. ROTARY-PUMP CASING. ROBERT E. L. HOLMES, Davenport, Iowa, assignor to Westco-Chippewa Pump Company, Davenport, Iowa, a Corporation of Delaware. Filed Sept. 11, 1925. Serial No. 55,704. 4 Claims. (Cl. 103—96.)

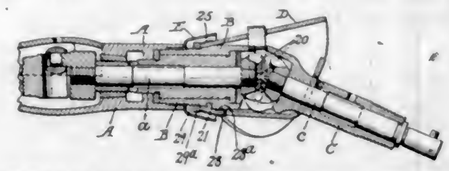
1. A rotary pump comprising a rotor having a web portion and a bucket portion, a casing enclosing said rotor and having portions closely cooperating with the web of said rotor to define a circumferential pressure developing channel wherein liquid is engaged by the bucket portion of said rotor, said casing having a peripheral connecting stub connecting with a plurality of passages extending therefrom and opening laterally into opposite sides of the pressure developing channel, and an additional passage extending between the first named passageways to a suitable peripheral connecting stub, said casing comprising a main portion carrying both of said connecting stubs and a supplemental portion removable independently of said connecting stubs and provided with a channel connecting one of the inlet passages and said pressure developing channel.

1,682,757. OIL SEPARATOR. ROBERT C. HOPKINS, Alliance, Ohio. Filed July 27, 1925. Serial No. 46,378. 4 Claims. (Cl. 210—165.)



1. An oil separator including a cylindric tank an oil inlet pipe entering the lower portion of the tank at a tangent thereto, a perforate cylinder suspended within the tank, an axial rod within the cylinder provided with a shoulder at its lower end, a piston slidable upon the rod and having a beveled edge for contact with the interior of the cylinder, and an oil outlet pipe communicating with the upper portion of the tank at a tangent thereto.

1,682,758. DISPLAY DEVICE. GEORGE HORNECKER, Elmhurst, N. Y., assignor, by mesne assignments, to Conwell Graphic Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 21, 1924. Serial No. 727,155. 3 Claims. (Cl. 40—149.)

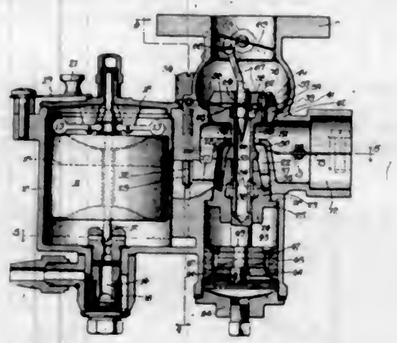


2. An advertising device comprising a one piece support and a one piece wing, said support having score lines thereon extending from top to bottom and other lines comprising scores and incisions, said last-named lines extending from top to bottom, all of said lines being formed and cooperating to divide the support into five sections which may be folded with respect to one another in such a manner as to slant the central section and hold the extreme end sec-

tions in another position, the central section and extreme sections being joined by intermediate sections; said wing comprising a separate section, means for interlocking said

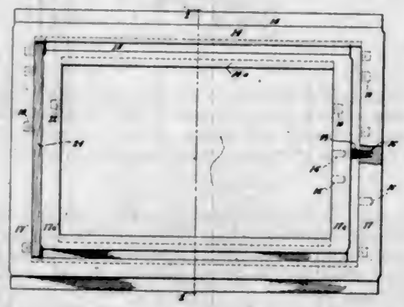
separate section with the supporting member and means for holding the aforesaid extreme end sections in predetermined positions.

1,682,759. HAND GUARD FOR SHEEP SHEARS. HENRY KOCOUREK, Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 10, 1927. Serial No. 174,156. 7 Claims. (Cl. 30—1.)



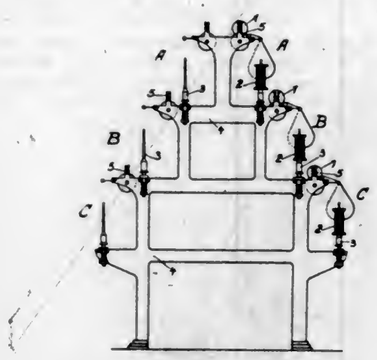
1. In a power-driven sheep shear and the like tool having a hand-grasped casing for the cutter-actuating means, a journal bearing member for the inleading shaft of said means swiveled to said hand-grasped casing, a journal bearing member for an antecedent shaft member hingedly joined to said swiveled journal bearing member; a sheath for the hinge joint and power-communicating means thereat between said antecedent shaft and cutter-actuating shaft, said sheath being carried by said swiveled journal bearing member in the swiveling movement of the latter, and a ferrule for covering the forward end of said sheath, mounted rigidly with respect to the hand-grasped casing.

1,682,760. METHOD OF TREATING TREES. JAMES E. LAFFIN, Berlin, N. H., assignor, by mesne assignments, to Chemicolor Wood Preserving Co., a Corporation of Delaware. Filed Aug. 26, 1925. Serial No. 52,628. 10 Claims. (Cl. 47—58.)



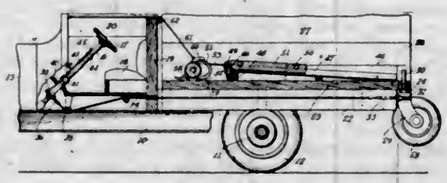
1. A method of treating living trees, which comprises forming in the trunk staggered chambers extending transversely thereof and terminating substantially at the edge of the heartwood, and supplying such chambers with an impregnating material adapted to be taken into the capillary system of the tree.

1,682,761. CARBURETOR. TORBJORN LINGA, Waukegan, Ill., assignor to The Linga Company, Waukegan, Ill., a Corporation of Illinois. Filed Aug. 22, 1925. Serial No. 51,761. 1 Claim. (Cl. 261—44.)



In a carburetor having an air-inlet port, the combination of a vertically-slidable valve co-operating with said air-inlet port and adapted to be raised to open said port by the suction present in the carburetor, said valve having an upright tubular stem, the passage through which terminates in a discharge orifice in a first chamber above said air-inlet port, means to retard the opening action of said valve, said carburetor having a second chamber to which fuel and air may be delivered and which connects with the passage through said tubular stem, a throttle-valve for the carburetor above said first chamber, a valve controlling the passage through said stem, and mechanical means connecting said throttle-valve and passage-valve, whereby opening of the throttle-valve lifts said passage-valve to increase the passage opening controlled thereby.

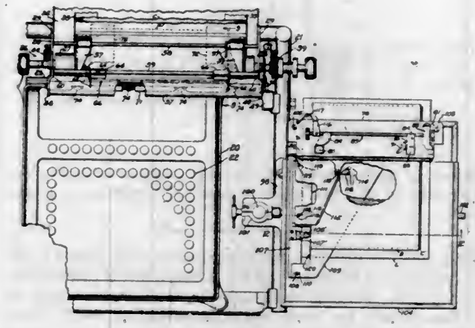
1,682,762. PRINTING-PRESS CHASE. RALPH MCCAHAN, Canton, Ohio. Continuation of application Serial No. 649,768, filed July 5, 1923. This application filed May 12, 1924. Serial No. 712,623. 10 Claims. (Cl. 101—391.)



1. A printing press chase including a side member having an upper bevel on its outer edge, and a larger chase provided with a longitudinal bar detachably secured therein, the smaller chase being located within the larger chase, and the detachable bar of the larger chase having an under bevel on one edge overlapping the upper bevel on the outer edge of the smaller chase side member.

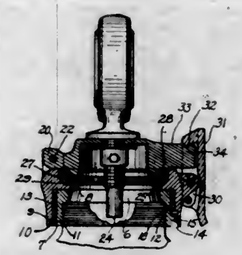
1,682,763. MACHINE FOR SPINNING AND WINDING FILAMENTS. KARL MEYER-GAUS, Barmen, Germany, assignor to the Firm: American Bemberg Corporation, New York, N. Y. Filed June 25, 1927, Serial No. 201,377, and in Germany June 28, 1926. 3 Claims. (Cl. 117—26.)

1. A machine for spinning and winding filaments, comprising stepped rows of spinning spindles and corresponding rows of winding spools located in front of the said spindles and arranged for co-operation with the corresponding spindles of the next lower row of spindles.



1,682,764. TRICK AUTOMOBILE. JOHN D. MOHR, Newark, N. J. Filed Mar. 5, 1927. Serial No. 172,981. 9 Claims. (Cl. 180—1.)

1. A self propelled four wheeled vehicle having a rear axle, a platform, a dirigible fifth wheel pivotally carried centrally at the rear of said platform on a horizontal axis, a shiftable weight, and means for moving said weight to cause the vehicle to tilt upon the rear axle whereby said fifth wheel is brought into contact with the surface and the forward wheels cleared therefrom.

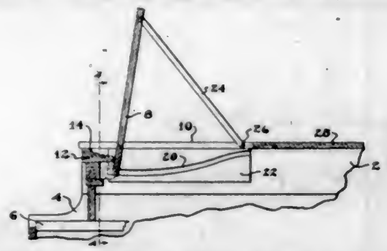


1,682,765. COLLATING EQUIPMENT FOR ADDING MACHINES AND THE LIKE. ROBERT L. MULLER, Detroit, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a Corporation of Michigan. Filed May 16, 1925. Serial No. 30,712. 30 Claims. (Cl. 197—127.)

1. In a machine of the class described, the combination of a platen, a feed roll cooperating with the platen, the platen being movable out of and into cooperative relation with the feed roll, means independent of the platen for retaining superimposed work sheets in collated condition between the platen and feed roll when the plate is out of cooperative relation with the feed roll, and means for

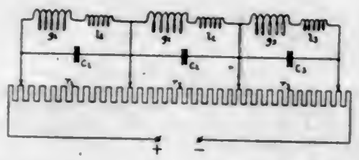
disabling said retaining means as an incident to the movement of the platen into cooperative relation with the feed roll.

1,682,766. RADIATOR CAP. WILLIAM G. NEWTON, East Orange, N. J. Filed Feb. 12, 1925. Serial No. 8,659. 5 Claims. (Cl. 220—24.)



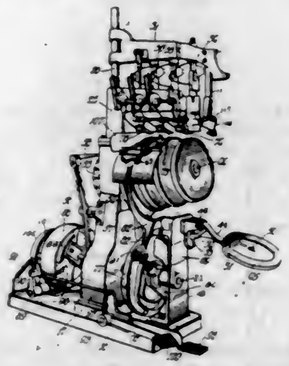
1. A radiator cap comprising a body portion, an insert fitting in said body portion for engaging the neck of a radiator, and a helical spring interposed between said body portion and said insert, said spring engaging and carrying the insert along with it when the body portion is rotated in one direction, and releasing said insert when rotated in the opposite direction.

1,682,767. PIANO CASE. JOSEPH JOHN OPELT, Guttenberg, N. J. Filed Nov. 23, 1926. Serial No. 150,227. 5 Claims. (Cl. 84—180.)



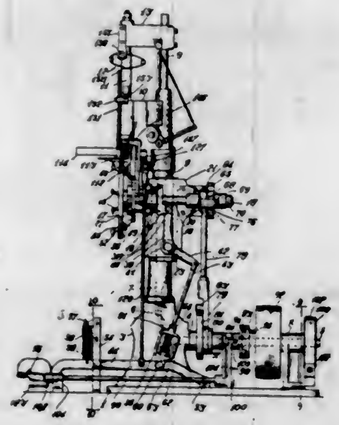
4. A case for grand pianos having, in combination, a side wall having its end portions projecting forwardly, a bar extending between said forward end portions, a top cover comprising a rear section having its forward edge spaced a distance back of said bar, and a front section arranged in the plane of said rear section for closing

the space between the front edge of said rear section and said bar, and devices for guiding said front section to



permit it to be moved into upright position adjacent the rear side of said bar so as to form with said bar a music rack..

1,682,768. CIRCUIT ARRANGEMENT FOR HIGH-FREQUENCY SYSTEMS WITH FREQUENCY AMPLIFICATION. MENDEL OSNOS, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation. Filed Feb. 20, 1923, Serial No. 620,220, and in Germany Feb. 22, 1922. 2 Claims. (Cl. 172—281.)



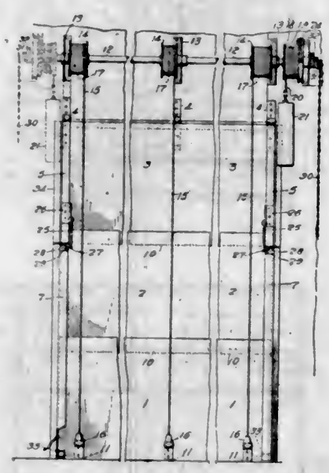
1. In combination, a source of energy, a potential distributor connected across said source, load circuits in series with each other and in parallel with the potential distributor, each load circuit comprising a load and a choke coil, taps extending from the ends of the load circuits to said distributor, whereby the current from said source thru said circuits may be separately adjusted, and condensers connected across said load circuits.

1,682,769. APPARATUS FOR MAKING BASKETS AND THE LIKE. ALBERT H. SCHMIDTKE, St. Joseph, Mich., assignor to St. Joseph Iron Works, St. Joseph, Mich., a Corporation of Michigan. Filed Aug. 1, 1925. Serial No. 47,429. 8 Claims. (Cl. 1—13.6.)

6. In a machine of the class described, the combination of a form, means for imparting a step by step rotation to the form, means for feeding panels edgewise to the form transversely of the axis thereof, a panel engaging stop extending transversely across one end of the form and in cooperative relation with the panel feeding means, panel stitching means cooperating with the form, and means working at the opposite end of the form and controlled and actuated by the panel stitching means to impact ends of the panels on the form against the stop to align the panel ends.

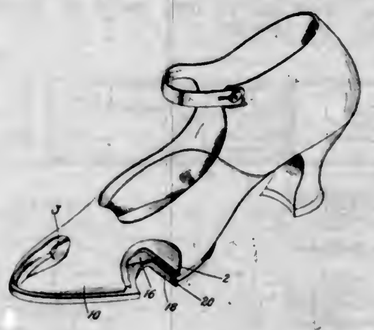
1,682,770. BASKET-MAKING MACHINE. ALBERT H. SCHMIDTKE, St. Joseph, Mich., assignor to St. Joseph Iron Works, St. Joseph, Mich., a Corporation of Michigan. Filed Feb. 6, 1926. Serial No. 86,386. 24 Claims. (Cl. 1—13.6.)

19. In a machine of the class described, the combination of a rotatable support, a fastener applying device movable to and from the periphery of the support, a work holder for supporting a panel between the periphery of the rotatable support and the fastener applying device, a pair of stops for engaging respectively the end and lateral edges of the panel to position the latter relatively to the support and fastener applying device, and a member movable transversely of the work holder toward the lateral edge engaging stop to shift the panel against the latter stop.



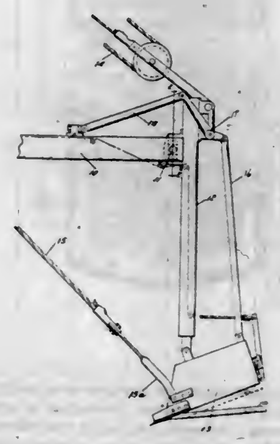
1,682,771. SEPARABLE BUTTON. JOHN E. BUTLER, Hoosick Falls, N. Y. Filed Mar. 28, 1928. Serial No. 265,407. 3 Claims. (Cl. 24—105.)

1. In a separable button, a base, a shank formed on one face of the base and formed with front threads for its entire length, and over which a piece of fabric is adapted to be disposed, a split resilient ring encircling the fabric covered shank at the juncture of the shank with the base, a head provided with a threaded socket in the inner side thereof.



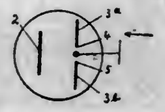
and an internally threaded collar formed on the inner side of the head and extending outwardly therefrom around the socket, the fabric covered threaded shank being removably secured in the socket and collar.

1,682,772. SLIDING SWING DOOR. JOHN CAHILL, Norfolk, Va. Filed July 17, 1924. Serial No. 726,495. 10 Claims. (Cl. 20—19.)



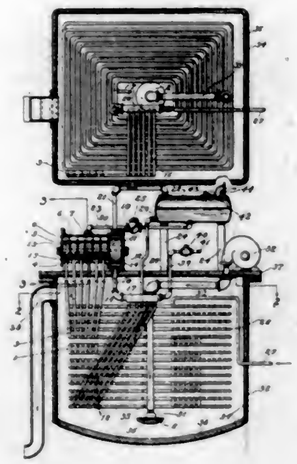
1. A door having an upper section mounted for swinging movement, a lower section mounted for relative sliding movement guides for compelling a sliding movement of the lower section into coincidence with the upper section before permitting swinging movement of such upper section, and lifting cables connected to the lower section and acting directly through such connection alone to first slide the lower section and then swing both sections.

1,682,773. METHOD OF MAKING SHOES. JAMES CAVANAGH, Boston, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 17, 1921. Serial No. 508,305. 2 Claims. (Cl. 12—142.)



1. That improvement in methods of making shoes which consists in splitting the edge of an innersole to form a flexible margin of reduced thickness and a flap, trimming the margin of the flap to reduce its width, turning up said reduced flap at right angles to the sole to form an upper attaching lip, lasting a shoe upper to said inner sole and securing it permanently to said lip, attaching an outsole to the upper by fastenings which pass through the outsole and upper and do not penetrate the innersole, and covering said fastenings with the flexible margin of the innersole.

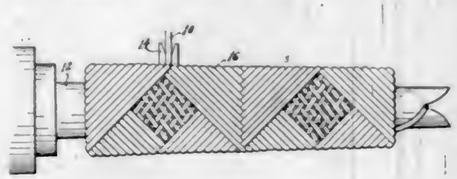
1,682,774. EXCAVATOR. BIRD C. CLUTTER, Akron, Ohio, assignor, by mesne assignments, to Clutter-Wagner, Inc., a Corporation of Ohio. Filed Mar. 22, 1927. Serial No. 177,296. 1 Claim. (Cl. 214—138.)



An excavator comprising a boom, and a stick pivoted on the boom, the pivot for the stick on the boom comprising a pin on the boom, a bearing member journaled on the pin and formed with transversely curved bearing surfaces, a box bearing member secured to the stick and having surfaces cooperating with said curved bearing surfaces on said first bearing member and extensions on the first bearing member engaging in slots in the box-bearing member for retaining the bearing members in proper relationship and limiting relative lateral movement of the boom and stick.

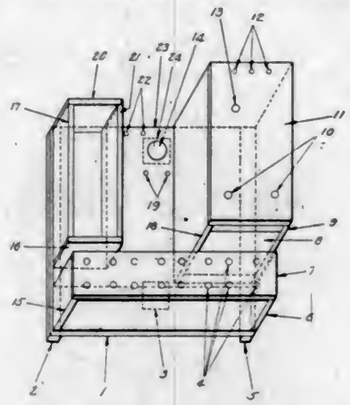
1,682,775. THERMIONIC TUBE. HENNY COHN, Charlottenburg, near Berlin, Germany, assignor to the Firm Dr. Erich F. Huth Ges. m. b. H., Berlin, Germany. Filed July 18, 1924, Serial No. 726,784, and in Germany Sept. 18, 1923. 4 Claims. (Cl. 250—27.5.)

1. A thermionic device comprising a flat anode, a filament and a controlling element having a broad flat surface and a narrow edge, said controlling element being so arranged as to present said narrow edge toward said filament, and the combined areas of the broad flat surface of said controlling element and the space from said filament to said controlling element being larger than the surface area of said flat anode.

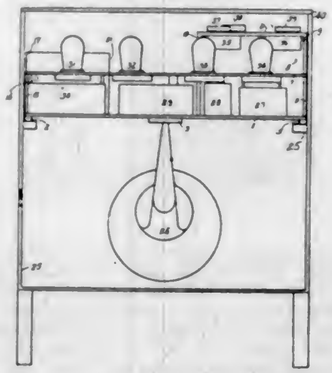


1,682,776. CIRCULATING SYSTEM FOR STEAM GENERATORS. SILAS F. CRABB, Pittsburgh, Pa., assignor to James M. Selden, Pittsburgh, Pa. Filed Jan. 21, 1921. Serial No. 439,019. 21 Claims. (Cl. 122—406.)

1. In a steam generator, the method of causing positive circulation within the generator consisting in creating a difference in pressure between portions of the generator and causing such differential pressure to operate mechanical water forcing means for supplying water from the portion of lower pressure to the portion of higher pressure.

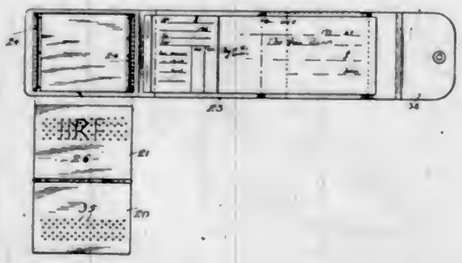


15. The combination with a steam generating member including a plurality of water tubes, having water intake ends and steam discharge ends, water feed pumps having their deliveries respectively connected to the water intake ends of the tubes, a steam receiving header with which the steam discharge ends of the tubes are connected, and a motor having an inlet for receiving the steam from the header, and operated thereby, said motor being connected to all the pumps for operating the same, the outlet from the motor constituting the steam supply outlet from the steam generating member.

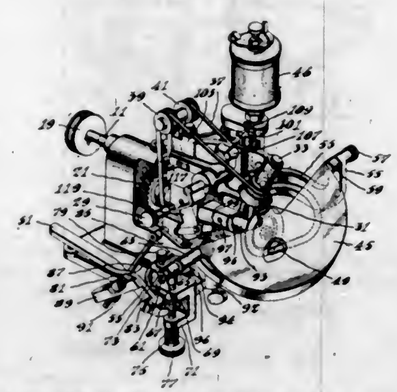


1,682,777. TWINE PACKAGE AND PROCESS FOR ITS MANUFACTURE. JOHN H. DAMON, Plymouth, Mass., assignor to Plymouth Cordage Company, Plymouth, Mass., a Corporation of Massachusetts. Filed Mar. 10, 1927. Serial No. 174,170. 6 Claims. (Cl. 242—161.)

1. A twine cop composed of a core portion of wound twine and a body portion wound thereon; those convolutions which lie parallel and adjacent to each other and which are all in a single layer being laid apart, in said layer in the said core portion of the cop, and being laid compactly together in the said body portion.

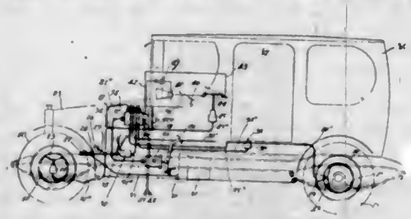


1,682,778. RADIOCHASSIS. PHILIP E. EDELMAN, Chicago, Ill. Original application filed June 5, 1922, Serial No. 566,132. Divided and this application filed Nov. 28, 1927. Serial No. 236,389. 6 Claims. (Cl. 312—7.)



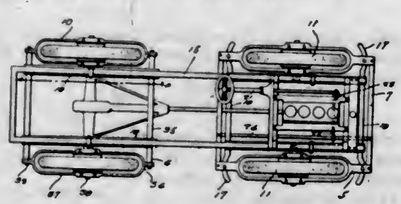
1. In a radio apparatus chassis, a supporting base, a mounting plate for apparatus parts supported on said base, and a vacuum tube supporting strip extending linearly along said base and supported thereby.

1,682,779. CHARACTERIZED CHECK PROTECTOR. HARRY R. FIELDS, Orlando, Fla., assignor to The E. T. Burrowes Company, Portland, Me., a Corporation of Maine. Filed Apr. 10, 1926. Serial No. 101,048. 6 Claims. (Cl. 101—26.)



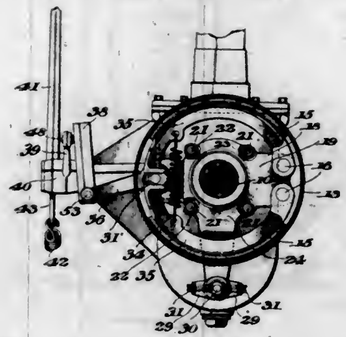
5. A characterization check protector comprising a bed plate provided with apertures and a cooperating cover plate having individualizing means for forming differing perforations at varying regular positions.

1,682,780. TRIMMING MACHINE. SIDNEY J. FINN, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 27, 1925, Serial No. 12,052. Renewed Feb. 2, 1928. 15 Claims. (Cl. 164—60.)



1. A machine of the class described having in combination, trimming mechanism, a work table mounted for angular adjustment to vary the angle of the trimming cut and for bodily adjustment to vary the level at which the work is presented to the trimming mechanism, and a single operator-controlled member manipulation of which may be caused to effect both adjustments.

1,682,781. MOTOR-VEHICLE CONTROL SYSTEM. JOHN J. GARDNER, New York, N. Y. Filed Apr. 16, 1926. Serial No. 102,598. 35 Claims. (Cl. 303—6.)



1. In a motor vehicle control system the combination of a movable actuator adapted to deliver the force for operating a plurality of terminal appliances, a controlling selector adapted to be set at will to different positions, a plurality of control devices adapted to be selectively adjusted by the selector, and transmitting connections from the respective control devices to the several terminal appliances through which the latter may be operated in a preselected manner by the movement of the actuator.

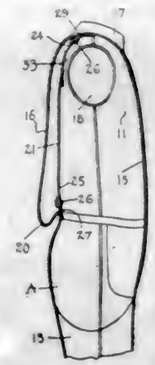
1,682,782. MOTOR VEHICLE. STEPHEN A. GIBSON, Hereford, Ariz. Filed Nov. 21, 1927. Serial No. 234,835. 3 Claims. (Cl. 280—106.5.)

1. In a vehicle of the class described comprising front and rear wheel trucks, each truck including transverse'y and longitudinally disposed truck members, each of said longitudinal members extending at each side of the adjacent vehicle wheel and providing a mounting for the axle of the wheel, and yieldable means interposed between the axles and their associated truck members.

1,682,783. MOTOR-VEHICLE BRAKE. EARL G. GUNN, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed June 30, 1920. Serial No. 393,004. 6 Claims. (Cl. 188—78.)

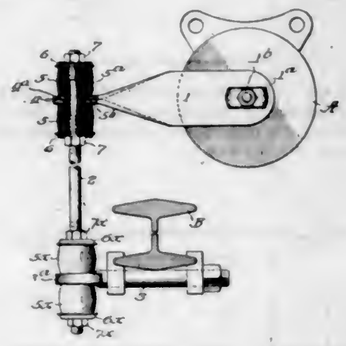
2. Brake mechanism including a brake drum, a supporting member, a bracket having arms forming a bell-crank movably secured to said supporting member, brake shoes adapted to engage the drum and independently pivoted to one arm of the bracket, and means for adjustably moving the other arm of said bracket about the center of said brake drum.

1,682,784. DENTAL DRILLING APPARATUS. TRYGVE GYTHFELDT, Stjordalen, Norway. Filed Nov. 3, 1923, Serial No. 672,667, and in Norway Feb. 20, 1923. 3 Claims. (Cl. 32—10.)



1. In combination, a drill mounted for rotation, a shell concentric with said drill and spaced therefrom, said shell having a concentric aperture in its end, said drill extending through said aperture and means on said shell for attaching vacuum producing means whereby cuttings from the drill will be sucked into the aperture and removed through the shell.

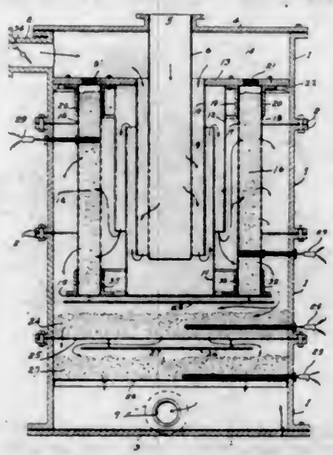
1,682,785. COVERALLS. HARRY C. HANSON, St. Paul, Minn. Filed May 9, 1927. Serial No. 189,885. 1 Claim. (Cl. 2—79.)



A combination outer garment comprising a trouser portion, a coat portion bloused at the back and connected to said trouser portion at the waist line, two upwardly extending tabs secured inside of the garment at the waist line, one being located on one side and one on the opposite side of the medial line of the back of said garment, downwardly extending tabs secured to the inside of the garment at the shoulder portions thereof, said tabs respectively pairing with one of said first tabs, elastic straps, one for

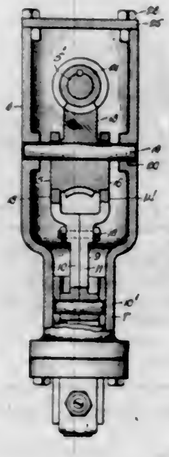
each pair of tabs, the straps having fastening means at the ends thereof and the tabs having fastening means complementing the fastening means of the straps, said straps,

when attached to said tabs, serving to support the back of the trouser portion independently of the back of the coat portion.



1,682,786. CONNECTER FOR SPRING BRAKES: MARK HARRIS, Birmingham, Mich., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Sept. 3, 1925, Serial No. 54,227. Renewed Apr. 14, 1928. 12 Claims. (Cl. 267—9.)

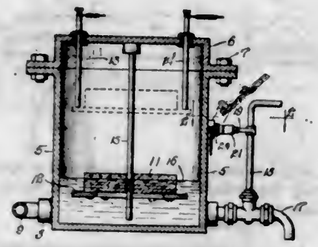
1. In a spring brake device having a load transmitting member and a connecting member, means for articulating said members consisting of an eye on one member through which the other member is inserted, and confining blocks mounted on the inserted member on opposite sides of said eye; said inserted member having freedom of angular movement in said eye, and said confining blocks permitting said angular movement while limiting longitudinal movement of said inserted member.



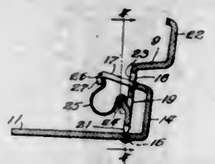
1,682,787. CATALYTIC APPARATUS. ALPHONS O. JAEGER, Pittsburgh, Pa., assignor to The Selden Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Nov. 5, 1926. Serial No. 146,525. 12 Claims. (Cl. 23—288.)

1. A catalytic apparatus comprising a converter, a catalytic chamber therein, an annular catalyst layer in said chamber adjacent to the chamber wall, means for introducing reaction gases into the interior of the catalyst

annulus, and means for permitting said gases to pass through the catalyst layer at approximately right angles to the axis thereof.



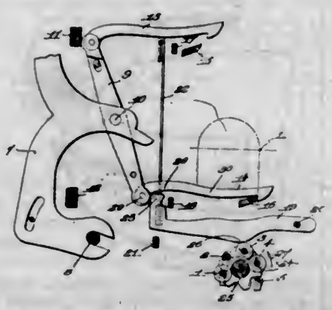
1,682,788. MOTOR AND PUMP. JOHN T. JANETTE, Chicago, Ill. Filed July 30, 1923. Serial No. 654,676. 2 Claims. (Cl. 74—14.)



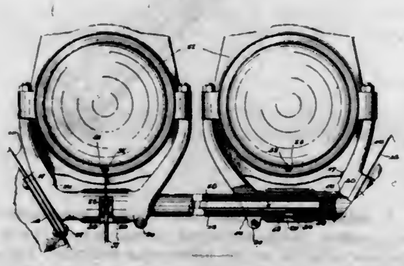
1. The combination of a piston, a gear for actuating said piston, eccentrics on said gear and a two piece eccentric rod connecting the eccentric and piston.

1,682,789. CONTROLLING APPARATUS. JOHN T. JANETTE, Chicago, Ill. Filed July 30, 1923. Serial No. 654,677. 6 Claims. (Cl. 158—42.3.)

6. In an oil burning system of the class described, having an electric circuit controlling the operation thereof, a switch located in said circuit, a safety chamber adapted to receive delivered fuel upon failure of ignition, means adapted to operate said switch and thereby stop the operation of said apparatus when a predetermined amount of fuel has entered the safety chamber, and means for draining said safety chamber operating, when in the draining position to cause the circuit to the oil burning system to be broken.

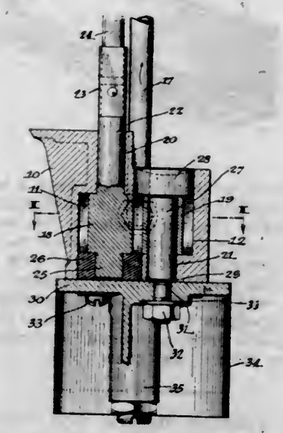


1,682,790. ELECTRICAL CONTACT. JOHN T. JANETTE, Chicago, Ill. Filed Feb. 26, 1925. Serial No. 11,782. 5 Claims. (Cl. 200—8.)



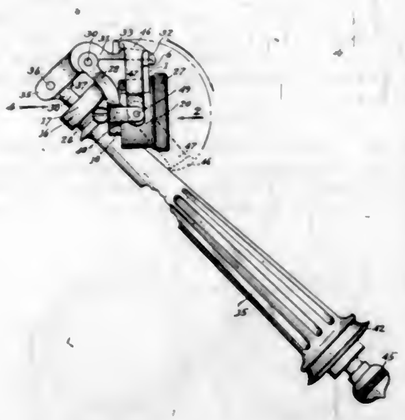
4. An electrical contact comprising a strip of metal having a main straight branch, a second branch bent at substantially right angles thereto, and a third branch which is bent back toward the main branch, the latter branch being cut away at the sides to form a tongue with shoulders at one end thereof, said main branch having grooves in the upper surface thereof, a movable member comprising an arm having a bifurcated lower end engaging with said grooves to form a pivot, and having a hole for receiving the tongue, said arm also having an outwardly projecting contact portion, a lip formed integrally with the movable member adjacent to the pivot, a substantially U-shaped spring formed of sheet metal, having one end engaging with said lip and having a slot in the opposite end for engagement with the tongue, the end of the tongue being bent over the adjacent portion of the spring when the parts are assembled, in order to lock the parts together.

1,682,791. DOBBY FOR LOOMS. JAMES T. MALLOY, Oakland, R. I., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 29, 1927. Serial No. 187,654. 4 Claims. (Cl. 139—71.)



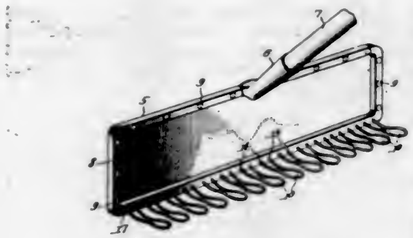
1. A single index dobby for looms having, in combination, harness jacks, dobby levers connected thereto, top and bottom dobby hooks attached to the dobby levers, top and bottom hook actuating knives, dobby fingers pivoted at one end and directly engaging the bottom dobby hooks to positively rnise them, push rods connecting the fingers with the top dobby hooks to positively raise them and a pattern chain having risers and sinkers, said bottom hooks and fingers being so shaped that a top hook may be raised by the lifting of a finger without engagement of the latter with a bottom hook to prevent camming the bottom hook from its knife as the latter moves from its outer to its inner position.

1,682,792. MOTOR VEHICLE. ALFRED MOORHOUSE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 26, 1924. Serial No. 701,942. 5 Claims. (Cl. 240—41.)



1. In a motor vehicle, the combination of a pair of lamps each mounted upon a tubular base, a tubular section connecting the tubular bases, a light projecting device mounted in each lamp, a bearing in each end of the tubular section, a rock shaft mounted in the bearings within the tubular section, levers mounted upon the rock shaft, connections between the levers and the light projecting devices and springs upon the rock shaft between the levers and the bearings.

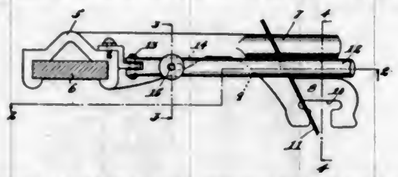
1,682,793. INTERNAL-COMBUSTION ENGINE. ALFRED MOORHOUSE, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 21, 1925. Serial No. 57,529. 10 Claims. (Cl. 103—126.)



1. A gear pump comprising a casing having over-lapping cylindrical bores open at opposite ends, and openings of lesser diameter forming continuations of the bores, intermeshing gears in said bores, one of said gears having a driving stem extending through and bearing in one of said openings, a bearing member for the other end of the gear and means retaining the parts in operable position.

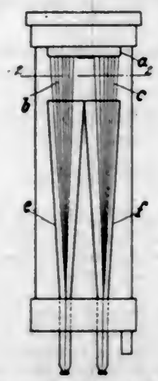
1,682,794. RIBBON SAFETY RAZOR. WILLIAM G. MOORE, Lankershim, Calif. Filed Nov. 11, 1926. Serial No. 147,751. 10 Claims. (Cl. 30—12.)

2. A ribbon safety razor comprising in combination, a handle, a plate rigidly connected thereto, a pair of cup like containers mounted on the plate, each container having a slot, and one being a supply container, a coil of ribbon sharpened on one edge mounted in one of the containers, a guard, means connecting same to the plate, the ribbon passing over the guard and through the slot in the other container, and means to coil the used ribbon in said latter container.



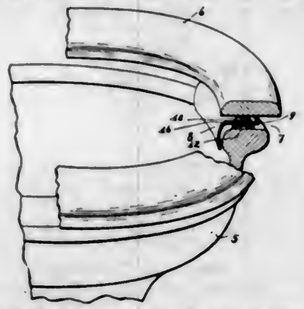
1,682,795. RAKE. ALBERT MORGAN, Indianapolis, Ind. Filed Dec. 20, 1926. Serial No. 155,954. 1 Claim. (Cl. 55—10.)

A rake frame having a frame-like head, a handle at an angle to the frame at one of its longitudinal edges, an apron secured to the frame enclosing the opening in the frame, teeth comprising lengths of metal shaped to form loops constituting the outer ends of the teeth, the ends of the metal being extended through the frame and secured thereto, the said teeth being convex and projecting from the frame approximately at right angles at the side from which the handle projects, the said teeth including means for anchoring them to the frame.



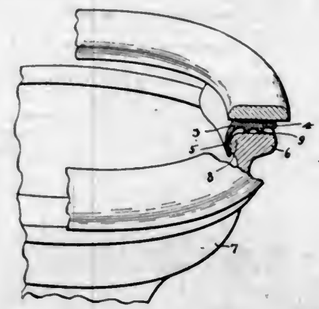
1,682,796. TENSION DEVICE FOR WINDING MACHINES. WALTER E. OLSON, Chicago, Ill. Original application filed Mar. 24, 1924, Serial No. 701,407. Divided and this application filed June 1, 1925. Serial No. 34,031. 1 Claim. (Cl. 242—149.)

A device of the class described comprising a bracket, two adjacent parallel guide members on said bracket and adapted to support a thread running freely on the surface thereof both transversely and longitudinally of said guide members, one of said guide members being formed with a lateral extension provided with a guide notch, a clamping member pivoted to the bracket to swing into and out of



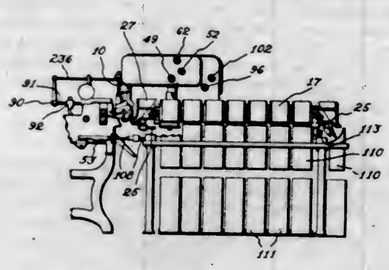
the space between said guide members and a spring yieldingly holding the clamping member in said space, substantially as described.

1,682,797. APPARATUS FOR SPINNING ARTIFICIAL SILK. GUSTAV OTTO, AUGUST HARTMANN, and GOTTHARD BAURIEDEL, Barmen, Germany, assignors, by mesne assignments, to American Bemberg Corporation, a Corporation of Delaware. Filed Mar. 23, 1925, Serial No. 17,811, and in Germany May 30, 1924. 6 Claims. (Cl. 18—8.)



1. A device for spinning artificial silk comprising in combination a nozzle for introducing a viscous spinning fluid into a casing, means for introducing a precipitating fluid into said casing, means for dividing the bundle of filaments coming from said nozzle into a plurality of bundles and means for keeping the divided bundles separate as they go through and pass out of the casing together with the precipitating liquid.

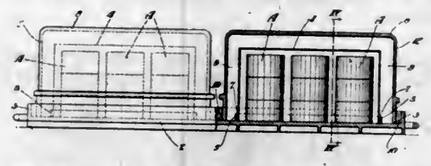
1,682,798. TOILET-BOWL ATTACHMENT. ITHIEL CHARLES RICHARDS, Los Angeles, Calif. Filed Nov. 3, 1927. Serial No. 230,838. 3 Claims. (Cl. 4—237.)



1. In a toilet bowl attachment, an apron shaped to extend from the underside of a toilet seat to within a bowl of a water-closet, and vacuum cups projecting from the underside of the apron adapted to be applied to the top edge of a water-closet bowl.

1,682,799. SANITARY CUSHION APRON. ITHIEL CHARLES RICHARDS, Los Angeles, Calif. Filed Nov. 3, 1927. Serial No. 230,839. 2 Claims. (Cl. 4—237.)

1. In a sanitary cushion apron for a toilet seat and bowl, an apron portion extending from the underside of the toilet seat into the toilet bowl to overlap the space between the seat and the bowl, and a flange portion extending from the apron portion between seat and bowl and including vacuum cups formed on the underside of the flange portion adapted to adhere to the top of the bowl when pressed upon the bowl.

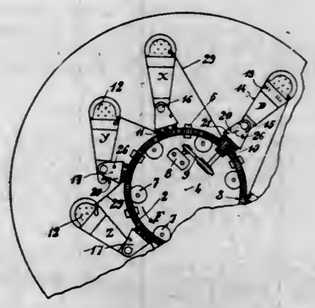


1,682,800. MACHINE FOR OPERATING ON BLANKS. WILLIAM THOMAS BUCKINGHAM ROBERTS, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 13, 1922, Serial No. 543,438, and in Great Britain Mar. 22, 1921. 17 Claims. (Cl. 209—90.)

1. The combination with mechanism for operating upon blanks in accordance with their thicknesses to change a characteristic thereof, of mechanism for distributing the blanks in accordance with their thicknesses as determined by the operating mechanism comprising an endless conveyor and receptacles mounted thereon, and a feeder adapted to receive the blanks one by one from the operating mechanism and deliver them to successive receptacles of the distributing mechanism.

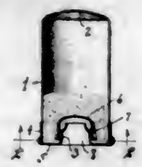
1,682,801. APPARATUS FOR ANNEALING. JAMES E. ROBERTSHAW, Bedford, Ohio, assignor to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed Apr. 2, 1927. Serial No. 180,526. 1 Claim. (Cl. 263—49.)

Apparatus for bright annealing comprising, in combination, a base for supporting the material to be annealed, at least one cover member supported on said base and adapted to cover the material to be annealed, an annular seal retaining ring secured to and spaced from the side wall of said cover at its bottom edge, a seal of granular ferrous metal between said ring and said cover and forming a sealed joint between said cover and said base, a second cover enclosing said first named cover, and a seal of granular material around the lower edge of said second named cover to form a sealed joint between said base and said cover.



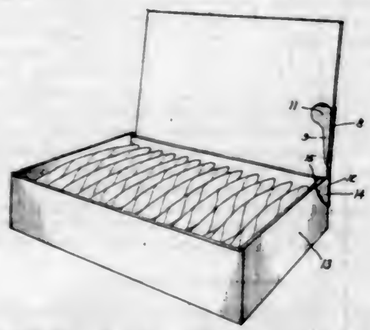
1,682,802. LINOLEUM-VENDING MACHINE. LOUIS P. ROSE, Arnold, Nebr. Filed June 29, 1926. Serial No. 119,338. 2 Claims. (Cl. 242—72.)

1. An expansible linoleum roll comprising spaced supports, a tubular member rotatably mounted in bearings of the support, a plurality of longitudinally disposed outwardly movable parallel strips adjacent the periphery of the tubular member, links carried by said strips and pivotally connected to the tubular member, said links being in crossed relation, a longitudinally movable threaded sleeve mounted on the tubular member, links connected between said sleeve and the strips, a second sleeve mounted on the tubular member, opposed threads carried by said sleeves, a longitudinally disposed stationary gripping strip to the outside of one of said first named strips, means carried by the gripping strip and extending through elongated openings in one of the strips and anchored to the tubular member, one of said first mentioned outwardly movable strips cooperating with the inner side of the gripping strip upon outward movement, and a member threaded on said sleeves and forming means whereby one of said sleeves is axially moved.



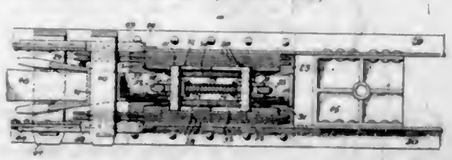
1,682,803. AMUSEMENT DEVICE. OCTAVE ROUGE, Paris, France. Filed Apr. 12, 1927, Serial No. 183,064, and in France Apr. 15, 1926. 1 Claim. (Cl. 272—43.)

In a device of the kind described, in combination with a member rotatable about a center, a plurality of chairs rotating with said member and adapted to roll on a horizontal surface, a connection between each of said chairs and said member including a vertical pivot, and a flexible connection for each chair having one end secured to said member at a



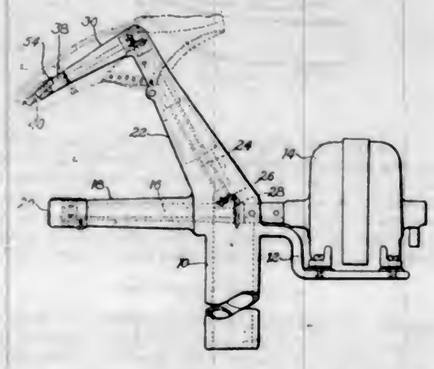
point spaced from the connection of the respective chair with said member and having its other end within reach of the occupant of the respective chair, whereby the occupant can draw the chair more or less close to said center of rotation.

1,682,804. SALT SHAKER. JOHN R. SEARIGHT, Birmingham, Mich. Filed Aug. 22, 1927. Serial No. 214,647. 4 Claims. (Cl. 65—45.)



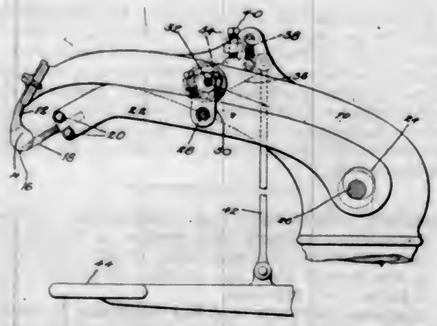
1. In combination, a cylindrical body having a closed upper end, an annular member attached to the open lower end and having an attached central inwardly extending tubular member, and a cap member having a fluted skirting so mounted on and attached to the tubular member as to leave passages between them extending from the inside of said body along the annular member to the upper edge of said tubular member.

1,682,805. COVER HOLDER. GUSTAF A. SELVIG, Minneapolis, Minn., assignor, by mesne assignments, to Northern Equipment and Supply Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Oct. 13, 1924. Serial No. 743,375. 1 Claim. (Cl. 217—61.)



A holder for a hinged box-cover, comprising an upright member bent laterally to form an upright flange along one edge and having the upper portion of said flange bent to lie parallel with the first mentioned upright member to form a channel portion, the lower portion of the flange having an offset portion and an integral extension having a portion bent downwardly parallel with the extension and connected thereto by a bridge portion.

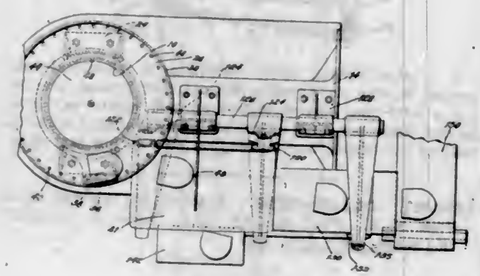
1,682,806. FRICTION DRAFT GEAR. CLIFTON W. SHERMAN and JOSEPH M. HALL, Hamilton, Ontario, Canada, assignors to Hall Draft Gear Corporation, Buffalo, N. Y., a Corporation of New York. Filed July 17, 1926. Serial No. 123,100. 9 Claims. (Cl. 213—22.)



1. A friction draft gear comprising intercalated friction plates, some of said plates being relatively stationary and others being movable lengthwise of the stationary plates, and means for pressing said plates tightly together during a compression stroke and releasing the pressure during the return of the parts to normal position, including shoes engaging said plates, a plunger movable lengthwise of said shoes, and forwardly and rearwardly facing inclines arranged on said plunger and engaging with correspondingly facing inclines on said shoes.

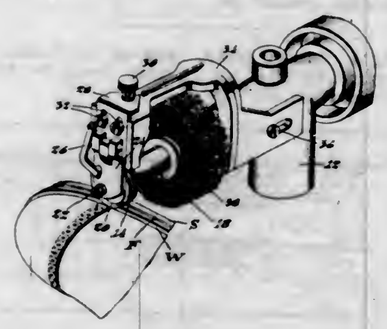
1,682,807. MACHINE FOR REMOVING PROJECTING TACKS FROM THE INTERIOR OF BOOTS AND SHOES. ORIN L. SMITH, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 13, 1926. Serial No. 81,006. 17 Claims. (Cl. 12—84.)

12. In a machine of the class described, the combination of a fixed casing having pointed peripheral projections closely spaced to admit between them a single projecting tack, and a rotary disk set in the casing with its outer face substantially flush with the projections, the margin of the outer face of the disk having cutting teeth to engage the tack, said teeth being prevented from digging into the work by the projections.



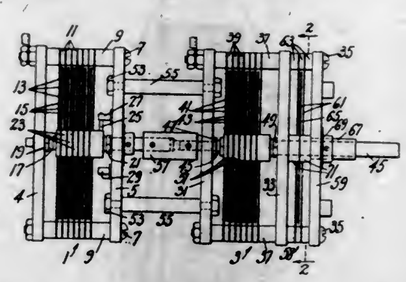
1,682,808. TACK-PULLING MACHINE. CLEVELAND N. SPINNEY, Harrisburg, Pa., and FRED L. MACKENZIE, Beverly, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 30, 1925. Serial No. 26,953. 17 Claims. (Cl. 12—16.)

1. In a tack-pulling machine to which work may be manually presented by an operator, a member movable toward and away from the operator to pull tacks, and



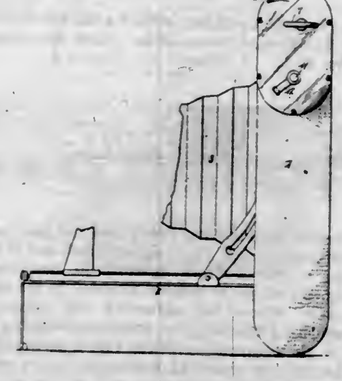
means arranged to move the pulling member independently of its pulling movement during the operation of the machine.

1,682,809. SORTING MACHINE. WILLIAM C. STEWART, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 24, 1922. Serial No. 596,650. 17 Claims. (Cl. 198—33.)



1. In a machine of the character described, means for receiving blanks from a source of supply and for turning certain of the blanks and delivering all of them with a given side facing upwardly, in combination with means subsequently operative for arranging the blanks with their long axes pointing all in the same direction.

1,682,810. MACHINE FOR OPERATING ON SHOES. HAROLD S. SWAIN, Brockton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 22, 1921. Serial No. 494,127. 8 Claims. (Cl. 12—17.)

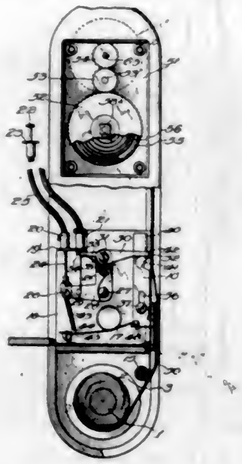


1. A machine for use in finishing welt shoes of the type having an insert between the welt and the outsole comprising, in combination, a cleaning disk having a periphery of a width equal to the thickness of the insert for operating entirely around the edge of the shoe bottom after trimming to clean the edge of the insert, and a gage disk arranged in a plane parallel to the plane of the cleaning disk and having its periphery projecting beyond the periphery of the cleaning disk for engagement within the welt crease of the shoe to guide the shoe as it moved relatively to the cleaning disk, the gage disk being spaced laterally from the cleaning disk a distance substantially equal to the thickness of the welt to register the edge of the insert with the periphery of the cleaning disk.

1,682,811. ELECTRICAL CONDENSER. ARTHUR L. TERRY, Jr., Wellesley Hills, Mass., assignor to Warren G. Ogden, Quincy, Mass. Filed Oct. 18, 1924. Serial No. 744,387. 10 Claims. (Cl. 175—41.5.)

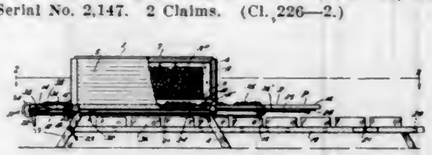
1. The combination of two tuning condensers operated mechanically as a unit, one of which has a value less than the other at all settings, and a variable balancing condenser having a value equal at least to the maximum difference in value between said two tuning condensers and connected in parallel with the tuning condenser of lesser value.

1,682,812. FILM-FEEDING MEANS FOR CAMERAS. EUGENE C. THOMPSON, Los Angeles, Calif. Filed Apr. 14, 1923. Serial No. 632,031. 3 Claims. (Cl. 95—31.)



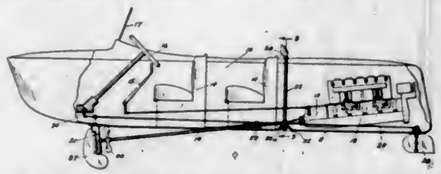
1. In a camera provided with lens and a shutter, the combination with a winding spool for receiving a film, manually operated means for winding the blank or protecting portion of the film upon said spool, spring actuated mechanism for automatically advancing the sensitized sections of the film, latch mechanism adapted to engage each sensitized section of the film to directly lock the same against movement, means for actuating the camera shutter, means operable simultaneously with the release of the shutter actuating means for releasing said latch mechanism and means associated with said latch mechanism for rendering said shutter operating means inoperative until said latching mechanism has assumed a locking position with respect to the next succeeding sensitized film section.

1,682,813. CAMERA. EUGENE C. THOMPSON, Los Angeles, Calif. Filed June 10, 1925. Serial No. 36,070. 3 Claims. (Cl. 95—31.)



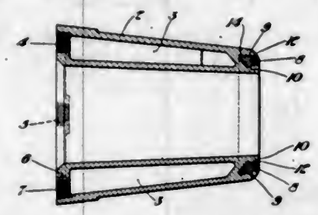
1. In a roll film camera adapted to receive a film perforated at intervals and a paper backing therefor imperforate except for a slit at a point near and over the initial

end of the film, the combination with a latch having a projection adapted to engage the perforations in the film, means for controlling the engagement and disengagement



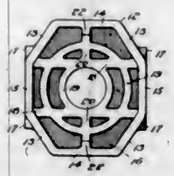
of said latch projection, means for separating said film and paper backing, means for causing said latch projection to pass intermediate said film and paper backing so as to permit said latch to engage perforations in the film only.

1,682,814. CANDY COOLING AND PACKING MACHINE. GEORGE TRIFELOS, Canton, Ohio. Filed Jan. 13, 1925. Serial No. 2,147. 2 Claims. (Cl. 226—2.)



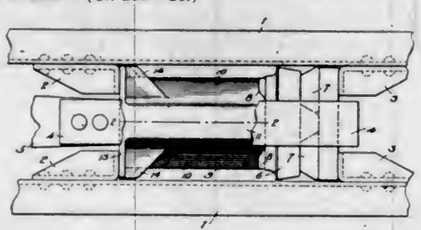
2. Apparatus for handling candy and the like including a tray conveyor operable by a rotatable roll, and delivering to a table, a tray delivery aperture in the table, and retractable tray supports slidably mounted in the aperture, and operative means for advancing the conveyor and instantaneously retracting the supports including a cam mounted on the conveyor operating roll, a push rod spring pressed against the cam and connected to one end of a pivotally mounted lever, the other end of the lever being linked to the supports.

1,682,815. BOAT. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Dec. 3, 1924. Serial No. 753,552. 9 Claims. (Cl. 115—34.)



9. In a motor boat, in combination, a hull, an engine mounted in the stern of said hull, a forwardly extending propeller shaft connected to the engine, a propeller on said shaft near the bow end of said hull, and a rudder mounted immediately aft of said propeller.

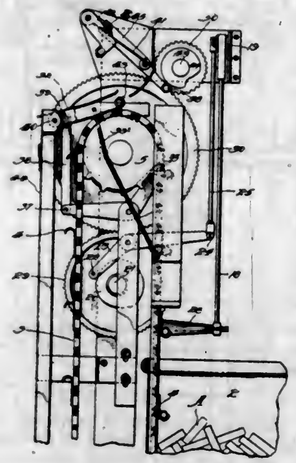
1,682,816. TUYÈRE. GEORGE W. VREELAND, Steubenville, Ohio. Filed July 8, 1927. Serial No. 204,356. 3 Claims. (Cl. 266—41.)



1. A blast furnace tuyère comprising a cylindrical body portion having an annular water-jacket formed therein, and a solid nose portion formed on said tuyère, said nose portion being composed of a shell formed integral with the body of the tuyère, and a cast iron ring within said shell.

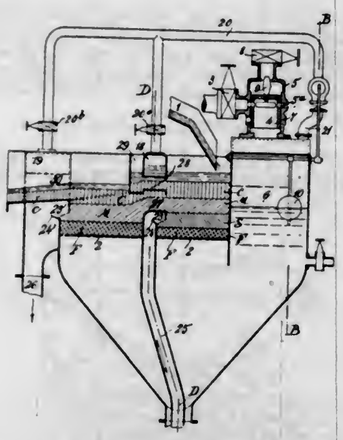
1,682,817. DRAFT GEAR. EDMUND H. WALKER, New York, N. Y. Filed Jan. 18, 1923. Serial No. 613,356. 12 Claims. (Cl. 213—26.)

1. In a draft rigging, the combination with the draft sills, of a horizontally disposed yoke slidably connected thereto, means engaging the closed end of said yoke to limit movement thereof in one direction, cushioning mechanism within said yoke including a spring barrel, said barrel having a closed end adapted to conform to and fit within the closed end of said yoke, and means for reinforcing the closed end of said barrel, said means including a plurality of circularly arranged ribs.



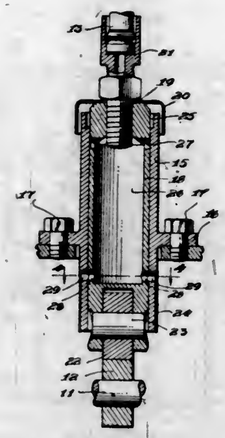
1,682,818. DRAFT GEAR. EDMUND H. WALKER, New York, N. Y. Filed Jan. 18, 1923. Serial No. 613,357. 9 Claims. (Cl. 213—26.)

1. In a draft rigging, the combination with a separable friction head, of a spring barrel for cooperating with said head, said barrel comprising an octagonal casting having a pair of side walls engaging said head beyond said friction faces, said side walls being of greater thickness than the adjacent walls of said casting, and means integral with said walls for closing one end of said barrel.



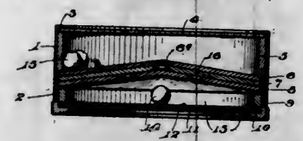
1,682,819. HAIRPIN-BOX MACHINE. FREDERICK D. WILLI, Chicago, Ill., assignor to The Hump Hairpin Manufacturing Company, Chicago, Ill., a Corporation of West Virginia. Filed Mar. 15, 1923, Serial No. 625,231. Renewed Feb. 16, 1928. 5 Claims. (Cl. 226—2.)

1. In a machine of the character described, in combination a container for box partitions, a chute, a traveling conveyor for transferring the partitions from the container to the chute, an intermediate pivoted element between the conveyor and chute functioning in timed relation with the



conveyor to transfer the partitions from the conveyor to the chute, and means for positively ejecting the partitions from the conveyor carriers into the intermediate element.

1,682,820. WASHING APPARATUS FOR COALS. PHILIPPE WOLF, Paris, France. Filed Oct. 22, 1923, Serial No. 670,055, and in France Oct. 24, 1922. 4 Claims. (Cl. 209—491.)

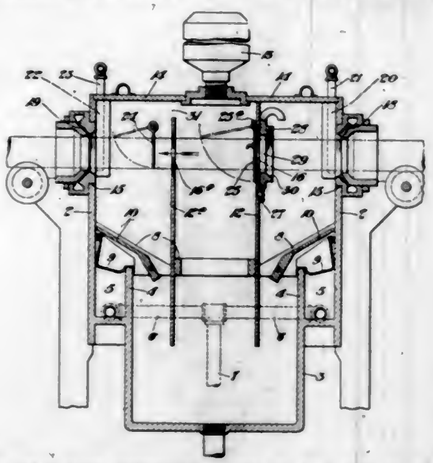


1. In an apparatus for washing coals, the combination with a vat and a piston chamber communicating at the bottom thereof with said vat, said chamber and vat containing water at a desired level, of means for introducing compressed air into said chamber and discharging same therefrom to produce pulsation comprising an automatic valve, means for dividing the washing bed into three parts, a compression chamber and means controlled by the amplitude of the pulsations for placing said compression chamber in communication with the atmosphere or shutting it off and placing it in communication with piston chamber.

1,682,821. INTERNAL-COMBUSTION ENGINE. LIONEL M. WOOLSON, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed May 8, 1922. Serial No. 559,446. 4 Claims. (Cl. 123—90.)

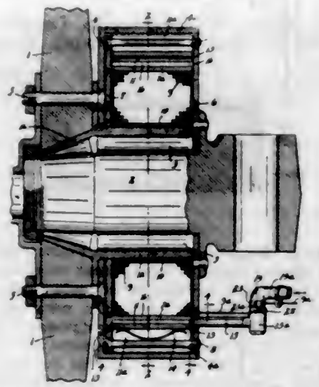
3. In an internal combustion engine, the combination with the crank case, of a guide mounted thereon and having a lubricant well at its upper end and ports near its lower end within the crank case, a push rod mounted in the guide and having an interior passage which communicates with the guide well at the upper extreme movement of the push rod only and which communicates with said ports when the push rod is in its lowest position only.

1,682,822. GAME. MAURICE ALLAND, Atlantic City, N. J. Filed Jan. 10, 1928. Serial No. 245,672. 5 Claims. (Cl. 273—113.)



2. A game, comprising a cylindrical casing having an inturned marginal flange, a transparent closure member adjacent to said flange, a liner within said casing and abutting against said closure member, a removable partition resting against said liner and having a recess, a player member between said partition and said closure and movable into said recess, and a removable closure for the opposite end of said casing, normally securing said partition in operative position and providing a storage space for reserve players beneath said partition.

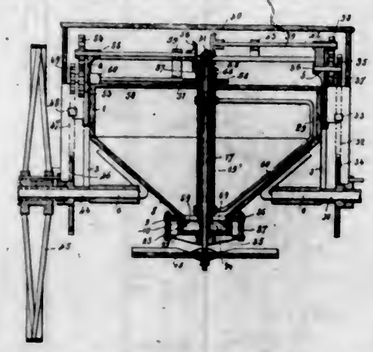
1,682,823. COATING APPARATUS. PAUL J. BARORD, Dormont Borough, Pa., assignor to The Sterling Varnish Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 26, 1927. Serial No. 215,710. 9 Claims. (Cl. 91—44.)



5. In an apparatus for coating the surface of an object with fluid coating material comprising, in combination, a coating chamber, a coating nozzle at one end of said chamber, a wiping nozzle at the other end of said chamber, means for supplying coating fluid to said coating nozzle, and means for supplying gaseous fluid to said wiping nozzle, a baffle plate arranged transversely of said coating chamber and adapted to prevent the passage of gaseous fluid from said wiping nozzle into the path of the coating fluid being

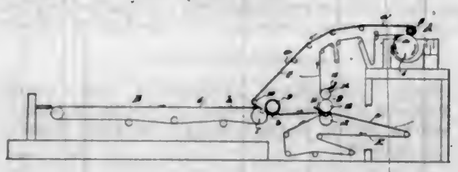
discharged from said coating nozzle, said baffle plate being provided with an aperture of sufficient size to permit the largest sized object to be coated to pass freely therethrough, a reducing plate having an aperture of less size therein,

said plate being removably mounted on said baffle plate so as to partially close the aperture in said baffle plate, and a yieldable closure for said aperture in said baffle plate, said closure being adapted to be opened by the object being coated as said object passes through said aperture.



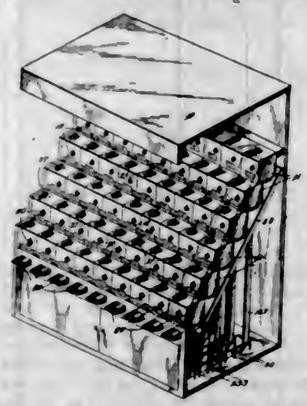
1,682,824. COMBINATION AIR AND ELECTRIC BRAKE. MICHAEL BECK, Minneapolis, Minn. Filed Dec. 26, 1923. Serial No. 682,676. 7 Claims. (Cl. 188—152.)

5. The combination with the wheel and the axle of a vehicle, of a brake drum secured to said wheel having a substantially cylindrical flange, braking means within said flange and adapted to move outward against the same to give a braking effect, a member disposed in said drum and carrying magnetic means for moving said braking means against said flange, and also forming an air chamber inwardly of said braking means, and means for delivering air into said chamber to move said braking means outward against said flange to give a braking effect.



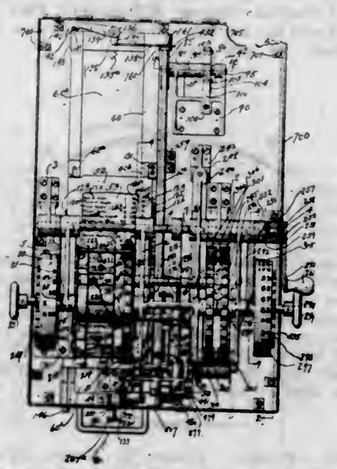
1,682,825. MACHINE FOR DISTRIBUTING FERTILIZER, SEEDS, AND GRAIN. RENÉ BERGERIOUX, Issoudun, France. Filed Aug. 19, 1925, Serial No. 51,080, and in France Dec. 19, 1924. 5 Claims. (Cl. 275—8.)

1. A machine for distributing fertilizer, seeds and grain, including a container, a plurality of shafts extending through said container and arranged concentrically one within another, a gear train for driving said shafts independently of each other, a stirrer in said container ro-



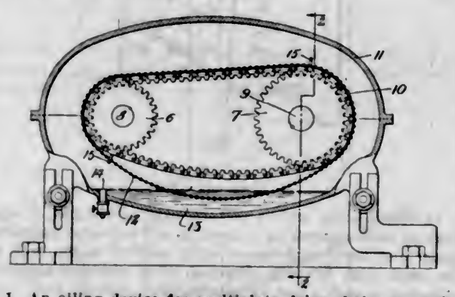
tated by one of said shafts, a distributor operated by another of the shafts, and a horizontal projector actuated by the remaining shaft.

1,682,826. METHOD OF AND APPARATUS FOR MAKING MULTIPLY PAPER. GEORGE L. BIDWELL, Riegelsville, Pa., assignor to The Warren Manufacturing Company, Riegelsville, N. J., a Corporation of New Jersey. Filed Aug. 4, 1925. Serial No. 48,057. 13 Claims. (Cl. 92—39.)



1. The method of making a multi-ply paper which comprises forming a plurality of wet paper webs, successively picking up the webs upon a pick-up felt, and passing the pick-up felt with the webs superimposed upon its under side to and through a suction press in contact with a bottom wet felt.

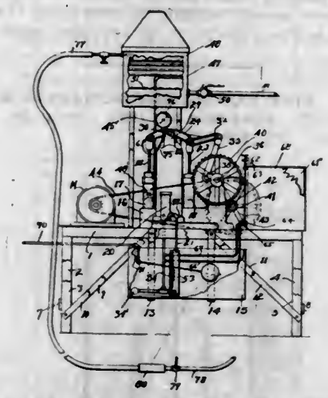
1,682,827. METHOD OF COMMODITY CONTROL. HARRY RUSSELL BRAND, New York, N. Y. Filed Mar. 20, 1919. Serial No. 283,817. 10 Claims. (Cl. 234—1.)



1. In the art of food control, the method which consists in positioning a card and then marking said card to form a record thereon, and, simultaneously therewith, marking upon a strip indicating characters, ejecting a token corresponding to the item marked on said card and announcing at a distance the order indicated by the marking on said card.

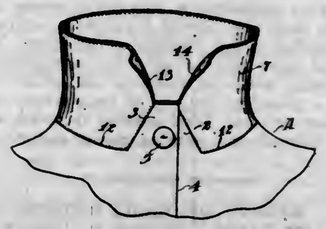
1,682,828. MECHANISM AND METHOD FOR CONTROLLING BUSINESS. HARRY RUSSELL BRAND, New York, N. Y. Filed Mar. 27, 1923. Serial No. 628,028. 2 Claims. (Cl. 234—1.)

1. In a recording mechanism including means for presenting in a desired relation a transaction record having a perforation thereon relating to a transaction which perforation is recognizable by another machine, means for perforating said record so that said first mentioned perforation will not be recognized by said other machine.



1,682,829. OILING DEVICE FOR DRIVE CHAINS. NORMAN C. BREMER, Ithaca, N. Y., assignor to Morse Chain Company, Ithaca, N. Y., a Corporation of New York. Filed July 13, 1926. Serial No. 122,072. 8 Claims. (Cl. 184—15.)

1. An oiling device for multiplate drive chains comprising a light chain passing around the drive chain, the sag of the slack run of which is greater than the sag of the slack run of the drive chain, and a reservoir containing lubricant through which the slack portion of the light chain passes.



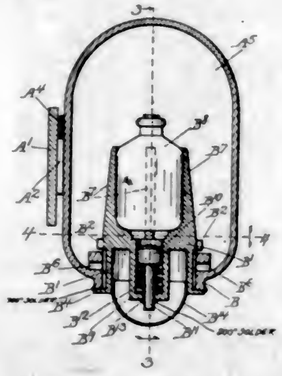
1,682,830. AUTOMOBILE CLEANING SYSTEM. RALPH B. BUSBY and LEE B. SAMANSKI, Oakland, Calif. Filed Apr. 8, 1926. Serial No. 100,472. 1 Claim. (Cl. 299—83.)

An automobile cleaning system comprising a frame, a high pressure pump mounted on said frame, an automatic pressure regulating relief valve on said pump, a fresh water tank mounted in said frame below said pump, a suction pipe extending from said pump to the bottom of said tank, a vertical opn end overflow pipe connected to said suction pipe, a pipe establishing communication be-

tween said automatic relief valve and said overflow pipe, a soap tank mounted on said frame and having a pipe connection to said suction pipe, a distillate tank having a pipe connection to said suction pipe.

1,682,831. GARMENT COLLAR. SAMUEL CAGAN and WILLIAM S. NEAD, Stillwater, Minn. Filed Feb. 7, 1927. Serial No. 166,420. 2 Claims. (Cl. 2—98.)

1. In combination with a garment having a neck opening therein and having a separable opening extending down a side of said garment, and having an upwardly projecting portion adjacent each edge of said separable opening, said projection being integral with the body of the garment, of a collar connected to the neck opening of said garment and having the ends thereof connected to the edges of said upwardly projecting portions of said garment.

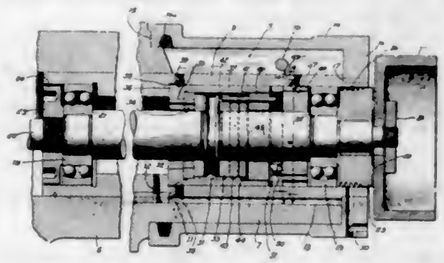


1,682,832. DOLL. IRWIN COHN, New York, N. Y., assignor to Irwin & Company, Inc., New York, N. Y., a Corporation of New York. Filed June 4, 1927. Serial No. 196,441. 1 Claim. (Cl. 46—40.)

A doll comprising a body and head portion formed of celluloid, a transparent celluloid bottle disposed exterior of the body and having a projection provided with a re-

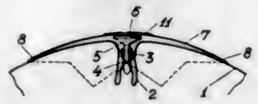
stricted outlet, a container hidden within the body of the doll and connected to said restricted outlet portion of the bottle, said bottle and container being supported by the walls of the doll, and dry finely ground marble within the bottle and adapted to flow into the container when the doll is tilted from normal position, the flow being at a speed controlled by the diameter of the restricted bottle outlet.

1,682,833. FIRE EXTINGUISHER. CHARLES W. DAKE, Chicago, Ill. Filed May 11, 1925. Serial No. 29,291. 2 Claims. (Cl. 169—27.)



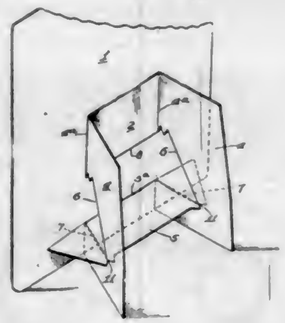
1. In an automatic fire extinguisher, an outer casing, and means for supporting it, said casing having an aperture in the lower part thereof, a closure for said aperture and a securing means therefor, a container, mounted within said outer casing, and a fire extinguishing substance therein, means for releasing said substance in response to a predetermined rise in temperature, said substance, when released, being adapted to create sufficient pressure to break the securing means and release the closure.

1,682,834. METHOD OF MANUFACTURING STRAW PULP AND PAPER. CHARLES H. DEDRICK, Drexel Hill, Pa., assignor to Philadelphia Quartz Company, a Corporation of Pennsylvania. Filed Jan. 6, 1925. Serial No. 803. 11 Claims. (Cl. 92—9.)



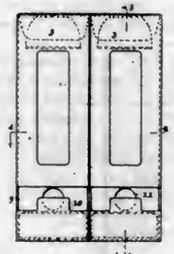
1. In the manufacture of paper the method of preparing the pulp which comprises cooking with silicate of soda, beating with cooking liquor, and then sizing.

1,682,835. TOOL-SPINDLE FIXTURE. GERARD A. DE VLIEG, Rockford, Ill. Filed Oct. 14, 1925. Serial No. 62,339. 13 Claims. (Cl. 308—161.)



10. Means for limiting end play of a rotary element comprising two abutments between which said element is held against axial movement, one of said abutments being movable, and means governed by the degree of friction between said movable abutment and said rotary element for controlling the pressure of said movable abutment against said element.

1,682,836. CLOSURE MEANS FOR INFLATABLE HOLLOW RUBBER BODIES. ISTVÁN DOROGI and LAJOS DOROGI, Budapest, Hungary, assignors to Dr. Dorogi és Társa Gummigyár R. T., Budapest-Albertfalva, Hungary, a Limited Company of Hungary. Filed Dec. 20, 1927, Serial No. 241,403, and in Germany Jan. 17, 1927. 5 Claims. (Cl. 273—65.)

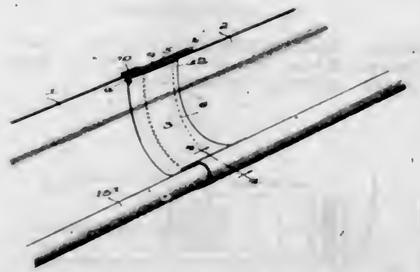


1. Closure means for inflatable hollow rubber bodies characterized by the inflating nipple, which may be closed by a plug provided with a button shaped head, being covered by an elastic rubber covering which forms a part of the outer wall of the hollow body and has an expansible opening, which allows the inflating nipple to be introduced but which in the unstretched condition is smaller than the head of the closure plug.

1,682,837. EASEL. ALBERT W. ENGEL, Chicago, Ill. Filed Apr. 15, 1927. Serial No. 183,935. 1 Claim. (Cl. 40—150.)

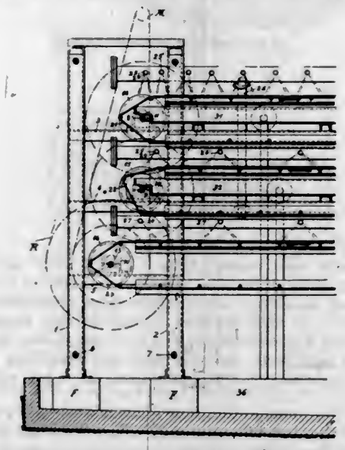
In combination with a picture, card or the like, a supporting easel comprising a sheet of stiff material including upper and lower attachment areas secured to the back of the card with laterally disposed wing portions hingedly attached to said areas at substantially vertical axes, and thus adapted to swing back from the plane of the card; together with a brace member formed within the area of the sheet and hingedly joined thereto along a horizontal axis, the area utilized to form said brace extending into said wing portions and providing openings adjacent their hinge axes in which said brace may be swung outwardly from the back of the card, the outline of each of said openings opposite the hinge axis of the wing being substantially the cord of an arc centered in the hinge axis of the brace, while the length of said brace from its hinge axis to its point of contact with the wing in operative position is equal to the radius of said arc, whereby the brace must be flexed in swinging it into operative position and is yieldingly locked therein.

1,682,838. PLURICELLED CONTAINER. HERMAN A. FEIGELMAN, Paterson, N. J. Filed Mar. 31, 1927. Serial No. 179,914. 8 Claims. (Cl. 206—44.)



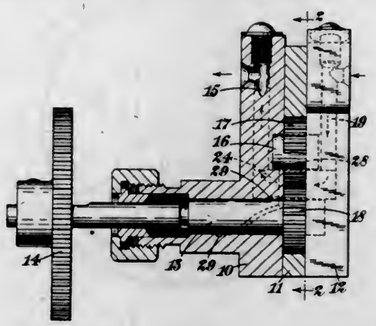
1. A pluri-celled container including a blank of stiff sheet material having its intermediate portion a flat panel and portions directly opposite each other and forming its extremities and arranged on opposite sides of the panel bent first toward each other and then toward the panel to form cells and each having a penetrating interlocking engagement with the panel.

1,682,839. END CLOSURE FOR PAPER BAGS. LOUIS J. FINN, Peoria, Ill., and PHILIP E. MORRILL, St. Louis, Mo., assignors to Bemis Bro. Bag Company, St. Louis, Mo., a Corporation of Missouri. Filed May 24, 1926. Serial No. 111,179. 5 Claims. (Cl. 229—53.)



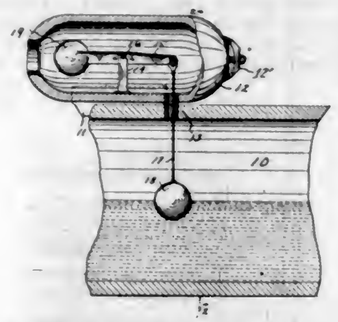
1. A multiple-wall container having reinforced end closures formed of extensions of the walls of the container, said extensions of an unequal number being folded over and upwardly along the opposite sides of the container, and means to secure in their folded position the extensions of the walls of the container.

1,682,840. GUTTER JOINT. JOHN W. FOERCH, Jr., Wilkes-Barre, Pa. Filed Apr. 12, 1927. Serial No. 183,095. 2 Claims. (Cl. 108—28.)



1. A gutter joint comprising a member so bent upon itself as to form an outer underlying portion, an inner overlying portion, and an intermediate portion, said portions forming oppositely opening pockets for the reception and retention of the adjoining ends of gutter sections, the overlying portion being shorter than the intermediate portion and extending obliquely across said portion whereby ledges of substantially triangular shape are presented to provide entry rests for the ends of the gutter sections, said ledges being offset outwardly from the outer and intermediate portions respectively whereby the entry of the gutter ends into the pockets is facilitated.

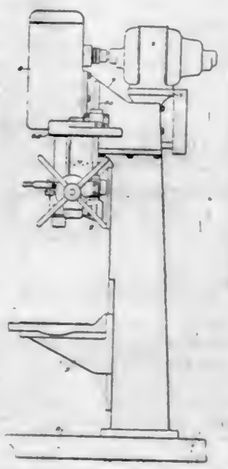
1,682,841. PROCESS OF AND APPARATUS FOR CLEANING TEXTILE GOODS. CONRAD J. FAÜH, Zurich, Switzerland. Filed June 25, 1926, Serial No. 118,832, and in Germany July 2, 1925. 7 Claims. (Cl. 8—19.)



1. The method of treating a textile fabric to the action of a cleansing liquid, which consists in conveying the fabric through a plurality of courses at progressively decreasing speeds, and spraying the fabric with the liquid on each course.

1,682,842. ROTARY PUMP AND THE LIKE. JAMES HENRY HAMER, Bolton, England, assignor to James Lever Rushton, Bolton, Lancashire, England. Filed May 27, 1927, Serial No. 194,726, and in Great Britain Mar. 29, 1927. 10 Claims. (Cl. 103—126.)

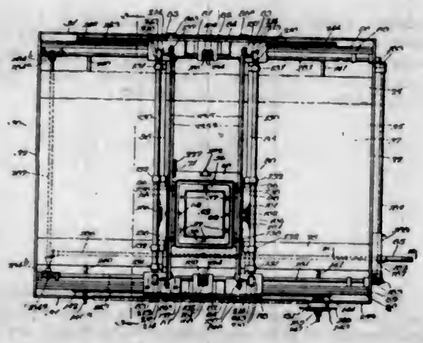
1. A rotary pump or the like comprising two toothed pumping wheels meshing with each other, a casing in which the said wheels are mounted which closely fits the faces, and a portion of the outer periphery, of each wheel and has a relief passage extending from a position communicating with the clearance space between the crown of each tooth in turn and the base of the space between two teeth of the other wheel in which the fluid is trapped at the meshing point of the wheels during operation of the pump, and means whereby fluid is led from the aforesaid relief passage to the mounting for one of the said toothed wheels to serve as the lubricant therefor.



1,682,843. WATER-LEVEL INDICATOR. DAVID S. JACOBUS, Jersey City, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a Corporation of New Jersey. Filed June 17, 1924. Serial No. 720,503. 8 Claims. (Cl. 73—82.)

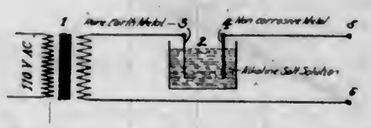
1. A water level indicator for a steam boiler having a steam and water drum, said indicator comprising a chamber, a steam connection between said drum and chamber, a balance lever in said chamber, a float in said drum and positioned in the water therein, and a suspension member connecting said lever and said float and extending freely through the steam connection between the drum and said chamber.

8. In a water level indicator for steam boilers, a steam and water drum, an auxiliary drum mounted on top thereof, means connecting said auxiliary drum to the steam space of the steam and water drum, a lever in the auxiliary drum having a counterweight, a vertical connecting member on said lever and extending through said connection to a float in said steam and water drum, a continuous indicator, and connections whereby said indicator is operated by movement of said lever.



1,682,844. BOX-COLUMN-TYPE UPRIGHT DRILL. DAVID C. KLAUSMEYER, Cincinnati, Ohio, assignor to The Cincinnati Bickford Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed June 4, 1925. Serial No. 34,829. 34 Claims. (Cl. 77—5.)

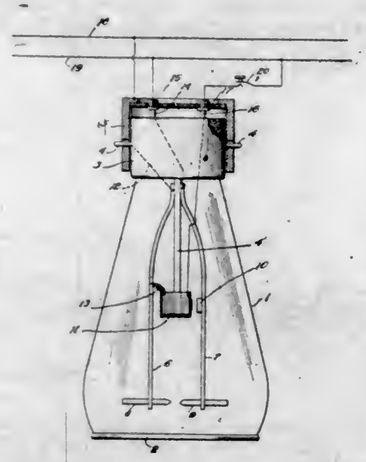
1. In an upright drill, the combination comprising a drill spindle having a back-gear sleeve and a reversing sleeve aligned therewith, said back-gear sleeve being splined to said drill spindle; a back-gear shaft having an operative connection to the reversing sleeve at one end thereof and an operative connection to the back-gear sleeve at the opposite end thereof, said connections to the back-gear shaft being constructed to provide changes in speed; and a motor connected to the reversing sleeve.



25. In an upright drill, the combination comprising a drill spindle; a motor for operating said spindle; mechanism comprising a back-gear shaft for connecting the motor to the spindle; a casing for enclosing and for supporting said mechanism; a lubricating well formed in the bottom of said casing; a lubricating pump secured to and operated by said back-gear shaft, said pump projecting into said lubricating well; and an outlet pipe connected to said pump and extending to top of said casing for delivering lubricating material over said mechanism.

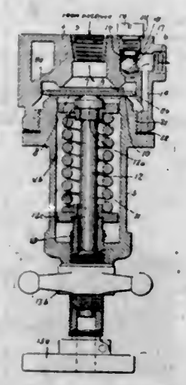
1,682,845. PHOTO-COMPOSING MACHINE. ALEXANDER T. KOPPE, Chicago, Ill., assignor to Directoplate Corporation, Chicago, Ill., a Corporation of Illinois. Filed Jan. 21, 1925. Serial No. 3,788. 27 Claims. (Cl. 95—76.)

1. The combination in a photo-composing machine, of a negative holding frame, means for raising said frame and holding it in an elevated position, means for operating said raising means to release said frame, and additional means for holding said frame in said elevated position after it has been released by said raising means.



1,682,846. ELECTROLYTIC RECTIFIER. HARRY C. KREMERS, Urbana, Ill. Filed July 16, 1926. Serial No. 122,802. 13 Claims. (Cl. 175—318)

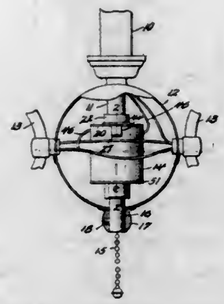
1. In an electrolytic cell, a filming electrode of rare earth metal.



5. In an electrolytic cell containing an electrolyte and having at least one electrode of non-filming conducting material, a filming electrode containing cerium.

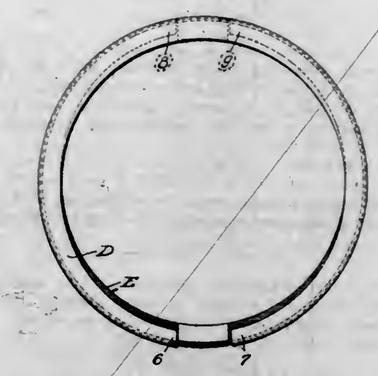
1,682,847. ELECTRIC-ARC LAMP. IAN JEAN LAVOISIER, New Orleans, La., assignor, by mesne assignments, to The Burdick Corporation, Milton, Wis., a Corporation of Delaware. Filed Oct. 1, 1924. Serial No. 740,982. 2 Claims. (Cl. 176—136.)

1. An electric arc electrode comprising a dehydrated and glazed mixture of zirconium and yttrium oxide.



1,682,848. FLUID-PRESSURE-CONTROL DEVICE JULIUS C. MOODY and LEON F. HOFFMAN, Franklin, Pa., assignors to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 2, 1926. Serial No. 133,168. 19 Claims. (Cl. 277—70.)

1. A fluid pressure control device having spaced valve seats, a valve movable between said seats, means yieldingly maintaining said valve against one of said seats, a passage uncovered by initial movement of said valve from said last named seat, and means preventing movement of fluid through said passage until said valve engages the other seat.

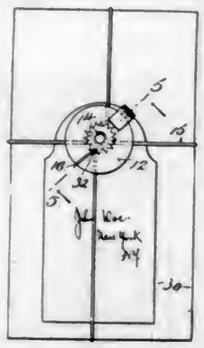


9. A fluid pressure control device comprising a cap and a body presenting opposed valve seats and a valve chamber therebetween, said cap having inlet and outlet connections for pressure-fluid extending to said chamber, the outlet connection extending to both sides of said chamber, said body connecting said chamber to atmosphere, a valve movable between said seats, and means for adjusting the distance between said seats without disturbing the inlet and outlet line connections to the device.

1,682,849. FIXTURE-BODY SWITCH. HARRY J. MOREY, Syracuse, N. Y., assignor to Pass & Seymour, Inc., Solvay, N. Y., a Corporation of New York. Filed June 25, 1924. Serial No. 722,398. 9 Claims. (Cl. 200—168.)

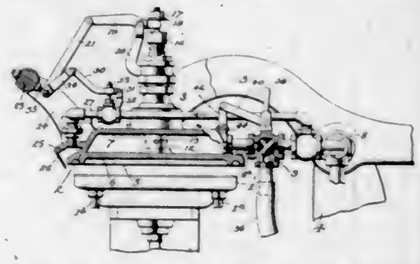
1. In a fixture body switch for electric circuits in combination an insulating switch body containing switch mechanism of the pull chain type, a metal plate adapted to fit on top thereof, an internally threaded collar attached to said plate and depending arms on said plate converging beneath and there engaging said switch body to loosely support the same from said plate.

1,682,850. TWO-PIECE PISTON RING. EDWARD C. NEWTON, Los Angeles, Calif. Filed Aug. 24, 1926. Serial No. 131,172. 8 Claims. (Cl. 74—109.)



1. A piston packing comprising a compression ring having a cylindrical outer perimeter and opposed yielding points, and an oil ring having a lesser diametrical dimension than the compression ring, having a conical outer perimeter and opposed yielding points.

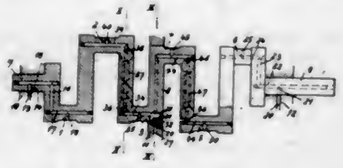
1,682,851. SHIPPING TAG. SHUHEI NOGUCHI, New York, N. Y. Filed July 2, 1927. Serial No. 203,087. 2 Claims. (Cl. 24—18.)



1. A shipping tag comprising a body part in combination with a disk having a slot therein, a sealing member on the body part for overlapping an edge of the disk, and

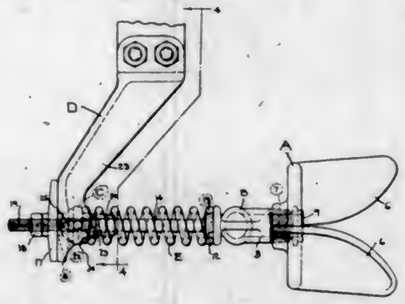
an assembly member consisting of a hollow rivet having a head for securing said disk and sealing member on to

the body part, said head over-lying a portion of said disk and having a cutting edge covering the inner part of the slot.



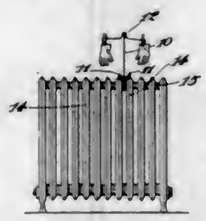
1,682,852. GARMENT-PRESSING MACHINE. HERBERT EDWARD PAGE, Syracuse, N. Y., assignor to United States Hoffman Machinery Corporation, New York, N. Y., a Corporation of Delaware. Filed June 4, 1923. Serial No. 643,443. 10 Claims. (Cl. 68—9.)

1. In a garment pressing machine, the combination of relatively movable pressing elements; means for ejecting steam from the pressing face of one of said elements and onto the face of the goods next thereto; and means for ejecting steam laterally between said pressing elements onto said face.



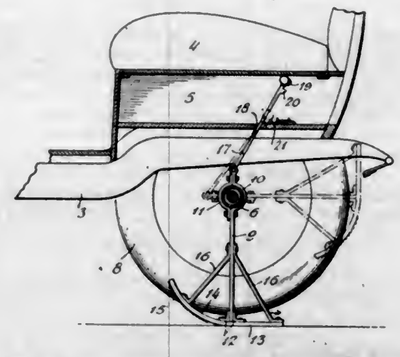
9. In a garment pressing machine, the combination of a buck; means for heating the same; a head movable toward and from the buck; means for cooling the head; and means for ejecting steam between the head and the buck.

1,682,853. OIL-FEEDING DEVICE. CURT RETSCHY, Dessau, Germany, assignor to Hugo Junkers, Dessau, Germany. Filed Jan. 16, 1926. Serial No. 81,802, and in Germany Jan. 24, 1925. 5 Claims. (Cl. 184—7.)



1. In a device for leading oil to the interior of rotating shafts in combination; a main shaft bearing, a shaft supported therein with its journal, a conduit in said bearing for supplying oil under pressure to the gliding surface of said journal, a second conduit in the journal communicating with said first conduit and leading to the place of oil consumption and a nonreturn valve in the entrance of said second conduit, adapted to hold back the oil entered against being repelled by centrifugal forces.

1,682,854. AUTOMATIC TRAIN-PIPE COUPLING. JOSEPH ROBINSON, New York, N. Y. Filed Nov. 29, 1920, Serial No. 427,047. Renewed Jan. 28, 1928. 4 Claims. (Cl. 285—58.)

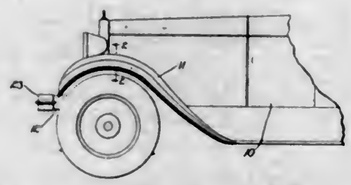


1. In an automatic train pipe coupling, the combination of a coupling head, a bracket having a perforation in its lower end, a pair of projections extending forward from the bracket on opposite sides of said perforation, an elongated bearing on each of said projections, a seat mounted on the front face of said bracket for universal movement thereon and having a perforation aligning with the perforation in said lower end of the bracket, a member extending rearward from said coupling head through said perforations and serving to prevent excessive rotation of the coupling head relative to said seat, a device mounted on the rear of said member and engaging said bracket to limit movement of said coupling head forward of the bracket, a spring surrounding said member and supported on said seat, means to adjust said device along said member to vary the compression of said spring, and projections extending laterally of said seat from opposite sides thereof into engagement with said bearings for oscillatory and sliding movement thereon.

1,682,855. GARMENT SUPPORT. WILLIAM H. ROSE, Jersey City, N. J. Filed Dec. 17, 1927. Serial No. 240,724. 3 Claims. (Cl. 211—86.)

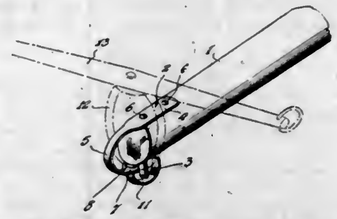
1. In a garment support capable of attachment to a radiator, in combination, an elongated member having a radiator hook at one end capable of placement around the under face of a horizontal radiator conduit, an extended support carried by the elongated member capable of abutment upon the adjacent upper perpendicular portion of a radiator and so positioned that when the radiator hook is in abutment with the horizontal radiator conduit the device will be maintained in inclined position and a suspending hook carried by the opposite portion of the elongated member.

1,682,856. VEHICLE JACK. SAMUEL M. SALKIND, Brooklyn, N. Y. Filed May 18, 1927. Serial No. 192,208. 1 Claim. (Cl. 254—94.)



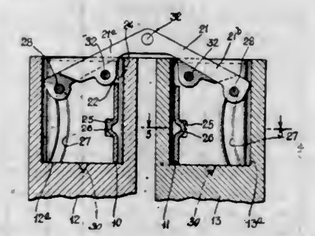
The combination with a vehicle including an axle housing, and a seat for the vehicle having a compartment therein; of a jack including a standard having a collar loosely embracing said axle housing for rotary movement thereabout, a supporting shoe carried by the standard and engageable with a supporting surface when the standard is in a vertical position to elevate said axle housing, an operating rod connected to said standard for moving the same about said housing, said rod extending into the compartment of said seat, and a latching device within said compartment engageable with said rod to hold the same in one of its actuated positions.

1,682,857. MANUFACTURE OF RUBBER AND THE LIKE. PHILIP SCHIDROWITZ, London, England, assignor to Vulcex Limited, Jersey, Channel Islands, England, a Jersey Company. Filed Mar. 14, 1923, Serial No. 625,171, and in Great Britain Sept. 14, 1922. 29 Claims. (Cl. 18—53.)



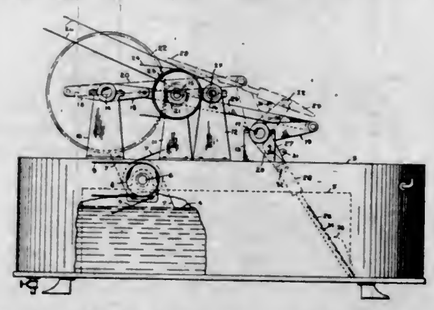
1. The process for the manufacture of vulcanized compositions which comprises substantially uncoagulated caoutchouc at a temperature below those ordinarily employed in hot vulcanizing methods under such conditions as to preclude any substantial coagulation of the caoutchouc during the vulcanization.

1,682,858. BUMPER AND FENDER GUARD. HARRY E. SIPE, New York, N. Y. Filed July 16, 1927. Serial No. 206,321. 6 Claims. (Cl. 293—55.)



6. A guard strip for detachable mounting in connection with a support and consisting of an elongated substantially tubular body of rubber, said body being divided longitudinally thereof to give access to the chamber therewithin, the member in connection with which said guard strip is mounted being insertable into the chamber of said body through the divided portion thereof, and the side walls formed by said divided portion engaging said member under the resilient tension of said rubber body to prevent accidental displacement of the guard strip.

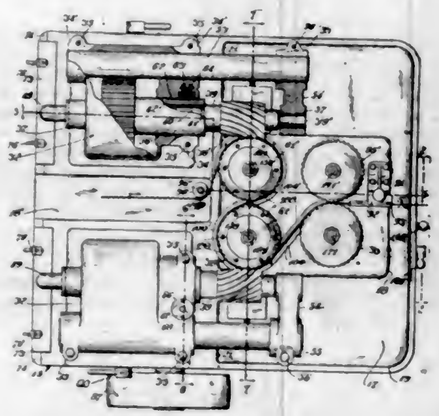
1,682,859. VEHICLE POLE TIP. NELS JOHN SODERSTROM, Burtrum, Minn. Filed Aug. 9, 1927. Serial No. 211,796. 2 Claims. (Cl. 278—50.)



1. A vehicle pole tip comprising companion upper and lower members adapted to be secured against upper and lower faces of a pole, said members extending longitudinally of the pole and the upper member having its forward portion extending outwardly and downwardly therefrom and provided with an eye at its lower end disposed at the end of the pole, the lower member having a depending arm intermediate its length and at its forward end provided with a guard extending downwardly through the eye and rearwardly below said arm and upwardly to the rear of the arm and having its rear end free.

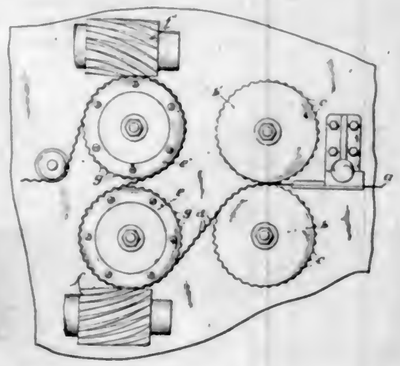
1,682,860. INVISIBLE HINGE. JOSEPH SOSS, Brooklyn, N. Y. Filed Nov. 27, 1925. Serial No. 71,539. 5 Claims. (Cl. 16—164.)

1. A hinge butt comprising a casing one side and one end of which are open to give access to a channel in said casing, bearing members within the casing and in spaced and parallel relation, said casing and bearing members being formed from a single sheet of metal, and flanges integral with said bearing members and arranged at right angles thereto and overlying the edge of the casing and within the boundary of said casing.



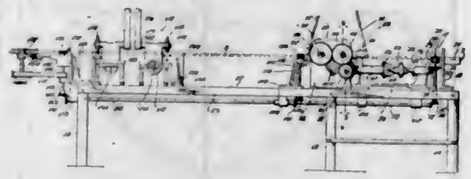
1,682,861. APPARATUS FOR WASHING FIBROUS MATERIALS. FRANK B. STRATFORD, Montclair, N. J. Filed Mar. 22, 1926. Serial No. 96,436. 2 Claims. (Cl. 141—12.)

1. An apparatus of the class described having means for circulating the wash around the same, pivoted means at one side for collecting and lifting fibrous material periodi-



cally from the wash, and means for lifting the same, said lifting means being adapted when elevated to a predetermined point to fall over a dead center, and said means for collecting said fibrous material being adapted when in discharging position to release the same, and in combination therewith a conveyor for removing the discharged fibrous material.

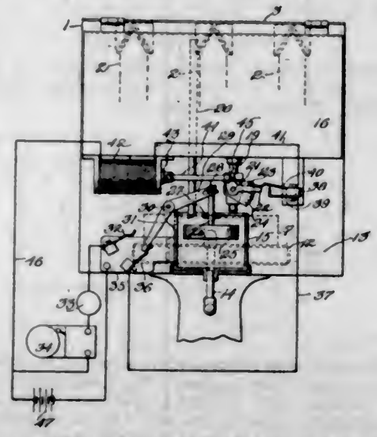
1,682,862. MACHINE FOR MAKING CORRUGATED FASTENERS. CARL O. SWENSON, Chicago, Ill., assignor to Consolidated Steel Strapping Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 9, 1924. Serial No. 742,642. 24 Claims. (Cl. 10—28.)



10. In a machine of the class described, the combination of supporting means a pair of corrugating wheels, a strip corrugated by said corrugating wheels, a pair of feeding wheels, a pair of milling cutters, one opposite each of said feeding wheels, means for driving the feeding wheels so as to guide the strip first over one of said wheels with one face engaged by the opposite cutter and subsequently over the other feeding wheel, with its opposite face engaged by the cutter opposite to the second wheel.

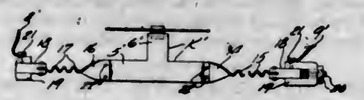
1,682,863. METHOD OF MAKING CORRUGATED FASTENERS. CARL O. SWENSON, Chicago, Ill., assignor to Consolidated Steel Strapping Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 9, 1924. Serial No. 742,643. 1 Claim. (Cl. 10—34.)

The herein described method of milling saw teeth in a corrugated fastener strip, which consists in bowing the strip, in moving the strip while bowed with its edge into cutting relation with a milling cutter, and in subsequently bowing the strip in the opposite direction and in moving its edge again into cutting relation with a milling cutter.



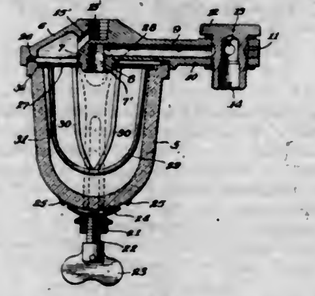
1,682,864. MACHINE FOR MAKING CORRUGATED FASTENERS. CARL O. SWENSON, Chicago, Ill., assignor to Consolidated Steel Strapping Company, Chicago, Ill., a Corporation of Delaware. Filed Oct. 9, 1924. Serial No. 742,644. 14 Claims. (Cl. 10—42.)

1. In a machine of the class described, the combination of means for guiding a portion of a corrugated strip in a substantially rectilinear path, and a milling cutter acting on said strip in said rectilinear path and having its axis disposed parallel to the plane of said path and inclined in a vertical direction.



11. In a machine of the class described, the combination of a frame comprising side supporting members, means for guiding the fastener strip through a predetermined path between said supporting members, individual bearing frames on each side of the strip, stub axles pivotally mounting said bearing frames to said supporting members for pivotal movement in planes parallel with said predetermined path, individual milling cutters journalled in each of said bearing frames, a drive shaft projecting from each of said bearing frames operatively connected to its respective milling cutter, gears on each of said drive shafts, gears on said stub shafts meshing with said first-named gears, and means for driving the gears on said stub shafts.

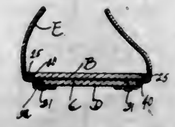
1,682,865. SHOE-BOTTOM-FILLING MACHINE. ANDREW THOMA, Cambridge, Mass., assignor to North American Chemical Company, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 1, 1924. Serial No. 747,275. 8 Claims. (Cl. 18—1.)



1. In a machine of the kind described, a filler supply reservoir for the safe handling with high heat of a heat responsive shoe-bottom filler which is normally slowly penetrative by heat and liable to burn at high heat, a steam generator connected to deliver heat and moisture to said filler in the reservoir, means for supplying heat to the generator at a substantially uniform rate, means for maintaining a substantially constant water level in the generator, said latter means comprising a receptacle freely communicating with the generator, a valve normally set to deliver water to said receptacle at substantially the same rate at which water is evaporated by the generator, a float in the receptacle, and operating connections between the float and inlet valve so constructed and arranged that upon failure of the generator to evaporate water at the rate at whih water is normally supplied to the receptacle, the valve will be closed by the abnormal upward movement of the float, said valve being unaffected upon the subsequent downward movement of the float, whereby the water supply will be automatcially cut off upon a flow of water in excess of the capacity of the machine but requires a separate operation independent of the float to turn the water on again.

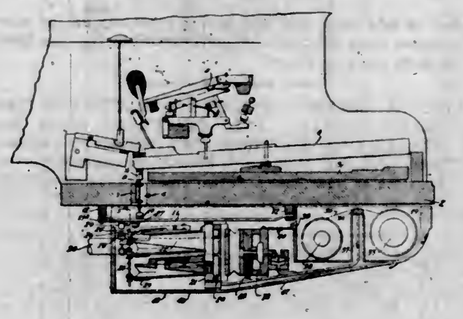
1,682,866. ELECTRICAL INSTRUMENT OF THE TELEPHONE TYPE. ADOLPH A. THOMAS, New York, N. Y. Filed Aug. 13, 1924. Serial No. 731,718. Renewed Jan. 12, 1928. 35 Claims. (Cl. 179—115.)

20. In an electrical instrument provided with a magnet having a straight air gap, a vibratory unit consisting of a resiliently supported non-magnetic conducting frame having a strip arranged to operate in said air gap to cut the magnetic lines of force, the ends of said strip extending through the opposite ends of said air gap.



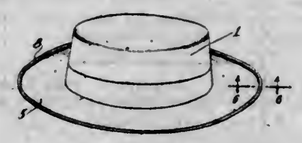
1,682,867. FILTER. GEORGE F. THOMAS, Berwyn, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Nov. 30, 1925. Serial No. 72,242. 5 Claims. (Cl. 210—165.)

5. A filter element comprising a disc having an opening therethrough, a filter bag supported by said disc, said disc and filter bag having registering openings therethrough lying between projecting portions of said filter bag, and metallic eyelets passing through said openings for securing said bag to said disc.



1,682,868. PROCESS OF MANUFACTURING SHOES. JORGE S. TOUCHE, Monterey, Mexico. Filed Sept. 7, 1927. Serial No. 217,984. 4 Claims. (Cl. 12—142.)

1. Those steps in the method of manufacturing shoes which consist in securing an inner sole to the bottom of a last, securing a metallic sole piece on the bottom surface of the inner sole in non-overlapping relation with the marginal portions of the inner sole, securing a temporary nailing strip over the metallic sole piece, drawing an upper over the last in margin-overlapping relation to the inner sole and the temporary nailing strip, tacking the marginal portions of the upper to the temporary nailing strip so that the points of the tacks engage the metal sole and clinch on the temporary nailing strip to secure the upper margin thereto without entry of the tacks into the inner sole or last, removing the last, stitching the upper beyond the

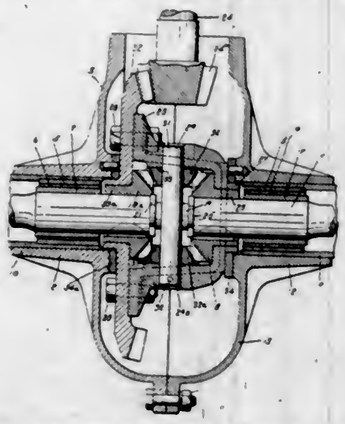


peripheral edges of the metal sole to the marginal portion of the inner sole, removing the temporary nailing strip, clinched tacks, and metal sole without mutilation of said stitching, and finishing the shoe in any approved manner.

1,682,869. PLAYER GRAND PIANO. WILLIAM B. TUNSTALL, Worcester, Mass., assignor to Earle E. Conway, Boston, Mass.; Carle C. Conway, Scarboro, N. Y.; and Theodore P. Brown, Worcester, Mass., trustees. Filed Jan. 24, 1923. Serial No. 614,599. 6 Claims. (Cl. 84—26.)

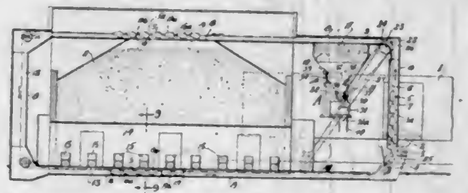
1. In a piano, a keybed, a piano action, keys, a rod below each key, an elongated crank member below each rod, and a stop to limit the downward movement of each elongated crank member.

1,682,870. FABRIC HAT AND METHOD OF MAKING THE SAME. JOHN M. VAN HEUSEN, Boston, Mass. Filed Aug. 5, 1922. Serial No. 579,912. 10 Claims. (Cl. 2—194.)



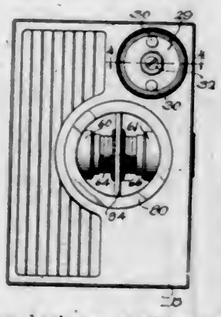
1. That improvement in the art of making cloth hats which consists in providing a fabric blank having a raised or bulged portion therein, treating the said blank with a shrinking agent, fitting the treated blank, while wet, to a hat form and drying it thereon.

1,682,871. DIFFERENTIAL GEARING FOR MOTOR VEHICLES. CHARLES R. SHORT, Dayton, Ohio, and VICTOR HUGHES, Detroit, Mich., assignors to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed Apr. 16, 1926. Serial No. 102,525. 3 Claims. (Cl. 74—99.)



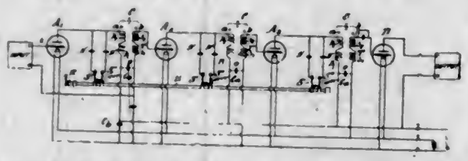
1. In a motor vehicle transmission, the combination with a rear axle and differential housing, of differential gearing comprising two alined axle shafts, beveled axle gears fac-

ing each other adapted to be secured respectively to said shafts, a one piece main gear bearing on one axle gear, a U-shaped differential cage detachably secured to the bearing



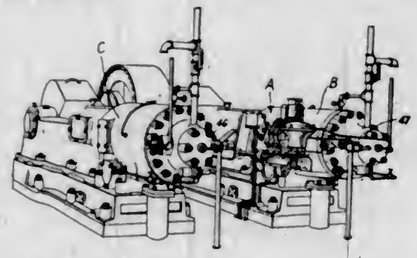
face of said main gear and having a bearing on the other axle gear; and differential pinions carried by the cage meshing with the axle gears.

1,682,872. METHOD OF AND APPARATUS FOR HANDLING, STORING, AND MEASURING BULK MATERIAL INTO BATCHES. WILLIAM MAYO VENABLE, Pittsburgh, Pa., assignor to Blaw-Knox Company, a Corporation of New Jersey. Filed June 3, 1924. Serial No. 717,535. 8 Claims. (Cl. 214—2.)



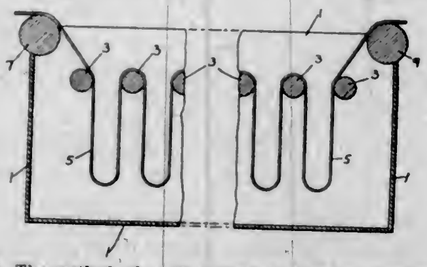
1. Apparatus for handling, storing and apportioning bulk material, comprising in combination a source of supply, a charging hopper, a measuring device, a storage bin, an endless conveyor for distributing the material, a conveyor for delivering material from the source of supply to the endless conveyor, a conveyor for delivering material from the charging hopper to the measuring device and a common drive for the various conveyors.

1,682,873. CAMERA. ALEXANDER FERDINAND VICTOR, Davenport, Iowa. Filed June 24, 1926. Serial No. 118,253. 15 Claims. (Cl. 95—42.)



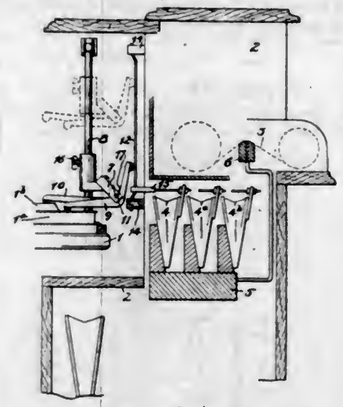
1. In a camera having a sensitized member, a lens mounted to focus through a finder in one plane and movable to an angle thereto for making a photographic exposure, and means actuated by the lens whereby to move the sensitized member during a portion of its movement.

1,682,874. RADIO FREQUENCY AMPLIFIER. FREDERICK K. VREELAND, Montclair, N. J., assignor to Vreeland Corporation, Hoboken, N. J., a Corporation of New Jersey. Filed Aug. 6, 1923. Serial No. 655,794. 6 Claims. (Cl. 179—171.)



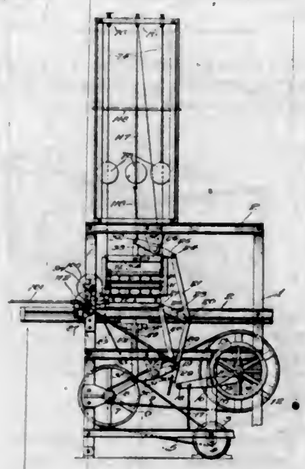
1. The method of amplifying high frequency currents which consists in amplifying the current energy, inductively reversing the polarity of the amplified output, shunting the reversing inductance by a capacity whose reactance balances the reactance of the reversing inductance at a given frequency, and adding capacity to the system whereby its reactances are balanced at a different frequency.

1,682,875. CONTROL APPARATUS FOR OIL ENGINES. HARRY C. WASSON and LESTER L. COLLINS, Franklin, Pa., assignors to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 11, 1924. Serial No. 731,319. 12 Claims. (Cl. 123—140.)



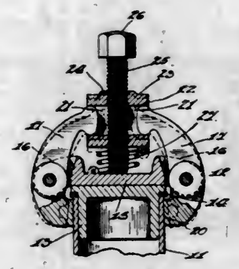
1. A unit control assembly for a multi-cylinder oil engine comprising a casing, a speed governor and fuel injecting pumps mounted on said casing, reciprocating pistons in said pumps, a driving shaft within said casing for said governor and pumps, means controlled by said governor for uniformly varying the fuel charges of said pumps, and means positively limiting the stroke of said pistons and permitting relative variation of the same to secure an equal power output from the cylinders of the engine.

1,682,876. COOLING RUBBER TIRE TREADS. HUGO C. WEISSE, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed June 4, 1926. Serial No. 113,788. 3 Claims. (Cl. 18—2.)



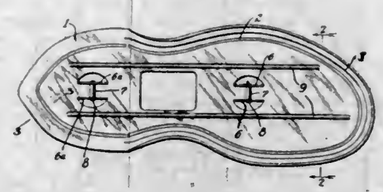
3. The method of cooling tread stock which comprises passing it freely over a series of rolls, driven at substantially equal speeds, and with the stock running in freely suspended festoon loops between the rolls, said loops being immersed in a cooling liquid.

1,682,877. ADJUSTABLE PLAYER ATTACHMENT FOR PIANOS. FRANK C. WHITE, Meriden, Conn., assignor, by mesne assignments, to Simplex Player Action Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 12, 1921. Serial No. 514,585. 20 Claims. (Cl. 84—111.)



1. In a player apparatus, pneumatic action devices, mechanical action devices, means for transmitting movement from the former to the latter comprising a plurality of roller wires mounted to move transversely and separately movable by said pneumatic action devices, said mechanical action devices being adjustable to different positions relatively to the length of said roller wires and being operable thereby in said different positions of adjustment.

1,682,878. PROCESS AND APPARATUS FOR NESTING PARTITION BLANKS. FREDERICK D. WILLI, Chicago, Ill., assignor, by mesne assignments, to Solomon H. Goldberg, Chicago, Ill. Filed Dec. 22, 1924, Serial No. 757,392. Renewed Mar. 4, 1927. 8 Claims. (Cl. 93—37.)

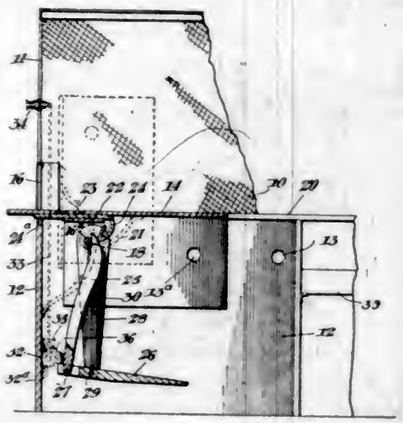


1. A process of nesting partition blanks, comprising feeding singly in a vertical plane, a predetermined number of spaced partition blanks having notches along one longitudinal edge from a plurality of magazines holding blanks lying in the same plane, vertically feeding individually blanks having longitudinal notches from a plurality of magazines holding blanks lying in the same plane, but at substantially right angles to the first mentioned blanks, causing the notches in the angularly disposed blanks to register, this nesting said blanks, and removing the formed nesting.

1,682,879. LEAD-PIPE SEAL. WILLIAM G. WILSON, West New Brighton, N. Y. Filed Sept. 3, 1927. Serial No. 217,399. 3 Claims. (Cl. 137—76.)

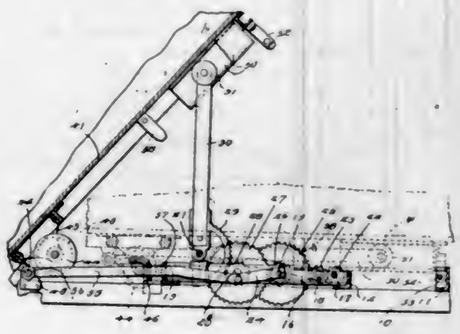
1. In combination with the open end of a lead pipe, a plug extending within said pipe for closing the open end thereof, of a clamping device including a plurality of pivoted jaws for clamping engagement with the exterior wall of said pipe, a collar engaging said jaws for actuating the same, a bearing plate overlying said plug on which said jaws are pivotally mounted, a contractile spring interposed between said collar and said bearing plate, and a stud threaded in said collar and pressing against said bearing plate to hold said plug seated in said pipe.

1,682,880. SOLE PATTERN. ROLAND G. ANDERSON, New Haven, Conn., and JOHN GAINES, Woonsocket, R. I., assignors to L. Candee & Co., New Haven, Conn., a Corporation of Connecticut. Filed July 3, 1926. Serial No. 120,315. 7 Claims. (Cl. 33—5.)



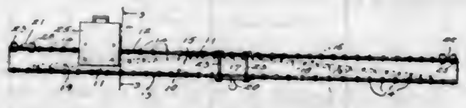
1. A sole pattern, the knife guiding edge of which is under-bevelled to the desired angle for cutting.

1,682,881. CASHIER'S PROTECTOR. LEON NOEL BEAUDRY, Calgary, Alberta, Canada. Filed July 15, 1925. Serial No. 43,873. 2 Claims. (Cl. 20—1.01.)



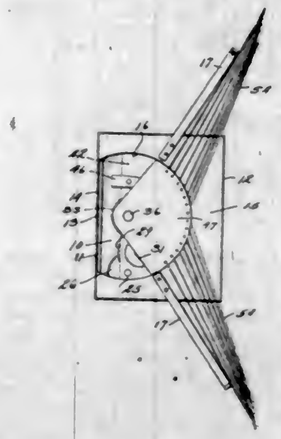
1. In a device of the character described the combination with a spring actuated, rotatably mounted counter provided with engaging means, of a locking bar adapted to slidably engage with said means to lock the counter in a horizontal position, a pivotally mounted wedge member adapted to engage the locking bar to unlock it and means

for operating the wedge comprising a pivotally mounted pedal lever, pivotally connected to said wedge whereby on the pedal being pressed the wedge is moved upwardly to en-



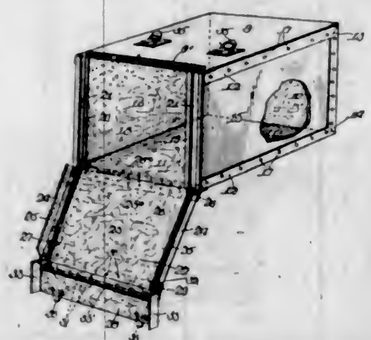
gage with the locking bar to unlock it and whereby on the pedal being released the wedge member automatically disengages with the locking bar.

1,682,882. DUMPING BODY. FRED BISZANTZ, Galion, Ohio, assignor, by mesne assignments, to The Central Ohio Steel Products Company, Galion, Ohio, a Corporation of Ohio. Filed Oct. 18, 1927. Serial No. 226,989. 14 Claims. (Cl. 298—14.)



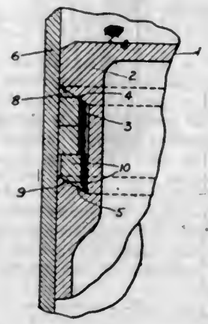
1. In a dumping body assembly, a frame, a body supported from the frame for tilting and longitudinal shifting movements, a shaft mounted upon the frame and having connection with the body whereby the body is tilted as the shaft is rotated, a second shaft mounted upon the frame, means connecting the second shaft and body whereby the body is shifted longitudinally upon rotation of said second shaft, intermittent gearing connecting the first and second shafts and transmitting rotation of the first to the second shaft only after a predetermined rotation of the second shaft and means for rotating the first shaft.

1,682,883. STEEL WALKING BEAM. LEE J. BLACK, Beaumont, Tex. Filed Nov. 10, 1927. Serial No. 232,373. 5 Claims. (Cl. 74—5.)



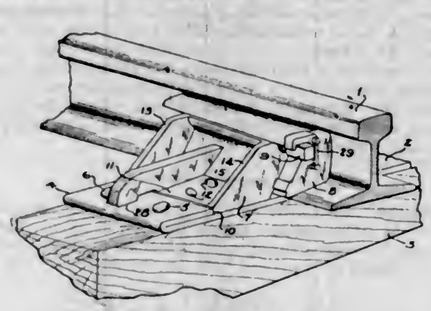
1. A walking beam for use in well pumping apparatus and the like comprising a metallic tube having parallel side walls and a truss member lying entirely within the tube and secured to said side walls throughout its length.

1,682,884. ADVERTISING AND DISPLAY DEVICE. HENRY BROADLEY, Walkerville, Ontario, Canada. Filed May 26, 1927. Serial No. 194,450. 8 Claims. (Cl. 40—104.)



1. A display mechanism including the similitude of a book comprising a plurality of rotatable spindles and leaves carried thereby and motor operated means causing the successive partial rotation of the spindles in one direction to thereby turn the leaves one by one in one direction and then causing the immediate reversal of all of the leaves to an initial position.

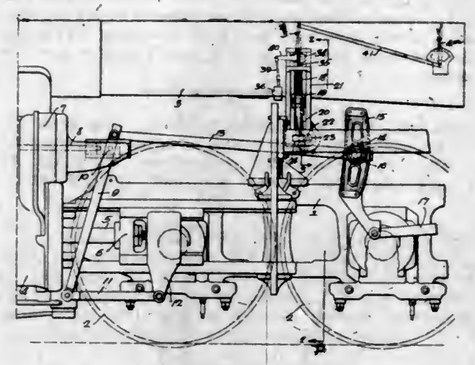
1,682,885. APPARATUS FOR STORING DISHES. FANNIE M. BUTLER, Hinsdale, Ill. Filed Apr. 23, 1925. Serial No. 25,195. 3 Claims. (Cl. 220—82.)



1. A receptacle of the character described, comprising top, rear, bottom and side walls, the top wall being provided with a pressed integral corrugation, and the side walls provided with inturned flanges having integrally pressed corrugations therein; a door hingedly connected to said receptacle, said door being provided with integrally pressed corrugations adapted to register with the corrugations in the portions of the receptacle when said door is closed; and means for holding said door in closed position, said door being provided with dust-proof material which extends over the related corrugations, and is adapted to be disposed between the registering corrugations when the door is in closed position.

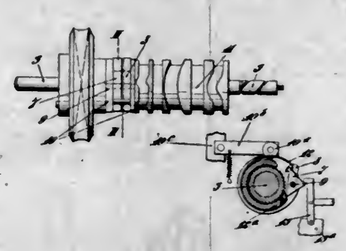
1,682,886. PISTON RING. SIDNEY JOHN COCKS and RAYMOND EDWIN BROWNING, Vancouver, British Columbia, Canada. Filed May 17, 1926. Serial No. 109,773. 8 Claims. (Cl. 74—109.)

1. A piston assembly comprising a piston having a peripheral groove, said groove having opposing end faces parallel to each other and inclined with respect to the longitudinal axis of the piston, a spiral ring to the piston having inclined end faces parallel to each other and adapted to make gas tight contact with the end faces of the groove.



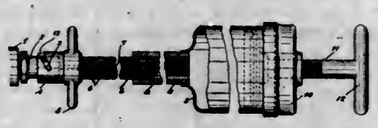
1,682,887. RAIL BRACE. WILLIAM W. COLEMAN, New York, N. Y. Filed Dec. 22, 1926. Serial No. 156,317. 3 Claims. (Cl. 238—292.)

1. In a rail brace; in combination: a fixed projection; a butt member formed with a surface to abut the fixed projection and a bearing arm attached to the butt member and extending out beyond the fixed projection.



1,682,888. POWER REVERSE GEAR FOR LOCOMOTIVES. WILLIAM A. CRAIG, Philadelphia, Pa. Filed Mar. 10, 1925. Serial No. 14,537. 6 Claims. (Cl. 121—162.)

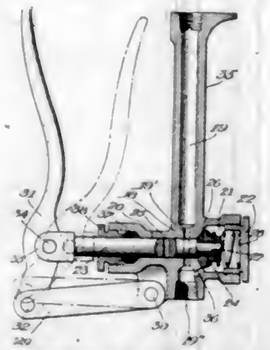
1. The combination in a power reverse gear for locomotives, of linkages; a shaft extending from one side of the locomotive to the other side; a reversible motor for driving said shaft; control means for the motor; a mechanism at



each side of the locomotive driven by the shaft for changing the operative relations of the linkages; and locking the same in the position in which they are adjusted.

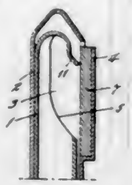
1,682,889. CLUTCH MECHANISM, SPECIALLY SUITABLE FOR USE IN TELEGRAPHIC APPARATUS. FREDERICK GEORGE CREED, Croydon, England, assignor to himself and Creed & Company Limited, Croydon, England. Filed Aug. 12, 1926, Serial No. 128,865, and in Great Britain Oct. 21, 1925. 12 Claims. (Cl. 192—28.)

1. Clutch mechanism comprising a rotary driving member, a rotary driven member, a number of toothed wheels adapted to be rotated by said driving member and having their respective sets of teeth staggered in relation to one another, spring actuated pawls equal in number to the toothed wheels and pivoted to said driven member and adapted, when released, to move towards and engage one or other of said toothed wheels and means whereby said pawls can be moved out of engagement with said wheels.



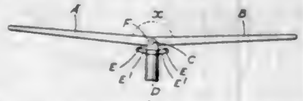
1,682,890. LUBRICATING MEANS. JOHN L. CREVELING, Oracle, Ariz., assignor, by mesne assignments, to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed May 28, 1924. Serial No. 716,404. 2 Claims. (Cl. 221—47.4.)

1. Lubricating means comprising lubricant containing means, means for expelling a lubricant therefrom, means for receiving said lubricant and exerting increased pressure



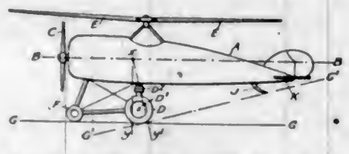
upon the same, a discharge conduit for said high-pressure means, a coupling means attached to said discharge conduit and adapted for making a connection with a lubricant receiving means, and projecting means secured to said coupling means and adapted to be manipulated during the operation of said lubricating means for preventing the application of undue force to parts of said lubricant receiving means.

1,682,891. VALVE. ERNEST W. DAVIS, Oak Park, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 25, 1924. Serial No. 708,031. 8 Claims. (Cl. 251—75.)



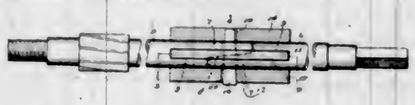
7. A valve comprising a body having a lubricant inlet and an outlet, a manually operable valve member in said body unaffected by the inlet pressure, means adapted to be actuated by the pressure in the outlet so as to tend to close the valve, said means operating to enlarge the volume of the outlet space, and spring means for assisting in the actuation of said means.

1,682,892. LIGHTER. LOUIS DE GOLL, Paris, France. Filed Dec. 5, 1923, Serial No. 678,623, and in France Dec. 5, 1922. 3 Claims. (Cl. 67—7.1.)



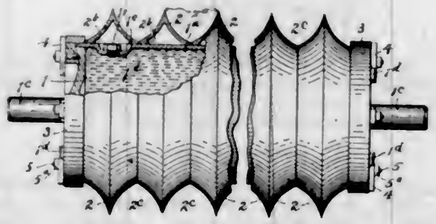
1. A portable lighter comprising a body portion, a striker attached thereto and a cap provided with a pyrophoric stone fitting over the lighter body, the said cap being formed from a flat piece of metal rolled into cylindrical form with overlapping edges which tend to contract the cap into diminished diameter and press the striker against the pyrophoric stone.

1,682,893. AIRCRAFT WITH ROTATIVE WINGS. JUAN DE LA CIERVA, Madrid, Spain. Filed Jan. 19, 1927, Serial No. 162,176, and in Great Britain Jan. 23, 1926. 8 Claims. (Cl. 244—19.)



1. In aircraft, a supporting system comprising an even number of freely rotative wings adapted to be driven by the relative air flown across them in flight, diametrically opposite wings being connected or rendered interdependent and flexibly jointed to the axis of rotation in such a manner that each pair of wings may oscillate under the influence of centrifugal and lift forces in a plane substantially perpendicular to the plane of rotation.

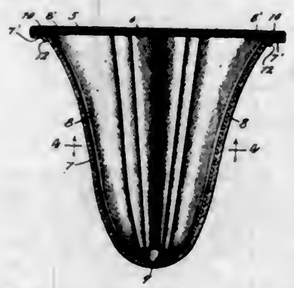
1,682,894. UNDERCARRIAGE OR LANDING GEAR FOR AIRCRAFT. JUAN DE LA CIERVA, Madrid, Spain. Filed Mar. 26, 1927, Serial No. 178,708, and in Great Britain Apr. 7, 1926. 2 Claims. (Cl. 244—2.)



2. An aircraft comprising a fuselage and propelling means, a supporting system comprising freely rotative wings articulated to the axis of rotation and adapted to be revolved by the relative airflow during flight and an undercarriage including principal landing wheels, supplementary supporting means pivotally mounted in front of the principal landing wheels, said landing wheels being so disposed that their axles lie in the rear of the vertical plane through the centre of gravity of the aircraft when resting on the wheels and supplemental supporting means and the said wheels being in advance of said vertical plane when the tail-skid of the aircraft is in contact with the ground.

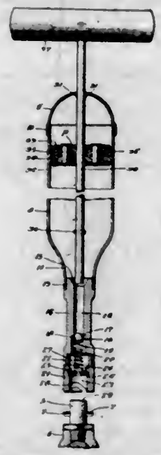
1,682,895. SHAFT COUPLING. JOHN M. DILLON, Hutton, La. Filed Oct. 12, 1927. Serial No. 225,742. 2 Claims. (Cl. 287—104.)

1. In a shaft coupling, shaft sections having overlapping reduced extensions which are provided with longitudinally inclined wedging faces, said shaft sections also having longitudinal grooves and the reduced extensions having transverse openings which are longitudinally staggered, a sleeve receiving the inner ends of the shaft sections and provided with a longitudinal groove and transverse openings, a longitudinal key fitting within the longitudinal grooves and a transverse tapered key within the transverse opening of the sleeve and within the transverse openings of the reduced extensions and engaging opposed walls thereof.



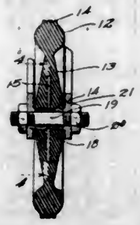
1,682,896. TILLAGE IMPLEMENT. RAY E. DUNHAM, Berea, Ohio, assignor to The Dunham Company, Berea, Ohio, a Corporation of Ohio. Filed Mar. 1, 1923. Serial No. 622,012. 3 Claims. (Cl. 55—77.)

1. In a tillage implement, the combination of a rotatably mounted body provided with a plugged aperture for the introduction of liquid ballast, and a plurality of



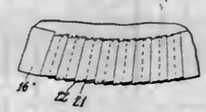
V-shaped treads in the form of rings, rotatably mounted upon the body and in laterally adjacent relation to one another, the walls of the body being provided with longitudinal corrugations, substantially as described.

1,682,897. FILTER ELEMENT. DOUGLAS F. FESLER, Chicago, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed July 19, 1923. Serial No. 652,628. 6 Claims. (Cl. 210—165.)



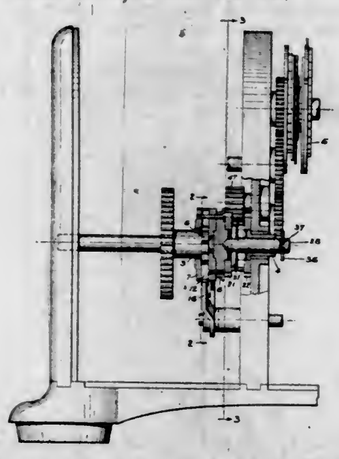
5. A filter element comprising a circular disc, a filter bag having its edge extending around the edge of said disc, and a retaining member bent around the edge of said disc and clamping said filter bag to said disc, said retaining member comprising means for determining modulations in said filter bag.

1,682,898. LUBRICATING SYSTEM. DOUGLAS F. FESLER, Chicago, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Feb. 21, 1924. Serial No. 694,301. 2 Claims. (Cl. 222—47.4.)



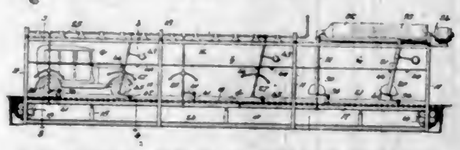
1. A lubricant compressor of the class described comprising a barrel, a cap secured to one end of said barrel, a high pressure cylinder secured to the other end of said barrel, a coupling member for making a quick detachable connection with a lubricant receiving nipple, said member carried by said cylinder, a washer clamped between said cylinder and said coupling member, a valve for said cylinder, sealing means for said coupling, spring means between said washer and said valve for holding said valve in closed position, a spring between said washer and said sealing member, a plunger extending through said barrel and cooperating with said cylinder, and a piston in said barrel and co-axial with said plunger.

1,682,899. RESILIENT WHEEL. JOSEPH H. FLETCHER, Los Angeles, Calif. Filed Nov. 16, 1927. Serial No. 233,653. 3 Claims. (Cl. 301—63.)



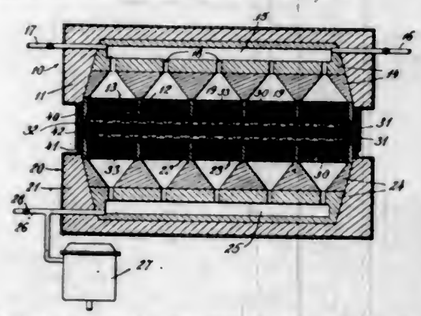
1. A wheel structure comprising a hub bushing, a stiffening plate circumscribing said bushing and carried thereby, said plate being disposed in a plane transversely of the longitudinal center of the bushing, and a wheel structure formed of a mass of resilient material enveloping said stiffening plate and being moulded thereover.

1,682,900. HOT-TOOL ROTARY CUTTER. FRANK E. FRICK, Flushing, N. Y. Filed Feb. 5, 1926. Serial No. 86,304. 1 Claim. (Cl. 29—103.)



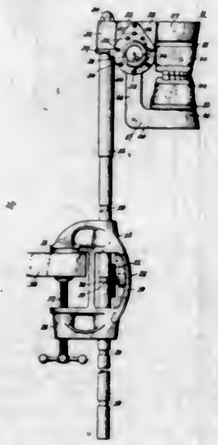
A hot tool rotary cutter comprising an annular disk having converging bevelled surfaces, teeth formed on said bevelled surfaces, the cutting edges of said teeth extending tangentially to the axis of the disk, the cutting edge of the teeth on one of the bevelled surfaces being of offset from the the cutting edge of the teeth on the opposite bevelled surfaces.

1,682,901. REVERSING MECHANISM. CARL M. F. FRIDEN, Oakland, Calif. Filed Apr. 13, 1926. Serial No. 101,658. 2 Claims. (Cl. 192—21.)



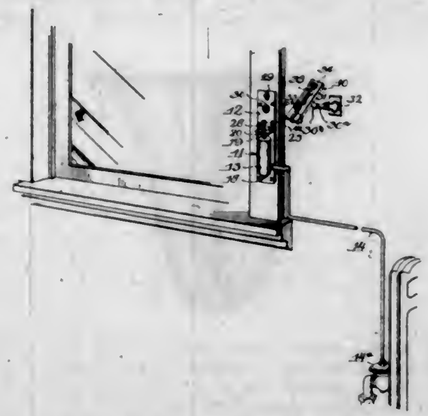
1. A reversing mechanism comprising a driving shaft having a diametric slot therein, a pair of contiguous gears rotatably mounted on said shaft, said gears being provided on their contiguous sides with diametrically disposed seats of different lengths on the opposite sides of the axis of the gears, a transverse pin disposed in said slot and extending beyond the surface of the shaft for different lengths on opposite sides thereof, and means for moving the pin longitudinally of the shaft into engagement with the seats of either gear.

1,682,902. VEHICLE-WASHING MACHINE. HOWARD S. GIASON, Washington, D. C., assignor of one-fourth to Dorsey F. Asbury and three-fourths to Helen Mills Gibson, Washington, D. C. Filed Apr. 14, 1924. Serial No. 706,354. 11 Claims. (Cl. 141—1.)



1. In a vehicle washing machine, a movable spray device, stop means to halt a vehicle passing through the machine, and means whereby said spray device is moved by a vehicle passing through the machine to a predetermined position with respect to a portion of the vehicle.

1,682,903. STEAM PRESS FOR CLOTHES. WILLIAM S. HADAWAY, Jr., New Rochelle, N. Y. Filed Apr. 11, 1923. Serial No. 631,383. 15 Claims. (Cl. 68—9.)



1. In apparatus of the character described, a pair of hollow press members having cooperating surfaces arranged to receive an article between them, a porous mass of heat retaining material in each of said members and means for passing a current of hot gaseous medium into one of the members through said cooperating surfaces an article between said surfaces and out through the other member.

1,682,904. DENTAL MANIKIN. RUDOLPH L. HANAU, Buffalo, N. Y. Filed Aug. 12, 1926. Serial No. 128,772. 21 Claims. (Cl. 35—16.)

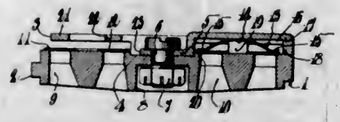
21. A dental instrument comprising a fixed jaw member, and a movable jaw member co-operatively supported with respect to said fixed jaw member, said movable jaw member having longitudinally movable supported pivot elements projecting laterally therefrom for pivotally and slidably supporting said movable jaw member.

1,682,905. THERMOSTAT CONTROL FOR RADIATOR VALVES. EARL VERNON HILL, Chicago, Ill. Filed Sept. 21, 1925. Serial No. 57,561. 5 Claims. (Cl. 236—68.)

1. In combination with a thermostatic member and a shut-off device to be controlled thereby, a motor member remote from said shut-off device comprising a vessel containing a liquid of low boiling point, a pipe connecting said vessel to said shut-off device for operating the same by the pressure developed in said vessel, a thermal element associated with said vessel, conductors for supplying electric current to said thermal element, one of said conductors including the thermostatic member, a normally closed make-and-break switch interposed in the other conductor, and means by which said switch is adapted to be opened upon the development of a predetermined pressure in said vessel.

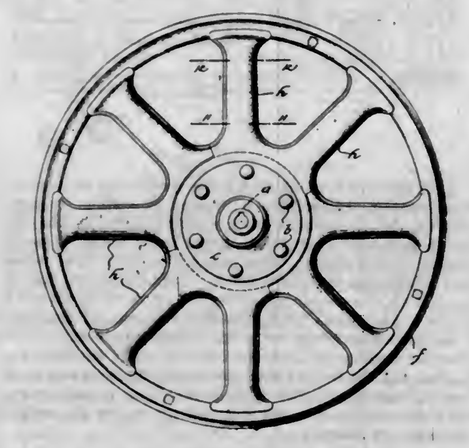
1,682,906. VALVE MECHANISM. FRED D. HOLDSWORTH, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 23, 1920. Serial No. 432,857. 6 Claims. (Cl. 251—119.)

1. In a valve mechanism, a cage member having a pair of adjacent open fluid conducting slots side-by-side therein and opening in different directions from each other, and, connecting said slots, an inclined passage having walls which if extended would pass wholly within the openings of said slots, the opposite ends of opposite sides of each passage lying closely adjacent the surfaces of the cage member through which the slots respectively open and said cage member providing in one of said slots a valve seat surface surrounding one end of said passage.



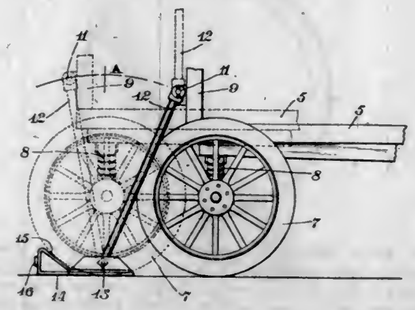
1,682,907. VALVE MECHANISM. FRED D. HOLDSWORTH, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Mar. 19, 1921. Serial No. 453,790. 13 Claims. (Cl. 277—46.)

11. An air compressor valve comprising valve seats disposed in parallel planes, flexible valves cooperating with said seats having a central portion and end portions, said valves disposed in parallel planes when in seated position, and a member located between the planes of said



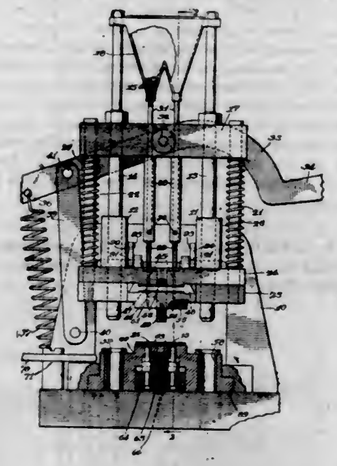
valves adapted rigidly to position said central portions and to guide said end portions inwardly along their entire length during opening movements thereof.

1,682,908. VALVE MECHANISM. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 19, 1923. Serial No. 681,597. 16 Claims. (Cl. 251—119.)



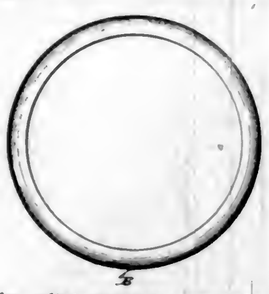
1. In a valve mechanism, a member providing concentric ported valve seats, annular valve members disposed on said seats, a guard member secured to said valve seat member, and a plurality of radially extending springs loosely guided by said guard member and slidably engaging said valve members, each of said springs lying wholly at one side of the center.

1,682,909. METHOD OF MAKING METAL WHEELS. EMIL R. JACOBI and FRANK H. LE JEUNE, Jackson, Mich., assignors, by mesne assignments, to Kelsey-Hayes Wheel Corporation, Detroit, Mich., a Corporation of New York. Filed June 19, 1925. Serial No. 38,204. 11 Claims. (Cl. 29—174.)



7. The method of making a metal wheel spider which comprises stamping wheel spider sections from flat stock and forming each section with a central portion and with one or more half tubular spoke portions, fitting at least two of the thus formed sections together to form a side of a wheel spider with the concave side of the half tubular spokes facing inwardly of the wheel spider and then placing two of such wheel spider sides together with the half tubular spokes matched to form a complete wheel spider with tubular spokes.

1,682,910. JACKING DEVICE FOR VEHICLE BEDS. GERHARD JAEGER, Columbus, Ohio. Filed June 22, 1926. Serial No. 117,727. 2 Claims. (Cl. 254—49.)



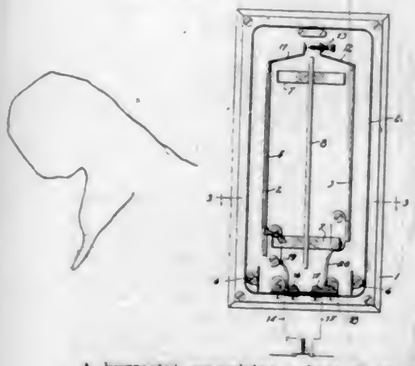
1. Means for relieving the weight of a wheeled vehicle bed on its supporting spring, including a ground purchase member and wheel chock connected together, a rod pivotally connecting the purchase member and vehicle bed, said rod adapted to elevate the bed in respect to its supporting spring when the vehicle wheel is moved toward the chock, said chock limiting the movement of the wheel while the bed is in elevated position.

1,682,911. MATERIAL-WORKING MECHANISM. EDMUND NIELS JORGENSEN, Chicago, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 31, 1925. Serial No. 19,672. 6 Claims. (Cl. 78—49.)

1. In a material working mechanism, a tube for delivering blanks to be worked, a blank positioning member carrying said tube, means for transferring one blank at a time from the tube to an opening in the blank positioning member, means for moving the blank positioning member to its operative position, means for causing the transferring means to operate when the blank positioning member is moved to its operative position, thereby transferring a blank to the positioning member, and means for moving the blank from the opening in the blank positioning member to the work.

1,682,912. ROLL GARTER. LEROY F. KEYSER, Akron, Ohio. Filed Aug. 9, 1926. Serial No. 128,092. 1 Claim. (Cl. 241—5.)

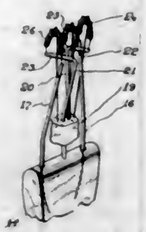
A garter for rolled stockings comprising an integral annular body composed of porous or sponge rubber and having a thin exterior casing thereon composed of smooth solid rubber the inner surface of said garter being flat in cross section and the exterior surface being rounded in cross section.



1,682,913. SOUND-RECORD COMPOSITION. FRANK E. LAYMAN and LINWOOD T. RICHARDSON, Milwaukee, Wis., assignors to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 13, 1923. Serial No. 662,559. 14 Claims. (Cl. 106—1.5.)

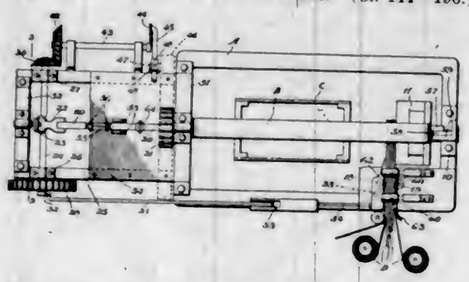
1. A sound record produced from material comprising approximately ten parts by weight of a resin of the sulphur type treated by incorporation therein of approximately one part by weight of white lead, and heating at a temperature above 300° F. for a period of approximately one-half hour.

1,682,914. METHOD OF MOLDING PLASTIC BODIES. FRANK E. LAYMAN and LINWOOD T. RICHARDSON, Milwaukee, and OSCAR A. CHERRY, Wauwatosa, Wis., assignors to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Sept. 13, 1923. Serial No. 662,560. 5 Claims. (Cl. 18—55.)



1. The process of producing a resin adapted to production of commercially useful shapes, which comprises subjecting a cold molding resin, produced from a reaction mixture of materials whose major constituents are an organic body and a chloride of sulphur, to pre-induration treatment including addition to about 175 parts of said resin about 50 to 75 parts of sulphur monchloride, raising the melting temperature of the supplemented resin to about 195 to 220 degrees F., and then subjecting said resin to quick hot molding treatment.

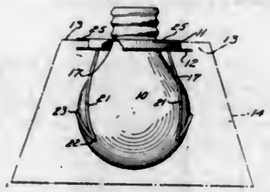
1,682,915. HYGROSTAT. GEORGE R. LAWRENCE, Chicago, Ill. Filed Feb. 19, 1927. Serial No. 169,635. 1 Claim. (Cl. 297—2.)



A hygrostat comprising a base of insulating material, two bi-metallic plates anchored at one end to the base in spaced parallel relation, and means for wetting the surface of the one plate, the free end of said plates arranged to contact when the plates are in a predetermined relative position and control an electric circuit, the wetted plate being slightly longer than the other plate to compense for the differences in the movements of the two plates at different ranges of temperatures.

1,682,916. ELECTRIC INCANDESCENT LAMP. STATES LEE LEBAY, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed June 28, 1923. Serial No. 648,371. 6 Claims. (Cl. 176—16.)

1. An electric incandescent lamp having a plurality of substantially U-shaped filaments each formed of a length of coiled filament wire and mounted in parallel planes, the adjacent terminals supporting the filaments having the same potential difference between them as the voltage drop in a single filament element.

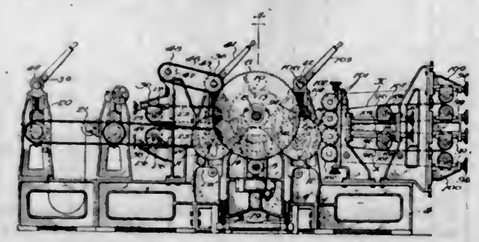


1,682,917. MACHINE FOR MANUFACTURING WOODEN SPOONS. JOHN LEWIS, Brownville, Me. Filed Mar. 28, 1927. Serial No. 179,143. 10 Claims. (Cl. 144—196.)

1. A machine for cutting wooden spoons and other pieces from veneer, comprising a frame, a casting turnably mounted in the frame, a block rigidly secured to the casting, a separably operable pocket slidably mounted in the casting and a cutting die rigidly secured to the pocket and registering with said block, a connecting rod for the cutting die, means for imparting a reciprocal movement to said die, mechanism associated with said rod for imparting a reciprocating movement to the die and the pocket, co-ordinating mechanism operable simultaneously with the connecting rod for feeding material to the die, and means for turning the pocket, the die and the block to synchronize with the operation of the die and the means for feeding the material thereto.

1,682,918. SHADE HOLDER. MATTHEW LUCKIESH, Cleveland, Ohio; LEROY C. DOANE, Meriden, Conn.; and ARTHUR MILLER, Cleveland, Ohio; said Doane and said Miller assignors to The Miller Company, Meriden, Conn., a Corporation of Connecticut. Filed Nov. 8, 1926. Serial No. 146,881. 8 Claims. (Cl. 240—138.)

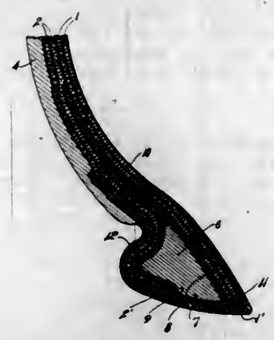
1. A shade holder cooperative with an incandescent lamp for supporting a shade therefrom, comprising, an outer ring having an inwardly directed flange having an aperture larger than the lamp base, an inner ring carried inside the outer ring, the hole in the inner ring being slightly larger than the lamp base so that the lamp base may be passed through said inner ring, bent wire supporting members having portions carried between the flange and the inner ring and means for fastening the two rings together, the wire members being capable of being spread by the bulb portion of the lamp.



1,682,919. MANUFACTURE OF ERYTHRENE. ALEXANDER T. MAXIMOFF, New York, N. Y., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Sept. 18, 1926. Serial No. 136,386. 19 Claims. (Cl. 260—171.)

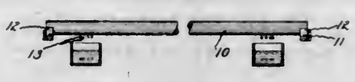
1. Method of manufacturing erythrene which comprises pyrogenically decomposing an aliphatic aldehyde having at least four carbon atoms at temperatures below 500° C. to produce a mixture of erythrene and other products, and recovering the erythrene therefrom.

1,682,920. MANUFACTURE OF THIURAM MONOSULPHIDES. ALEXANDER T. MAXIMOFF, New York, N. Y., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed Sept. 18, 1926. Serial No. 136,387. 4 Claims. (Cl. 260—106.)



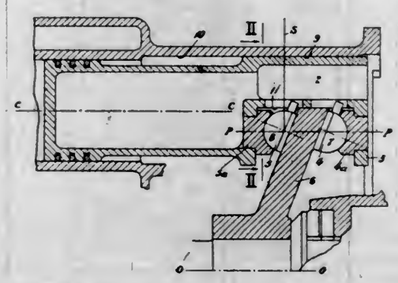
1. The method of preparing thiuram monosulphides from the corresponding thiuram disulphides which comprises treating the thiuram disulphide while in suspension in a non-solvent with a metallic cyanide in aqueous solution.

1,682,921. APPARATUS FOR PRODUCING INDIVIDUAL SHINGLE-SIMULATING ELEMENTS. OWEN D. MCFARLAND, Chicago, Ill., assignor to Guyton & Cumfer Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 6, 1926. Serial No. 127,680. 9 Claims. (Cl. 164—28.)



1. A machine for producing individual flexible shingle-simulating elements, comprising in combination a stationary main frame, means for feeding a continuous strip of flexible material into the machine, revolving means adapted to act on said continuously advancing sheet to produce slits and lines of severance therein according to a predetermined design, means for separating the continuous strip so slit and severed into individual elements, means for collecting the separated individual elements, said revolving means comprising a bed roll mounted for rotary movement on a shaft bearing in the main frame, and an opposed design-forming cutting cylinder mounted for rotary movement on a shaft bearing in a movable frame, opposed gears carried by each of said shafts, and means for moving the movable frame into and out of the machine.

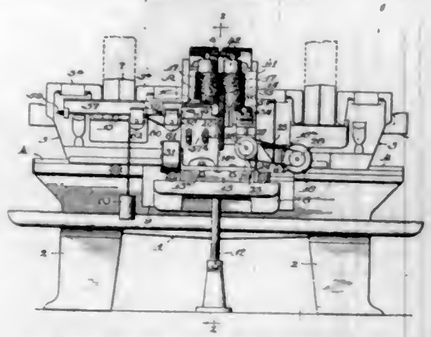
1,682,922. RUBBER-TIRE-BEAD CONSTRUCTION. CHARLES W. MCKONE, Canton, Ohio. Filed July 23, 1924. Serial No. 727,783. 1 Claim. (Cl. 152—13.)



A multiple ply fabric tire comprising a bead core triangular in cross-section and with its inner face widened to extend the toe of the core and provide a recess on its base face marked by a shoulder therein, certain plies of fabric extending across the inner side of the core and terminating adjacent its toe and certain other plies of fabric extending around the outside of the core and terminating at said shoulder in the base side thereof, substantially as set forth.

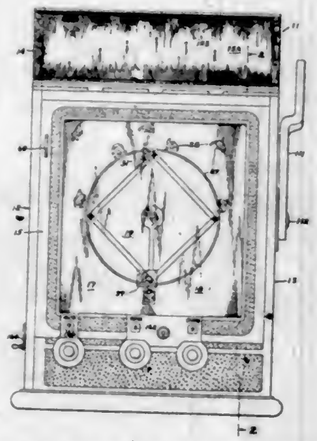
1,682,923. METHOD OF PRODUCING RUBBER TUBES. CHARLES EDGAR MAYNARD, Northampton, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Apr. 16, 1926. Serial No. 102,458. 5 Claims. (Cl. 18—53.)

1. A method of producing a rubber tube which comprises applying bands of cement to a warm mandrel, allowing the cement to dry, rolling a sheet of rubber around the mandrel with the ends of the sheet overlying the bands, and vulcanizing the tube upon the mandrel without external confining means other than the enveloping atmosphere.



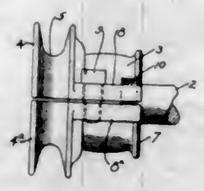
1,682,924. MECHANISM FOR THE INTERCONVERSION OF RECIPROCATING AND ROTARY MOTION. ANTHONY GEORGE MALDON MICHELL, Melbourne, Victoria, Australia, assignor to Crankless Engines Limited, Melbourne, Australia. Filed Jan. 26, 1927, Serial No. 163,765, and in Great Britain Apr. 7, 1926. 5 Claims. (Cl. 74—14.)

1. In mechanism for the interconversion of reciprocating and rotary motion in combination, a reciprocating piston member, a swash plate, a yoke member connected to said



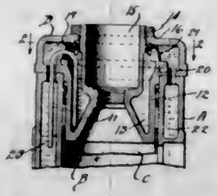
reciprocating member, slipper members having a common pivotal axis carried by the reciprocating member and the yoke member and engaging with opposite sides of the swash plate, an outer cylindrical guide surface on said yoke eccentric to the common axis of said slipper members, a stationary element engaging said outer cylindrical surface, and an inner cylindrical guide surface on said yoke parallel to and in sliding contact with the periphery of the swash plate.

1,682,925. WORK-FEEDING DEVICE FOR GRINDING MACHINES. JOHN MILLER, Jr., Beloit, Wis., assignor to Charles H. Besly and Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 29, 1927. Serial No. 164,388. 14 Claims. (Cl. 51—215.)



1. In a work feeding device for grinding machines the combination of a pair of rotative grinding discs, means for guiding the work to be ground between said discs, a pair of feed rolls mounted in advance of said discs and in line with said work guiding means, a work magazine, a rotative friction disc mounted at the discharge end of said magazine, and operative to advance the work successively from said magazine to said feed rolls.

1,682,926. GAME APPARATUS. GORDON B. MILLS, Oakland, AUGUST J. SCHMIEDESKAMP, Berkeley, and HENRY E. SKINNER, Oakland, Calif.; said August J. Schmiedeskamp assignor to said Gordon B. Mills and Henry E. Skinner. Filed Dec. 8, 1926. Serial No. 153,228. 10 Claims. (Cl. 273—88.)



1. In a game apparatus, a playing field providing a series of spaced stations including a starting station, player pieces arranged to be initially positioned at said starting station, means arranged at each successive operation thereof to move a different piece from said starting station to another station and means operative independently of said last means for moving pieces disposed at other than said starting station to said last station.

1,682,927. PULLEY ATTACHMENT. LAURITZ F. NIELSEN, Minneapolis, Minn., assignor to Durkee-Atwood Company, Minneapolis, Minn., a Corporation of Minnesota. Filed May 9, 1921. Serial No. 467,909. 5 Claims. (Cl. 64—18.)

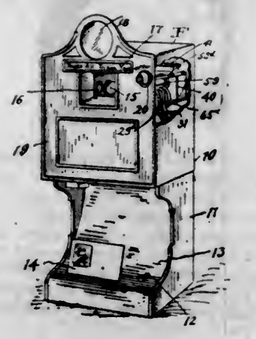
1. The combination, with a pulley having a flanged edge, of an attachment composed of separable sections having a flange for engaging the edge of the pulley, the sections of said attachment having arms thereon to extend across the peripheral face of the pulley in opposing relation, screws passing though said arms for locking them together, and means for rocking one of said sections on the other to clamp it on the pulley.

1,682,928. CYLINDER-HEAD CONSTRUCTION. ARCHIE MACPHAIL NIVEN, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a Corporation of Virginia. Filed Feb. 21, 1927. Serial No. 169,741. 14 Claims. (Cl. 123—173.)

1. A device of the character described comprising in combination, cooperating elements together forming an engine cylinder and head therefor, a cover, and means providing a fluid tight joint between the cover and one of said elements, said means comprising a sealing structure located within the cover enclosure.

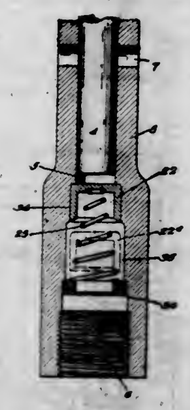
1,682,929. METHOD OF AND APPARATUS FOR INDUCING AND INCREASING THE FLOW OF WELLS. CLARENCE OCHS and BUD HILDEBRAND, Long Beach, Calif., assignors to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of Massachusetts. Filed Mar. 21, 1925. Serial No. 17,171. 40 Claims. (Cl. 103—260.)

1. The method of inducing the flow of wells which comprises forming ascending concentric columns or bodies of well fluid and compressed gas, effecting a gradual mixing of said fluid and gas, imparting a whirling motion thereto during the mixing process, subjecting one of said bodies and the portion of the other mixed therewith alternately



to compression and expansion during the mixing process, and progressively increasing such forced compression and progressively reducing such permitted expansion.

1,682,930. LAMP SOCKET. JOSEPH VICTOR PARENT, Worcester, Mass., assignor to Worcester Electric Supply Company, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 25, 1926. Serial No. 83,531. 1 Claim. (Cl. 173—346.)



A lamp socket comprising, in combination, an insulating plug engaged with a pair of wires, two spring-pressed inner conducting members connected with said wires guided by the plug, and projecting from one end thereof, a tubular casing in which the plug is movable endwise, the casing being provided with a longitudinal slot and the plug with a stud entering and movable in the slot, so that the plug may be projected and retracted without rotation in the casing, the plug being provided with a recess opening on its periphery, and with a spring-pressed ball in said recess, the sleeve being provided with orifices, into either of which the ball may be forced by its spring, said ball and orifices providing a semi-positive clutch adapted to yieldingly confine the plug, either projected or retracted, an insulating disk rigidly fixed within the casing, two spring-pressed outer conducting members longitudinally movable in said disk and maintained thereby in longitudinal alinement with the inner members, the inner members being separated from the outer members by the retraction of the plug and pressed against the outer members by the projection of the plug, the outer end of the casing being provided with coupling parts to engage complemental coupling parts on a lamp base, and a tubular handle fixed to and slidable with the plug, and overlapping a portion of the casing to cover and exclude dust and moisture from the guiding slot and the ball-receiving orifices therein.

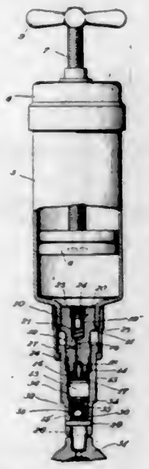
1,682,931. AUTOMATIC PHOTOGRAPHING MACHINE. GEORGE N. PIPER, Cleveland, Ohio, assignor, by mesne assignments, to American Phototure Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 31, 1924. Serial No. 758,989. 37 Claims. (Cl. 95—14.)

6. A photographing machine having means for causing the exposure of a portion of a sensitized flexible strip for the production of a negative, the feed of the strip, the development of the exposed portion thereof to complete the negative, the exposure of a sensitized blank for producing a positive picture from the negative and the development of the positive picture, and having means whereby the sequence of operations for producing the positive picture may be repeated as often as desired so as to produce duplicate positive pictures from the same negative.

1,682,932. DOUBLE-ACTION LUBRICANT COMPRESSOR. EMILE PIQUEREZ, Paris, France, assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 15, 1925, Serial No. 23,352, and in France July 26, 1924. 5 Claims. (Cl. 221—47.4.)

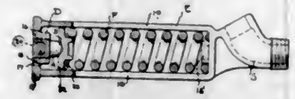
4. A lubricant compressor comprising a barrel, a plunger in said barrel, a discharge conduit for said barrel adapted to be attached to a part to be lubricated, and means for controlling communication between said barrel and said conduit and serving to relieve the pressure on the lubricant in said conduit, said means comprising a check valve having a cylindrical seat and a plane seat, said valve closing return flow by engagement with one seat before engaging the other seat.

1,682,933. STACK OF NESTED CONTAINERS AND METHOD OF PACKING THE SAME. PETER T. POTTS, Chicago, Ill., assignor to The Vortex Mfg. Co., a Corporation of Illinois. Filed Oct. 9, 1924. Serial No. 742,499. 1 Claim. (Cl. 206—56.)



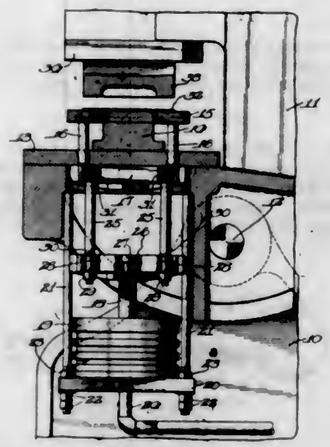
A stack of nested open end flangless articles of flexible resilient material and conical form, and a container therefor shaped to compress the series of articles along one diameter normal to the longitudinal axis of the stack and permit of expansion of the articles along the remaining portions of the peripheries thereof, so that the open ends of the articles are maintained in elliptical form and the edges thereof are separated along the expanded portions to facilitate individual removal of the articles from the stack.

1,682,934. SYNTHETIC RESIN AND METHOD OF PRODUCING THE SAME. LINWOOD T. RICHARDSON, New Brunswick, N. J., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed May 15, 1922. Serial No. 561,008. 6 Claims. (Cl. 260—3.)



1. An industrially useful hard resin which is the reaction product of furfural and an inorganic substance of acid reaction or character adapted to produce resinification of the furfural.

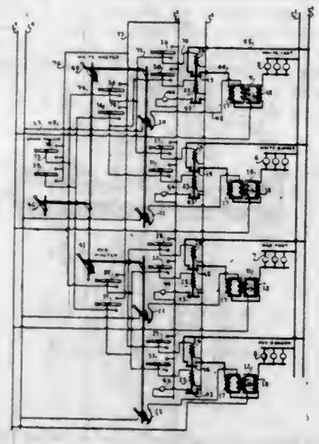
1,682,935. LUBRICANT COMPRESSOR. JOHN N. ROBIN, Chicago, Ill., assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 27, 1923. Serial No. 634,942. 8 Claims. (Cl. 221—47.4.)



8. In lubricating apparatus of the class described, a lubricant compressor comprising a lubricant containing barrel having at one end thereof, a reduced end portion interiorly and exteriorly threaded, a protective sleeve presenting internal threads engaging the external threads of said reduced end portion and a completely assembled valve unit presenting exterior threads engaging the interior threads of said reduced end portion, said valve unit being protected by said sleeve.

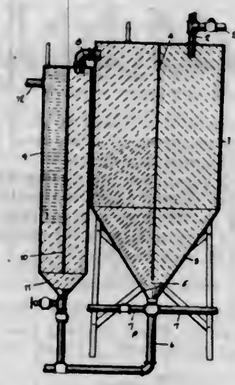
1,682,936. AUTOMATIC TRAIN-PIPE COUPLING. JOSEPH ROBINSON, New York, N. Y. Filed Nov. 26, 1920. Serial No. 426,534. Renewed Nov. 12, 1925. 12 Claims. (Cl. 285—58.)

5. In an automatic train pipe coupling, the combination of a coupling head, a bracket, spaced members secured to said head and extending rearward on opposite sides of said bracket, a flange secured to said members for engaging the rear face of the bracket, a pivot device rigidly mounted on said bracket intermediate the vertical sides thereof and adjustable toward and from said head, a plate arranged between said members and engaging said pivot device and also engaging said spaced members, and a coiled spring arranged between said members and bearing against said plate.



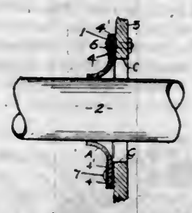
1,682,937. SHEET-METAL PRESS. FREDRICH J. RODE, Chicago, Ill., assignor to Marquette Tool & Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 4, 1927. Serial No. 165,764. 4 Claims. (Cl. 113—38.)

1. A sheet metal drawing press embodying a pressure pad, a fluid pressure controlled cushion for resisting the movement of the said pad in one direction, said cushion embodying a cylinder and piston relatively movable one with relation to the other, said cylinder and piston being connected one with the stationary part of the press and the other with the said pad, means adapting said pad to be rendered inactive while the said cushion is maintained intact and in operative position upon the press, whereby the press may be converted from a drawing into a blanking or punching press, and means removably supported beneath the bed of the press for receiving and deflecting the punchings away from the press.



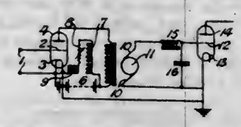
1,682,938. ELECTRICAL CONTROLLER. ARTHUR SIMON, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 2, 1922. Serial No. 533,510. 4 Claims. (Cl. 175—312.)

1. In a controller for a plurality of lighting circuits, in combination, individual electromagnetic switches for controlling the continuity of such circuits, individual current control means for said circuits each including a rheostat, and a remote control switchboard comprising interchangeable sections each including an operating member



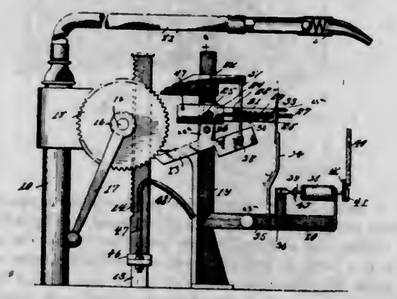
for certain of said rheostats and a pair of double throw switches, certain of said double throw switches being arranged to directly control one of said electromagnetic switches or to extend the control of said electromagnetic switch to another of said double throw switches.

1,682,939. CLEANSING-LIQUID-RESTORING MEANS. MAURICE M. SCHWAB and SAMUEL S. SCHWAB, Toledo, Ohio. Filed Mar. 3, 1927. Serial No. 172,263. 1 Claim. (Cl. 210—58.)



In a cleansing liquid restoring means, a pair of vats, each of the vats having inverted cone shaped bottoms and partitioning walls extending from the tops of the vats towards the bottoms, the partitioning wall of one of the vats extending well within the cone bottom and to near the apex of the cone, the other of the partitioning walls extending to near the bottom of the other vat, means for causing the fluid to enter the top of the first vat, flow down through one chamber and pass through the small opening in the apex of the cone of the bottom of the vat, then to rise and precipitate greases of the liquid in a caustic solution in the other chamber of the first vat and to pass off into the second vat, flowing down through one chamber and passing slowly through the space between the lower edge of the partitioning wall of the said vat and the cone bottom of the vat to carry down the precipitated foreign material to the bottom of the vat and change the direction of flow of the liquid from the downward movement of the precipitated material to an upward movement of the liquid through the other chamber of the vat, leaving the precipitated material in the second named vat.

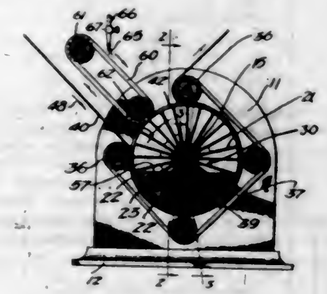
1,682,940. FLEXIBLE PIPE-SEALING MEANS. BERT H. SMITH, Horton, Kans. Filed Jan. 10, 1927. Serial No. 160,288. 6 Claims. (Cl. 126—314.)



1. In a flexible pipe sealing means, in combination, a wall, a pipe, and a washer, the washer having the peripheral edge of the aperture turned outward to engage on the pipe, said washer being severed at one side through which the said pipe will enter, semi-annular member to receive the outer peripheral portion of the washer, means for attaching said member and the washer simultaneously to the wall as closing means for the opening in said wall through which the pipe extends.

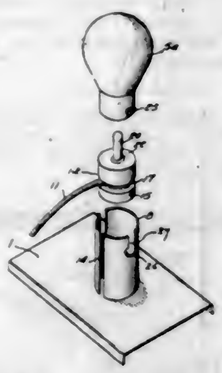
1,682,941. TELEGRAPHY. WILLOUGHBY STATHAM SMITH, Newton Poppleford, and NORMAN WILLIAM MCLACHLAN and WILLIAM GORDON REED JACOB, London, England. Filed Jan. 21, 1928, Serial No. 248,461, and in Great Britain Aug. 23, 1926. 6 Claims. (Cl. 178—65.)

1. Telegraph apparatus comprising in combination generating means, field windings in said means, thermionic means for applying signals to be amplified to said windings, output means in said generating means, output thermionic means, means for applying to the input side of said output thermionic means signal proportional output from said generating means, and means for compensating for direct current for said first mentioned thermionic means passing through said field windings.



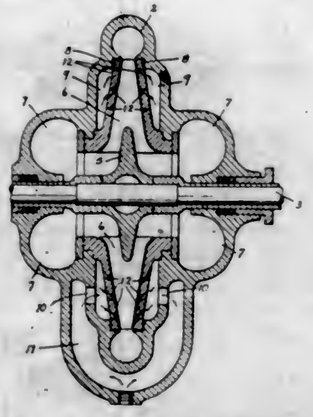
1,682,942. VENDING MACHINE. LEWIS P. STARKEY, Fort Collins, Colo., assignor, by mesne assignments, to Rose E. Starkey. Filed Oct. 5, 1922. Serial No. 592,515. 8 Claims. (Cl. 194—6.)

1. The combination with a pump and a toothed wheel in operative connection therewith, of a mechanism including interconnected pawls adapted to alternately engage the



wheel to prevent its movement in opposite directions, resilient means to reverse the position of the pawls relative to the wheel, a latch normally restraining said means, a coin-controlled element to release the latch, and means actuated by movement of the wheel to restore the mechanism to its original condition at a determinate point in the operation of the pump.

1,682,943. APPARATUS FOR TREATING FILMS. WILLIAM M. THOMAS, Los Angeles, Calif., assignor, by mesne assignments, to William M. Thomas and Foster A. Leonard, Los Angeles, Calif., a Copartnership. Filed Sept. 5, 1923. Serial No. 660,970. 6 Claims. (Cl. 95—94.)

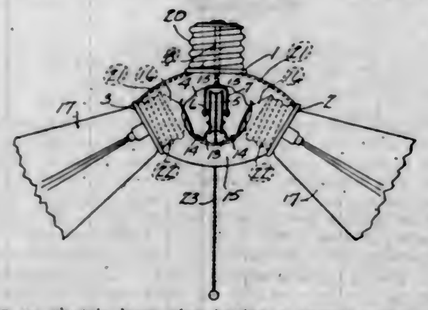


1. In a device for treating film, the combination of: a member having walls defining a number of channels successively disposed in the same radial plane, the outer ends of which are disposed along a curved line in arrangement corresponding to the frames of a film, said channels being alternately interconnected; means for holding a film across the outer ends of said channels; and means whereby treating substances may be placed in said channels so as to make contact with the frames of said film.

1,682,944. LAMP SOCKET. LOUIS VAN GALE, Astoria, N. Y. Filed Jan. 17, 1923. Serial No. 613,123. 2 Claims. (Cl. 173—328.)

1. A lamp socket, including a fixed tubular member having one end adapted by closed attachment for rigid support and having the other end open and free, means for attachment of a lamp at the free end, a longitudinal slot extending from the free end part way down one side, a contact lug and a permanently pre-attached lead wire adapted to be inserted in the socket from the free end with the lead wire sliding through said slot, and contact means projecting from the lug to engage an inserted light bulb.

1,682,945. CENTRIFUGAL VACUUM PUMP. EDWIN M. R. WEINER, Three Rivers, and Floyd F. Woods, Battle Creek, Mich. Filed Aug. 21, 1924. Serial No. 733,415. 6 Claims. (Cl. 230—108.)



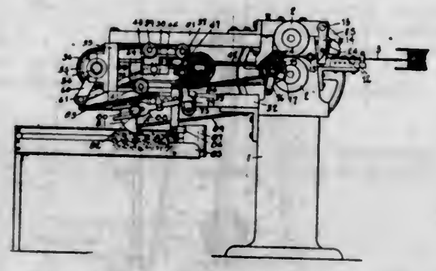
1. In a pump, the combination of a casing provided with inlets at each side, an impeller provided with blades, and entraining plates mounted in said casing at the sides of said impeller blades and providing annular air chambers at each side, said entraining plates having a plurality of slots therein disposed concentrically relative to the axis of the impeller and arranged in overlapping relation, said slots being of inwardly tapering cross section.

1,682,946. CAR-DOOR-LOCKING DEVICE. WILLIAM E. WINE, Toledo, Ohio. Filed Mar. 17, 1922. Serial No. 544,416. 19 Claims. (Cl. 105—308.)

1. In combination with a freight car having a plurality of drop bottom doors, hooks pivotally mounted along the side of the car for supporting said doors, a shaft disposed longitudinally of the car body and having fingers thereon so spaced as to act on said hooks successively when said shaft is moved in one direction to force said hooks from a supporting relation with said doors and thereby permit said doors to swing to an open position.

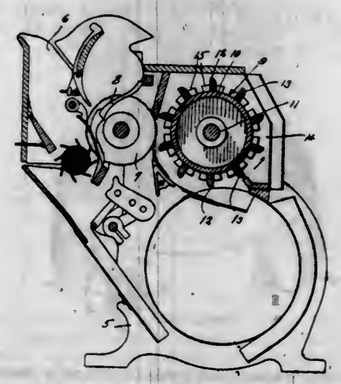
1,682,947. CHAIN-PULL DOUBLE-SOCKET LAMP PLUG. WESLEY M. WIRE, Newberg, Oreg. Filed Nov. 24, 1923. Serial No. 676,694. 1 Claim. (Cl. 173—336.)

In an electric lamp plug having a central recess and a threaded aperture communicating with said recess, said aperture being adapted to threadedly engage the base of an



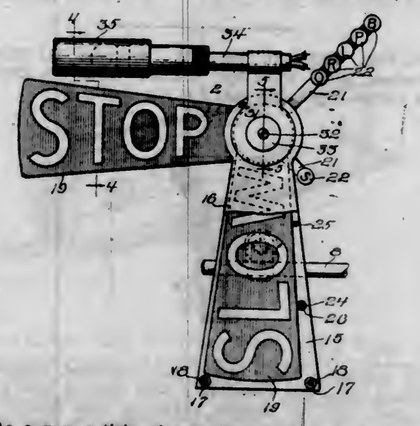
electric lamp, the combination comprising a contact pulley of insulation material journaled in said plug and adapted to rotate within said recess, a spring set chain adapted to engage the periphery of said pulley; a plurality of latch cups positioned in the sides of the pulley; means for connecting some of the latch cups to a source of electricity; and a resilient contact formed of a single piece of metal fastened medially its ends on said plug within said recess, one end of said contact being adapted to engage said pulley and the other end to engage said base of the electric lamp.

1,682,948. WARNING LIGHT. OLIVER C. RITZ WOLLER, Chicago, Ill. Filed July 13, 1925. Serial No. 43,105. 6 Claims. (Cl. 177—329.)



1. A warning light device, comprising in combination a casing member in the form of a ring and having parts projecting inwardly therefrom, a lens in the opening of the ring with its edge portions engaging the inwardly projecting parts of the ring, a retaining member slidably mounted in said ring and held by friction removably therein for holding the lens in position, a bracket carried by said retaining member and projecting backwardly therefrom for supporting an electric light globe therein opposite said lens, a second casing member, and means for detachably connecting said two casing members together serving thereby to secure said retaining member positively in position in said ring.

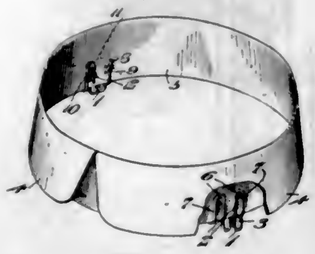
1,682,949. WIRE-SPRING-MAKING MACHINE. CORBAN H. ZILER, Carthage, Mo., assignor to L. A. Young Industries, Inc., Detroit, Mich. Filed Feb. 5, 1927. Serial No. 166,158. 42 Claims. (Cl. 140—1.)



1. In a wire spring making machine, the combination of a coiling means, means for feeding wire to said coiling means, means for severing formed springs from the stock, spaced top and bottom ways, a carriage traveling on the bottom way and provided with a pair of spring clamping jaws, a knotter member coacting with the top way, said knotter member and carriage being slidably associated for relative movement, a knotter gear rotatably mounted on said knotter member, a fixed rack with which said knotter member is slidably associated coacting with said knotter gear, said rack having an untoothed portion at its rear end, said knotter gear having a flattened portion coacting with said untoothed portion of said rack whereby the knotter gear is held against rotation, a jaw closing cam member slidably disposed between said carriage and knotter member for limited movement relative to both, said cam member having driving engagement with said carriage, springs acting to open said jaws, a dog pivoted on said knotter member for locking it to said cam member, said dog being disposed to slidably engage the upper way whereby it is held in engagement with said cam member, said way having a recess in the side thereof permitting the disengagement of said dog, a tripping cam for said dog disposed opposite said recess in said way, actuating means connected to said cam member whereby it is actuated to close the jaws after the knotter member and the carriage have reached the limit of their forward stroke, a dog on said carriage for locking said cam member to said carriage in its jaw actuating position, and means for releasing said dog on said carriage as the knotter member nears the end of its stroke whereby the knotted spring is removed from the knotter gear and the jaws are opened.

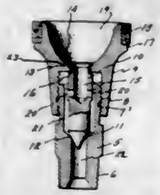
1,682,950. GIN BRUSH. HOMER BEAVER, Chickasha, Okla. Filed Oct. 14, 1927. Serial No. 226,157. 1 Claim. (Cl. 19—60.)

In a gin, a housing, gin saws operating in the housing, a gin brush including an elongated body portion, bars formed of wood secured to the periphery of the body portion and extending beyond the surface thereof, said bars operating adjacent to the saws to create a suction within the housing to draw material from the saws, and means for securing the bars to the body portion.



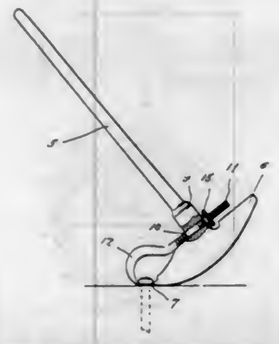
1,682,951. SEMAPHORE AND THE LIKE FOR AUTOMOBILES. JAMES BEEBY, Chicago, Ill. Filed Dec. 7, 1925. Serial No. 73,784. 3 Claims. (Cl. 116—53.)

1. As a new article of manufacture, a semaphore for the purpose specified including in combination a pair of vertical side plates, a series of pins extending between



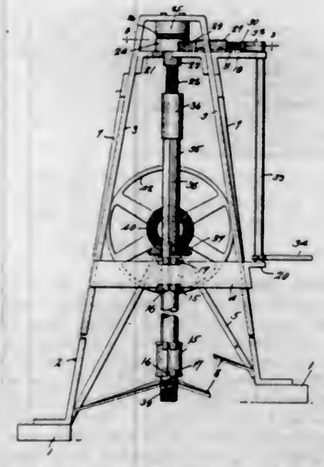
the bottom of the side plates and between the side plates along one edge thereof serving to draw the side plates towards each other, means for limiting the approaching movement of the side plates towards each other, a pivot sleeve extending between the upper portions of the side plates, means for drawing the side plates towards each other at the position of said pivot sleeve and for limiting the approaching movement of the side plates towards each other at such location, a series of semaphore arms pivotally mounted on said pivot sleeve, a series of disks located on said pivot sleeve intermediate bewteen the pivotal ends of the arms, a cross pin extending between the side plates and through the disks at a position above the pivotal ends of the semaphore arms serving to limit the upswing of the arms and to retain the disks against rotation for the purpose specified, and a rubber block located on the pivot sleeve intermediate between each of the side plates and the proximate arm, substantially as described.

1,682,952. NECKTIE RETAINER. JOHN C. BETTS, Philadelphia, Pa. Filed July 22, 1925. Serial No. 45,305. 2 Claims. (Cl. 2—137.)



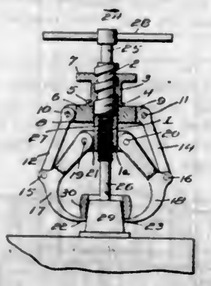
1. A necktie retainer and guide formed of a continuous, resilient wire and comprising a single, front inverted U shaped member having the lower end of one of its vertical limbs deflected inwardly, thence upwardly, thence downwardly and thence upwardly and having an inner, upper, clamping terminal portion, the lower end of the other of said vertical limbs being deflected inwardly, thence upwardly, thence downwardly, thence upwardly and thence downwardly and having an inner, lower, clamping terminal portion, said single front inverted U shaped member being adapted to be positioned between the folds of the collar and said upper and lower terminal clamping members being oppositely disposed and engaging the inner surface of the inner fold of the collar.

1,682,953. PRIMING DEVICE. HERBERT H. BRIDGE, Detroit, Mich. Filed Apr. 4, 1923. Serial No. 629,937. 4 Claims. (Cl. 123—187.5.)



1. A priming device of the class described, comprising a liquid receptacle including a body member and a cup member, said cup member having a stem loosely held therein against displacement, an opening in the top of said stem and an opening in the side thereof communicating with said first opening whereby liquid may flow through said top opening and out said side opening, means on the lower end of said stem for closing the bottom of the body member and means for opening the bottom of said body member to permit the flow of liquid therefrom.

1,682,954. EXTRACTING TOOL. ALMON T. BAUNKOW, Duluth, Kans. Filed June 25, 1927. Serial No. 201,433. 2 Claims. (Cl. 254—25.)

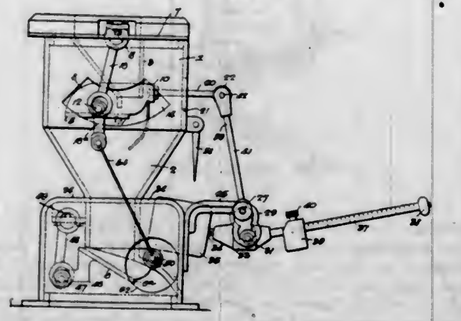


1. In an extracting tool of the character described, a handle lever, a head arranged upon one end of the lever, the front face of said head being of rounded formation to permit the same to be rocked, one end of said head being sharpened for engaging the member to be extracted, a claw member for cooperation with the sharpened edge of the head for engaging the opposite side of said member, and means whereby the claw may be adjustably rigidly secured to the tool in predetermined spaced relation with respect to the sharpened edge of said head.

1,682,955. DRILLING MACHINE. ARCH GLEN COPELAND, Rich Hill, Mo., assignor of one-half to Fred V. Reagel, Jefferson City, Mo. Filed Aug. 25, 1926. Serial No. 131,487. 1 Claim. (Cl. 255—22.)

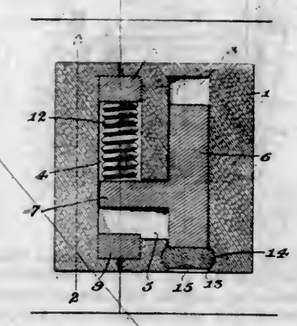
In a device of the class described, a frame, a drill shaft supported for rotation on the frame, a screw having threaded connection with the drill shaft, means for rotating the drill shaft, a plunger slidable upon the frame, a shoe carried by the plunger and cooperating with the screw to limit the rotation thereof, spring means for retracting the plunger and the shoe with respect to the screw, a second shaft journaled on the frame, mechanism under the control of an operator for rotating the second shaft, and an eccentric on the shaft and coacting with the plunger to advance the plunger and the shoe with respect to the screw.

1,682,956. GRIPPING AND PULLING IMPLEMENT. VERNON B. DAWSON and IVAN B. PENTON, Wilmington, Del. Filed Nov. 10, 1926. Serial No. 147,510. 3 Claims. (Cl. 29—84.)



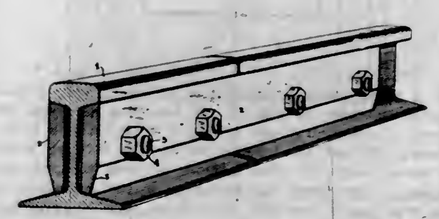
1. A gripping and pulling tool comprising a cylindrical body portion screw threaded on the upper extremity of the exterior surface thereof, journals on opposite sides of the lower portion of said body portion, gripping jaws pivoted in said journals, a rotatable screw threaded device operable upon said screw threaded portion, a laterally extending member adapted to be reciprocated upon said body portion of said rotatable screw threaded device, links connecting the opposite sides of said last mentioned member and said gripping jaws whereby said jaws may be quickly opened and closed, and screw threaded means extending centrally through said body portion for laterally moving said jaws with respect to a fixed point.

1,682,957. COLLODION COATING COMPOSITION. WILLIAM HENRY GARDNER, Los Angeles, Calif., assignor of one-fourth to Clarence Neil De Witt, Los Angeles, Calif. Filed June 23, 1924. Serial No. 721,835. 1 Claim. (Cl. 134—79.)



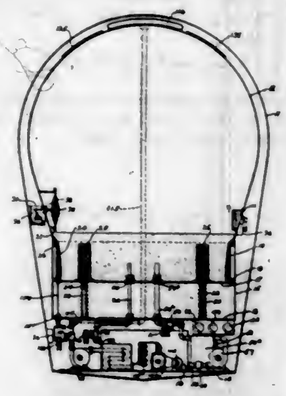
A film protector and preservative solution composed of the following ingredients in the proportions substantially as set forth, namely; one pint of Spar varnish; one quarter pint of ether; one ounce japan drier, one ounce Venice turpentine, and two ounces of collodion.

1,682,958. FEED REGULATOR. DAVID GEDDES, Berkeley, Calif. Filed Jan. 29, 1926. Serial No. 84,654. 16 Claims. (Cl. 83—44.)



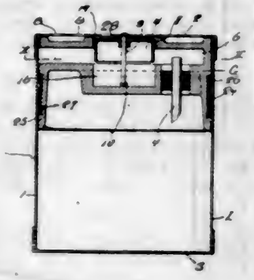
1. The combination in a feed regulator, of a supply duct, a valve for regulating the flow of material through the duct, means tending to hold the valve in open position, a pivoted regulating platform onto which material is delivered from the supply duct, a connection between the platform and the valve for moving the valve in the closing direction when the platform is moved by material engaging therewith, and means automatically serving to change the position of the initial engagement of the material with the platform and thereby change the leverage of said platform in accordance with variations in the position of the valve.

1,682,959. THERMAL CIRCUIT CLOSER. LLOYD GRAYSON, Grafton, W. Va. Filed Mar. 9, 1926. Serial No. 93,519. 3 Claims. (Cl. 200—142.)



1. A thermal circuit closer comprising a casing having a pair of parallel channels therein, and a communicating passageway therebetween, fixed contacts in one of said channels, a movable contact in alignment with said fixed contacts, a rod slidably mounted in the other of said channels and forming a support for said movable contact, electric conducting means in contact with one of said fixed contacts and said movable contact for biasing the latter toward the other fixed contact, and fusible means for normally holding said biasing means inoperative.

1,682,960. FISHPLATE FOR RAILWAY RAILS. EMIL GRUENFELDT, Cleveland, Ohio, assignor to The Rail Welding and Bonding Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 15, 1922, Serial No. 560,969. Renewed Feb. 2, 1928. 4 Claims. (Cl. 238—164.)



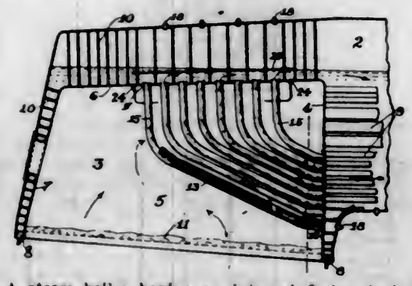
4. A splice plate for a rail joint having upper and lower surfaces adapted to bear against the heads and bases respectively of abutting rail ends and to be thereby positioned substantially parallel to and spaced from the webs of the rails, said plate being formed with a portion of its lower outer edge displaced inwardly relatively to its upper outer edge.

1,682,961. PRESSURE, TEMPERATURE, AND VOLUME INDICATING AND CONTROLLING MEANS FOR AIRCRAFT. CHARLES S. HALL, Oakland, Calif. Filed Mar. 6, 1926. Serial No. 92,791. 20 Claims. (Cl. 244—8.)

1. An aircraft having gas holding compartment therein, means enabling the size of said compartment to be varied, an indicating station, and means connecting said indicating station and said compartment and adapted to indicate the relative volume of gas in the compartment.

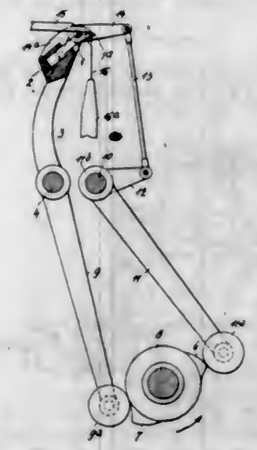
1,682,962. VOICE-DEVICE. LEVIN GESSFORD HANDY, Mountain View, N. J., assignor, by mesne assignments, to Voices Incorporated, Wilmington, Del., a Corporation of Delaware. Filed Dec. 24, 1924. Serial No. 757,845. 17 Claims. (Cl. 46—46.)

1. A voice device comprising a bellows having a head adapted to move by gravity for expelling air from the bellows, a sounding device arranged to be sounded by the outgoing air and there being an opening through which the sound issues, a valve member movable through said opening to interrupt the sounding of the sounding device, and means whereby said valve member will pass relatively successively in opposite directions through said opening during each air expelling movement of said head.



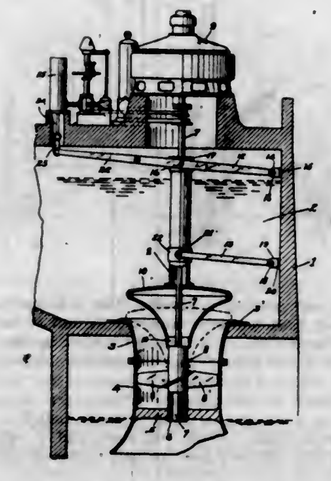
1,682,963. MAILING AND DISPLAY CARTON. WADE L. HARDY, South Bend, Ind., assignor to L. P. Hardy Co., South Bend, Ind., a Corporation of Indiana. Filed Apr. 16, 1927. Serial No. 184,308. 2 Claims. (Cl. 206—44.)

1. The combination with a carton, one wall of said carton having formed integral therewith an easel leg, a brace member for said leg formed integral with said wall, said brace member and leg being normally in the plane of the wall, of a flap carried by the carton and overlying the



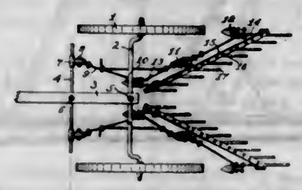
wall, the leg and the brace member and forming means for maintaining said leg and brace member in the plane of the wall.

1,682,964. LOCOMOTIVE-BOILER FIRE BOX. CHARLES GILBERT HAWLEY, Chicago, Ill., assignor to Locomotive Firebox Company, Chicago, Ill., a Corporation of Delaware. Filed May 13, 1922. Serial No. 560,657. 3 Claims. (Cl. 122—68.)



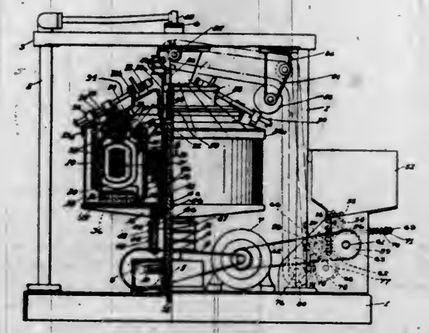
1. A steam boiler having an internal firebox including a flue sheet at one end and a crown sheet at the top, and a group of water tubes all arranged in the same longitudinal vertical plane in the fire box and opening at one end through the crown sheet and opening at the other end through the flue sheet with some of said tubes communicating with the front water leg of the boiler above said water leg, the tube ends in the crown sheet being spaced a greater distance apart than the tube ends in the flue sheet.

1,682,965. STRAIGHT-KNITTING FRAME. WOLDEMAR HEINITZ, Chemnitz, Germany. Filed Nov. 13, 1924, Serial No. 749,646, and in Germany Dec. 18, 1923. 4 Claims. (Cl. 66—109.)



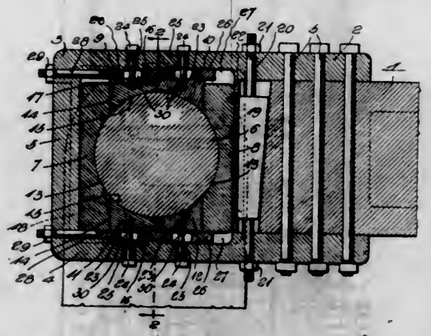
4. In a straight knitting frame, in combination jack sinkers, knock-over sinkers having each a locking-in throat, a nib above this latter, and a beak below the same, a bar carrying these knock-over sinkers, double-armed levers carrying this bar at one of their arms, other double-armed levers supporting the first-mentioned ones at their upper ends, the points of fulcrum lying in the ideal line extending through the extreme ends of the nibs of the knock-over sinkers, a shaft and two cams thereon, a lever arranged to be rocked by one of the cams in predetermined intervals, arms connected with this lever, and rods connecting these arms with the free arms of the first-mentioned double-armed levers, the second cam being arranged to rock the double-armed lever mentioned in the second place in predetermined intervals, substantially as described.

1,682,966. WATER WHEEL. JOHN J. HOPPES, Springfield, Ohio. Filed July 14, 1924. Serial No. 725,788. 3 Claims. (Cl. 253—154.)



1. In a water wheel, a runner having blades, a casing enclosing said runner, a valve controlling the inlet end of said casing and cooperating therewith to form a water passageway, a single centrally arranged stem connected with said valve, and radius rods pivotally connecting said stem with a stationary point.

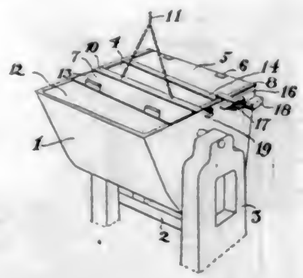
1,682,967. RAKE ATTACHMENT FOR CULTIVATORS. JOHN HOYLE and STEPHEN T. SHORT, Buchanan County, Iowa. Filed Jan. 31, 1927. Serial No. 164,807. 1 Claim. (Cl. 97—8.)



In a cultivator, a pair of like but reversed bipartite gang frames, independently movable, and positioned side by side, gangs of shovels rigidly mounted on forward parts of said frames and in echelon thereon, with the gangs on one frame reversed in alinement relative to the other gang, the other parts of said frames being vertically spaced apertured horizontal bars mounted in parallelism to the rear of the forward parts of said frames, and tines having their forward ends clamped between said spaced bars, the forward parts being transversely flattened, elastic, and curved downwardly, the free terminations of the tines being cylindrical, rigid and pointed, and removable fastening devices in the apertures of said spaced bars to clamp a tine between each adjacent pair thereof, permitting when the said devices are loosened, independent lateral swinging adjustments of each curvate time relative to the line of draft of the said bars and gang frame.

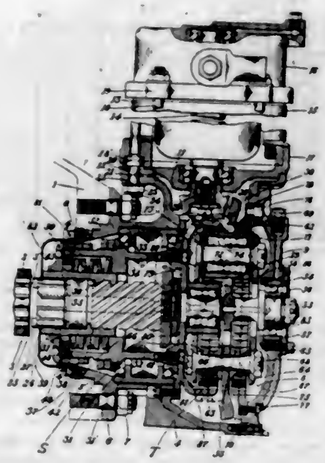
1,682,968. ELECTRIC METAL-STOCK HEATER. ERNEST S. JEFFERIES, Hamilton, Ontario, Canada. Filed Dec. 6, 1926. Serial No. 153,000. 15 Claims. (Cl. 219—11.)

1. In a rotary metal stock heater, a tank mounted to rotate on an axis, annular electrodes supported by said tank, a magnetic core in said tank, and primary and secondary circuits surrounding said core, said secondary electrically connected to said electrodes.



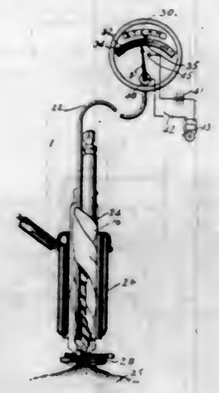
1,682,969. MAIN-ROD BEARING. JULIUS KINDERVATER, New York, N. Y. Filed Dec. 1, 1925. Serial No. 72,528. 5 Claims. (Cl. 308—68.)

1. In a rod bearing, a frame having an opening of substantially rectangular form, two end bearing brasses disposed at opposite ends of the opening and extending substantially the full depth thereof, each end bearing brass having a bearing surface extending substantially on an arc of 90° and having upper and lower abutment surfaces above and below said bearing surface, a top bearing brass formed of a pair of independent members disposed between the upper abutment surfaces of the end bearing brasses and on opposite sides of the vertical center of the bearing and each having a bearing surface extending substantially on an arc of 45°, a bottom bearing brass formed of



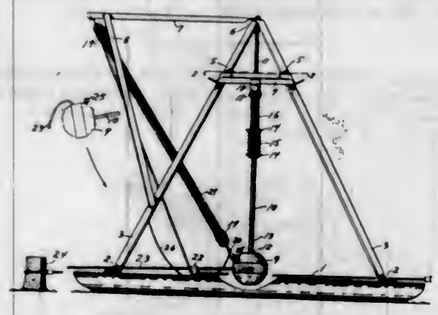
a pair of independent members disposed between the lower abutment surfaces of the end bearing brasses and on opposite sides of the vertical center of the bearing and each having a bearing surface extending substantially on an arc of 45°, means located at one end of the bearing opening and acting upon one of the end bearing brasses for holding the bearing brasses assembled in the frame, and adjusting means for said top and bottom bearing brasses between said top and bottom bearing brasses and the top and bottom walls of the frame opening.

1,682,970. MIXER. RAY KNAPP, Buffalo, N. Y. Filed May 19, 1927. Serial No. 192,599. 6 Claims. (Cl. 192—135.)



4. A closure unit comprising a plate, flanges on opposite sides of the plate to provide grooves along the margins thereof, a cross-bar connected to the flanges and spaced from the base of the plate, a second plate adapted to slide in the grooves of the first plate, means carried by the second plate to contact with the cross-bar to limit the movement thereof, and a contact means movable with said second plate for operating a control device.

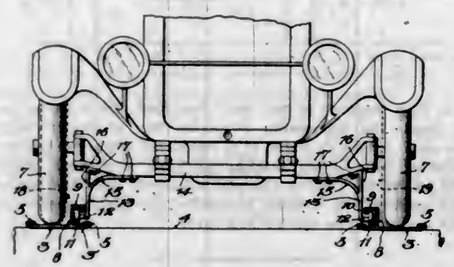
1,682,971. ENGINE-STARTING APPARATUS. RAYMOND P. LANSING, Montclair, N. J., assignor, by mesne assignments, to Eclipse Machine Company, New York, N. Y., a Corporation of New York. Filed June 30, 1919. Serial No. 307,713. 56 Claims. (Cl. 123—179.)



1. The combination in an engine starter, of a starting means, a transmission connecting said means to an engine, said transmission including a splined hub, an annular plate embracing said hub, and splined at its inner periphery to cooperate with the splines on said hub, and means responsive to a back-fire of said engine to move said hub out of engagement with said plate for interrupting said transmission.

1,682,972. PERMANENT-WAVING APPARATUS. WILBUR S. LEWIS, Lakewood, Ohio, assignor to The S. Le Mur Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 6, 1927. Serial No. 181,328. 17 Claims. (Cl. 132—36.)

1. In a hair waving apparatus, the combination with a curler rod upon which is wound a strand of hair, of a fluid-containing cell, of a wrapper enclosing the wound strand of hair and the cell and a container telescoped over the wound strand of hair and cell, means to heat the wound strand of hair in the presence of moisture through the walls of the container, a fluid pressure indicator means disposed exteriorally of the container and a tube interconnecting the said cell and the said indicator means.



1,682,973. STUMP-PULLING MACHINE. GERHARDT L. LUERSSEN, Parma, Mo. Filed May 20, 1927. Serial No. 192,969. 1 Claim. (Cl. 254—135.)

A stump puller including a portable frame comprising a structural support and skids upon which said support is mounted, a heavy weight suspended from the upper portion of said structural support in a central position, said weight having an approximately funnel-shaped opening for the admittance and unimpeded action of a rope or chain connecting the stump to be extracted and the hanger passing thru said weight, two extensible elements comprising each a spring constrained between two cap plates with two draw-bars and their connections, each extensible element being suspended from opposite sides of the structural

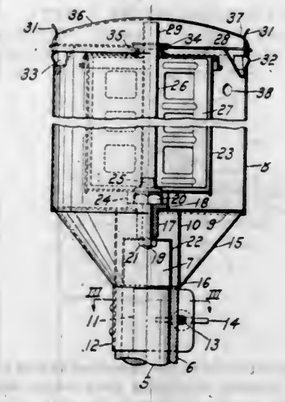
frame and attached at their lower ends to the above mentioned weight, the weight with its hanger and the two extensible elements being articulated in such manner at their upper ends as to be capable of swinging together as a pendular element, means of raising said pendular element comprising a structural extension of the main structural frame, a multiple pulley block depending therefrom, a similar multiple pulley bock attached to said weight, and a rope threaded thru said pulley blocks, means for suddenly releasing said pendular element consisting of a trip hook and trip rope.

1,682,974. HIGH-SPEED TRACKWAY. FRANCIS J. LUKENS, Washington, D. C. Filed Oct. 7, 1927. Serial No. 224,599. 3 Claims. (Cl. 238—4.)

1. In combination, a wheeled vehicle having a depending support carrying a guide wheel, and a track having a base portion to receive the vehicle wheel and guide wheel, and having a guide way for the guide wheel adapted to engage the said wheel on each side thereof to limit its lateral movement.

1,682,975. PROCESS FOR PROTECTING WOOL AND FUR FROM MOTHS. ERNST MECKBACH, Opladen, Germany, assignor to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne, Germany. Filed Aug. 11, 1921, Serial No. 491,570, and in Germany May 13, 1918. 7 Claims. (Cl. 167—6.)

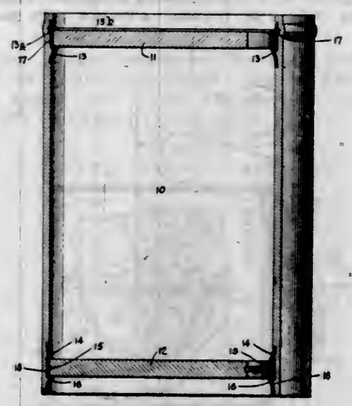
1. Process for protecting wool, fur and other similar materials against attack by moth which comprises treating the same with a solution containing an inorganic compound of fluorine in a manner similar to the method employed for dyeing fabrics with acid dyestuffs, whereby the inorganic compound of fluorine is fixed in the material in moth-proofing quantity.



4. Process for protecting wool, fur and other similar materials against attack by moth which comprises treating the same with a solution containing a double salt of fluorine in a manner similar to the method employed for dyeing fabrics with acid dyestuffs, whereby the double salt of fluorine is fixed in the material in moth-proofing quantity.

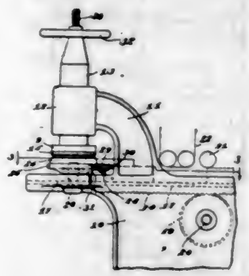
5. A moth-proofed material comprising a material liable to attack by moth impregnated with an inorganic fluorine compound, said moth-proofed material being substantially proof against loss of its mothproofness by dusting or by washing with water as incurred in ordinary usage and wear.

7. A moth-proofed material comprising material liable to attack by moth impregnated with an inorganic double salt of fluorine.



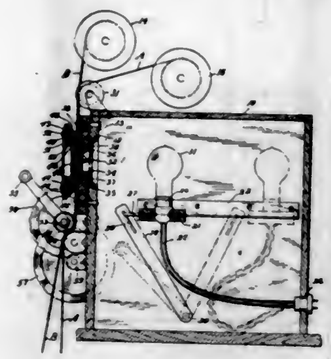
1,682,976. ICE-CREAM FREEZER. BASIL W. MCGINNIS, Birmingham, Ala., assignor, by mesne assignments, to Universal Metal Mfg. Co., Birmingham, Ala., a Corporation of Alabama. Filed Sept. 25, 1926. Serial No. 137,757. 6 Claims. (Cl. 259—36.)

1. A freezer attachment for a machine having a vertically extending turnable shaft with a surrounding sleeve, said attachment comprising a receptacle for a freezing substance, supporting means for securing said receptacle to the sleeve and against turning movement, and a container



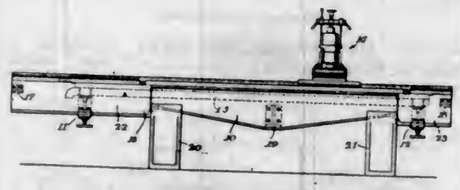
within said receptacle and rotatable relative thereto, said container being connected for power transmission with said shaft by a connection extending through said supporting means.

1,682,977. PAPER RECEPTACLE OR CONTAINER AND ART OF MAKING THE SAME. FRED T. NICHOLSON, Bloomfield, N. J. Original application filed Jan. 24, 1920, Serial No. 353,692. Divided and this application filed Nov. 24, 1922. Serial No. 602,944. 6 Claims. (Cl. 229—5.5.)



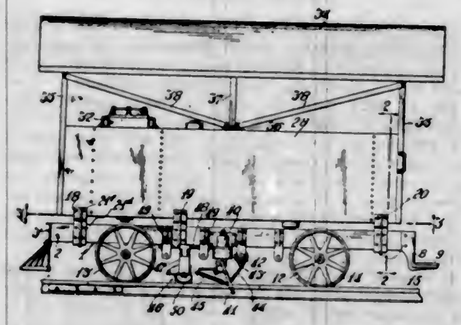
1. In a container of the class described, a tubular body having a wall composed of a plurality of continuous turns or layers of paper, at least the inner layers being indented circumferentially to form an inwardly-extending circumferential rib and having reinforcing means for the rib, disposed between the turns or layers of paper without crossing a turn or layer of the paper, said tubular body having a circumferential groove axially spaced from said rib, a closure engaged by said rib and held thereby against displacement in one axial direction, and means adapted to seat in said groove and engage said closure for holding said closure against displacement in the opposite axial direction.

1,682,978. MACHINE FOR PRINTING OR EMBOSSING. SKIDMORE O'HARA, Waltham, Mass., assignor to O'Hara Waltham Company, Waltham, Mass., a Corporation of Massachusetts. Filed May 20, 1927. Serial No. 193,039. 3 Claims. (Cl. 101—41.)



1. A machine of the character described having a vertically reciprocable printing member, a work holder mounted on an arm pivotally mounted adjacent the path of movement of the printing member and adapted to swing in a horizontal plane on its pivot to bring the work into and out of alinement with the printing member, a die having thereon the design to be printed, a reciprocable die carrier, means for reciprocating the die carrier to move the die into and out of alinement with the printing member, and a bumper carried by the die carrier which when the die is moved into operative position beneath the printing member engages the said work holder arm and turns it on its pivot to move the work holder out of alinement with the printing member.

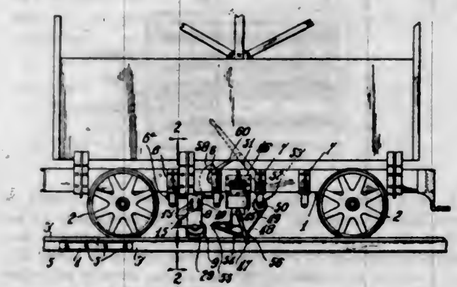
1,682,979. MOTION-PICTURE-PRINTING MECHANISM. FRANK E. OILER, Detroit, Mich., assignor to Mantor, Inc., New York, N. Y., a Corporation of Delaware. Filed Mar. 28, 1924. Serial No. 702,552. 4 Claims. (Cl. 95—75.)



1. A printing machine comprising a casing having a window in one of its walls, guide members within the casing extending toward and away from said window, an illuminator having a mounting on said guide members permitting movement of the illuminator in the line of the window, a lever connected with said mounting having an operating handle to the exterior of the casing for adjusting the position of the illuminator, a ground glass diffuser mounted within the window, a spacer member beyond said ground glass provided with means for guiding positive and negative films and holding them in contact and provided with means for permitting the inspection of the film during its exposure, and means for feeding the film past the window.

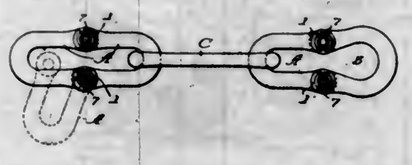
1,682,980. MACHINE FOR PLANING SUCTION BOXES. HARRY M. OSTERTAG, Appleton, Wis., assignor, by mesne assignments, to Paper Patents Company, Neenah, Wis., a Corporation of Wisconsin. Filed July 29, 1927. Serial No. 209,271. 14 Claims. (Cl. 144—288.)

1. In a machine of the class described, the cambination of means for supporting a suction box at substantially the same points at which it is supported when operatively mounted in a paper making machine, a planing device and means for guiding the planing device over the top of said suction box, thereby to control the planing effect of said device on the suction box cover.



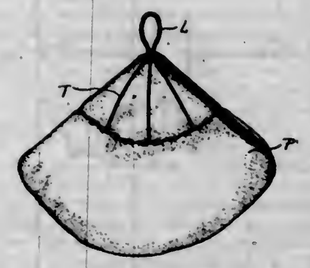
1,682,981. CAR CONSTRUCTION. HARRY W. PROTZELLER, East Chicago, Ind., assignor to O. F. Jordan Company, East Chicago, Ind., a Corporation of Indiana. Filed Feb. 23, 1927. Serial No. 170,296. 11 Claims. (Cl. 105—369.)

1. A car embodying therein, a frame including side sills, each comprising at least a pair of spaced parallel sill members, a filler block fixed between and to the ends of each pair of sill members, and end sills fixed at their ends to the ends of said filler blocks.



1,682,982. AUTOMATIC MAKE AND BREAK CONTACTOR. HARRY W. PROTZELLER, East Chicago, Ind., assignor to O. F. Jordan Company, East Chicago, Ind., a Corporation of Indiana. Filed Feb. 23, 1927. Serial No. 170,300. 5 Claims. (Cl. 104—279.)

1. A contactor of the kind described embodying therein a supporting member, a roller journaled on one end thereof for guiding engagement with a rail, means at the other end of said member for supporting the same from above to maintain said roller in engagement with said rail by gravity, a stationary contact member on said supporting member, a double arm lever pivoted on said member, a contact member movable with one arm thereof into and out of engagement with said stationary contact member, a joint plate contact finger removably secured to the other

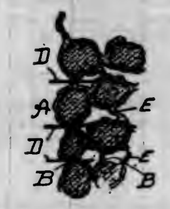


arm of said lever and means so connected to said lever as to hold the contact finger movable therewith out of engagement with said stationary contact member.

1,682,983. DRAG-CHAIN LINK. WILLIAM M. PRYOR, St. Louis, Mo., assignor to Southern Manganese Steel Company, St. Louis, Mo., a Corporation of Delaware. Filed Apr. 9, 1927. Serial No. 182,242. 2 Claims. (Cl. 59—85.)

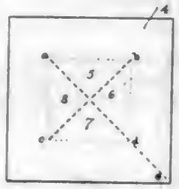
2. In composite links, members having ends meeting and articulated to produce a complete link; one end at each point of articulation being bifurcated and the other single and fitting between the members of the bifurcation; and a pin passing through each bifurcated end and the intervening single end; one of the members of each bifurcation being diametrically grooved and the portion of the pin adjacent thereto carrying a transverse pin lying in said groove; the axes of the pins being perpendicular to and spaced apart in the plane of the link.

1,682,984. POWDER PUFF. LOUIS L. RAYNOR, New Rochelle, N. Y., assignor, by mesne assignments, to The Hygienol Co. Inc., New York, N. Y., a Corporation of New York. Filed Aug. 17, 1927. Serial No. 213,559. 1 Claim. (Cl. 132—78.5.)



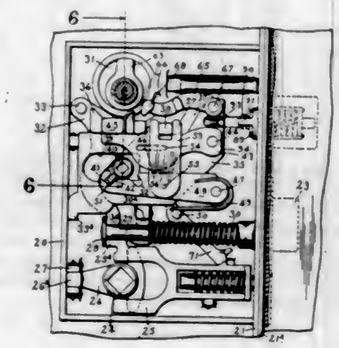
A powder puff of substantially triangular form, said puff being made of soft material throughout, the apex portion of said puff constituting a hand-hold portion, the remainder of said puff constituting a powder-applying portion, the outer surface of said hand-hold portion having threads thereon to render said outer surface of the hand-hold portion unsuitable for applying powder.

1,682,985. NEEDLE FOR REPAIRING RUNS IN KNITTED FABRICS. HARRY T. ROLLINS, Des Moines, Iowa. Filed May 10, 1927. Serial No. 190,245. 1 Claim. (Cl. 66—117.)



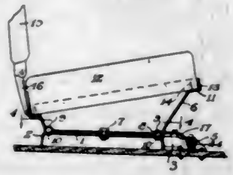
A knitting needle comprising a handle having one end terminating in a hook, a pivoted latch formed of spring material adapted to move from a position closing said hook to an open position adjacent to one side of said handle, said parts being so constructed and arranged that as the latch is forced to its closed position it will bend, and upon being released it will spring back to its normal shape and be thrown toward open position.

1,682,986. SOUND-ABSORBING SURFACE AND PROCESS OF PRODUCING SAME. LYAL B. RYMARCZICK, Los Angeles, Calif. Filed Aug. 29, 1927. Serial No. 216,325. 2 Claims. (Cl. 72—17.)



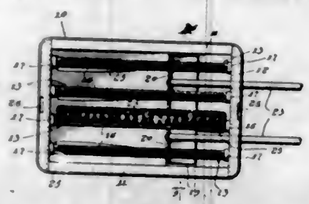
1. The process of producing a sound absorbing wall which consists in providing a plaster including porous granular particles that will prevent close packing and produce voids between the particles, applying the plaster to the surface to be covered, permitting the plaster to set, and in penetrating the exposed face of the plaster and continuing this step of penetrating the material to break down the hardened surface film induced by seepage of cementitious moisture in the act of applying the plaster and to break down the inner texture of the material at the boundaries of the voids between the granular particles, whereby to establish inter-communication between the voids and to open the voids to the exposed outer face of the material.

1,682,987. PAPER COVER FOR TOILET SEATS. HILDA M. SAXON, Bellingham, Wash. Filed Sept. 7, 1926. Serial No. 133,774. 1 Claim. (Cl. 4—243.)



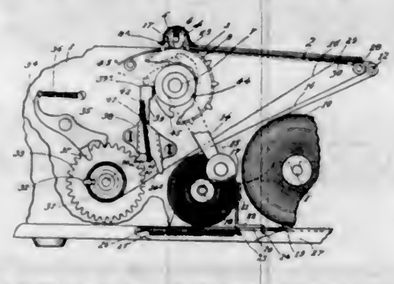
A sheet of paper for the specified use having crossing rows of perforations all confined to its central area except one of said rows one end of which is extended to the margin of said sheet of paper.

1,682,988. LOCK. JOHN H. SHAW, New Haven, Conn., assignor to Sargent & Company, New Haven, Conn. Original application filed Apr. 25, 1924, Serial No. 708,918. Divided and this application filed Jan. 26, 1927. Serial No. 163,726. 5 Claims. (Cl. 70—6.)



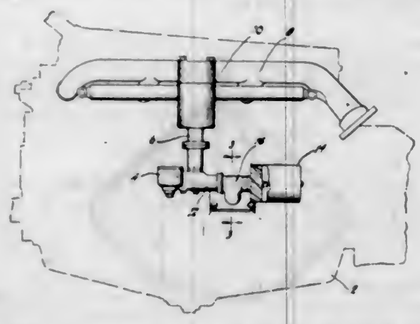
1. In combination, a door lock provided with a bolt and a face-plate having an opening therein, a strike-plate cooperating with the lock, an indicator on the strike-plate provided with a controlling member protractable from this plate into the face-plate opening, and a member movably mounted upon and entirely supported by the front face of the lock case and adapted to contact with said protractable member to prevent movement thereof.

1,682,989. AUTOMOBILE SEAT AND THE LIKE. LE ROY SMELKER, Germantown, Ohio. Filed July 14, 1926. Serial No. 122,321. 4 Claims. (Cl. 155—95.)



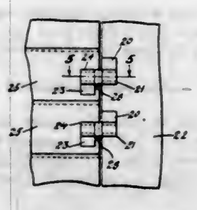
1. A rotatable seat for an automobile comprising a base concaved on its under side, supported on the floor of the car and presenting a bearing face upwardly, a base concaved upwardly presenting a bearing face to the bearing face of the floor base, rotatable thereon, and having an upwardly extended wall including a circumferentially arranged shoulder and flange acting respectively for supporting and retaining the seat cushion.

1,682,990. TOILET SEAT. OLIVER P. SMITH, Chicago, Ill. Filed May 12, 1927. Serial No. 190,750. 15 Claims. (Cl. 132—87.)



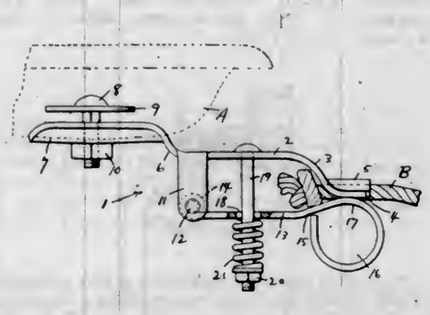
1. In a device of the character described, a casing, a brush member normally enclosed in said casing, and an extension for actuating said brush member and normally substantially enclosed in said casing, said extension being slidably mounted to extend out of said casing thereby affording a handle for said device and actuating said brush member to a position such that it projects out of said casing.

1,682,991. MANIFOLDING REGISTER. JOHN Q. SHERMAN and ALBERT W. METZNER, Dayton, Ohio; said Metzner assignor to said Sherman. Filed Oct. 30, 1922. Serial No. 597,723. 3 Claims. (Cl. 242—55.)



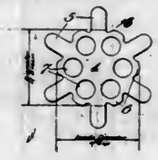
1. A device for operating the rewind roll of a summary strip in manifolding machines, comprising in combination a frame with a rotary feed shaft therein, a rotary rewind roll, a toothed member thereon, a pawl slidable as to the frame, and in the path of the toothed member, and means on the feed shaft for operating the pawl, whereby the pawl by contact with the toothed member will actuate the rewind roll.

1,682,992. VENTILATING DEVICE FOR ENGINE CRANK CASES. CALEB E. SUMMERS, Detroit, Mich., assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 25, 1926. Serial No. 118,492. 8 Claims. (Cl. 123—119.)



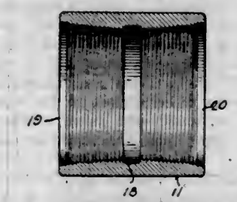
1. The combination of an engine having a crankcase, a passage leading from the crankcase, a conduit for conducting a stream of air across the passage, and a partition in the passage projecting into the conduit for diverting a portion of the air stream passing through the latter into the passage on one side of the partition, the air stream passing through the conduit exerting an aspirating effect on the portion of the passage at the other side of the partition for withdrawing vapors from the crankcase.

1,682,993. HINGE. CHARLES R. SHORT, Dayton, Ohio, assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed Feb. 8, 1926. Serial No. 86,828. 2 Claims. (Cl. 16—168.)



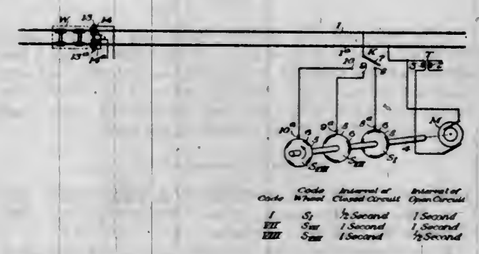
1. A hinge, comprising in combination, a pair of hinge straps having eye portions in axial alignment and spaced relation; a rubber pivot member flexible by torque, said pivot having reduced ends oppositely disposed and anchored in the eye portions of the hinge straps, the portion of the said pivot member between said hinge straps being of greater transverse dimensions than the two ends anchored to said straps.

1,682,994. ROPE HOLDER. CHARLES L. SIMON, Beardsley, Minn. Filed Dec. 16, 1927. Serial No. 240,549. 1 Claim. (Cl. 280—33.16.)



In a rope holder of the class described, an elongated flat upper bar, the forward end portion thereof being constructed for attachment to a tractor seat, the rear end portion of said bar being constructed to form a transversely curved jaw, depending ears formed at the side edges of the intermediate portion of the upper bar, a lower bar pivotally secured at its end between the lower ends of said ears, the rear end of said lower bar being bent upwardly to form a jaw complementary to the first mentioned jaw, the free end portion of said last mentioned jaw being bent to form a finger engaging portion, a bolt secured at its upper end to the intermediate portion of the upper bar and extending downwardly through the intermediate portion of the lower bar, a nut threaded on the lower end of the bolt, and an expansible coil spring encircling the lower portion of the bolt and disposed between the nut and the lower bar for normally urging the lower bar upwardly to maintain the complementary jaws in engagement with each other to secure the knotted end of the rope therebetween.

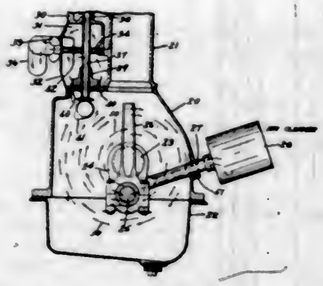
1,682,995. DRY CELL. EDWARD C. SMITH, Lakewood, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Feb. 10, 1927. Serial No. 167,257. 6 Claims. (Cl. 136—123.)



1. A galvanic cell comprising a container electrode, a depolarizing bobbin therein, and a spacer comprising a sheet having edge portions adapted to engage the side walls of the container electrode, said sheet having tangs upturned between the edge portions and adapted to receive the bobbin snugly therebetween, said spacer having perforations in the portion below the bobbin.

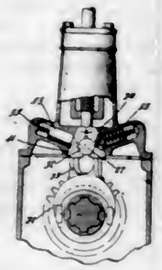
1,682,996. METHOD OF MAKING PIPE COUPLINGS. LLOYD RAYMOND SMITH, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed July 15, 1927. Serial No. 205,964. 3 Claims. (Cl. 29—156.)

1. The method of making a pipe coupling which consists in forming a metal bar with an intermediate, longitudinally extending tap clearance and surfaces sloping oppositely therefrom on one of its broader sides, converting the said bar into a tube with the said side upon its interior and the ends of the bar abutting, and welding the meeting ends of the bar to constitute an integral tubular structure having inwardly tapering openings which terminate at the tap clearance.



1,682,997. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. ANDREW J. SORENSEN, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed May 21, 1925. Serial No. 31,754. 13 Claims. (Cl. 246—63.)

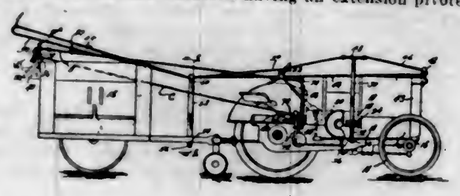
1. In combination, a member biased to one position, a motor device for moving said member from said position, dampling means for retarding motion of said member,



means for supplying said motor device with different code impulse combinations comprising impulses of energy separated by time intervals whereby said member occupies different other positions depending on the proportion of a given interval of time that said motor device is energized, and contacts controlled by said member.

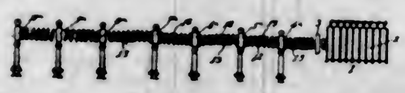
1,682,998. INTERNAL-COMBUSTION ENGINE. CALEB E. SUMMERS, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 13, 1925. Serial No. 15,413. 2 Claims. (Cl. 123—119.)

1. An internal combustion engine comprising cylinders, pistons in the cylinders, a valve compartment, a crankcase having an air admission opening, said valve compartment being in communication with said crankcase to receive air and gases therefrom, and a conduit leading from said valve compartment and extending rearwardly of the engine so as to be subject to the aspirating action of passing air currents, said valve compartments being provided with a cover upon which said conduit is mounted.



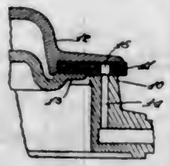
1,682,999. TRANSMISSION. PERRY L. TENNEY, Muncie, Ind., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 16, 1926. Serial No. 116,381. 4 Claims. (Cl. 74—39.)

1. A gear shifting device comprising a gear casing including a cover, a fixed rail, a shifter fork having a long sliding bearing with the casing cover on one side, and with said rail on the other side, the plane of the bearing between the casing cover and fork being at an acute angle to the plane of the lower surface of the cover.



1,683,000. REMOTE CONTROL FOR TRACTORS. GUY A. TRAUGER, Livermore, Iowa. Filed Sept. 30, 1926. Serial No. 138,805. 2 Claims. (Cl. 180—77.)

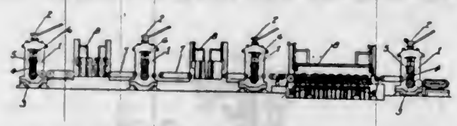
1. In combination with a tractor having steering mechanism including a drag link and a steering arm for operating the same, a remote control device comprising a bracket mounted on the tractor, a steering lever pivoted thereto, a clamp member comprising two semi-circular members having ears, clamping bolts through said ears for clamping said clamp member on said drag link, one of said semi-circular members having an extension pivoted



to said steering lever a pulley mounted on said tractor and a steering rope extending from said steering lever to the operator and back through said pulley back to the steering lever.

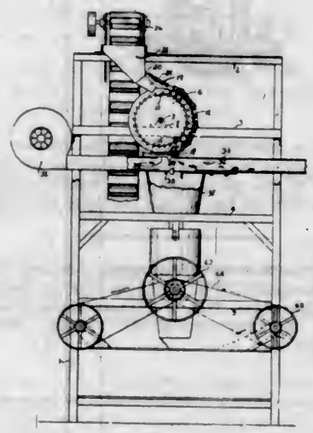
1,683,001. METAL ROLLING. JOHN B. TYTUS, Middletown, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Apr. 9, 1925. Serial No. 21,814. 1 Claim. (Cl. 80—60.)

That process of reducing thick wide metal to thin plates which consists in furnishing a series of heated pieces to thick metal, passing said metal in single thickness through successive stands of rolls, without reheating, maintaining said rolls cold, and providing in each stand for enforcing a transverse convexity on the piece with each stand enforcing a less convexity than the preceding stand.



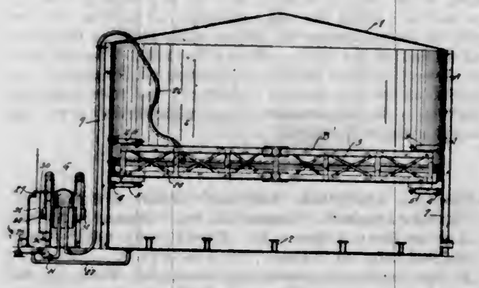
1,683,002. VALVE CONSTRUCTION. EMIL TYDEN, Evanston, Ill. Filed Feb. 3, 1926. Serial No. 85,656. 4 Claims. (Cl. 277—20.)

1. In a valve device for controlling a port encompassed by a seat for the valve, a valve comprising a face-forming part of relatively soft compressible material as rubber, leather and the like, and a rigid part forming the backing for the valve on which said compressible part is mounted, said compressible part having a recess open toward the valve seat and extending entirely through said compressible part so as to constitute an aperture therethrough, said aperture being at least equal in area to the port to be controlled and positioned for registering with said port at the seating position of the valve, whereby said apertured part operates valve-wise at its opposite faces upon the valve seat and upon the backing member of the valve respectively.



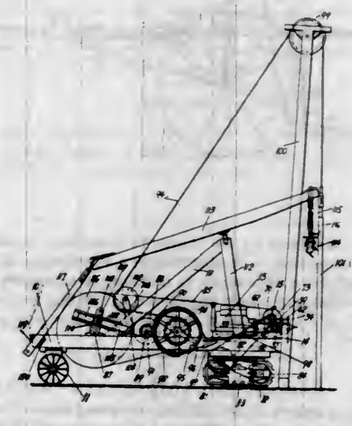
1,683,003. ROLLING SHEET METAL. JOHN B. TYTUS, Middletown, Ohio, assignor to The American Rolling Mill Company, Middletown, Ohio, a Corporation of Ohio. Filed Apr. 30, 1926. Serial No. 105,845. 3 Claims. (Cl. 29—19.)

1. A process of rolling hot packs for the production of sheets which consists in passing the packs through successive stands of rolls in a series, and in said stands engaging the packs by small diameter rolls backed by rolls of larger diameter, said rolls being maintained cold, and controlling the temperature of the packs between selected



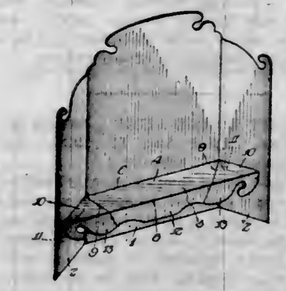
stands, and preserving an active pass in each stand which has less of a convex curve, than the convexity of the pack prior to its passage therethrough.

1,683,004. MACHINE FOR HUSKING NUTS. ALBERT P. J. VOIOT, Galveston, Tex. Filed Oct. 22, 1926. Serial No. 143,355. 5 Claims. (Cl. 83—36.)



1. In a device of the character described, a husking device comprising a rotating disc cutter, toothed both transversely and circumferentially, a stationary member comprising a plurality of rows of links toothed at each end and secured transversely together to produce a flexible cutter, and means to hold said flexible cutter yieldably toward said rotary cutter.

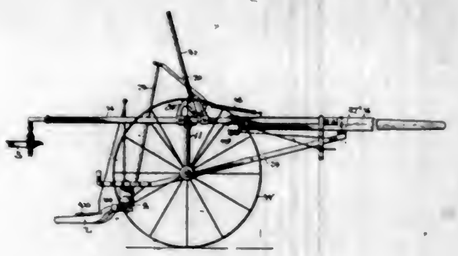
1,683,005. GAS HOLDER. JOHN H. WIGGINS, Bartlesville, Okla. Filed July 20, 1925. Serial No. 44,855. 4 Claims. (Cl. 48—176.)



1. A gas holder, comprising a cylindrical side wall, a vertically-movable deck or piston having its peripheral portion spaced away from said side wall, a radially-movable flexible sealing apparatus at the periphery of the deck that acts on the side wall of the holder, a supporting means for said sealing apparatus, a gas-tight, flexible closure for the space between said sealing apparatus and deck, and means for recovering any gas that escapes upwardly through the joint between said sealing apparatus and side wall.

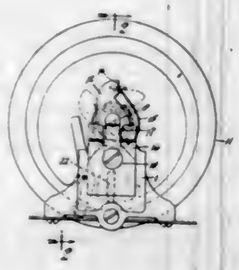
1,683,006. DRILLING MACHINE. ALTON F. YEATON, Akron, Ohio, assignor to The Star Drilling Machine Company, Akron, Ohio, a Corporation of Ohio. Filed Dec. 26, 1924. Serial No. 757,972. 2 Claims. (Cl. 255—11.)

1. In a drilling machine, a drilling apparatus, a prime mover, a transmission connected thereto and including a longitudinal shaft having forward and reverse gearing thereon, a transverse shaft having shiftable reduction gearing thereon and operable by either the forward or reverse gearing, a second transverse shaft parallel to the first shaft and driven by the reduction gearing, means on said second transverse shaft for driving the drilling apparatus, a tractor for bodily transporting the drilling machine, and means on said second transverse shaft adapted to be selectively employed to drive said tractor, whereby driving of the drilling apparatus or tractor is effected directly through only one transmission.



1,683,007. FOLDING-SHELF DISPLAY CARD. HENRY ZIEMMERMAN, Chicago, Ill., assignor to Chicago Cardboard Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 5, 1926. Serial No. 99,718. 7 Claims. (Cl. 211—72.)

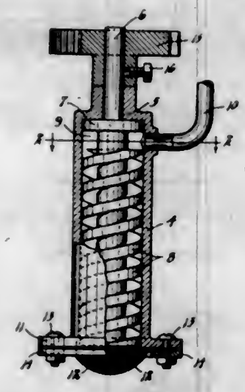
1. In a display device of the class described, a shelf foldable transversely into sections and having a depending flange along the front, the fold line of the flange crossing



the sectional fold lines of the shelf to prevent the shelf from collapsing until the flange is folded into the plane of the shelf.

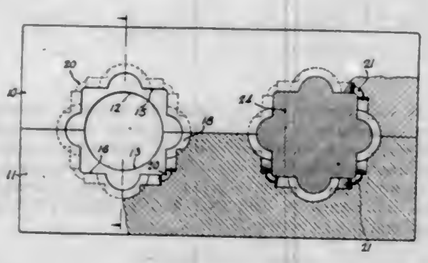
1,683,008. CULTIVATOR. RASMUS AARVIG, Pontiac, Ill.; Bessie Aarvig Jenkins administratrix of said Rasmus Aarvig, deceased. Filed Nov. 25, 1922. Serial No. 603,312. 11 Claims. (Cl. 97—161.)

1. In a cultivator of the character described, a cultivating unit comprising, a carrier having a rearwardly directed socket provided with a series of notches, an elongated blade having a shank extending therealong and fitting said socket and having a rib adapted to selectively engage any of said notches.



1,683,009. HAIRSPRING-ADJUSTMENT RETAINER. RAY E. AMIDON, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Mar. 1, 1926. Serial No. 91,534. 7 Claims. (Cl. 264—13.)

1. A rotary spindle, means for biasing the spindle to rotation in one direction, movable adjusting means for controlling the said biasing means, yielding means to retain the spindle against axial movement and to hold the adjusting means in its position of adjustment.

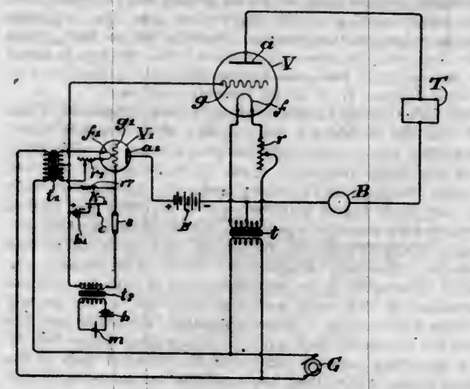


1,683,010. ROTARY LIQUID PUMP. JOSEPH M. ANDERSON, Elko, Minn. Filed Aug. 17, 1927. Serial No. 213,521. 2 Claims. (Cl. 103—89.)

1. A rotary liquid pump comprising a cylindrical casing having a closed upper end and an open lower end adapted to be submerged in liquid, a screw journaled in said upper end and extending through said casing, said screw having screw threads closely engaging the walls of said casing, said screw threads extending from the lower end of said casing to adjacent the top thereof but terminating some distance from the top to form a small chamber at the upper end of said casing, said casing having a discharge outlet extending laterally from said chamber, means for rotating said screw and a flange carried by said screw, rotating therewith, abutting the upper end of said casing and being of substantially the same diameter as the interior diameter of said casing, said flange sealing the bearing for said

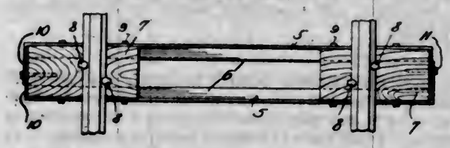
screw, having a close running fit with the top and internal wall of said casing and forming a rotatable top wall for said chamber in one continuous plane whereby friction of the liquid against the top of said casing is prevented.

1,683,011. PROCESS FOR FORGING. BIRGER TORVALD ANDREN, Milwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a Corporation of New York. Filed Apr. 14, 1926. Serial No. 101,908. 3 Claims. (Cl. 78—81.)



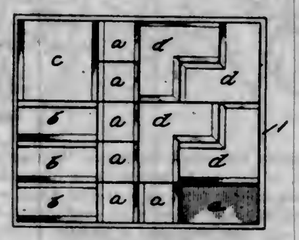
1. The method of forging simultaneously a plurality of shaped articles, which comprises the steps of providing a forging die with article shaping recesses in plural number equal to the number of articles to be so produced, heating the end of a metal bar and arranging and holding the bar with its heated end in the die, exerting pressure upon the heated end of the bar to expand the metal laterally into the several recesses of the die, holding the expanded end portion of the bar against movement, and then applying pressure to the bar to move it longitudinally and sever the shaped articles therefrom.

1,683,012. CONTROL METHOD AND APPARATUS. THOMAS APPLEBY, Philadelphia, Pa., assignor to Arthur Atwater Kent, Ardmore, Pa. Filed Dec. 31, 1921. Serial No. 526,123. 34 Claims. (Cl. 179—171.)



1. The method of controlling thermionic discharge between anode and cathode of a thermionic device having anode, cathode and control electrode, with an unsaturated thermionic impedance comprising an anode and cathode connected in circuit directly between said control electrode

and cathode of said thermionic device with the cathode of said impedance presented to said control electrode, which comprises controlling the leakage through said impedance

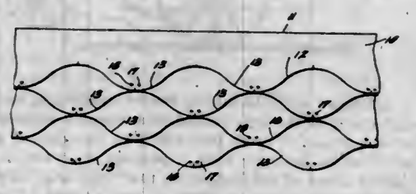


between said control electrode and cathode of said thermionic device by controlling the temperature of said cathode of said impedance.

1,683,013. RAILROAD CROSSTIE. CHARLES L. ARNOLD, Bardstown, Ky. Filed Sept. 29, 1927. Serial No. 222,858. 1 Claim. (Cl. 238—58.)

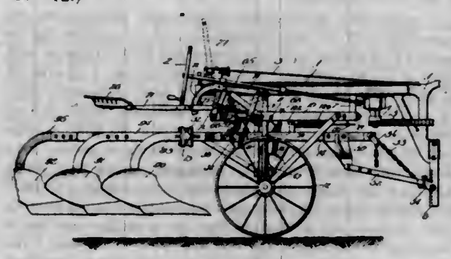
A railway tie including angle bars of equal lengths arranged in parallel spaced relation with each other, the ends of the angle bars extending inwardly at right angles and overlapping each other, the overlapping ends having registering openings, wooden blocks fitted within the angle bars and contacting with the inturned ends, spikes extending through the registering openings and imbedded in the ends of the blocks, and the wooden blocks extending appreciable distances above the upper edges of the angle bars to receive railway rails.

1,683,014. PUZZLE. FAY L. BABCOCK, St. Petersburg, Fla. Filed Oct. 8, 1927. Serial No. 224,939. 3 Claims. (Cl. 273—132.)



1. A puzzle comprising an open casing and a series of elements arranged therein in contact and in number to provide an unoccupied space in the casing, the elements comprising a number of unitary elements of square surface form, a number of elements of rectangular form including a surface area twice that of the unit elements, a number of elements of right angled form having a surface area three times that of the unit elements, and a master element having a surface area four times that of the unit elements.

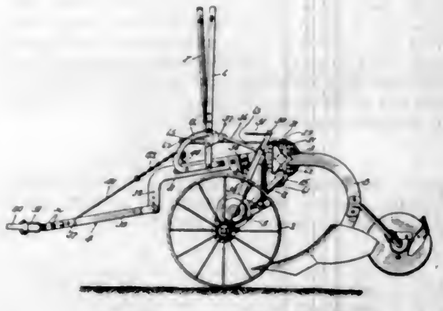
1,683,015. CLOSURE SEAL. CLIFFORD WAYNE BARBOUR and LAMOINE S. CARSON, Norman, Okla. Filed May 9, 1927. Serial No. 190,014. 2 Claims. (Cl. 220—55.)



1. A sealable closure, consisting of the usual upstanding neck of a container, a closure for application to the same, both the wall of the neck and the wall of the closure being provided with elongated slots substantially equidistantly disposed about the walls, a flexible strand passing through the slots of both walls and also through diametrically opposed sets of the slots, and a seal holding the free ends of the seal after passing through said slots.

1,683,016. ROOFING STRIP. ELVA L. BELL and ORLANDO M. BEEBE, Spokane, Wash. Filed Sept. 6, 1927. Serial No. 217,772. 4 Claims. (Cl. 108—7.)

1. As an element of a roof made up of plurality of strips of composition material applied in overlapped relationship, a strip of flexible material having one edge scalloped, and fasteners in the lobe portions of said edge adapted to hold said lobe portions flat against the underlying strip and to pass through said underlying strip into the roof to secure both strips in place.

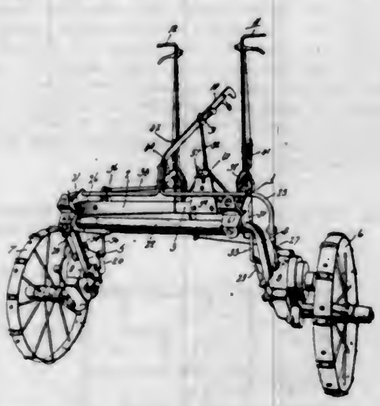


1,683,017. POWER FARMING APPARATUS. HARRY A. BECHTELHEIMER, Rock Island, and HENRY P. CORBIN, Moline, Ill., assignors, by mesne assignments, to Moline Implement Company, a Corporation of Illinois. Filed Feb. 9, 1922. Serial No. 535,187. 16 Claims. (Cl. 97—72.)

1. A universal implement carriage for front wheel drive tractors of the type having a rearwardly extending coupling frame, comprising a wheeled frame adapted to be positioned beneath a tractor coupling frame and having connections for attaching it to said coupling frame, tool supporting means to which a wide variety of agricultural tools, including heavy tools such as plows, may be adjustably and detachably connected, a draft structure connected to said means, means for supporting the draft structure on the wheeled frame so that it may be moved relative to the frame from a lowered or working position to a raised or transport position and vice versa, said supporting means including connections preventing the draft structure

from moving laterally relative to the frame, hitch connections for connecting the draft structure to a tractor, and mechanical power-lift mechanism for raising and lowering the draft structure relative to the wheeled frame.

1,683,018. UNIVERSAL AGRICULTURAL IMPLEMENT. JOSEPH E. BODA, Moline, Ill., assignor, by mesne assignments, to Moline Implement Company, a Corporation of Illinois. Filed Sept. 25, 1922. Serial No. 590,314. 14 Claims. (Cl. 97—47.)

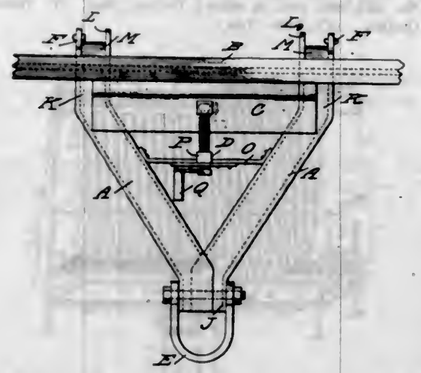


1. A universal agricultural implement comprising an independent unit of the drag-behind type adapted to be connected to a source of draft power and to be adjusted and controlled by an operator from a position on a source of draft power ahead of the implement, said implement having a tool supporting means to which a wide variety of agricultural tools, including heavy tools such as plows, may be adjustably and detachably connected, crank axles carrying ground wheels for supporting the implement, means for adjusting the crank axles relative to one another to maintain the tool supporting means level when one of the wheels runs on a lower level than the other, draft connections for connecting said tool supporting means to a source of draft power to pull the implement, powerlift mechanism operated by travel of the implement for swinging the crank axles to raise and lower the implement, and controlling means for the powerlift mechanism, said controlling means and the adjusting means for the crank axles including elements that may be easily manipulated from a position on a source of draft power to which the implement may be connected.

5. A universal agricultural implement comprising an independent unit of the drag-behind type adapted to be connected to a source of draft power and to be adjusted and controlled by an operator from a position on a source of draft power ahead of the implement, said implement having a single, rectangular tool bar positioned with two of its edges in a substantially vertical plane so that a wide variety of tools, including heavy tools such as plows, may be adjustably and detachably clamped to the bar, draft connections for connecting said bar to a source of draft power, crank axles carrying ground wheels for supporting the bar, means for adjusting the crank axles relative to one another to maintain the tool bar level when one of the wheels is required to run in a furrow, powerlift mechanism operated by travel of the implement for swinging the crank axles to raise and lower the tool bar, and controlling means for the powerlift mechanism, said controlling means and the means for adjusting the crank axles including portions by means of which they may be easily manipulated by an operator from a position on a source of draft power to which the implement may be connected.

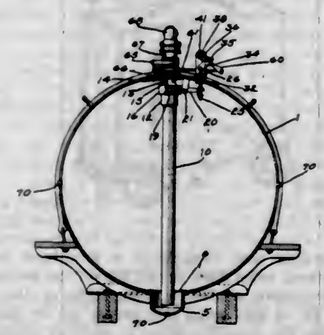
10. A universal agricultural implement having a single tool bar to which a wide variety of agricultural tools may be adjustably and detachably connected, draft connections for connecting said bar to a source of draft power such as a tractor or the like, crank axles carrying ground wheels for supporting the bar, powerlift mechanism operated by the travel of the implement for swinging the crank axles to raise and lower the bar, means for adjusting the crank axles to vary the depth of working of the implement and to maintain the tool bar level when the implement is in working position with one of its ground wheels lower than the other, said powerlift mechanism and the adjusting means being constructed and co-ordinated so that, when the implement is raised by the powerlift, the bar is lifted to substantially the same height above the ground and to a level position from all its working positions.

14. A universal agricultural implement comprising a single tool bar to which a wide variety of agricultural tools, including heavy tools such as plows, may be adjustably and detachably connected, a pair of draft beams connected to said tool bar and extending forwardly, the forward ends of said draft beams being connected together and having downwardly extending portions, a pair of crank axles pivotally connected to the implement and carrying ground wheels, means for adjusting the crank axles to vary the depth of working of the implement and to vary the relative positions of the crank axles so that one of the ground wheels may run on a lower level than the other and the tool bar be maintained level, said adjusting means including operating members located at the forward ends of the draft beams where they are available for ready operation by an operator seated on a source of draft power such as a tractor to which the implement may be connected, powerlift mechanism operated by travel of one or more of the ground wheels for swinging the crank axles to raise and lower the forward ends of the draft beams and acting as a flexible hitch which adjusts itself to the line of draft when the implement is in working position but serving to automatically limit the upward movement of the forward end of the implement as the implement is raised by the powerlift mechanism, and controlling means for the powerlift mechanism.



1,683,019. UNIVERSAL AGRICULTURAL IMPLEMENT. JOSEPH E. BODA, Moline, Ill., assignor, by mesne assignments, to Moline Implement Company, a Corporation of Illinois. Filed June 11, 1923. Serial No. 644,581. 11 Claims. (Cl. 97—47.)

1. A frameless, universal, implement carriage adapted to be connected to and to be pulled by a forwardly located source of draft power such as a tractor from which it is to be controlled, comprising tool supporting draft bars having their rear ends arranged to be detachably connected to a variety of agricultural tool units comprising a plurality of tools attached to a common supporting bar, a wheeled support for the draft bars, means for raising and lowering the draft bars, and means for controlling the raising and lowering means having portions located forwardly where they may be easily manipulated by an operator on a source of draft power to which the carriage may be connected.

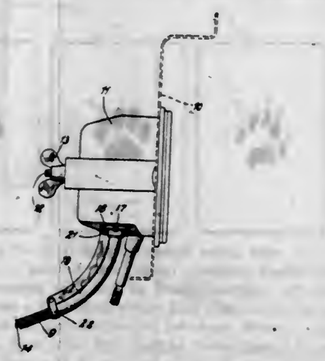


6. The combination with an agricultural tool unit comprising one or more tools connected to a common supporting bar, of a frameless draft carriage detachably connected to said bar, said carriage comprising draft bars for connection to the supporting bar, supporting wheels movable vertically with relation to said bars, means for moving the wheels to raise and lower the tool unit and means for adjusting the wheels vertically to vary the working position of the tool unit.

1,683,020. AUTOMOBILE LIFTER. LOUIS T. BIEGLER, Aberdeen, S. Dak. Filed Apr. 11, 1927. Serial No. 182,901. 2 Claims. (Cl. 294—82.)

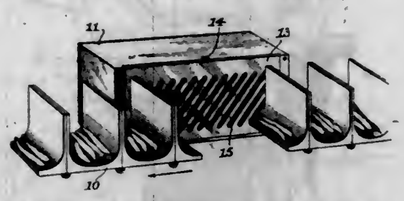
1. A lift for automobiles and the like, comprising bars connected at their forward ends and rearwardly divergent, said bars including rearwardly extending parallel portions at the ends of the divergent portions, such parallel portions being designed to underlie and provide supporting means for the axle of the vehicle and being terminally formed as upstanding forwardly directed hooks having their upper surfaces downwardly and forwardly inclined to wedge beneath the rear upper flange of the vehicle axle, a single plate slidably supported on both bars with its forward portion resting on the bars and its rear portion spaced from the upper surface of the bars, the rear edge of the plate being substantially in alignment with the hook terminals of the bars, and means for moving the plate toward the hook terminals to thereby wedge such hook terminals in place.

1,683,021. OIL-DISPENSING APPARATUS. GEORGE A. BROWN, St. Paul, Minn. Filed Sept. 3, 1927. Serial No. 217,405. 8 Claims. (Cl. 221—74.)



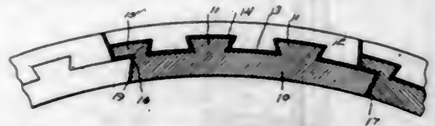
1. A tank having a siphon tube having its delivery end projecting through the tank, and having a port within the tank and above the intake end of the tube, a valve for controlling the discharge through the tube at the outer side of the tank, a valve for closing said port, and connections between the valves whereby gravity action of the inner valve to open the port will cause the outer valve to close.

1,683,022. DEMOUNTABLE HUT. GEORGE BULBECK, London, England. Filed Nov. 6, 1926. Serial No. 146,728. 7 Claims. (Cl. 189—2.)



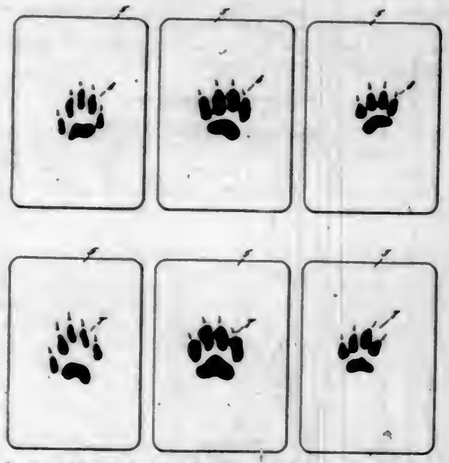
1. A temporary building construction comprising a frame, a plurality of sheets for covering said frame, strips of wood fixed to said sheets and clamping devices for securing said sheets to said frame wherein said clamping devices consist of movable clip members embracing the members of said frame and screws for fixing said clip members detachably to said strips of wood.

1,683,023. FLEXIBLE TUBE SUPPORT. ALBERT CHAMPION, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed July 2, 1926. Serial No. 120,239. 3 Claims. (Cl. 64—30.)



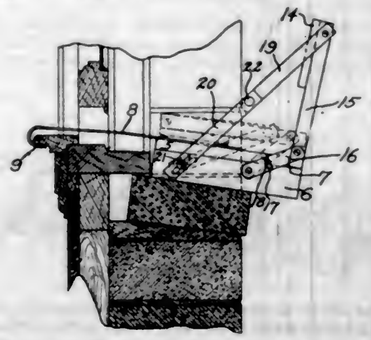
1. A flexible drive shaft casing having a rigid sheath for the end comprising a stamping having a curved cross section and a radial external flange, the said curved portion shaped to fit over the flexible casing, and means associated with the said radial flange whereby the sheath is fixed to the said casing.

1,683,024. BEAN-SNIPPING MACHINE. QUINBY CLIMER, Chillicothe, Ohio, assignor of one-half to Charles M. Haynes, Chillicothe, Ohio. Filed July 30, 1927. Serial No. 209,409. 9 Claims. (Cl. 146—86.)



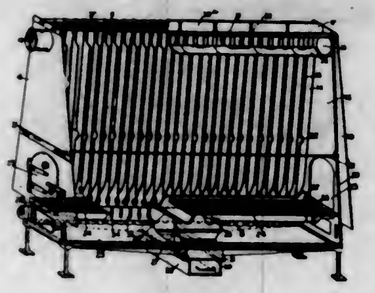
5. In a bean snipping machine, in combination, a traveling conveyor for the beans, and a suction box having at its front a plate provided with slots inclined downwardly in the direction of travel of the conveyor, the forward edges of the slots being beveled to form cutting edges.

1,683,025. LINER BLOCK FOR CEMENT SEWER PIPES. ROY M. DALLAM, Fort Dodge, Iowa. Filed June 28, 1926. Serial No. 119,187. 4 Claims. (Cl. 72—51.)



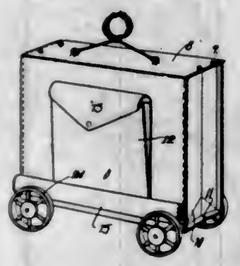
1. A liner block comprising a rectangular body portion having its outer surface provided with longitudinal ribs, and one end provided with an offset flange, the inner surface of said flange being provided with longitudinal ribs, the side edges of all of said ribs being beveled inwardly.

1,683,026. CARD GAME. JOHN WILLIAM DONOVAN, Sunburst, Mont. Filed Apr. 16, 1928. Serial No. 270,364. 2 Claims. (Cl. 273—152.)



1. A card game comprising a deck of cards of a predetermined number, each card having a space provided with the representation of the foot prints of one of the feet of an animal, said cards including a series of complete sets of cards, each set corresponding in number with the feet of a particular animal and each card of each set having the representation of one of the foot prints of such animal thereon and combining upon being properly matched with the remaining cards of the set to complete said set.

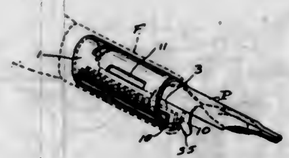
1,683,027. WINDOW SEAT. CLEMENS E. EHNBORN, Chicago, Ill. Filed Aug. 23, 1926. Serial No. 130,824. 6 Claims. (Cl. 304—24.)



1. A construction of the class described comprising a seat member; a back member foldable on said seat member; a clamping member adjustably mounted on said seat and arranged to clamp the same to different sizes of window sills; and swinging brace links for supporting the back in open position and adapted to extend into the path of said clamping member when the back is extended to lock said clamping member against adjustment but release the same when said back is folded, substantially as described.

1,683,028. APPARATUS FOR SUPPLYING A CURRENT OF HEATED AIR OR GAS. VIVIAN ELKINGTON, St. Margarets Bay, England. Filed Nov. 7, 1927, Serial No. 231,740, and in Great Britain Nov. 11, 1926. 7 Claims. (Cl. 126—104.)

1. A furnace for producing a rapid current of heated air, comprising a pair of end plates, two pairs of walls extending between the said end plates and constituted by a pair of inner metal heating walls converging inwardly and upwardly towards one another throughout their entire length, and a pair of outer walls converging inwardly and upwardly towards the respective inner heating walls to form open air passages diminishing in area from their lower to their upper ends and into the wider lower ends of which air to be heated enters, a heating source confined between the end plates and the said inner walls, and an outlet at the top of the furnace for the products of combustion.



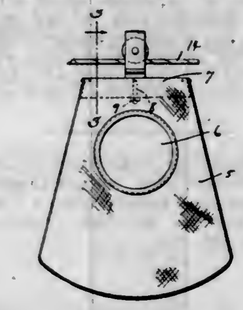
1,683,029. WHEELED CARRYING CASE. NATHAN FANGER, New York, N. Y. Filed July 22, 1927. Serial No. 207,650. 3 Claims. (Cl. 280—36.)

1. A carrying case comprising a receptacle having a foldable bottom, axles fixed to one side of the bottom, axles movably connected to the opposite side of the bottom, wheels on all of said axles and means on the fixed axles for engaging the movable axles to prevent collapsing of said bottom.

1,683,030. PEN CLAMP AND RESERVOIR. ROSS F. GEORGE, Seattle, Wash. Filed July 15, 1924. Serial No. 726,128. 9 Claims. (Cl. 120—101.)

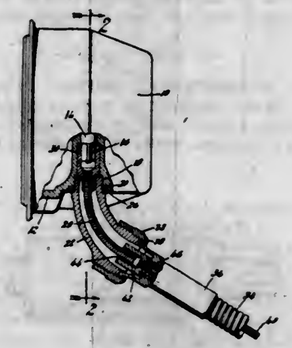
1. A device for securing a pen in a pen holder having a terminal ferrule, comprising a pivot base adapted to snugly fit within the ferrule and having pen supporting ledges adapted to engage the side edges of the pen shank,

and a cam pivoted upon said pivot base and adapted to engage the pen shank between its side edges to clamp it in place.



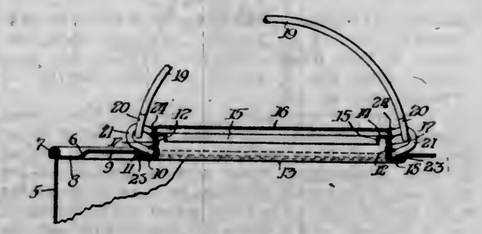
1,683,031. OIL AND GAS WELL SAND TESTER. WILLIAM O. HARRIS, Oklahoma City, Okla. Filed Dec. 21, 1927. Serial No. 241,552. 3 Claims. (Cl. 166—1.)

1. A device of the class described for testing the sands of oil and gas wells, comprising means for corking up the hole adjacent its lower end, a perforated casing having its lower end securely capped, its upper end being adapted to be securely fastened to the lower end of said corking means, a reduced nipple valve being seated between the lower end of said corking means and the upper end of said perforated casing, its smaller end extending downwardly and being adapted to be normally closed by a breakable cap for preventing the flow of liquid therethrough, a gasket ring member and an open ended capsheath for holding said breakable cap in place, plunger means for breaking said breakable cap, a ball valve means for closing the lower neck portion of said nipple valve and shutting off the inflow of liquid thereinto.



1,683,032. CLOTHESPIN BAG. JOSH HATCHER, Cokedale, Colo., assignor of two-thirds to Leo R. Gottlieb, Cokedale, Colo. Filed May 28, 1927. Serial No. 195,020. 1 Claim. (Cl. 68—11.)

In a device of the class described, a bag of flexible material having an opening formed in one side near the upper edge thereof, a block forming a closure for the top of the bag, a bolt extending through said block, a vertically disposed hanger extending upwardly from said bolt and connected thereto and comprising a strip of material formed substantially into a loop having a restricted opening adjacent its lower end, a spring pressed finger formed on the free end of said strip and movable into and out



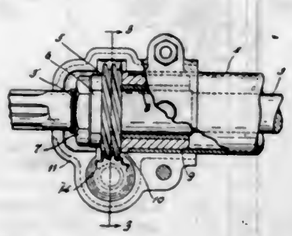
of closing position with respect to said opening in said loop, and a pulley wheel rotatably mounted within the loop.

1,683,033. SPEEDOMETER-DRIVE ADAPTER. RALPH OLAF HELGEBY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed Mar. 21, 1927. Serial No. 177,164. 3 Claims. (Cl. 64—30.)

1. An instrument drive comprising, in combination, a measuring instrument, a short flexible shaft connected with said instrument for the purpose of driving the latter, a curved housing for said shaft secured to said measuring instrument, a driving shaft held in driving engagement with said flexible shaft, and a second housing encasing the driving shaft and secured to said first named housing.

1,683,034. CAN CLOSURE AND SEALING MEANS. WILLIAM HORLICK, Jr., Racine, Wis. Filed Apr. 3, 1926. Serial No. 99,543. 3 Claims. (Cl. 220—56.)

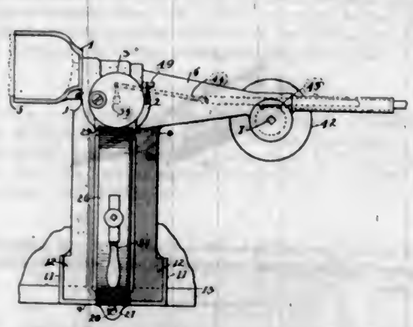
1. A can having a lateral wall and a top attached thereto and having an annular depression immediately adjacent the lateral portion, an annular raised portion in-



wardly thereof with an inwardly sloping inner portion, an annular depressed portion inwardly of the raised portion with its outer portion defined by the inwardly sloping inner portion of the annular raised portion, and a neck projecting upwardly from the last mentioned depressed portion, and a closure engaged with said neck portion and having an outward extension at its bottom edge seated in the last-named depression below the annular raised portion and adapted to receive sealing means thereover.

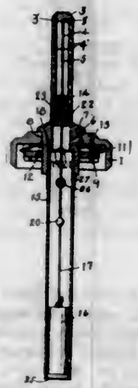
1,683,035. METHOD OF MAKING DRAG LINKS. VICTOR HUGHES, Detroit, Mich., assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed Nov. 30, 1925. Serial No. 72,380. 2 Claims. (Cl. 29—152.)

1. The method of forming a tubular drag link from an enlogated piece of flat metal stock comprising rolling said flat stock into tubular form so that the longitudinal seam at one end of the tube lies at ninety degrees to the seam at the opposite end of the tube, and then deforming the metal at the ends of said tube to form enlarged socket portions with bolt lugs extending laterally therefrom.



1,683,036. SPEEDOMETER DRIVE. VICTOR HUGHES, Detroit, Mich., assignor to General Motors Research Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 29, 1926. Serial No. 112,628. 4 Claims. (Cl. 74—7.)

1. Speedometer actuating means on the transmission shaft of an automobile, including a helical worm gear having a lateral extension with flat sides to permit engagement of an adjusting wrench, screw threads on the interior of the gear for adjustable engagement with a screw threaded portion of the shaft, and a lock nut on the shaft for maintaining the gear in its adjusted position, a second gear meshing with the worm gear, and a distantly located indicator connected to the second gear.

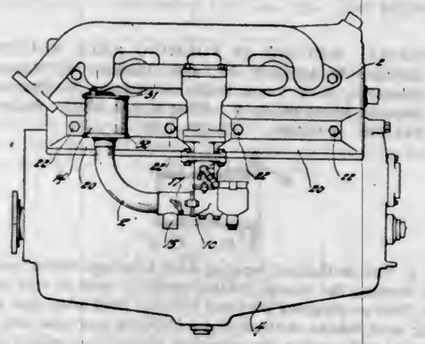


1,683,037. CLOTHES WASHING AND WRINGING MACHINE. MERLIN M. JACKSON, San Jose, Calif., assignor to Fred Hamann and Glen I. Lang, San Jose, Calif. Filed Feb. 8, 1927. Serial No. 166,712. 4 Claims. (Cl. 68—32.)

1. In a wringer mechanism, a supporting base having a horizontal part and a part extending upwardly therefrom, a wringer frame mounted on the horizontal part of the base, intermeshing means between one end of the frame and the upwardly extending part, an apertured lug on the opposite end of the frame seated on the horizontal part of the base, and a single bolt extended through the aperture in the lug and into said horizontal part of the base to hold said last named end of the frame onto the horizontal part of the base and to also hold the first named end of the frame in intermeshing position whereby upon removal of said single bolt the frame may be disengaged from the base.

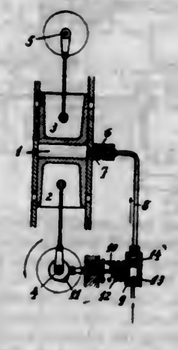
3. In a wringer mechanism, a base for supporting a wringer frame having downwardly divergent parts formed to seat on a partitioned tray or the like, webs transversely connecting said parts, threaded rods secured at their ends to the divergent parts and extending beneath the webs in spaced parallel relation thereto, a pair of clamps slidable on each rod and formed to engage opposite sides of the partition and the web, and a follower nut for each of the clamps.

1,683,038. RADIATOR CAP. WILLIAM B. JARVIS, Grand Rapids, Mich. Filed July 12, 1923. Serial No. 651,123. 6 Claims. (Cl. 220—24.)



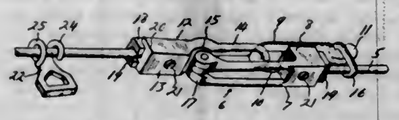
1. The combination with a radiator cap having an opening therein, of a head member provided with a shouldered shank disposed through said opening in said cap and externally threaded, a nut threaded upon said shank, said nut being also externally threaded to engage the threads in the neck of a radiator and having a central recess with radial slots in its upper side, and a spring washer with outwardly and downwardly projecting arms disposed in said recess and slots and adapted to be clamped between said nut and cap with the arms projecting beyond the periphery of the nut to engage the top of a radiator neck.

1,683,039. ENGINE. ROBERT K. JACK, Lansing, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 25, 1926. Serial No. 118,513. 8 Claims. (Cl. 123—119.)



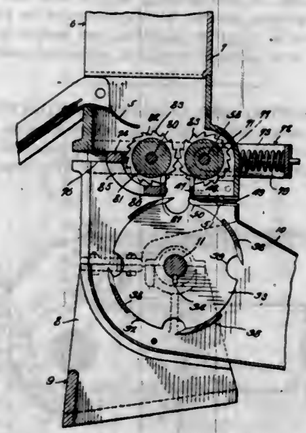
1. An internal combustion engine having a carburetor and a crankcase, said crankcase having an air admission

opening, a valve chamber in communication with the crankcase, means for connection said valve chamber with the carburetor to supply air to the latter, and an oil separator



interposed in said means and communicating with said valve compartment for receiving air therefrom and returning oil thereto.

1,683,040. WORKING OIL ENGINE. HUGO JUNKERS, Dessau, Germany. Filed Nov. 17, 1921, Serial No. 515,983, and in Germany Dec. 6, 1920. 7 Claims. (Cl. 123—27.)

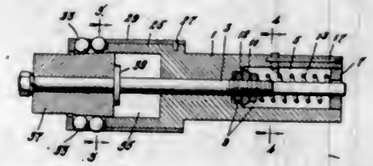


1. The method of operating oil engines of the solid injection type which consists in compressing air in the working cylinder to ignition temperature of the fuel, pumping liquid fuel in attenuated condition directly into the compressed air in substantially constant timed relation to the commencement of the working stroke of the piston so as to ignite said fuel, and regulating the period of combustion exclusively by means of the fuel delivery pump.

1,683,041. FASTENER FOR SAFETY CALK WEBS. MACK I. KARN, Pontiac, Mich. Filed Apr. 9, 1928. Serial No. 268,651. 8 Claims. (Cl. 24—69.)

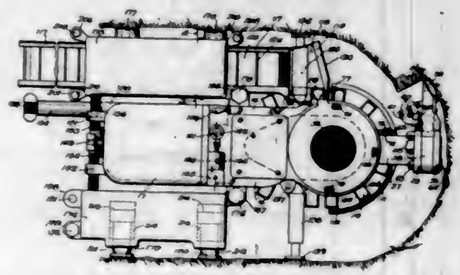
1. In a fastener for side cables of anti-skid devices, a body member secured to one end of a cable, a lever pivoted to said body and provided with a hook portion facing toward said body member and adapted to be positioned approximately midway of the body and lever when the lever is in closed position, a link member secured to the other end of the cable and adapted to be slipped over the end of the lever for engagement with the hook portion thereof, and means carried by the cable and engageable with the outer end of the lever for retaining the latter in closed position against the pull of said link member.

1,683,042. CORN CUTTER. ABNER H. KROGAN, Stanley, Wis. Filed Jan. 25, 1926. Serial No. 83,708. 5 Claims. (Cl. 146—120.)



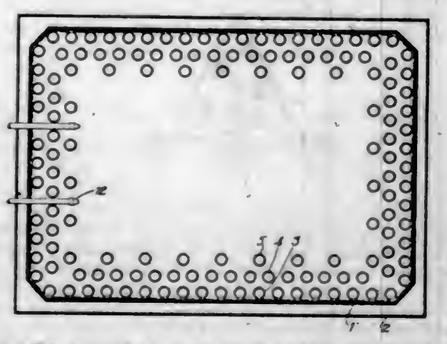
1. In a device of the class described, a casing having a guide slot, a stud on the casing, a first feed roll journaled in the casing, a frame including side bars and end bars, one end bar being slidably mounted in the guide slot, and the other end bar being slidably mounted on the stud, a second feed roll journaled on the side bars, a spring cooperating with the casing and with the last-specified end bar to slide the frame and to vary the distance between the feed rolls, the spring being disposed about the stud, means for driving the rolls, and cutting mechanism whereon the rolls discharge.

1,683,043. PLANT PROTECTOR. ROBERT A. MILLER, Pekin, Ill. Filed Feb. 28, 1927. Serial No. 171,429. 2 Claims. (Cl. 47—28.)



1. In a plant protector, a plurality of rod members, means for connecting same at their upper ends in a manner to permit collapse thereof to a position where they lie adjacent each other, comprising an enlarged eye portion for one of the rods and smaller eye portions for the adjacent rods, said portions being adapted to engage the first named enlarged eye portion, and a flexible detachable covering for the rods adapted to fold tightly about the rod members when in their collapsed position.

1,683,044. BURNISHING TOOL. FRED D. MONGEAU, Dearborn, Mich. Filed May 28, 1926. Serial No. 112,319. 11 Claims. (Cl. 29—90.)

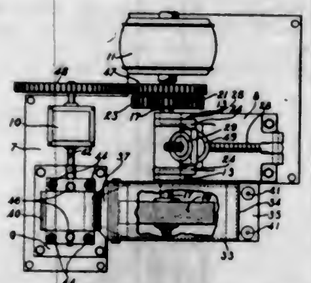


1. A burnishing tool comprising a tool member having radial openings, burnishing members variably projectable in said openings, means movably within said tool to project said burnishing means, yieldable means to hold said movable means in operative position, and means to engage and hold the said movable means in retracted position.

1,683,045. MINING AND LOADING APPARATUS. EDMUND C. MORGAN, New York, N. Y.; Olive Eugenie Morgan executrix of said Edmund C. Morgan, deceased. Filed Jan. 10, 1923. Serial No. 611,711. 41 Claims. (Cl. 262—5.)

1. In a mining machine, the combination with dislodging mechanism adapted to be held in continuous engagement with the coal at a mine wall for continuous forward movement over a predetermined path of travel, means for supporting said dislodging mechanism for such movement, means for effecting the operation of said dislodging mechanism to dislodge coal from such path, and multiple wall jack mechanism comprising a supplemental frame pivoted to one side of the mining machine and having wall engaging shoes distributed along said supplemental frame.

1,683,046. BOILER. THOMAS E. MURRAY, Brooklyn, N. Y. Filed July 1, 1925. Serial No. 40,746. 1 Claim. (Cl. 122—235.)

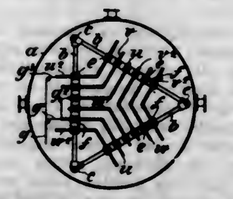


A boiler adapted to generate steam at high pressure having an outer wall and having an inner wall comprising a multiplicity of tubular members of substantially the same diameter in rows at different distances from the outer wall, with the members of the innermost row spaced farther apart than those of the next row so as to permit greater surface exposure of the latter to the radiant heat of the burning fuel.

1,683,047. METHOD OF FORMING AXLE HOUSINGS. THOMAS E. MURRAY, Jr., and HERBERT H. WILLIAMS, Brooklyn, N. Y.; said Williams assignor to Thomas E. Murray, Brooklyn, N. Y. Filed Mar. 1, 1927. Serial No. 171,756. 5 Claims. (Cl. 29—153.)

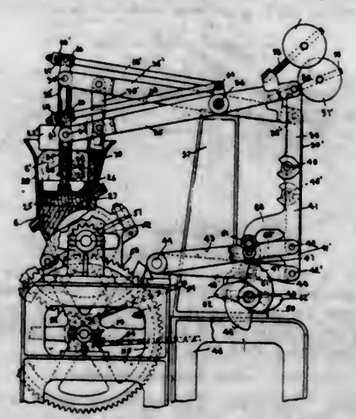
1. The method of forming axle housings which consists in forming flat blanks, folding back the ends of said blanks to form overlapping portions of extra thickness, then bending said blanks with their overlapping portions into segments and uniting the segments along longitudinal edges.

1,683,048. DOUBLE-WHEEL GRINDER. EDWARD J. PAQUE, Cincinnati, Ohio, assignor to The Pollak Steel Company, Carthage, Ohio, a Corporation of Ohio. Filed July 29, 1925. Serial No. 46,909. 6 Claims. (Cl. 51—80.)



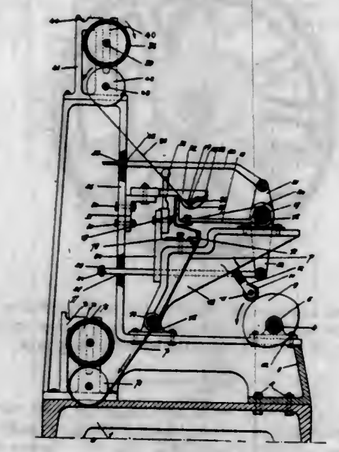
1. In a grinding and polishing device the combination with a pivotally mounted housing member, of spindles rotatably mounted adjacent the opposite ends of the housing, abrasive wheels fixedly mounted on the spindles, guide means disposed in horisontal alignment with the pivotal mounting of the housing and on opposite sides thereof, and means for positioning the housing about its pivotal mounting whereby the peripheries of the abrasive wheels may be moved toward and away from the plane in which the guide means and housing mounting are disposed.

1,683,049. CLOTHES CLIP. LESTER H. PENLEY, Portland, Me. Filed Mar. 23, 1928. Serial No. 264,261. 3 Claims. (Cl. 24—137.)



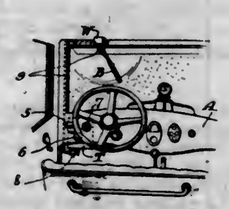
1. A clothes-clip comprising in combination, two clothes-gripping jaws, a shoulder projecting from one side, near the upper end, of one of said jaws and adapted to directly support the weight of said clip when suspended on a clothes-line, means detachably secured to said jaw adapted to yieldingly hold the clothes-line beneath said shoulder, and means to hold said yielding means against transverse and longitudinal displacement from said jaw.

1,683,050. ELECTRIC RESISTANCE FOR ELECTRICALLY-HEATED BOILERS. WILHELM PENZOLD, Hanover, Germany, assignor to the Firm Widerstand Aktiengesellschaft für Elektro-Wärme-Technik, Hanover, Germany. Filed Nov. 10, 1926, Serial No. 147,584, and in Germany Nov. 25, 1925. 4 Claims. (Cl. 219—40.)



1. In an electrode assembly adapted for immersion in a conducting liquid, in combination, a plurality of electrode groups assembled in stellate formation, each electrode group including a plurality of spaced plates each having angularly disposed branches such that the branches of plates of adjacent groups are substantially parallel to each other and means to connect adjacent plates to different terminals of a source of current.

1,683,051. KNEADING MACHINE. ERLAND F. PETERSON, Everett, Mass., assignor to The Goudey Gum Company, Boston, Mass. Filed Mar. 27, 1926. Serial No. 97,913. 10 Claims. (Cl. 107—4.)

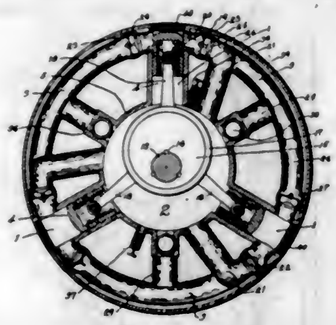


10. In a kneading machine, the combination of a chamber provided with an inlet hopper and an outlet a kneading device operating within the chamber; a plunger operating within the hopper for the purpose of forcing plastic material into the kneading device; a fulcrumed lever to which the plunger is swiveled; means for operating the kneading device for the purpose of kneading plastic material supplied thereto by the operation of the plunger, and thereafter expelling it from the chamber outlet; coordinated means for rocking the lever on its fulcrum for the purpose set forth; and means for controlling the swing of the plunger on its swivel connection as it is operated by the fulcrumed lever.

1,683,052. LOOM FOR MANUFACTURING NONRAVELING FABRICS. FERNAND PHILY, Pau, France. Original application filed Nov. 10, 1925, Serial No. 68,080, and in France Nov. 20, 1924. Divided and this application filed Dec. 31, 1926. Serial No. 158,201. 5 Claims. (Cl. 28—1.)

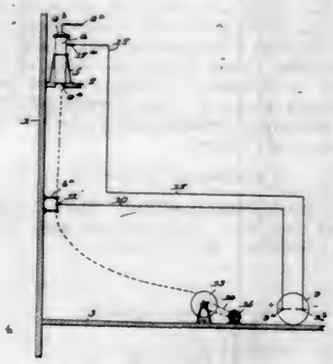
1. In a loom, the combination with stationary guides to hold the warp threads in the form of closed loops, of means to insert weft threads through the loops to bind the warp threads together, means to draw the loops off the yarn guides onto the enclosed weft threads, and an oscillatory tension member moving in a semi circular path about the guides to manipulate threads in said guides to form another series of warp loops.

1,683,053. WINDSHIELD WIPER. CARL C. PISCIOTTA, Highland Park, N. J. Filed Feb. 15, 1927. Serial No. 168,462. 3 Claims. (Cl. 15—255.)



1. A wiper arm for windshield cleaners, comprising a hollow backing, an absorbent wiper strip having one edge embraced by the hollow backing, a distributor pipe within said backing, and a flexible conduit for conducting fluid to said distributor pipe.

1,683,054. HYDRAULIC OR VACUUM CLUTCH. LEMMA J. ROOT, Seattle, Wash. Filed Sept. 26, 1923. Serial No. 664,982. 3 Claims. (Cl. 192—60.)

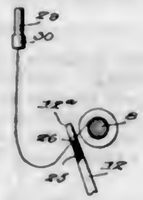


3. In a holding device, a plurality of radially disposed cylinders, a drum shaped casing for supporting the said cylinders, pistons in the said cylinders, an eccentric in the said casing, means for individually operating the said pistons by the said eccentric, means for connecting the outer ends of the said cylinders to a chamber at the center of the said casing, check valves in the said connecting means which are normally held closed by the rotary motion of the

said casing, a peripheral chamber connecting the outer ends of the said cylinders, check valves in the said peripheral chamber also held closed by the rotary motion of the cas-

ing, suitable connections between the said peripheral chamber and the said central chamber, and valves operatable from a remote point in the said latter connections.

1,683,055. PROCESS AND APPARATUS FOR PRODUCING FILAMENTS. JOHN ANDRÉ ROUX, Tenafly, N. J. Filed Oct. 6, 1921, Serial No. 505,953. Renewed Nov. 18, 1927. 50 Claims. (Cl. 18—8.)



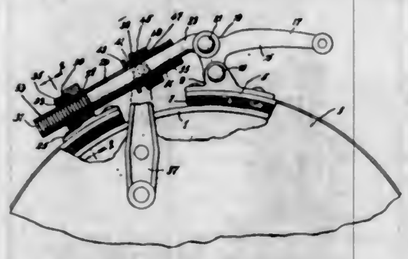
1. In apparatus for producing filaments, a spinneret tube having a discharge orifice, a collecting reel, a polarizer member located between said orifice and said reel, and on a level below the level of said discharge orifice and spaced sufficiently distant therefrom to effect a drying action during the travel of a filament from the discharge orifice to the region of said polarizer, and a source of electricity having one pole electrically connected to said polarizer member and the other pole electrically connected to said tube.

8. In apparatus for producing filaments, a polarizer member comprising a tubular frame mounted below a spinneret tube and comprising sections of tubing with spherically shaped metal members at the adjacent ends.

13. In apparatus for producing filaments, a spinneret tube having a discharge orifice, and a three sided tubular polarizer frame mounted below said spinneret tube.

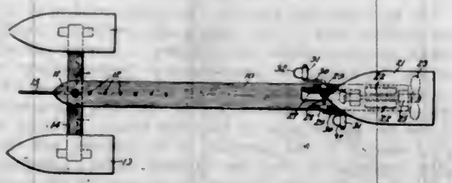
46. The process of producing filaments which comprises expressing material in filament form from a discharge orifice, leading said filament downward and past a charged polarizer member and through the electrostatic field set up thereby, effecting a substantial drying of the filament in the period of travel from said discharge orifice to the region of said polarizer, and collecting said dried filament, said polarizer member being located along the path of travel of said filament and between said orifice and the point of collection of said dried filament.

1,683,056. PROCESS AND APPARATUS FOR PRODUCING FILAMENTS. JOHN ANDRÉ ROUX, Tenafly, N. J. Filed Aug. 1, 1923. Serial No. 655,133. Renewed May 28, 1928. 41 Claims. (Cl. 18—8.)



1. The process of producing filaments which comprises expressing material in filament form from a discharge orifice, leading said filament from said discharge orifice past a charged polarizer member spaced from said orifice and through the electrostatic field set up thereby, and effecting substantial reduction in the size of the filament and a substantial drying of the same in the period of travel between the discharge orifice and the polarizer member, said polarizer member being located along the path of travel of said filament and between said orifice and the point of collection of said dried filament.

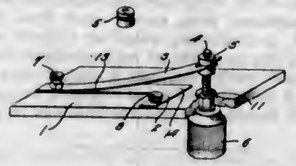
22. Apparatus for producing filaments comprising a spinneret member having a discharge orifice, a filament receiving member, a charged polarizer guide member, and means for varying the position of said guide member with respect to said receiving member.



26. In a machine for producing and winding filaments, a U-shaped guide member having a charged polarizer plate in the curve thereof.

1,683,057. BRAKE ADJUSTMENT. JOHN E. SCESE, Pontiac, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed July 12, 1926. Serial No. 121,876. 10 Claims. (Cl. 188—196.)

1. In a band brake, a drum, a contracting band, a lever pivoted to one end of the band, a rod connected to said lever for applying the opposite end of the band to the drum, a plurality of automatic slack adjustment devices associated with said rod.



1,683,058. AQUATIC AMUSEMENT DEVICE. HENRY UBERTO, New York, N. Y. Filed June 27, 1927. Serial No. 201,710. 2 Claims. (Cl. 9—18.)

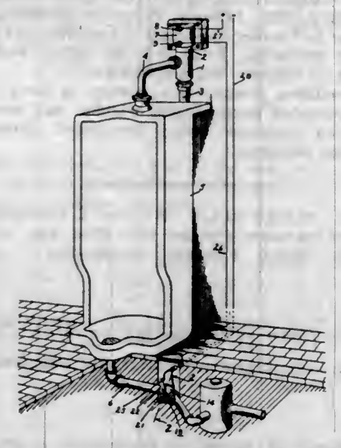
1. An aquatic amusement device, including a flat elongated member, a cross arm turnably carried by the forward end of said member, buoyant elements at the opposite

ends of the cross arm, a buoyant element at the rear of said member, the latter buoyant element being spaced relatively above the forward buoyant element whereby to dispose the device at an upward and forward inclination beneath the surface of the water, propulsion means at the rear end of the device having foot-operated pedals, a rudder carried by the cross arm and turnable therewith, and means for turnably connecting the cross arm and forward buoyant elements at longitudinally spaced points with respect to said member, whereby to compensate for variation in the heights of the users.

1,683,059. RESISTOR. HARRY R. VAN DEVENTER, New York, N. Y., assignor to Dubilier Condenser Corporation, a Corporation of Delaware. Original application filed Dec. 1, 1922, Serial No. 604,395. Divided and this application filed Nov. 1, 1923. Serial No. 672,161. 4 Claims. (Cl. 201—55.)

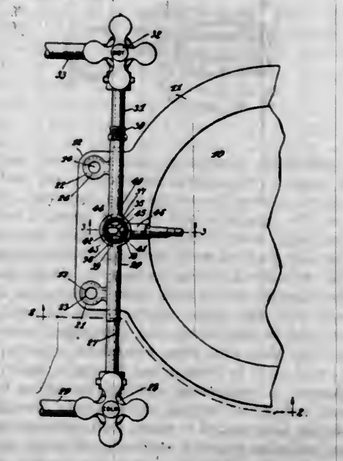
4. An electrical device comprising a base, a fixed impedance element thereon, a resilient, movable conducting element fastened at a predetermined point to the fixed element but normally divergent with respect to said fixed element away from said point, the conducting element having a portion removed at an end away from the predetermined point, a member having grooves which engage the conducting element at the place where the said portion was removed, and a means for moving the grooved member in such manner that the movable conducting element may be progressively moved toward and away from the fixed element to vary the impedance of the device.

1,683,060. RESISTANCE DEVICE AND METHOD OF MAKING SAME. CHARLES E. VAWTER, Philadelphia, Pa., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 18, 1924. Serial No. 738,422. 10 Claims. (Cl. 201—76.)



2. A resistance device comprising a casing in the form of an open-ended tube of porous insulating material, electrically conductive caps engaging the ends of said tube, a conductive substance in said tube comprising manganese dioxide mixed with carbon capable of offering a constant resistance to the passage of current flowing therethrough, the device and contents being thoroughly dried, and thoroughly impregnated with a waterproof and insulating material.

1,683,061. METHOD OF TREATING AND FORMING ARTIFICIAL FUELS. HERBERT E. WETHERBEE, Cleveland, Ohio, assignor of one-third to Richard F. Grant and one-third to Howard M. Hanna, Cleveland, Ohio. Filed Oct. 1, 1925. Serial No. 59,963. 7 Claims. (Cl. 44—25.)



1. The herein described method for coalescing irregular small sizes of anthracite and the like, which consists in treating a mass thereof in moistened condition with a suitable filming oil to displace the water and thereafter effecting the drying of said oil to insure its adherent action, substantially as set forth.

1,683,062. AUTOMATIC FLUSHING VALVE. WESTON FRANCIS BRIGHT, Longmeadow, Mass., assignor to Bridgeport Brass Company, Bridgeport, Conn. Filed May 8, 1925. Serial No. 28,968. 18 Claims. (Cl. 4—100.)

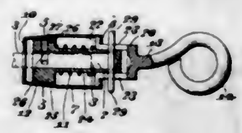
1. Regulating apparatus including a source of fluid, a receptacle into which waste is first introduced and which said fluid is intended to flush, means for controlling the flow of said fluid including an electric circuit, normally non-bridged electrodes for said circuit which are situated out of the path of fluid discharged from said receptacle, and means for deflecting waste fluid discharging from said receptacle from said path directly and unadulterated to said electrodes to bridge the same and and close the circuit to initiate the action of the controlling means when the character of the waste is such that it is electrically conductive.

1,683,063. WATER-CLOSET FITTING. CESARE C. CAMPUS, Santa Monica, Calif. Filed July 29, 1926, Serial No. 125,627. Renewed July 23, 1927. 12 Claims. (Cl. 4—7.)

1. In an apparatus of the class described, a closet bowl having the upper rear portion thereof constructed for the attachment of a closet bowl seat thereto, a tubular

supply fitting constructed to lie on that portion of the bowl adapted for the attachment of the closet bowl seat, and a nozzle member extending from the said tubular supply fitting in a position immediately below the rear portion of the closet bowl seat and adapted to direct a stream of water in a centrally disposed line from the rear toward the front of the closet bowl.

1,683,064. ELECTRIC CONDUCTOR AND PROCESS OF MAKING SAME. JAMES V. CAPICOTTO, Brooklyn, N. Y., assignor to Dubilier Condenser Corporation, a Corporation of Delaware. Filed Feb. 27, 1924. Serial No. 695,591. 4 Claims. (Cl. 250—27.5.)



1. A conductor comprising a mixture of finely divided and intermingled platinum and iridium, and containing barium and strontium evenly distributed through the mass of the conductor.

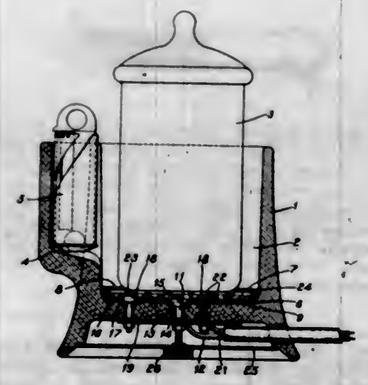
1,683,065. PLUMB RULE. WILLIAM J. CARPENTER and FRANCIS SHANLEY, Chicago, Ill. Filed Aug. 14, 1925. Serial No. 50,156. 6 Claims. (Cl. 33—214.)

1. A plumb rule having, in combination, a rectangular metal frame comprising spaced parallel straight edges having longitudinal guide grooves therein on their adjacent sides, an apertured slide adjustable within said frame in said grooves, said slide carrying four bubble tubes parallel to the sides of said frame, said frame having end portions adapted to house said slide, a spring pressed plunger mounted on said slide bearing against said frame to hold the slide in its adjusted position, and means operable to release said plunger.

1,683,066. ELECTRICAL CONNECTER. SAMUEL COHEN, Brooklyn, N. Y., assignor to Grace A. Barron, New York, N. Y. Filed July 31, 1922. Serial No. 578,540. 2 Claims. (Cl. 173—328.)

1. An electrical connecter comprising in combination a hollow stem, a connecting member on one end of said stem, a head having the shape of a frustrum of a cone formed on the opposite end of said stem, a cylindrical casing enclosing said stem, spring means interposed between one end wall of said casing and the head of said stem, said cylindrical casing having the walls thereof adjacent the opposite end of said cylindrical casing shaped to correspond with the shape of the head of said stem, a transverse slot in said head, and a gripping member positioned in said slot, said stem extending opposite the end on which said head is formed and having a guide pin positioned therein, a conducting member extending from said cylindrical casing and having slots therein through which said guide pin is arranged to move, said guide pin providing means for allowing relative movement between said cylindrical casing and said hollow stem for forcing said gripping member against a conductor inserted in said hollow stem.

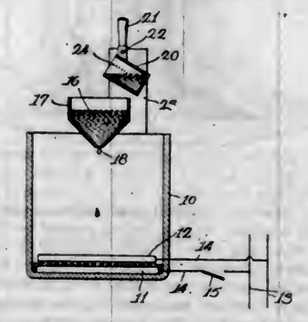
1,683,067. GRID-LEAK RESISTANCE. WILLIAM DUBILIER, New York, N. Y., assignor to Dubilier Condenser Corporation, a Corporation of Delaware. Filed May 24, 1924. Serial No. 715,657. 6 Claims. (Cl. 201—63.)



6. In a grid leak, the combination of a high resistance element supported solely at its ends, a sleeve surrounding said element, terminal caps at the ends of said sleeve, conductors joined at their ends to said caps, a non-hygroscopic substance surrounding said sleeve and said caps and the adjacent ends of the conductors imbedding and sealing the same, said substance being spaced apart from the resistance element, an insulating wrapping for said substance, bushings abutting the ends of said substance and giving passage to said conductors, and a casing involving said substance and said wrapping and engaging at its extremities with said bushings to hold the bushings in place.

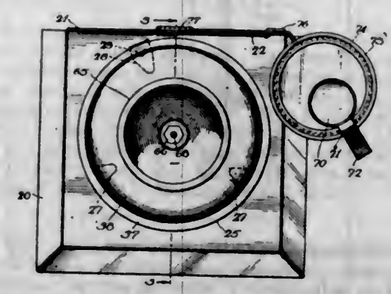
1,683,068. METHOD OF TREATING DRIED FIGS AND DRIED PRUNES. THOMAS W. W. FORREST, Fresno, Calif., assignor to Sunland Sales Cooperative Association, Fresno, Calif., a Corporation of California. Filed Dec. 27, 1926. Serial No. 157,416. 2 Claims. (Cl. 99—11.)

1. The method of reconditioning packaged dried fruits such as dried figs and dried prunes in which the fruit has become surface sugared through storage conditions, which comprises placing the unopened packages of fruit in a receptacle and applying a heat thereto to maintain a temperature throughout the fruit below 212 degrees F. until the sugary coating has been dissolved and reabsorbed.



1,683,069. LIQUID-CONDUCTOR HEATER DEVICE. MARSHALL W. HANKS and MAX MASON, Madison, Wis., assignors to Hankscraft Company, a Corporation of Wisconsin. Filed Oct. 1, 1923. Serial No. 665,761. 7 Claims. (Cl. 219—40.)

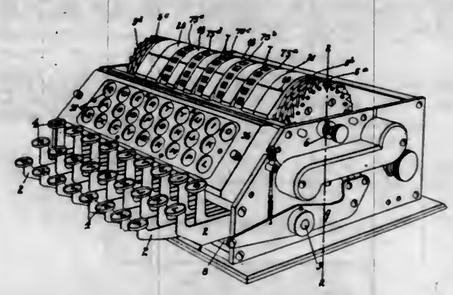
4. An electric heating apparatus comprising a receptacle for vaporizable liquid having a main chamber containing a pair of superposed and spaced-apart electrodes, the upper electrode having one or more perforations, and



an auxiliary chamber in open communication with said main chamber to receive a liquid-measuring device which automatically discharges its contents into the main chamber when placed in the auxiliary chamber.

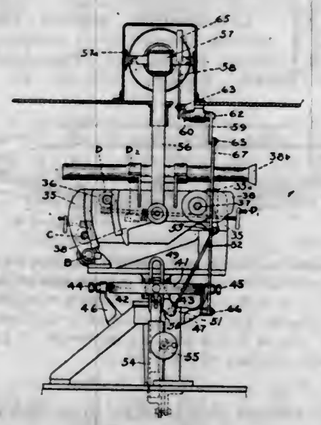
1,683,070. LIQUID-CONDUCTOR HEATER AND METHOD OF OPERATING SAME. MARSHALL W. HANKS, Madison, Wis. Filed June 27, 1924. Serial No. 722,670. 6 Claims. (Cl. 219—40.)

4. A liquid conductor heater comprising a heating vessel adapted to hold and retain a liquid conductor, electrodes located in said vessel, an electric circuit for said electrodes, and means for introducing into said vessel at a gradual predetermined rate a measured quantity of liquid conductor adapted to remain in said vessel and establish an electrical connection between said electrodes.



1,683,071. LIQUID-CONDUCTOR HEATER AND METHOD OF OPERATING SAME. MARSHALL W. HANKS and MAX MASON, Madison, Wis., assignors to Hankscraft Company, a Corporation of Wisconsin. Filed Jan. 12, 1925. Serial No. 1,784. 19 Claims. (Cl. 219—40.)

1. A liquid conductor heater in which a measured quantity of liquid is evaporated substantially to dryness, comprising a receptacle provided with a heat treating chamber, and spaced electrodes in said receptacle adapted to make circuit closing contact with said liquid and formed to effect a ready escape from the space between said electrodes of bubbles produced in said liquid by the passage of current therethrough.



1,683,072. ELECTRIC CODE MACHINE. EDWARD H. HEBERN, Oakland, Calif., assignor, by mesne assignments, to International Code Machine Company, Reno, Nev., a Corporation of Nevada. Filed Nov. 20, 1923, Serial No. 675,898. Renewed May 17, 1927. 57 Claims. (Cl. 35—13.)

1. In a coding and decoding machine, a plurality of code wheels, a plurality of ratchet wheels, means whereby the ratchet wheels are actuated and means operatively connecting each of the ratchet wheels with a correspond-

ing code wheel whereby one of the code and one of the ratchet wheels is actuated only after another ratchet wheel has made a complete revolution.

1,683,073. SIGHTING DEVICE. JAMES BLACKLOCK HENDERSON, Lee, England. Filed July 26, 1919, Serial No. 313,538, and in Great Britain June 29, 1917. 37 Claims. (Cl. 33—49.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

4. The method of correcting for the effect of angular displacement of a gun mounted on an angularly movable platform which consists in establishing a line of sight to an objective, establishing another line of sight at a substantial angle to the first mentioned line of sight, continuously and effectively maintaining the second mentioned line of sight laid on a distant point while the first mentioned line of sight is displaced angularly about the axis of the gun, and utilizing the angular displacement between the platform and the second mentioned line of sight to correctively position the first mentioned line of sight for the effects of such displacement.

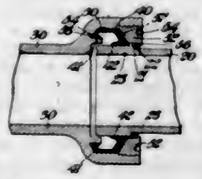
14. A sighting device for use with a gun mounted on a rolling platform comprising a sighting telescope, a telescope adapted to be maintained upon a point lying at a substantial angle to said sighting telescope and means continuously actuated by the second named telescope for actuating the sighting telescope whereby errors resulting from displacements of the gun axis due to the movement of the platform may be corrected.

26. In an apparatus of the character described, in combination, a pointer's telescope, a trainer's telescope and a cross-leveler's telescope and means associated with said telescopes whereby they mutually cooperate for correcting the error in the sighting of one or more guns.

31. In an apparatus of the character described, in combination, pointer's sighting means, trainer's sighting

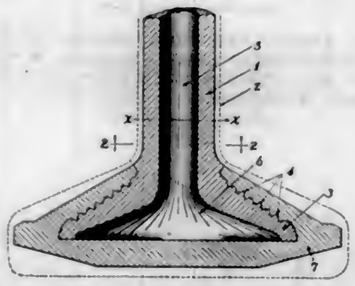
means and cross-leveler's sighting means and means actuated by said cross leveler's means for overcoming the error introduced in the training of the guns due to inclination of the gun trunnions.

1,683,074. BAG FASTENER. WILLIAM C. HIERING, Newark, N. J., assignor to J. E. Mergott Co., Newark, N. J., a Corporation of Delaware. Filed May 29, 1926. Serial No. 112,525. 2 Claims. (Cl. 292—228.)



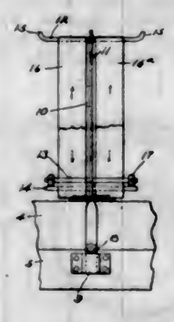
1. In a bag the combination with the frame members thereof in which one member has an opening and a torsional spring adjacently below the opening, the other member having a projection opposite the opening, of an elongated block disposed longitudinally over said member, an H-shaped integral blank doubled upon itself and fastened to said block, said blank presenting a loop to extend through the mentioned opening and receive said spring and having an opening to engage said projection when the frame members are closed.

1,683,075. AUTOMOBILE SPRING SNUBBER. CHARLES H. HUGHES, Denver, Colo., assignor of one-half to H. C. Denny, Denver, Colo. Filed July 5, 1927. Serial No. 203,647. 2 Claims. (Cl. 267—48.)



1. A vehicle spring of the multiple leaf type comprising an additional leaf secured to the convex side of the spring, the free end of said leaf being connected with the master leaf by a shackle and a resilient block interposed between the upper side of leaf 9 and the underside of the spring, intermediate the ends of said leaf.

1,683,076. SPIGOT AND SOCKET PIPE JOINT. PERCY GRAHAM JOHNSON and HAROLD RAYMOND MORGAN, London, England, assignors to Victaulic Company, Limited, London, England. Filed May 31, 1924, Serial No. 717,035, and in Great Britain Jan. 22, 1924. 6 Claims. (Cl. 285—163.)

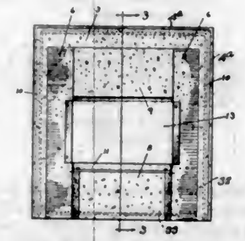


1. A spigot and socket joint comprising, a spigot, a socket member having a packing ring receiving recess of which the outer end is closed by an externally screwed packing gland screwing into the outer end of the packing receiving recess, a hollow fluid-sealed packing ring of flexible material having a circumferential opening communicating with the fluid passing through the joint, one of the free edges of the packing ring bearing on the spigot and extending from a side of the packing ring bearing on the inner side of the screwed packing gland member while the other free edge of the packing ring bears on a side of the recess in the socket member.

1,683,077. VALVE FOR INTERNAL-COMBUSTION ENGINES. CHARLES SHERIDAN JOYCE, Brooklyn, N. Y. Fi'ed Apr. 2, 1925. Serial No. 20,229. 6 Claims. (Cl. 123—188.)

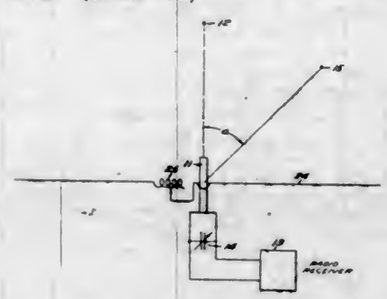
1. In a valve for internal combustion engines, the combination of a hollow stem, a hollow conical portion integral with the stem and substantially conforming to the shape of the completed valve, the thickness of the metal of the hollow conical portion decreasing toward the base of the cone, a valve head of heat resisting metal cast over the hollow conical portion, the conical portion of the valve head extending substantially to the juncture between the conical portion of the stem and the cylindrical portion thereof.

1,683,078. SEWING-MACHINE ATTACHMENT. ARTHUR G. KAY, Wellesley, Mass., assignor to Powdrell & Alexander, Inc., Boston, Mass., a Corporation of Massachusetts. Filed July 27, 1926. Serial No. 125,181. 2 Claims. (Cl. 112—152.)



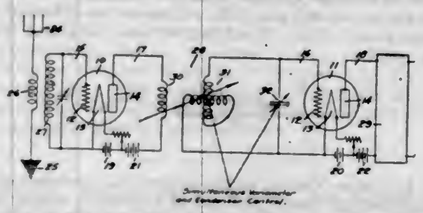
1. In combination with a sewing machine having two needles, means for feeding a strip of fabric to each of said needles to be hemmed, a single support for tensioning bars in the plane bisecting the space between the needles, and a plurality of substantially parallel tensioning bars arranged substantially horizontally on and symmetrically with respect to said support, the uppermost of said bars being spaced a substantial distance from the lowermost bar, each bar guiding both strips of fabric which pass over the uppermost bar and under the lowermost bar and thence to the respective needles, said support being positioned intermediate the ends of said tensioning bars so that the strips of fabric will pass one on either side thereof.

1,683,079. REMOVABLE FIREPLACE. JOHN KERTES, Pittsburgh, Pa. Filed Apr. 5, 1927. Serial No. 181,064. 4 Claims. (Cl. 126—120.)



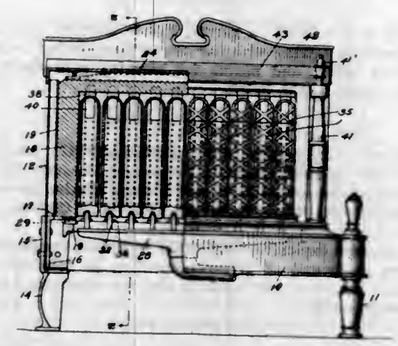
2. In a fireplace the combination of a structure comprising side walls and a back wall having an upper wall portion, and a lower back wall portion spaced vertically

from the upper wall portion and offset horizontally from the plane thereof; a backing member in the interval between the edges of the upper and lower wall portions, a



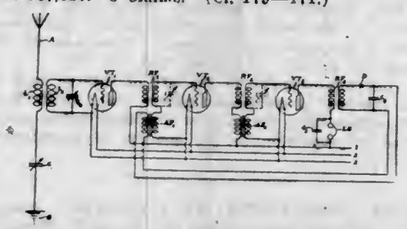
member secured to the lower back wall portion arranged to support the backing member, and an apron having a tile facing supported by said member and extending outwardly and downwardly therefrom.

1,683,080. RADIO RECEIVING SYSTEM. FREDERICK A. KOLSTER, Palo Alto, Calif., assignor to Federal Telegraph Company, San Francisco, Calif., a Corporation of California. Filed June 2, 1924. Serial No. 717,293. 5 Claims. (Cl. 250—11.)



4. In a system for receiving electromagnetic radiations, a loop antenna having directional characteristics, means for selectively tuning said antenna, a detector circuit electrically associated with said antenna, and means for altering the wave front of radio energy which is received from a direction other than perpendicular to the axis of said loop, said means comprising an elongated conductor relatively greater in length than the diameter of said loop and arranged at an angle to the plane of said loop.

1,683,081. VARIABLE-COUPLING TRANSFORMER. FREDERICK A. KOLSTER, Palo Alto, Calif., assignor to Federal Telegraph Company, San Francisco, Calif., a Corporation of California. Filed Mar. 23, 1926. Serial No. 96,689. 3 Claims. (Cl. 250—40.)

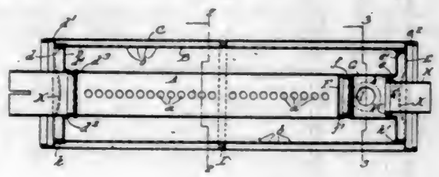


1. A device of the class described comprising a primary inductance, a variometer secondary inductance including a pair of coils relatively rotatable with respect to each other for varying their total inductance between a maximum and minimum, said primary inductance positioned in fixed inductive relation to one of said coils whereby the coupling between the primary and secondary will vary upon variation of said secondary, a variable capacitance shunted across said secondary, and a common control means simultaneously increasing said secondary from a minimum to a maximum inductance upon variation of the capacitance from a minimum to a maximum value without effecting a substantial change in the primary inductance.

1,683,082. HEATER. LINDLEY S. LAWSON, Pittsburgh, Pa., assignor to Lawson Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 10, 1924. Serial No. 742,821. 23 Claims. (Cl. 126—92.)

1. The combination in a gas heater of a fire back, a burner located in front of said fire back, radiants supported in operative relation to said burner and means for supporting said fire back and said burner located at each end thereof.

1,683,083. AMPLIFIER OF ELECTRICAL CURRENTS. EDWARD H. LOFTIN, Washington, D. C., assignor to Edward H. Loftin, trustee. Filed June 22, 1923. Serial No. 647,027. 5 Claims. (Cl. 179—171.)



1. A stage of amplification in an amplifier system including a three-electrode vacuum tube, an input circuit having a portion tuned to currents above audibility, means for impressing currents above audibility on said tuned portion, means associated with said input circuit for simultaneously impressing substantially lower frequency currents on said input circuit, an output circuit, means for transferring said currents above audibility from said output circuit, and means for simultaneously transferring said lower frequency currents from said output circuit including a coil in said output circuit so connected as to unmodifiedly offer its natural impedance to the flow of said currents above audibility in said output circuit.

1,683,084. MUFFLER. ROY J. MACKENZIE and LUCIEN L. HAAS, Buffalo, N. Y., assignors to Buffalo Pressed Steel Company, Buffalo, N. Y. Filed Dec. 21, 1925. Serial No. 76,711. 7 Claims. (Cl. 137—160.)

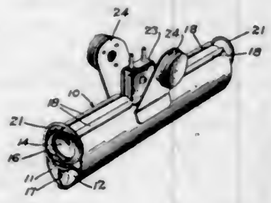
1. In a muffler, the combination of a plurality of shells of different sizes arranged one within another forming a plurality of chambers in which the gases of combustion ex-

pand, said shells being provided with openings through which the gases flow from one chamber to another, two adjacent shells being provided with registering holes and being bent to cause the portions having said holes to be

brought into contact to permit gas to flow through said holes without mixing with the gas in the chamber between said two shells, and means for securing said shells together around said holes.

1,683,085. METHOD OF GENERATING MOTIVE FLUID. HUDSON MAXIM, Hopatcong Borough, N. J.; Lilian Maxim executrix of said Hudson Maxim, deceased. Filed Feb. 23, 1921. Serial No. 447,176. 3 Claims. (Cl. 52—5.)

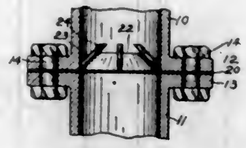
3. A liquid explosive for driving torpedoes consisting of a nitro compound of glycerine holding in solution gum camphor, acetylene gas, acetone and a combustible non-explosive material.



1,683,086. CAST IRON AND THE METHOD OF MAKING SAME. AUGUSTUS F. MEEHAN, Chattanooga, Tenn. Filed June 16, 1927. Serial No. 199,419. 8 Claims. (Cl. 75—49.)

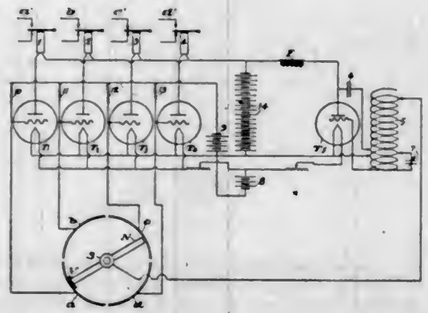
1. That improvement in the art of making cast-iron which consists in adding to gray molten metal a silicide containing an alkaline earth metal, and another graphitizing agent such as nickel.

1,683,087. CAST IRON AND METHOD OF MAKING SAME. AUGUSTUS F. MEEHAN, Chattanooga, Tenn., assignor to Mechanite Metal Corporation, Chattanooga, Tenn., a Corporation of Tennessee. Filed Aug. 27, 1927. Serial No. 215,997. 6 Claims. (Cl. 75—27.)



1. That improvement in the art of making cast iron which consists in adding to molten iron, which if cast would contain more than 2% of combined carbon metallic calcium in proportion to the amount of graphitization desired.

1,683,088. PERMANENT-WAVE HEATER. KARL E. MERZ, Oakland, Calif. Filed Oct. 18, 1927. Serial No. 226,842. 9 Claims. (Cl. 132—36.)



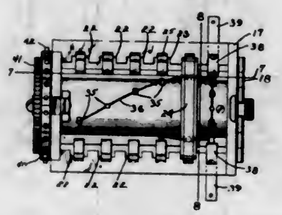
1. A heater of the character described comprising a pair of heater members yieldably held together by spring means, a heating element embraced by said heater members and about which they may pivot, said heating element being adapted to heat the inner surfaces of said heater members, said inner surfaces being recessed to receive a wound strand of hair.

1,683,089. REATOMIZING DEVICE. RAY F. MILLS, Waynesville, Ohio. Filed July 6, 1923. Serial No. 649,927. 3 Claims. (Cl. 48—180.)

1. A reatomizing device, comprising an intake pipe of a hydro-carbon motor, a member to be inserted therein, said member having a portion frustro-conical in form, traversed by a frustro-conical passage through which the gases in the pipe pass; said conical portion being adapted to co-operate with the wall of the pipe in forming an annular basin in which unconsumed fuel flowing down along the wall of the pipe may accumulate; a tube secured to the outer wall of said conical portion, in such a position that one end will be in said basin and the other end in the path of the gas which emerges from the small end of said opening, and means for securing said member in the pipe.

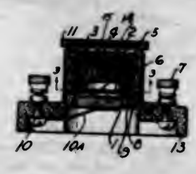
1,683,090. ELECTRICAL SYSTEM. CARLOS B. MIRICK, Washington, D. C. Filed July 10, 1925. Serial No. 42,777. 6 Claims. (Cl. 177—351.)

1. In an electrical indicator system, the combination of a plurality of vacuum tube relays having grid-filament and plate-filament circuits, a plurality of electro-magnetic relays, the coil of each one of which is disposed in the plate-filament circuit of its corresponding vacuum tube, a vacuum tube oscillator and means for coupling the vacuum tube oscillator to each grid of the vacuum tube relays independently of the other relays.



1,683,091. PIEZO-ELECTRIC CRYSTAL HOLDER. CARLOS B. MIRICK, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed June 7, 1927. Serial No. 197,133. 14 Claims. (Cl. 171—327.)

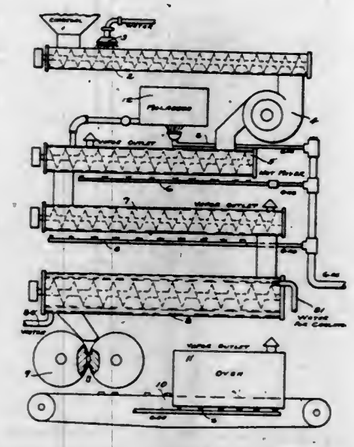
1. In a piezo electric crystal holder, the combination of a frame having grooves recessed in its faces, a crystal and electrodes therefor within the frame, and metallic cover plates inserted within the grooves and having bent up ends, said bent up ends constituting electrical contacts for the electrodes of the crystal.



10. In a multiple crystal unit the combination of a cabinet of insulating material having a plurality of double grooves in its inner walls, a plurality of crystal holders having contact surfaces upon their edges inserted within the grooves and means conforming to the shape of a portion of the grooves for establishing electrical contact with the contact surfaces of the crystal holders.

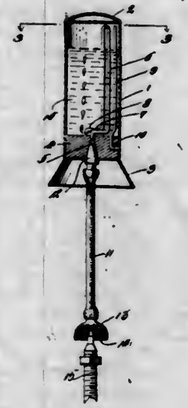
1,683,092. PIEZO-ELECTRIC CRYSTAL HOLDER. CARLOS B. MIRICK, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed June 8, 1927. Serial No. 197,494. 5 Claims. (Cl. 171—327.)

1. In a multiple crystal unit, the combination of a cabinet, electrical terminals upon the cabinet, a plurality of grooves within the cabinet, individual crystal holders within the grooves, and means for making electrical contact between each of the crystal holders and the terminals independently of the other crystal holders.



1,683,093. PIEZO-ELECTRIC CRYSTAL APPARATUS. CARLOS B. MIRICK and ALFRED CROSSLEY, Washington, D. C., assignors to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Nov. 7, 1927. Serial No. 231,589. 4 Claims. (Cl. 171—327.)

1. A piezo electric crystal holder comprising a cylindrical casing screw threaded on the interior thereof, a metallic plug screw threaded into one end of said casing, a metallic cap screw threaded onto the opposite end of said casing, a piezo electric crystol element carried by the interior surface of the plug in said casing, a contact plate resting on the upper surface of said piezo electric crystal element, and a ring member screw threaded into said casing and controlling the position of said plate with respect to said piezo electric crystal element.



1,683,094. ART OF BRIQUETTING. PAUL C. MULLIGAN, Seattle, Wash., assignor to Luther J. Hull, Isaac M. Foster, and himself. Filed Oct. 4, 1926. Serial No. 139,381. 4 Claims. (Cl. 44—14.)

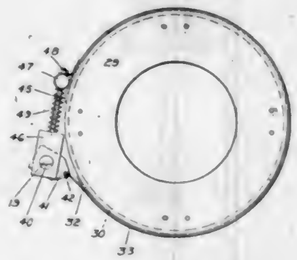
1. The process of briquetting fuel by the use of a molasses binder which consists in heating the base fuel material, adding thereto and mixing therewith the molasses, continuing heating of the mixture to drive off the water contained in the molasses, but maintaining the temperatures throughout below that required to drive off the volatiles,

cooling the mixture to a briquetting consistency, pressing the mixture, and finally baking the briquettes to carbonize the binder.

1,683,095. VALVE LEAK AND PUNCTURE DETECTOR. ENGRACIO P. OFFEMARIA, Chicago, Ill. Filed Feb. 15, 1927. Serial No. 168,428. 4 Claims. (Cl. 73—51.)

3. In a tire valve leak detector of the character described, the combination with a receptacle having a tube body leading thereinto and adapted to be attached to a tire valve, of a liquid having phosphorescent characteristics contained in the receptacle to indicate in the dark the passage of air bubbles therethrough escaping from the attached tube body.

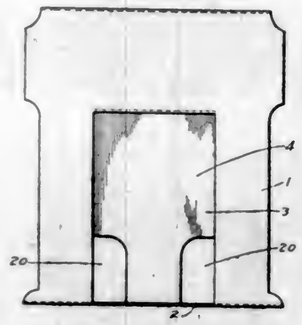
1,683,096. ROTARY JAR. ROBERT MCDONALD PYLES, Fullerton, Calif. Filed May 2, 1921. Serial No. 466,050. 4 Claims. (Cl. 255—27.)



2. In a rotary jar, the combination of a tubular section and a plunger-section within the tubular section, said plunger section having an integral bead on its inner end,

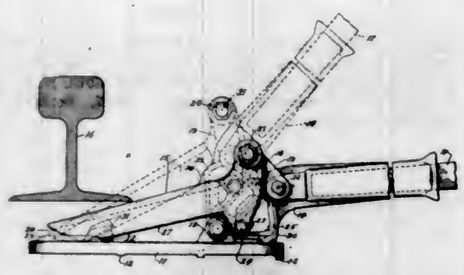
an impact-nut composed of sections disposed on opposite sides of the plunger section, and secured in the end of the tubular section, said plunger section having an annular shoulder at its end remote from said head, to strike and

cooperate with the impact nut, said impact nut having an angular opening and said plunger having an angular body fitting said opening to enable a rotary movement to be imparted from one of the sectionsto the other.



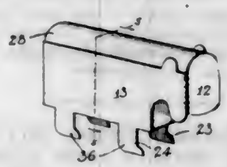
1,683,097. BRAKE FOR MOTOR VEHICLES. JOHN F. RICHARDSON, Pittsburgh, Pa. Filed Apr. 3, 1924. Serial No. 703,964. 3 Claims. (Cl. 188—77.)

1. In a brake mechanism, a brake drum, a brake band embracing the drum, an operating shaft having a half-round cam thereon, a link having a slot therein fitted over said half-round cam, said link being connected with one end of the brake band, whereby a rotative movement of the shaft may effect the movement of the brake band, and a support for the other end of the brake band.



1,683,098. DISPLAY DEVICE. CARL E. RIDGWAY, Seattle, Wash. Filed July 30, 1927. Serial No. 209,532. 2 Claims. (Cl. 211—157.)

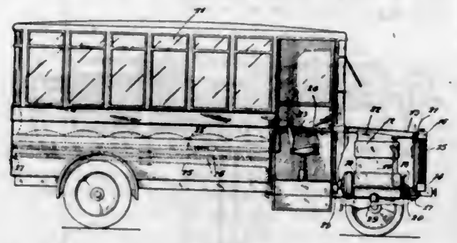
2. In a display device, a vertical member having an opening therein, a horizontal member extending rearward from the lower end of the said vertical member forming a base, and a secondary vertical member formed from the said opening and having its lower end articulated to the



said base and its upper end articulated to the said former vertical member in the upper end of the said opening by a horizontal member.

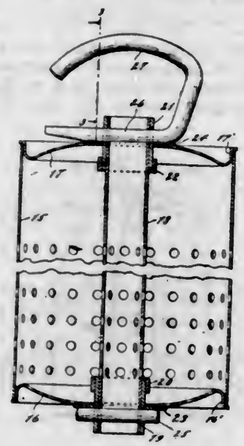
1,683,099. TRACK LINER. ROBERT ROSTRON, Chicago, Ill., assignor to Crerar, Adams & Co., Chicago, Ill., a Corporation of Illinois. Filed June 27, 1924. Serial No. 722,800. 14 Claims. (Cl. 254—44.)

1. A track liner, comprising a base, an actuating lever pivoted to said base, and a track shifting member connected for actuation by said lever, said lever having a shoulder adapted to contact with said member as the lever approaches its raised position, and said member having a cam portion adapted to be acted upon by said shoulder.



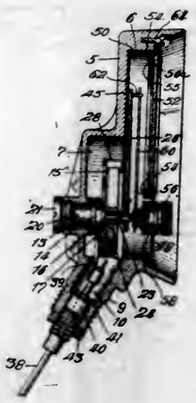
1,683,100. BOX. ALFRED ROZOWSKY, Brooklyn, N. Y. Filed Mar. 21, 1925. Serial No. 17,180. 3 Claims. (Cl. 229—8.)

1. A container composed of a single integral blank comprising sides, back, front, bottom and top closure portions, tabs on the sides, top and bottom portions, said blank



adapted to form a totally enclosed receptacle with an end of reduced section, a foldable flap extending from the bottom portion forming a side and bottom for said reduced end section and supporting members cut from the bottom, the contour of the box and supporting members simulating an animal.

1,683,101. COMBINED ENGINE-COOLING AND CAR-HEATING SYSTEM. SAMUEL W. RUSHMORE, Plainfield, N. J. Filed Oct. 31, 1924. Serial No. 746,926. 5 Claims. (Cl. 123—174.)



1. An automotive vehicle, including a vehicle body and an internal combustion engine having a closed circuit cooling system designed to circulate water slightly in excess of the maximum evaporative requirements for cooling the engine by the boiling and condensing cycle, said system including an engine jacket and a plurality of cooling circuits supplied therefrom, one being a primary cooling circuit including an exterior air cooled radiator connected to operate as an up-flow condenser with its lower portion only serially included in said circuit so that, in its normal operation, the heat transfer is by the boiling and condensing cycle and the excess water is kept at boiling point; and another cooling circuit including heat radiating means in the body of the vehicle; in combination with a common return and circulating pump for returning excess water and condensate from said circuits to the jacket.

1,683,102. CONTAINER FOR EXTRACTING APPARATUS. JOSEPH F. SANFTLEBEN, New York, N. Y., assignor to Filtrators Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 23, 1926. Serial No. 143,773. 11 Claims. (Cl. 220—55.)

1. A container having a lid and a member extending through the bottom of the container and freely movable therethrough and arranged to press against the interior of the lid to open the same when said member is moved toward the lid.

1,683,103. INDICATING INSTRUMENT. HERMAN SCHLAICH, Long Island City, N. Y. Filed Mar. 4, 1924. Serial No. 696,813. 5 Claims. (Cl. 116—129.)

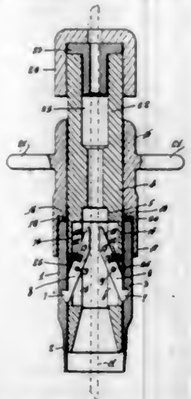
1. In an instrument, a casing, an indicating mechanism mounted therein having a pointer moving within said casing, a dial mounted in cooperative relation to said pointer, a face-plate removably secured to said casing and provided with a window thru which the dial and pointer are visible, a hand for recording maximum indications of said pointer pivotally mounted on said face-plate and arranged to be moved by said pointer and means projecting through the face plate to the front thereof for moving the maximum hand into engagement with the pointer.

1,683,104. AURO MERCAPTO CARBOXYLIC ACID AND PROCESS OF MAKING SAME. WALTER SCHOELLER, Berlin-Westend, and HANS GEORG ALLARDT, Berlin-Reinickendorf-West, Germany, assignors to the Firm Chemische Fabrik auf Actien (vorm. E. Schering), Berlin, Germany. Filed Feb. 10, 1927, Serial No. 167,350, and in Germany Feb. 17, 1926. 4 Claims. (Cl. 260—11.)

1. As a new product a compound having the general formula X—S·Au, wherein X is a radical of an aliphatic carboxylic compound, the alkali metal salts being soluble in water and having valuable therapeutical properties.

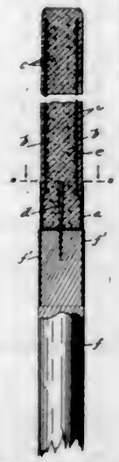
1,683,105. METALLO MERCAPTO COMPOUNDS AND PROCESS OF MAKING SAME. WALTER SCHOELLER, Berlin-Westend, and HANS GEORG ALLARDT, Berlin-Reinickendorf-West, Germany, assignors to the Firm Chemische Fabrik auf Actien (vorm. E. Schering), Berlin, Germany. Filed Feb. 10, 1927, Serial No. 167,351, and in Germany Feb. 17, 1926. 8 Claims. (Cl. 260—11.)

1. As a new product a water-soluble metallo mercapto compound corresponding to the general formula R—S·Me, wherein R is the radicle of a compound containing, besides a sulf-hydryl group, several hydroxyl groups, while Me is a heavy metal.



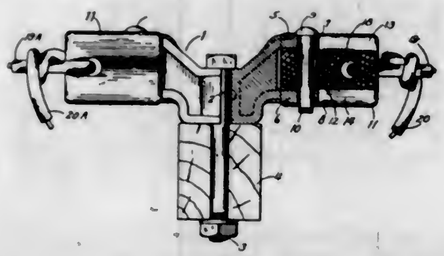
1,683,106. GUN SIGHT. FRED J. SCHRANK, Akron, Ohio. Filed Dec. 31, 1927. Serial No. 243,866. 4 Claims. (Cl. 33—47.)

2. A sight for guns comprising a sight element, and means for mounting said element on a gun barrel, said means comprising an endless loop of flexible, elastic rubber, the opening of which is less in perimeter than the perimeter of the gun barrel, and the cross-sectional diameter of



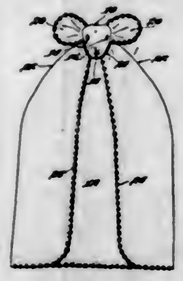
which is such that the loop is adapted to be stretched onto the gun barrel and to be retained thereon by the inherent contractile nature of the rubber.

1,683,107. OIL SAVER. CLAYTON SEVERNS and JOHN N. HICKS, Los Angeles, Calif. Filed Dec. 28, 1927. Serial No. 243,076. 4 Claims. (Cl. 166—14.)



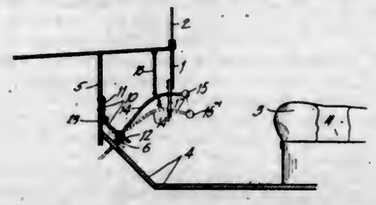
1. In an oil saving device to cooperate with a cable and socket, the combination of a sleeve having means for attaching the same to the upper end of a well tubing or casing, a cap having a bore, seated on the upper end face of the sleeve, a packing ring clamped between the cap and the said end face, a plug threaded to the cap carrying a stuffing box at its upper end and having slots in its wall at its lower end, said sleeve having a circumferential shoulder on its inner face, a trigger pivotally mounted in each slot and having a tail normally projecting into said bore so as to be engaged by the cable-socket, and spring means associated with the triggers for normally holding the triggers in engagement with the said shoulder, said triggers cooperating with said cap to hold the plug in the sleeve when the cap is screwed down on the packing ring, and operating to withdraw substantially into their corresponding slots when their tails are struck by the cable-socket.

1,683,108. CONCRETE PILE FOLLOWER AND METHOD OF MOUNTING THE SAME. JAMES H. SMALL, Jr., Cleveland, Ohio. Filed Sept. 30, 1920. Serial No. 413,866. 14 Claims. (Cl. 61—53.)



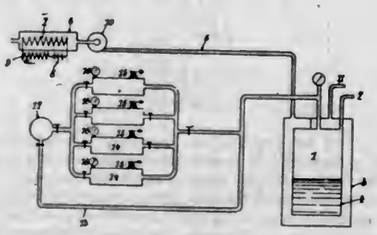
1. The herein described method of pile driving, comprising the provision of a composite concrete follower with a hollow metallic sleeve, driving a wooden pile in place, the butt of the pile being larger than said sleeve, positioning the follower in alinement with the butt, driving the sleeve down about the butt to insure a shearing fit, and thereafter driving the follower and pile as a unit to the depth desired, substantially as set forth.

1,683,109. CONDUCTOR SUPPORT. EDWARD B. SNYDER, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed Mar. 7, 1924. Serial No. 697,669. 3 Claims. (Cl. 173—321.)



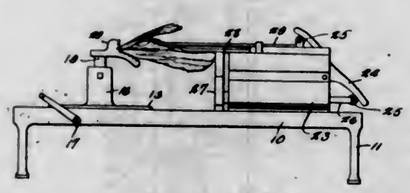
1. A combination comprising a body member, an insulating member, means on the body member to receive the insulating member, means to secure the insulating member to the body member, the insulating member provided with two pair of oppositely disposed longitudinal grooves, all grooves being parallel and each pair defined by flanges disposed at 90 degrees to the other pair, the insulating member provided with a transverse opening therethrough connecting the grooves of one pair and located adjacent the end of the insulating member to receive the connecting means on the body member, the insulating member provided with another transverse opening therethrough connecting the other pair of grooves adjacent the opposite end of the insulating member to receive a conductor and place the insulating member in tension when in action, a conductor passing through the last transverse opening and secured to the insulator and having its end free for connection and the body member provided with an opening therethrough and having its axis parallel to one of the aforesaid openings in the insulator to receive a pin to secure the body to a support.

1,683,110. WASH CLOTH. MABEL Y. STOCKBOWER, Hollis Gardens, N. Y., assignor to Earnshaw Knitting Company, Newton, Mass., a Corporation of Massachusetts. Filed Feb. 12, 1927. Serial No. 167,738. 6 Claims. (Cl. 46—40.)



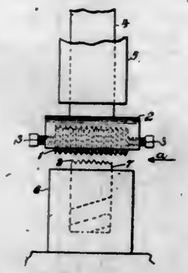
6. A one-piece rectangular wash-cloth having its upper central portion folded to simulate the head of an animal and its two upper corners folded to simulate a pair of ears and a cord for forming a neck and for holding said ears in proper relation to said head the sides of said cloth being folded over upon the body portion to simulate a cape.

1,683,111. HAND STARTER FOR AUTOMOBILES. JULUIES WASHINGTON, Ravena, N. Y. Filed July 29, 1927. Serial No. 209,377. 3 Claims. (Cl. 74—39.)



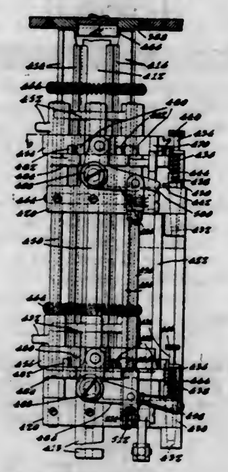
1. In a motor vehicle having an instrument board, the combination with an electric switch for starting the motor and adapted to be actuated by the foot of the operator, of a hinged element connected to said vehicle and having a movable member extending over said switch, a lever connected to said hinged element and extending upwardly and backwardly below the instrument board to a point within easy reach of the vehicle operator, and a slotted element attached to said instrument board and forming a guide adapted to permit the lever to be moved in a vertical plane about the axis of the hinged element.

1,683,112. GAS-SUPPLYING APPARATUS. ROBERT WEBER, Hayange, Moselle, France, assignor to Les Petits Fils de François de Wendel & Cie., Paris, France. Filed May 12, 1924, Serial No. 712,827, and in France May 22, 1923. 2 Claims. (Cl. 62—1.)



1. A plant for supplying a gas to an apparatus using the same comprising a double wall receptacle adapted to contain the liquefied gas, a heating device embodying an electrical source, an electric resistance and a control rheostat electrically connected together, means for circulating an auxiliary gas between the walls of said receptacle and through said heating device and pipe lines connecting said receptacle to said apparatus.

1,683,113. OYSTER-OPENING MACHINE. HOWARD J. WHELAN, Baltimore, Md. Filed Feb. 21, 1928. Serial No. 255,868. 5 Claims. (Cl. 17—4.)

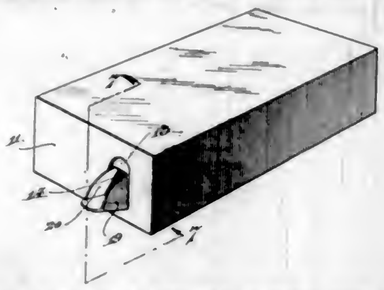


1. In an oyster shucker of the kind described, a movable support provided with a body having a concave oyster engaging face, and a pair of spaced arms projecting from the body to lie below and support a bivalve engaged against said face.

1,683,114. THREAD-CORRECTING DEVICE. EDWIN O. WILLIAMSON, New Haven, Conn., assignor to The Eastern Machine Screw Corporation, New Haven, Conn. Filed Dec. 30, 1926. Serial No. 157,884. 1 Claim. (Cl. 10—1.)

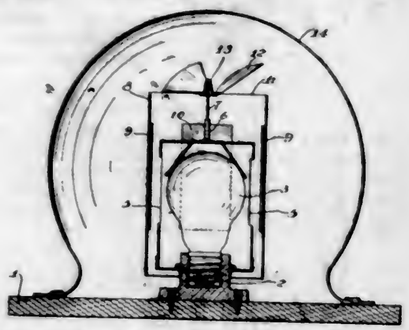
In a device for correcting the imperfections in preformed chaser threads, means for rigidly holding the chaser with the threads on the end of the chaser exposed protruding above said holding means and reciprocal means having master threads projecting therebelow for correcting the chaser threads by a series of short continuous and rapid blows delivered to the chaser threads thereby to gradually upset the metal of the chaser threads and render the surfaces thereof smooth without affecting the original length of the chaser.

1,683,115. HEEL PRESS. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Sept. 22, 1922, Serial No. 589,794. Divided and this application filed July 25, 1925. Serial No. 46,001. 25 Claims. (Cl. 12—42.)



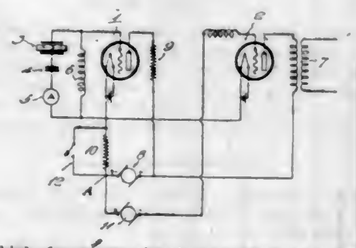
1. A tube type heel press comprising side members with which a heel engages when within the press, a frame supporting said side members, means for yieldingly pressing said side members inward, and means mounted in fixed position at one end of the press with which said side members engage to limit their inward movement when the press is empty.

1,683,116. CARTON. GLENDON T. WOOD, Philadelphia, Pa. Filed Apr. 7, 1927. Serial No. 181,634. 4 Claims. (Cl. 229—17.)



1. A piece of material in the form of a container comprising side pieces and cover pieces, an extension on one of said cover pieces, the line therebetween acting as a

hinge, portions of said extension adapted to be folded to form a spout and swing through said cover piece and an opening in the other cover piece at a second point on said

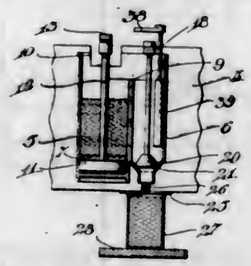


extension serving as a hinge, said extension being folded on the first cover piece in a position between the cover pieces.

1,683,117. ADVERTISING DEVICE. HARVEY L. YOAS, Du Bois, Pa. Filed Apr. 4, 1927. Serial No. 180,636. 1 Claim. (Cl. 240—49.)

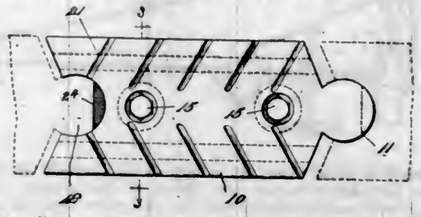
The combination with a globe of light transmitting material, of an illuminating device therefor comprising a lighting fixture, including a socket and incandescent lamp, an inner opaque casing surrounding said fixture, and having a base portion fitting around and engaging said socket and a top portion fitting over and engaging said lamp, said casing being provided with a slot through its side wall, an outer opaque casing surrounding the inner casing and supported for rotation thereon, and means carried by the outer casing whereby it is rotated by heat from the lamp, said outer casing having its side wall provided with a window which registers with said slot at each revolution of said outer casing.

1,683,118. RADIO TELEGRAPH KEYING SYSTEM. LEO C. YOUNG, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 15, 1926. Serial No. 155,026. 5 Claims. (Cl. 250—19.)



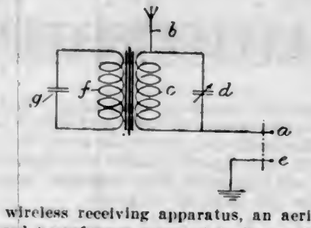
1. A high frequency signal transmission system comprising a plurality of electron tubes each having grid, filament and plate electrodes, input and output circuits interconnecting said electrodes, including a circuit to interlink the output circuits of one of said tubes with the input circuit of a succeeding tube, the circuits of one of said tubes being arranged to sustain high frequency oscillations at a selected frequency, and another of said tubes being arranged to amplify the oscillations produced by the first mentioned tube, a source of high potential for supplying power to the output circuits of each of said tubes, a source of potential for impressing a high negative charge on the grid electrode of the last mentioned tube, and a resistance device connected between said sources of potential and a point common to the input and output circuits of the first mentioned electron tube, and means for abruptly changing the condition of said resistance element for controlling the operation of the electron tubes in accordance with telegraphic signals.

1,683,119. UMBILICAL CLAMP TOOL. CHARLES E. ZIEGLER, Pittsburgh, Pa. Filed Sept. 21, 1927. Serial No. 220,915. 2 Claims. (Cl. 128—346.)



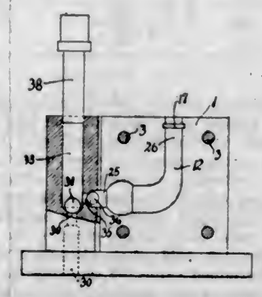
1. A tool for applying an apertured disc umbilical cord clamp comprising in combination a pair of pivoted jaws, handles actuating said jaws, a third jaw adapted to reciprocate between said pivoted jaws, a toggle joint actuating said third jaw and connected to said handles, and prongs disposed on all of said jaws, said prongs having end portions parallel to each other for a distance equal to the thickness of said disc and adapted to engage the aperture therein and to maintain the disc thereon when deflected inwardly toward said jaws when said jaws are opened, and having rounded ends to effect removal of the disc upon a subsequent jaw-opening movement after the disc has been deflected outwardly.

1,683,120. LIQUID-MEASURING VALVE. CHARLES H. AYARS, Salem, N. J., assignor to Ayars Machine Company, Salem, N. J. Filed Jan. 16, 1926. Serial No. 81,704. 6 Claims. (Cl. 226—97.)



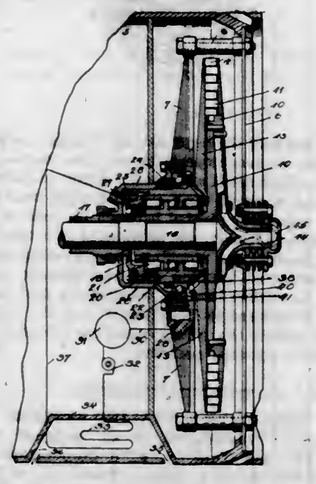
3. A liquid measuring device for filling cans including a rotary tank; filling cylinders communicating with the tank through openings at their lower ends; pistons in the cylinders; valve chambers in communication with the upper part of the filling cylinders; valves in the valve chambers; means for reciprocating the pistons, and means for opening the valves.

1,683,121. LINE MARKER FOR ROADBEDS. LEON F. N. BALDWIN, Edgewood, R. I., assignor of one-half to Benjamin S. Clark, Providence, R. I. Filed May 1, 1926. Serial No. 106,105. 3 Claims. (Cl. 94—1.5.)



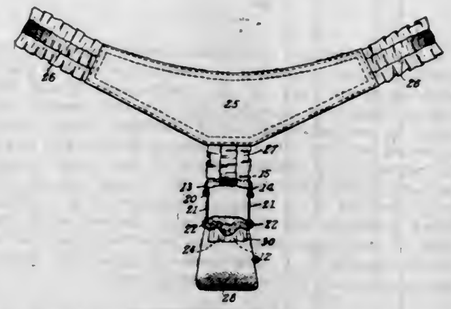
2. A line marker for a roadbed comprising a series of plates, each plate having a rounded head at one end and provided with a circular socket at its other end to receive and retain the head of the next adjacent plate by which said plates are flexibly connected end to end.

1,683,122. ANTISTATIC ARRARNGEMENT IN WIRELESS RECEIVING APPARATUS. ARTHUR ELLIOT BEATTIE, Manzanillo, Cuba. Filed July 2, 1927, Serial No. 203,150, and in Great Britain Aug. 21, 1926. 3 Claims. (Cl. 250—20.)



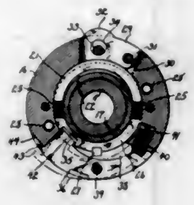
1. In a wireless receiving apparatus, an aerial circuit, an iron cored transformer resonant to low audio-frequencies and having a primary winding in series with said aerial circuit and a closed secondary winding, and a capacity capable of passing radio-frequencies but offering a high impedance to audio-frequencies in parallel with said primary winding.

1,683,123. APPARATUS FOR DRAWING METAL. CARL BERGMANN, Jr., Lynbrook, N. Y., assignor of one-half to Gustave R. Thompson, New York, N. Y. Original application filed May 18, 1920, Serial No. 382,372. Divided and this application filed Apr. 18, 1925. Serial No. 24,055. 4 Claims. (Cl. 113—44.)



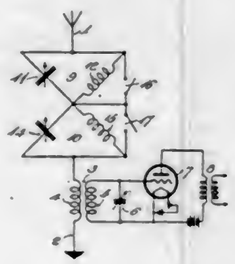
1. An apparatus for making seamless, tapered, bent drawn articles, comprising a series of dies adapted to successively receive a bent tube or shell therein, each die having a tapered bent form, and being made in parts adapted to be separated and closed to admit and hold the tube or shell, means for holding the dieparts together, and fluid pressure means for expanding said tube or shell in said series of dies, each of said dies having at one end parts of uniform size throughout the series adapted to fit closely around one end of the tube or shell to be expanded therein.

1,683,124. TORPEDO. ARTHUR F. BLASIAR, Guilford, N. Y. Filed Feb. 28, 1925. Serial No. 12,445. 5 Claims. (Cl. 184—6.)



1. In a torpedo, in combination, driving and driven turbine wheels, concentric driven shafts with which said wheels are connected, antifriction devices interposed between the relatively moving parts to reduce friction, a lubricating circulating system for forcing oil over the relatively moving parts, and a chamber through which seat water may automatically pass in transit of the torpedo through water, the chamber housing a portion of the lubricating system in the path of flow of the water therethrough.

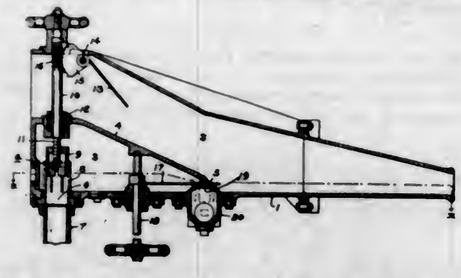
1,683,125. FABRIC GRIP. TERRICE G. BRADY and CELIA NELKIN, New York, N. Y. Filed Sept. 1, 1926. Serial No. 132,988. 3 Claims. (Cl. 24—193.)



1. A device of the class described comprising a unitary substantially rectangular wire rear loop having a pair of eyes formed in the upper part of its side members, and a straight batten bar member connecting the sides, a second loop having hooked ends engaged in said eyes, the sides of the second loop registering with the sides of the first member, and an undulating bar connecting the sides of the second member, the undulations of said bar extending beyond the sides and bottom of the first loop.

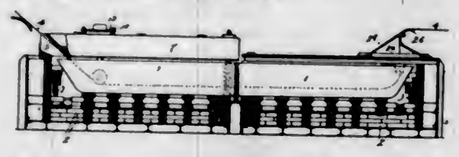
1,683,126. SELF-OPENING DIE HEAD. ALBERT F. BREITENSTEIN, New Haven, Conn., assignor to The Geometric Tool Co., New Haven, Conn. Filed Nov. 23, 1925. Serial No. 70,949. 6 Claims. (Cl. 10—95.)

3. A self-opening die-head having a body, radially-movable chasers, a chaser-operating member having chaser-closing, chaser-retracted and chaser-clearance positions, an adjusting-ring mounted upon the said body, and a spring-actuated stop-member pivoted between its ends in the said chaser-operating member, one of its ends co-acting with the said adjusting-ring for stopping the operating-member in its chaser-retracted position and its opposite end being adapted to be pushed inward, whereby its first mentioned end is moved outward to disengage it from the said adjusting-ring to permit the chaser-operating member to move into its chaser-clearance position.



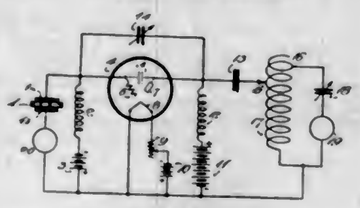
1,683,127. SELECTIVE SIGNALING SYSTEM. THOMAS McL. DAVIS, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed May 12, 1926. Serial No. 108,666. 4 Claims. (Cl. 250—20.)

1. An interference prevention circuit, for signal receiving systems comprising in combination with a signal receiving circuit a pair of trap circuits, each of said trap circuits comprising variable inductance and capacity connected in parallel, with one of said trap circuits series connected with the other of said trap circuits and means for independently shunting either of said trap circuits, the inductance and capacity in one of said trap circuits being arranged to be tuned to resonance with an interfering frequency for the exclusion thereof, while the other of said trap circuits may have its capacitive reactance adjusted to a value equal and opposite to the inductive reactance of the other trap circuit.



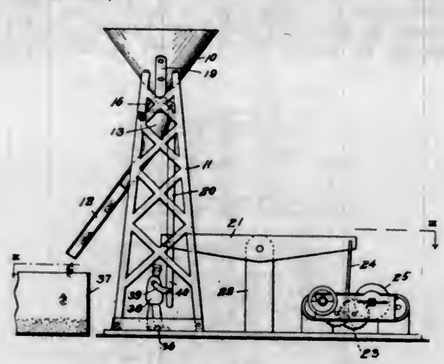
1,683,128. GAS BURNER. SAMUEL E. DIESCHER, Wilkinsburg, Pa. Filed Oct. 24, 1923, Serial No. 670,456. Renewed July 9, 1925. 1 Claim. (Cl. 158—119.)

A gas burner having in combination a shell provided with an air passage substantially rectangular in cross section and with a gas chamber so communicating with the air passage as to deliver gas to the underside of a stream of air flowing through the passage, gas supplying means having rectangular ports communicating with the gas chamber, a valve adapted to change the dimensions of said ports without changing their shape, a damper



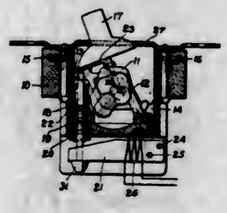
adapted to change the rate of flow of air through the passage without changing the shape of the stream, and means for simultaneously shifting the valve and damper.

1,683,129. METAL-TEMPERING APPARATUS. HENRY J. GAISMAN, New York, and CONRAD SCHUMACHER, Lynbrook, N. Y., assignors to Autostrop Patents Corporation, Dover, Del., a Corporation of Delaware. Filed June 28, 1923, Serial No. 648,175. Renewed Feb. 4, 1928. 19 Claims. (Cl. 266—3.)



1. A tempering apparatus comprising a tank for tempering material, means to heat said tank, and guiding means in the tank for a strip, part of the guiding means dividing the tank into a plurality of chambers for said material, said apparatus being provided with openings for entrance and egress of the strip.

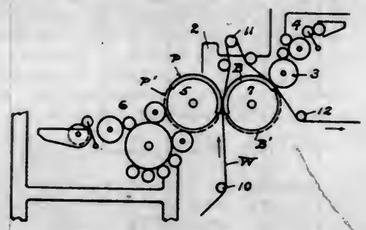
1,683,130. PIEZO-ELECTRIC CRYSTAL-CONTROLLED OSCILLATOR. LOUIS A. GEBHARD, Washington, D. C., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 16, 1926. Serial No. 155,236. 3 Claims. (Cl. 250—36.)



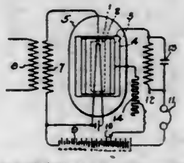
1. A piezo electric crystal control system comprising an electron tube having grid, filament and plate electrodes, an input circuit interconnecting said grid and filament electrodes, an output circuit interconnecting said plate and filament electrodes, an oscillatory circuit connected with said output circuit, a piezo electric crystal element connected in said input circuit and a varaible condenser coupling said input and output circuits for maintaining the current through said piezo electric crystal element below a predetermined value for relieving the strain upon said piezo electric crystal element while sustaining oscillations at maximum amplitude and at the frequency of said piezo electric crystal element in said oscillatory circuit.

1,683,131. TOY. LESTER S. GUNDERMAN, Pittsburgh, Pa. Filed July 16, 1926. Serial No. 122,842. 1 Claim. (Cl. 46—37.)

The combination in a toy including a support of an elevated hopper mounted thereon and provided with an orifice through which material flows from said hopper, of a tube associated with said orifice and extending downwardly therefrom, a tiltable tray located below said outlet for alternately collecting a charge of material while shutting off the flow through said tube and delivering said charge to said tube, an upright mounted on said support, and a walking-beam mechanism for operating said tray including a horizontally-extending lever pivoted to said upright, a motor-operated eccentric mounted on said support, a link connecting one end of said lever to said eccentric, and a tray-operating connecting-rod connecting the other end of said lever to said tray.



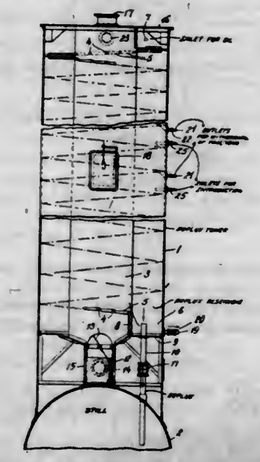
1,683,132. ELECTRIC SWITCH. CHESTER I. HALL, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed June 3, 1924. Serial No. 717,649. 6 Claims. (Cl. 200—116.)



1. In an electric switch, the combination with a movable switch member, of means including a resilient member for operating the switch member with a snap action to and from one position, a second resilient member arranged to be put under strain upon operation of the switch member to the said one position for operating the switch member therefrom with a snap action, and a thermal-responsive latch for controlling the operation of said second resilient member in response to predetermined temperature conditions.

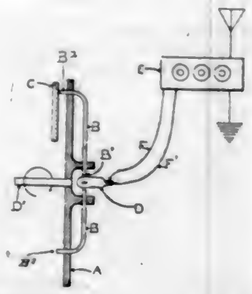
1,683,133. LATE-NEWS AND COLOR-PRINTING MECHANISM. JOHN J. HALLIWELL, Tuckahoe, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed Oct. 22, 1926. Serial No. 143,319. 4 Claims. (Cl. 101—221.)

1. In a printing mechanism, the combination of a late news printing member for printing in an unprinted portion of a web, an impression member cooperating with the late news printing member and provided with a non-impression surface, a color printing member arranged to cooperate with the impression member and having a non-impression surface, and web guides for guiding the web through the mechanism for color and late news impressions.



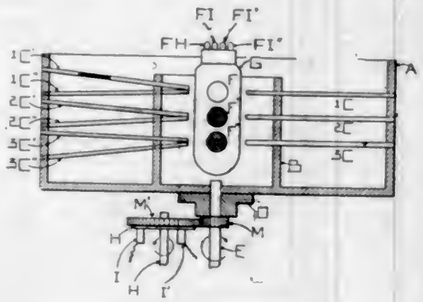
1,683,134. AMPLIFIER. ALBERT W. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 28, 1921. Serial No. 525,366. 5 Claims. (Cl. 179—171.)

1. Means for amplifying electric currents comprising an electron discharge device having an electron emitting cathode, a control electrode, an anode and an electrode made up of conducting slats between said cathode and anode, circuit connections between said cathode and each of the other electrodes, means for causing the greater part of the primary electrons emitted from said cathode to strike the slat electrode and produce an emission of impact electrons greater than the primary emission, means for impressing the currents to be amplified upon the circuit between cathode and control electrode, and means for producing an indication of the amplified currents flowing in the circuit connection to the anode.



1,683,135. METHOD OF DISTILLATION OF PETROLEUM. EDWARD W. ISOM, Winnetka, Ill., assignor to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed May 6, 1924. Serial No. 711,376. 4 Claims. (Cl. 196—72.)

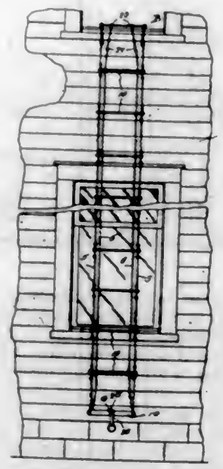
2. The method of distilling crude oil which comprises introducing into the still substantially less than a normal



charge of the crude oil, heating the still and subjecting the vapors therefrom to refluxing action until the desired light distillate is removed from the still charge, then introducing additional crude oil to said still in refluxing relation with the vapors therefrom and continuing the heating of the still with regulation of the feed to obtain the desired light distillate from the reflux tower, discontinuing the operation when the still is approximately filled, and distilling the resulting charge directly to a condenser without refluxing.

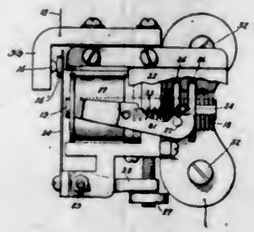
1,683,136. METHOD OF AND APPARATUS FOR CONVERTING LIGHT IMPULSES INTO GRAPHIC REPRESENTATIONS. CHARLES FRANCIS JENKINS, Washington, D. C. Filed Apr. 22, 1926. Serial No. 103,692. 17 Claims. (Cl. 178—6.)

2. The method of scanning a plane which includes the step of distributing light from a light source through a channel of sharp light boundary from end to end during relative movement of the light source and the channel.



1,683,137. METHOD OF AND APPARATUS FOR CONVERTING LIGHT IMPULSES INTO ENLARGED GRAPHIC REPRESENTATIONS. CHARLES FRANCIS JENKINS, Washington, D. C. Filed June 2, 1926. Serial No. 113,266. 24 Claims. (Cl. 178—6.)

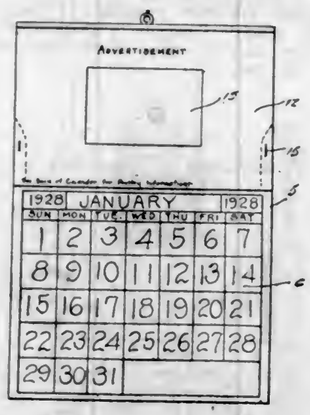
2. The method of scanning a plane which consists in distributing light from a light source through a plurality of channels of sharp light boundary from end to end, and rotating the channels with the axes in separate planes.



1,683,138. FIRE ESCAPE. WILLIAM KAUTZ, Willard, Ohio. Filed Nov. 29, 1926. Serial No. 151,480. 3 Claims. (Cl. 228—40.)

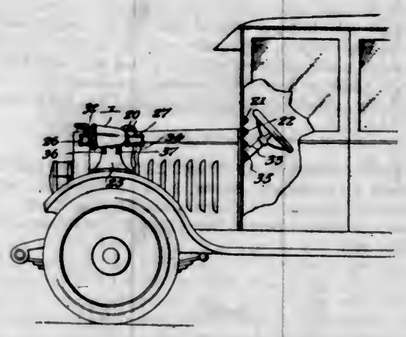
1. In a fire escape of the class described, a plurality of chain lengths adapted for vertical disposition on the outside of a building, ladder steps arranged at predetermined spaced intervals throughout the chain lengths, a window sill attaching unit at the upper ends of the chain lengths, a cross bar secured at its ends to the lower ends of the chain lengths, and means upon the outside of the building adjacent the foundation thereof for engagement with the cross bar for locking the fire escape against swinging

movement, said means comprising a fixed member extending laterally from the building, and a vertically swinging normally pendent lever pivoted at its upper end on the outer end of said member, said lever when pendent preventing the disengagement of the cross bar from beneath the laterally extending member.



1,683,139. VIBRATING REGULATOR. WILLIAM K. KEARSLEY, Jr., Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 13, 1921. Serial No. 522,137. 7 Claims. (Cl. 200—90.)

1. An electric regulator comprising a core, a magnetizing coil therefor, a movable armature, electric contacts for making and breaking an electric circuit operatively connected to said armature, and means for changing the electric reluctance of the magnetic circuit between different values to vary the vibration characteristic of said regulator, said means resisting adjustment to an intermediate value and passing from one respective value to another with a snap action.

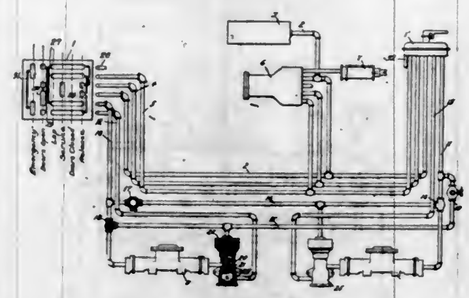


1,683,140. POULTRY-RECORD CALENDAR. WESLEY GEORGE KOHL, Iowa City, Iowa. Filed Sept. 8, 1927. Serial No. 218,247. 2 Claims. (Cl. 281—31.)

1. In an article of the class described, a base member, a pad of poultry record sheets secured along one edge to said base member and corresponding in number to the calendar months and being consecutively marked in accordance therewith, each of said poultry record sheets being ruled to provide separate columns upon which to record the sale of poultry products, the expense thereof, the daily record of eggs produced and to enable totals of such records to be made, whereby to determine the extent of profits or losses

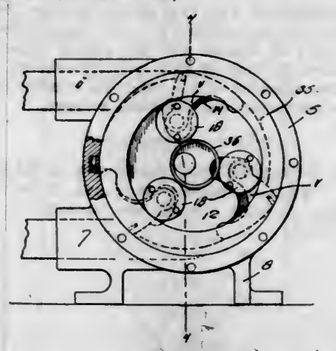
during a particular month, said column for the daily record of eggs produced corresponding with the days of the current month of the calendar in order to record the data in chronological order and a cover sheet for the poultry record sheet having a pocket formed therein and adapted to have the free edge of each of the sheets inserted therein whereby to afford access to the next succeeding record sheet.

1,683,141. REVERSIBLE LIGHT FOR AUTOMOBILES. HARRY LENFERS, Evansville, Ind. Filed Dec. 6, 1927. Serial No. 238,167. 9 Claims. (Cl. 240—7.1.)



1. In a reflecting lamp, the combination with the lens and reflector of the lamp, of a movably mounted multiple-socket lamp support all of whose sockets are jointly exposed in front of the reflector, independent electric bulbs carried by said sockets, and means controllable at will for moving the lamp support to position either one of said lamp bulbs in reflecting position in relation to the reflector.

1,683,142. CAR-DOOR-CONTROL EQUIPMENT. GEORGE MACLOSKIE and CHARLES A. IVES, Erie, Pa., assignors to General Electric Company, a Corporation of New York. Filed Feb. 23, 1921. Serial No. 447,358. 18 Claims. (Cl. 303—6.1.)

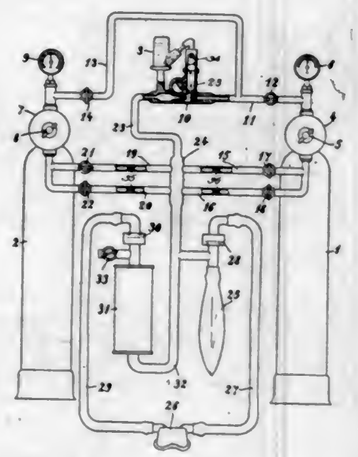


2. In a car door control equipment, the combination of a fluid operated door engine at each operating end of the car for operating a door thereat, a source of fluid pressure,

a manually controlled door valve at each operating end of the car arranged to establish suitable communication between said source and the engine at the corresponding end of the car to effect the opening and closing of the door thereat, a valve means associated with each engine and

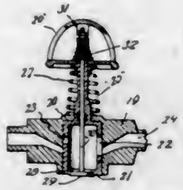
adapted to be controlled by the door valve at the other end of the car so that both engines are simultaneously operated, and a manually controlled device at each end of the car arranged to prevent the door valve at the corresponding end from controlling the valve means associated with the engine at the other end.

1,683,143. ROTARY PUMP. FRANCIS C. PETERSON, Everett, Wash. Filed May 7, 1927. Serial No. 189,575. 5 Claims. (Cl. 103—140.)



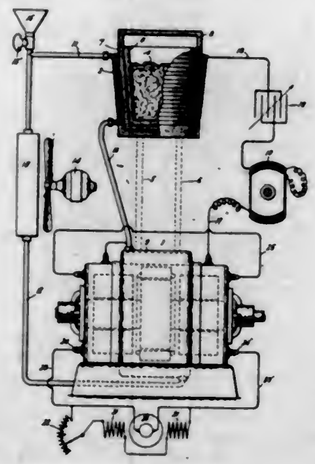
1. In a pump, a cylindrical stator casing or shell having an outlet and an inlet, cylinder heads for the casing, a cylindrical piston in the casing, means for mounting the piston eccentrically in the casing, said piston having peripheral compartments, impellers mounted in said compartments, axles journalled through said impellers, rollers on the axles, rings in the casing one on each side of the piston to hold the impellers against axial movement and having openings concentric with the casing, and means engaging the rollers to hold them in engagement with the peripheries of the openings of the rings.

1,683,144. INHALING APPARATUS FOR NARCOTICS. HANS WILHELM CHRISTIAN SCHRÖDER, Lubeck, Germany, assignor to Alexander Bernhard Dräger, Lubeck, Germany; Elfriede Dräger, née Stange, executrix of said Dräger, deceased. Filed Mar. 26, 1927, Serial No. 178,748, and in Germany Mar. 11, 1926. 2 Claims. (Cl. 128—203.)



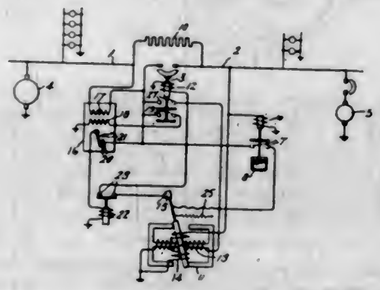
1. Apparatus for administering anæsthetic gases comprising a source of anæsthetic gas of constant pressure, a source of nutrient gas of constant pressure, a mixing

chamber, a conduit leading from said chamber and terminating in two branches, connected to said sources respectively, valve means adapted to shut off said branches selectively, a vapor admixing device including a throttling member inserted in said conduit and serving to admix anesthetic vapors with the gas passing therethrough, a face



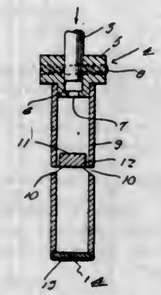
piece communicating with said mixing chamber, two sets of conduits, each set forming a direct communication between one of said sources and said mixing chamber and valves adapted to shut off said conduits selectively, each conduit being provided with a throttling element equal in size to the aforementioned throttling member.

1,683,145. STEAM-SUPPLY DEVICE FOR ELECTRIC IRONS. WILLIAM HERBERT SLONAKER, Detroit, Mich. Filed Nov. 29, 1926. Serial No. 151,473. 3 Claims. (Cl. 277—20.)



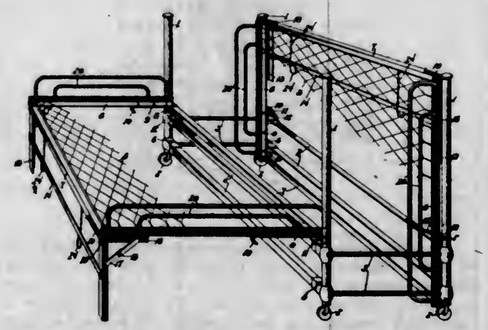
1. In a steam supply control valve, a casing provided with diametrically opposed steam inlet and outlet openings, a hollow body vertically slidable within the casing, said hollow body being provided with diametrically opposed inlet and outlet openings, the inlet opening in the body being at all times in communication with the inlet opening of the casing, the outlet openings being normally out of registry with each other, a stem extending upwardly from the hollow body and freely slidable through the top of the casing, a handle on the upper end thereof for manually moving the hollow body downwardly in the casing for bringing the outlet opening in the hollow body into communication with the outlet opening of the casing, whereby the steam may be emitted through the outlet opening in the casing, and resilient means for normally maintaining the hollow body in a raised position to prevent the discharge of the steam through the outlet opening in the casing.

1,683,146. HIGH-FREQUENCY INDUCTION APPARATUS. ELIHU THOMSON, Swampscott, Mass., assignor to General Electric Company, a Corporation of New York. Filed Apr. 25, 1924. Serial No. 709,045. 5 Claims. (Cl. 266—1.5.)



1. An electric heating apparatus comprising the combination of a dynamo-electric machine capable of delivering alternating current of a periodicity of about ten to twenty kilocycles per second, a primary inducing winding connected to said source and constructed to permit electromagnetic interlinkage with a load to be heated without interlinkage with a magnetic core, a variable reactance connected in the electric circuit in series with said dynamo-electric machine and said winding, and common cooling means for said dynamo-electric machine and said winding.

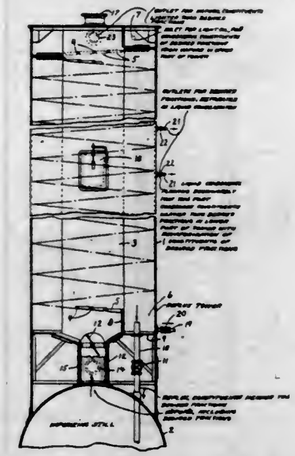
1,683,147. SYSTEM OF ELECTRICAL DISTRIBUTION. ARVID E. ANDERSON, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 1, 1924. Serial No. 747,395. 11 Claims. (Cl. 171—97.)



1. In a system of electrical distribution, two electric circuits adapted to be energized independently, a circuit breaker for connecting said electric circuits together, power directional means for effecting the opening of said circuit breaker when a predetermined amount of current flows from one of said electric circuits to the other, and means controlled by the voltage across said one of said electric circuits for effecting the reclosure of said circuit breaker.

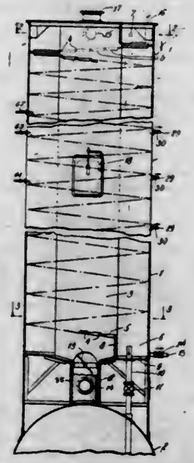
1,683,148. EXCESS-STEAM-PRESSURE SIGNAL. JOSEPH BACKSTATTER, Winfield, N. Y. Filed Apr. 7, 1928. Serial No. 268,199. 2 Claims. (Cl. 116—112.)

1. As a new product of manufacture, an audible steam pressure signal of the class described comprising an attachment including a coupling for the lower end of an overflow pipe, and a ported cylinder carried by said coupling.



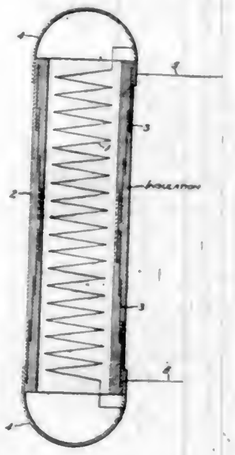
1,683,149. FOLDING TWIN BEDS. CLARENCE R. BALL, Washington, D. C. Filed June 30, 1926. Serial No. 119,765. 2 Claims. (Cl. 5—8.)

1. In a twin bed structure, the combination with an open main frame including corner posts and side and end rails connecting the same only at the lower portions of the posts, of a bed frame at each side of the main frame, means on the main frame and bed frames whereby the latter have a combined laterally folding and sliding movement on the former to permit the bed frames to abut each other or to provide a passageway therebetwen when open, legs for supporting the outer sides of the bed frames when they are in horizontal position, and means for retaining said bed frames in vertical position within the main frame and in spaced relation to each other.



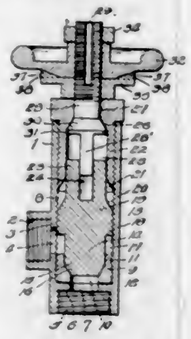
1,683,150. FRACTIONAL DISTILLATION OF PETROLEUM. JOHN E. BELL, Brooklyn, N. Y., assignor to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed Mar. 27, 1924. Serial No. 702,256. 7 Claims. (Cl. 196—139.)

7. The improvement in the fractional distillation of hydrocarbon oils, which comprises supplying oil containing a fraction to be separated and substantially no components lighter than the fraction to be separated to a vaporizing zone and subjecting the oil to a vaporizing operation therein, passing vapors of the oil from the vaporizing zone through a continued refluxing zone, independently supplying oil lighter than the said fraction to the end of the



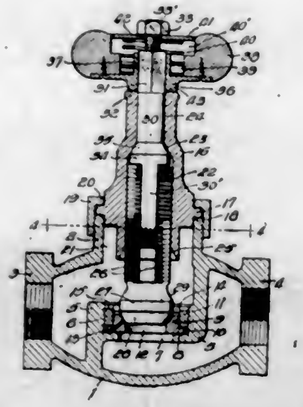
refluxing zone away from the vaporizing zone, and taking off the fraction to be separated from an intermediate point in the refluxing zone.

1,683,151. METHOD AND APPARATUS FOR DISTILLING PETROLEUM OILS. JOHN E. BELL, Brooklyn, N. Y., assignor to Sinclair Refining Company, Chicago, Ill., a Corporation of Maine. Filed Apr. 1, 1924. Serial No. 703,338. 8 Claims. (Cl. 196—139.)



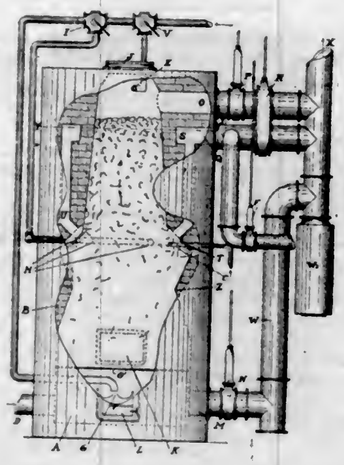
1. In the fractional distillation of petroleum oils, introducing hot oil vapors into the lower portion of a fractionating tower and introducing the oil to be fractionated into the upper portion of the said tower, causing the liquid oil introduced into the upper portion of the tower to flow downwardly in a substantially continuous helical stream through the tower and causing the oil vapors to flow upwardly in a helical path in direct contact with the surface of the stream of liquid oil and in indirect heat exchanging relation with the stream of liquid oil at a higher point.

1,683,152. CORONA-PREVENTING APPARATUS. JOSEF BIERMANNS, Karlshorst, near Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed Feb. 8, 1926, Serial No. 86,693, and in Germany Feb. 23, 1925. 5 Claims. (Cl. 201—63.)



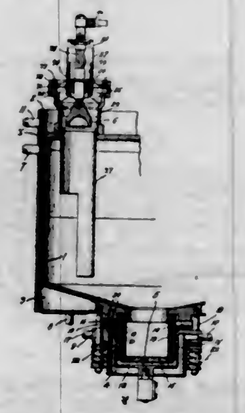
1. Means for preventing the formation of corona about a resistance conductor comprising a tubular shield of insulating material adapted to receive the conductor, said shield having members closing the ends thereof and having spaced conducting inserts embedded therein and extending in a series lengthwise of the tube.

1,683,153. VALVE. JAMES A. BISHOP, Mascoutah, Ill.; Lulu H. Bishop administratrix of said James A. Bishop, deceased. Filed Feb. 7, 1925. Serial No. 7,501. 1 Claim. (Cl. 251—47.)



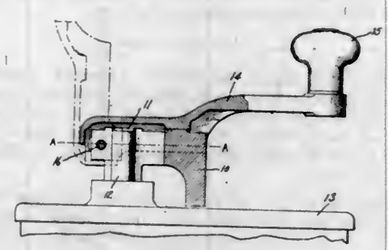
In a packless valve, a hollow internally screw threaded casing, an internal flange at the lower end of said casing, said casing having an inlet and outlet opening, a replaceable metallic member provided with an opening terminating upwardly in a tapered seating surface, said replaceable member having screw threaded engagement with said casing and engaging said flange, a valve member having a central section in screw threaded engagement with said casing, a lower section of less diameter than the central section to provide a space between the lower section and the casing, a seating face at the lower end of the lower section adapted for engagement with the seating surface of the replaceable member and a bifurcated cylindrical upper section of less diameter than said central section, a tapered seating surface at the upper end of said central section, a sleeve plug having screw threaded engagement with said casing and having its inner end provided with a tapered seating surface adapted to be engaged by the upper tapered seating surface of the central section of said valve member, the upper section of said valve member having telescopic connection with said sleeve plug, a valve stem having an inverted cone head receivable in said sleeve plug and extending upwardly therethrough, a coacting seating surface in said sleeve plug for said cone head, a flat tongue directed inwardly from said cone head and receivable in the bifurcation of the upper section of said valve member, a plate having screw threaded connection with said valve stem and engaging the upper outer face of the sleeve plug, spaced lugs on the upper face of said plate, a handle having a spline connection with said valve stem, a multiplicity of radial grooves formed in the lower face of the handle for adjustable connection with said lugs and a nut carried by said valve stem in contact with said handle.

1,683,154. VALVE. JAMES A. BISHOP, Mascoutah, Ill.; Lulu H. Bishop administratrix of said James A. Bishop, deceased. Filed Feb. 15, 1926. Serial No. 88,258. 1 Claim. (Cl. 251—32.)



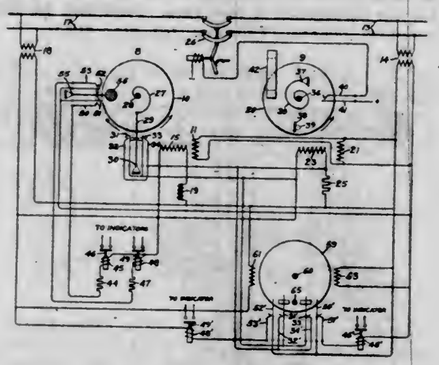
In a packless valve, a casing having an inlet opening and an outlet opening, a casing partition having an opening disposed between the inlet and outlet openings, a recess formed in said partition adjacent the opening therein, a replaceable seating ring having a tapered seating surface disposed in said recess, a flange for said seating ring, a lock ring having screw threaded engagement with the wall of the recess and engaging the flange of said seating ring, an internally screw threaded closing cap member removably secured to the casing, an internal tapered seating surface at the lower end thereof, a valve plug having screw threaded engagement at its upper end with the closing cap member, an external tapered seating surface at the lower end of said valve plug adapted to co-act with tapered seating surface of said seating ring member, an upper external tapered seating surface for said valve plug adapted to co-act with the tapered seating surface at the lower end of said closing cap member, an internal tapered seating surface near the upper end of said closing cap member, a valve stem rotatably carried by the upper end of said closing cap member, an external tapered seating surface at the lower end of said valve stem adapted to co-act with the upper internal tapered seating surface of the closing cap member, a sliding connection between the valve stem and the valve plug, a handle having an annular groove surrounding the upper end of the valve stem and terminating upwardly in a recess, a coiled spring seated in the annular groove and extending into the recess, a metallic disc seated upon said spring and receivable in said recess, and a nut for said valve stem engaging said metallic disc.

1,683,155. GAS GENERATOR. CLAUDE WINFIELD BOTSFORD, Chicago, Ill., assignor to William W. Odell, Pittsburgh, Pa. Filed Dec. 26, 1919. Serial No. 347,566. 6 Claims. (Cl. 48—78.)



1. A combined water gas generator and gas producer comprising a substantially upright, lined shell for retaining a bed of ignited solid fuel, said shell having an annular recess in said lining intermediate the ends of said shell and contacting said fuel, said shell being provided with separate and independent passages for admitting steam and an air blast directly to the fuel bed at said annular recess, outlets adjacent the top and bottom of said shell for the discharge of gas and valves for controlling said discharge outlets.

1,683,156. ELECTRIC DISCHARGE DEVICE. HERBERT D. BROWN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 3, 1925. Serial No. 34,696. 6 Claims. (Cl. 250—27.5.)

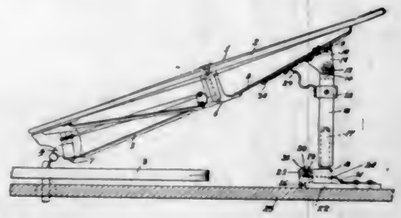


1. An electric discharge device comprising means forming an anode chamber, an anode supported at a point intermediate the ends of said chamber, anode supporting means interposed between said anode and the side wall of said chamber in a manner to permit the free circulation of vapor therethrough, and a cathode mounted outside said anode chamber.

1,683,157. CONTROLLER HANDLE. WALTER W. BROWN, Erie, Pa., assignor to General Electric Company, a Corporation of New York. Filed June 23, 1927. Serial No. 200,980. 1 Claim. (Cl. 74—33.)

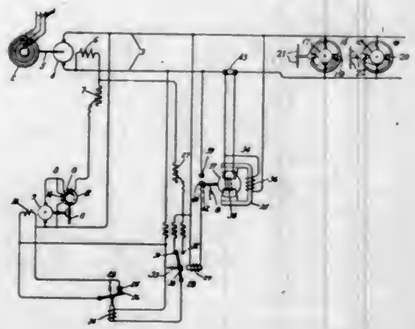
The combination with an electric controller having an operating shaft, of an operating handle for the controller shaft including a slotted hub portion having a shaft-receiving socket intersecting the slot therein, an operating handle pivotally mounted upon the slotted hub portion for rotation in the plane substantially parallel to the slot in said hub, a pair of double conical cam members mounted in the hub on opposite sides of the slot therein, a pair of complementary conical cam members mounted in the operating handle in such cooperating relation with the cam members of the hub as to increase the width of the slot in the hub when the operating handle is raised to a position substantially at right angles to the hub and to decrease the width of the slot in the hub when the operating handle is lowered into alignment with the hub.

1,683,158. SYNCHRONIZING APPARATUS. WALDEMAR BRÜCKEL, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed July 17, 1925, Serial No. 44,226, and in Germany Aug. 6, 1924. 18 Claims. (Cl. 171—118.)



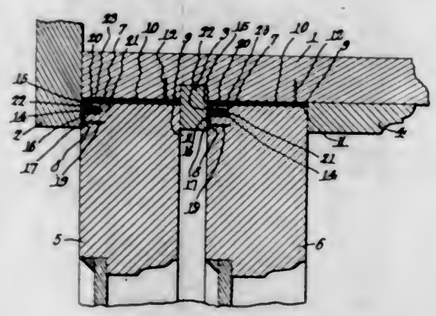
18. An apparatus for paralleling two alternating current circuits comprising electro-responsive means having a movable member arranged to be actuated in accordance with the product of the voltages of said circuits and the cosine of the phase angle between the voltages, and a cooperating electroresponsive means having a movable member arranged to be actuated in accordance with the product of said voltages and the sine of said angle.

1,683,159. PROCESS FOR THE PRODUCTION OF SOLUBLE SALTS OF ORGANIC COMPOUNDS POSSESSING ACID CHARACTER. MAX BUCHNER, Hanover-Kleefeld, Germany, assignor to Albert Fritz Meyerhofer, Zurich, Switzerland. Filed Dec. 22, 1925, Serial No. 77,129, and in Germany Jan. 16, 1925. 9 Claims. (Cl. 260—112.)



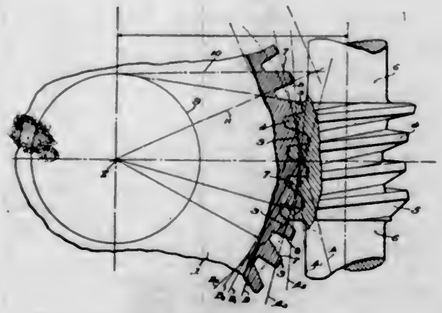
1. The method of making soluble salts of organic substances having an acid character, which comprises first forming an insoluble metal compound of the substance, and reacting upon the same with a fluoride whose base forms a soluble organic compound therewith.

1,683,160. TALKING MACHINE. HORACE LEOPOLD TUCKER BUCKLE, Iver Heath, England, assignor to Victor Talking Machine Company, Camden, N. J., a Corporation of New Jersey. Filed May 6, 1925, Serial No. 28,444, and in Great Britain May 14, 1924. 8 Claims. (Cl. 181—31.)



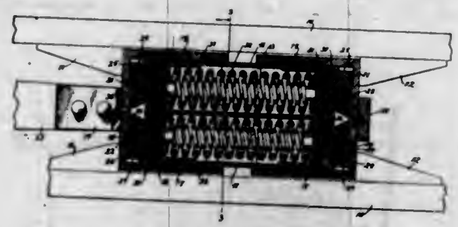
1. In a talking machine of the large diaphragm type wherein a record turntable is mounted above a motor board, a supporting spider for the diaphragm, a stylus carried by the spider and operatively connected to the diaphragm, and means coacting with said stylus to support said diaphragm for playing in a plane inclined with respect to said turntable, said means including a member pivoted to the motor board at one side of said turntable, and means, permitting movement of the diaphragm in vertical and horizontal planes, mounted on said member and secured to said spider at a point substantially diametrically opposite said stylus.

1,683,161. REGULATING SYSTEM. FRANK A. BYLES, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 10, 1927. Serial No. 174,381. 7 Claims. (Cl. 171—312.)



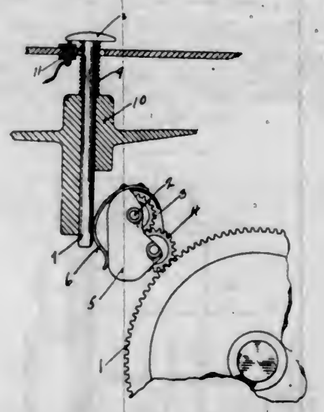
1. In combination, a dynamo-electric machine adapted to operate as a generator or as a motor, regulating means adapted for controlling a plurality of predetermined electrical characteristics of said machine, and means responsive to an electrical characteristic of said dynamo-electric machine for automatically controlling said regulating means to govern one of said predetermined electrical characteristics when said dynamo-electric machine operates as a generator and to govern a different one of said predetermined electrical characteristics when said dynamo-electric machine operates as a motor.

1,683,162. WEATHER STRIP. FRANK E. CALDWELL, North Mankato, Minn. Filed Sept. 7, 1926. Serial No. 134,017. 1 Claim. (Cl. 20—69.)



In a device of the class described, a weather strip embodying a wing having a hook-shaped bead, and a weather strip embodying a flange having a sigmoidal portion including an inner trough-shaped part, and an outer trough-shaped part having a lip, the outer trough-shaped part fitting closely and slidably in the hook-shaped bead, and the free edge of the hook-shaped bead fitting closely and slidable in the inner trough-shaped part, the lip being disposed at right angles to the flange and being in slidable contact with the wing, the interfitting portions of the sigmoidal portion and the hook-shaped bead being parallel, whereby they may be separated transversely without distorting either of them.

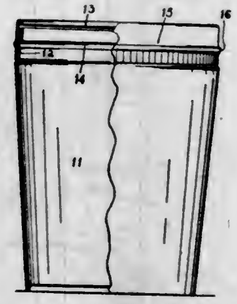
1,683,163. PRECISION WORM GEARING. SAMUEL I. CONE, Portsmouth, Va., assignor to Cone Gearing Corporation, Norfolk, Va., a Corporation of Virginia. Filed June 27, 1925. Serial No. 40,114. 2 Claims. (Cl. 74—41.)



1. A gear wheel for precision worm gearing whereof the teeth are formed with flanks disposed at an acute angle with relation to each other and have relatively unequal slopes to provide for small pressure angle and whereby, when operating with a complemental worm at least four of said teeth will have simultaneous effective sliding contact with relation to the worm.

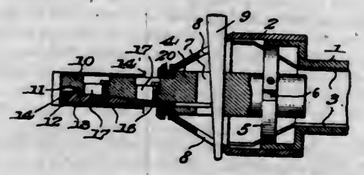
1,683,164. DRAFT GEAR. WALTER H. COTTON, Chicago, Ill., assignor to Union Draft Gear Company, Chicago, Ill., a Corporation of Delaware. Filed Aug. 29, 1923. Serial No. 659,865. 7 Claims. (Cl. 213—26.)

1. In a draft gear, in combination, a pair of chambered followers, a pair of triangular wedge blocks seated against the end walls of each follower, a central element having wedge-shaped ends bearing upon the inner faces of all the said wedge blocks, a friction shoe having a wedging face engageable with the outer face of each wedge block, such shoe having an instanding and inwardly facing shoulder, springs reacting between the shoes at each side of the gear, a friction plate interposed between the shoes at each side of the gear and the adjacent side walls of the followers, and means movable with said central member for positioning said plates.



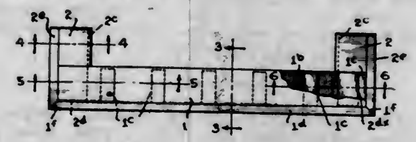
1,683,165. STARTER DRIVE FOR INTERNAL-COMBUSTION ENGINES. JOSEPH C. COULOMBE, Kokomo, Ind. Filed Dec. 21, 1925. Serial No. 76,782. 1 Claim. Cl. 74—7.)

A starter drive for internal combustion engines, comprising a gear on the starting motor shaft, an intermediate gear, a movable housing supporting said intermediate gear radially relative to said motor shaft gear, a spring on said housing, an operating member arranged to apply pressure on the said spring to force said intermediate gear into engagement with the flywheel gear, a starting switch for said starting motor and adapted to be operated by the said operating member.



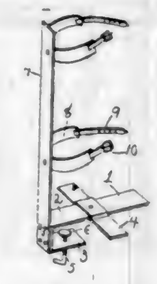
1,683,166. RECEPTACLE. WILLIAM EDMUND JACOBS CROSSBY, Harrow, and JOHN MELLOR, Feltham, England, assignors to Packs (1925) Limited, Feltham, England. Filed Nov. 21, 1927, Serial No. 234,753, and in Great Britain Aug. 26, 1926. 1 Claim. (Cl. 229—5.5.)

A receptacle comprising a body open at one end and having about its open end a depressed rim or flange provided exteriorly with an annular bead, and a lid including an end and a flange adapted to fit about the body flange and provided with a recess to receive the said bead on



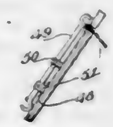
the body flange, the lower edge of the lid flange being crimped inward beneath the said bead and uncrimped above the bead, for the purpose described.

1,683,167. EXPANDING MANDREL. SYLVESTER CUNNINGHAM, Evansville, Ind. Filed Aug. 30, 1926. Serial No. 132,625. 2 Claims. (Cl. 279—2.)



1. In an expanding mandrel of the character set forth, the combination with a shaft and a housing carried thereby, of a mandrel having a part thereof received within the housing and provided with a head, members carried by the shaft which project into the housing and positively locked with the head aforesaid for the purpose of driving the mandrel from the aforesaid shaft, said mandrel having an expanding part extending outside the housing, and means carried by the housing and independent of the aforesaid securing means for operating the expanding part of the mandrel.

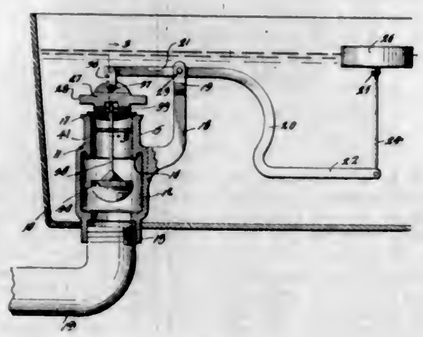
1,683,168. ADJUSTABLE MANTEL SHELF. RALPH A. DAMBACH, Evans City, Pa., assignor to The Edward Dambach Co., Evans City, Pa., a Corporation of Pennsylvania. Filed Jan. 29, 1926. Serial No. 84,630. 4 Claims. (Cl. 45—51.)



1. An adjustable mantel shelf comprising a front member formed of spaced top and bottom boards, an outer plate board on the front member, side members each comprising spaced top and bottom boards and a member intermediate the top and bottom boards and extending beyond the front ends thereof and adapted to be inserted between the top and bottom boards of the front member; and an outer plate board on each side member closing the space between the top and bottom boards thereof and extending beyond the outer end thereof and closing the space between the top and bottom boards of the front member at the ends thereof.

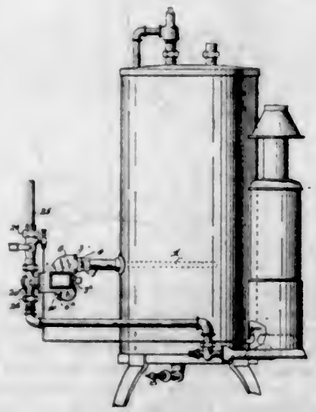
1,683,169. GOLF-BAG HOLDER. EVERETT A. DE NOTA, Pawhuska, Okla. Filed Aug. 25, 1927. Serial No. 215,448. 1 Claim. (Cl. 224—29.)

A golf bag holder comprising a running board engaging bracket substantially U-shaped in form to provide two spaced running board embracing arms, a clamp screw passing through one of said arms to engage the running board, a cross piece mounted upon one of said arms extending across the arm and being deflected at each side of the arm into the plane of the arm, an upright formed of a flat piece of metal extending upward from the outer closed end of the bracket, the plane of said upright being at right angles to the length of the bracket, and means attached to said upright for engaging the golf bag therewith.



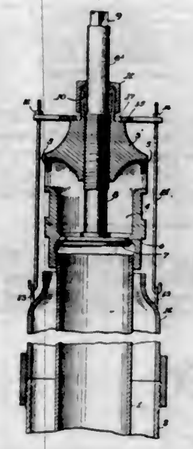
1,683,170. LAMP. DONATO DI CARLO, Philadelphia, Pa. Filed May 25, 1927. Serial No. 193,973. 8 Claims. (Cl. 240—23.)

1. A lamp including a casing body, a light screen unit mounted in the casing body, light screens slidable in said unit, rear guideways formed on the rear of the casing body, a casing back slidable therein, front guideways formed on one front edge of the casing body and on one side of the light screen unit, an apertured casing front slidable in the front guideways, a lens mounted in the casing front, an electric light in the casing body, and means for selectively moving the light screens into position between the light and the lens.



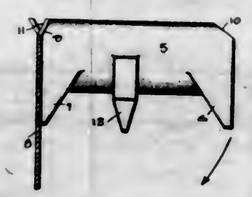
1,683,171. AUTOMATIC FLOAT VALVE. ROBERT T. DICKEY, Del Rio, Tex. Filed Dec. 11, 1926. Serial No. 154,226. 3 Claims. (Cl. 137—104.)

3. An automatic valve comprising a casing formed with an intermediate enlarged casing section, an inlet sleeve formed at the lower end of said casing adapted for connection with a liquid supply pipe and an outlet sleeve formed at the upper end of the casing and having a valve seat formed on its upper edge and a second valve seat formed on its lower edge, a control valve for engagement with the upper valve seat, means for adjusting the said valve with respect to its seat, a safety valve including a valve rod pivotally connected with the control valve and a valve member secured to the lower end of the valve rod and normally suspended in the intermediate portion of the enlarged casing section and engageable with the inner valve seat, a bracket secured to the side of the casing, an arm pivotally connected with the upper end of the bracket, a float connected with the inner end of the arm, links pivotally connecting the outer end of the arm and the control valve whereby the control valve will be automatically



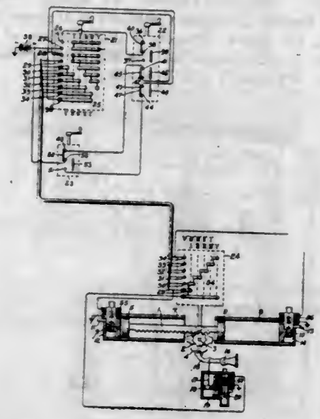
opened and closed by the movement of the float, the said safety valve being vertically operable simultaneously with the movement of the control valve and normally maintained out of engagement with the seat and engageable with the inner seat by the pressure of the liquid when the control valve and adjusting means therefor fails to function.

1,683,172. THERMOSTATIC VALVE. LORAN F. DOEN, Cleveland, Ohio, assignor to The Cleveland Heater Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 27, 1925. Serial No. 4,995. 6 Claims. (Cl. 236—48.)



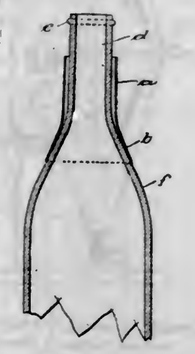
3. In a device of the character described, a fuel supply valve, a thermostatic regulator, reversely arranged overlapping compound levers operatively connected to said thermostatic regulator, a yoke operatively connected to said levers, pivotally mounted spring resisted levers carried thereby, toggle acting arms in operative engagement at their inner ends with the valve and interposed between the spring resisted levers and the valve to form a toggle acting connection between the valve and the levers.

1,683,173. TEMPORARY WELL CAPPER. GEORGE B. ERVIN, Weston, W. Va. Filed Feb. 16, 1927. Serial No. 168,679. 2 Claims. (Cl. 166—15.)



1. A capping device for well tubing including a body member, said body member provided with a central passage and one or more outlets, a valve seat formed on the inner wall of said passage, a valve for cooperation with said seat, a valve stem extending through the top of said body member, a packing gland for said stem, means for connecting said body member to the tubing, a nipple connected to the well casing, rods connected to said nipple, a yoke adapted to seat on said body member and provided with an opening to receive said packing gland, and means for securing the ends of said yoke to said rods.

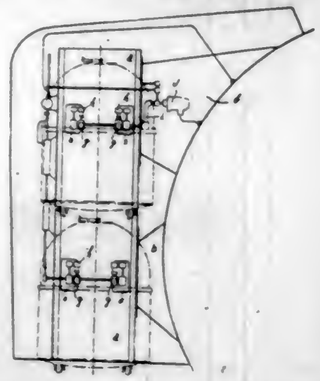
1,683,174. SAW-SETTING ANVIL AND GAUGE. CARL EYRISH, Gig Harbor, Wash. Filed Nov. 16, 1925. Serial No. 69,471. 1 Claim. (Cl. 76—73.)



A saw-tooth setting anvil and gauge comprising an elongated anvil body having parallel end faces and provided at its opposite ends and at one side with anvil faces inclined at relatively different angles with respect to the respective end faces of the body and of different lengths, gauge points projecting from the other side of the body at the ends thereof with their relatively remote sides in a common plane with the respective end faces of the body, and another gauge point projecting from the last mentioned side of the body and of greater length than the first mentioned gauge point and located nearer that end of the body at which the less inclined and shorter anvil face is located.

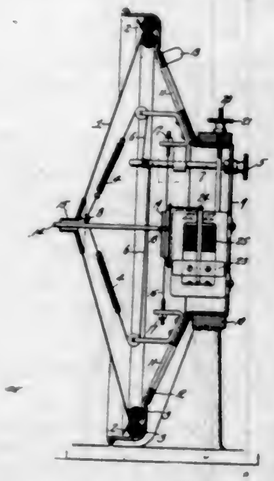
1,683,175. SYSTEM OF CONTROL. EMIL FALCKE and KURT LEHMANN, Berlin, Germany, assignors to General Electric Company, a Corporation of New York. Filed May 17, 1923, Serial No. 639,605, and in Germany May 31, 1922. 5 Claims. (Cl. 121—40.)

1. A control system for a switch mechanism comprising a reciprocating element, means for reciprocating the same between predetermined limits, and electrically controlled means for stopping and locking said reciprocating member in any selected one of a plurality of definite intermediate positions comprising a position-selective controller, a star-wheel operable in accordance with the movement of said member between said positions, a member operable into and out of locking engagement with said star-wheel, and fluid pressure means having electroresponsive valve mechanism energized jointly in accordance with the positions of said selective controller and said reciprocating member for releasing and maintaining said locking member released until after movement of the reciprocating element to a selected one of said intermediate positions.



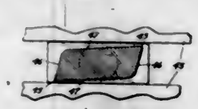
1,683,176. CATCH DROP FOR BOTTLES. JACOB FAULHABER, Siershahn im Westerwald, Germany. Filed Jan. 25, 1927, Serial No. 163,501, and in Germany Jan. 27, 1926. 1 Claim. (Cl. 215—100.)

A drip catcher for bottles, including a body formed of absorbent material and provided with a cylindrical portion having an internal diameter greater than the necks of con-



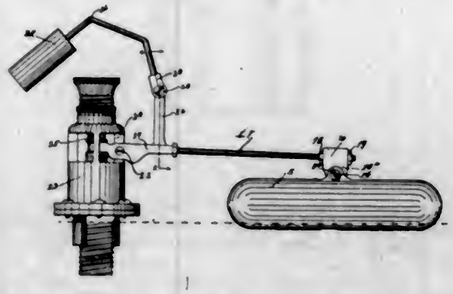
ventional types of bottles and a substantially funnel shaped portion carried by the cylindrical portion and adapted to partially overlie the body of the bottle.

1,683,177. MINE RECESS OF MINE-PLANTING SUBMARINES. FERNAND FENAUX, Le Havre, France, assignor to Societe Anonyme Chantiers & Ateliers Augustin Normand, Le Havre, France, a Corporation of France. Filed Feb. 7, 1927, Serial No. 166,532, and in France Feb. 18, 1926. 3 Claims. (Cl. 114—17.)



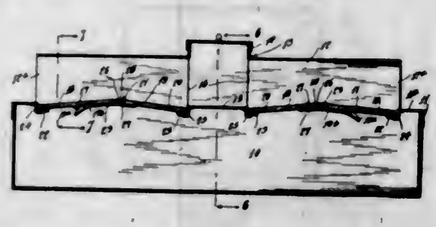
1. A mine recess for mine-planting submarines, provided between the heavy hull of the submarine and a light shell exterior to the hull, comprising a cross-partition between the hull and the shell, and a mine supporting beam fixed to the hull, distinct from the cross partition, and unaffected by the deformations of the cross partition.

1,683,178. CONE SPEAKER. WILLIAM E. GIBBS, East Orange, N. J. Filed Nov. 2, 1926. Serial No. 145,831. 10 Claims. (Cl. 181—31.)



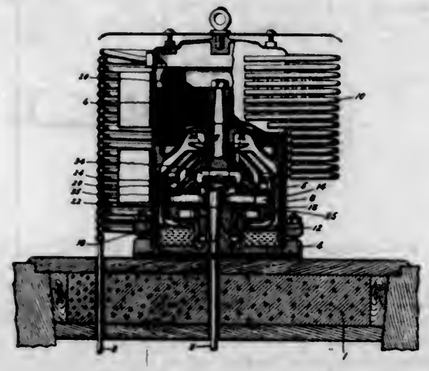
1. In a loud speaker, a conical vibratile member having an everted rim, a cushion support therefor in elastic engagement therewith and having contact both within and without the angle formed by said conical member and its everted portion, and elastic tension means applied axially to said conical member in opposition to the thrust of said cushion.

1,683,179. REVERSIBLE LOOM DOBBY KNIFE. JOHN W. GILES, Greer, S. C., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed May 25, 1926. Serial No. 111,658. 8 Claims. (Cl. 139—74.)



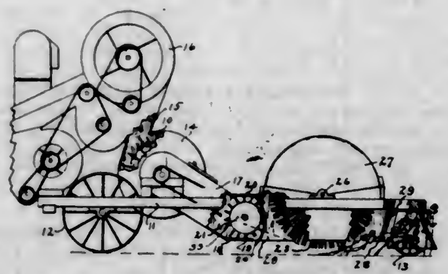
1. A reversible dobby knife for looms having dobby hooks, said knife having at the ends thereof aligning gudgeons and having between the gudgeons a plurality of knife edges to engage the hooks, said edges all being symmetrically disposed with respect to the axis of the gudgeons.

1,683,180. FLOAT-CONTROLLER VALVE. SAMUEL GREENHOUSE, Akron, Ohio. Filed Apr. 9, 1924. Serial No. 705,259. 7 Claims. (Cl. 137—104.)



4. In a device of the class described, a lever, a float mounted on the outer end thereof, means to fulcrum said lever for movement on a horizontal axis, a vertical extension projecting upwardly from said lever at a point between the fulcrum and the float; an arm adjustably secured to the upper end of said extension, said arm projecting to a point on the other side of said fulcrum than the side on which the float is positioned and a weight secured to the free end of said arm.

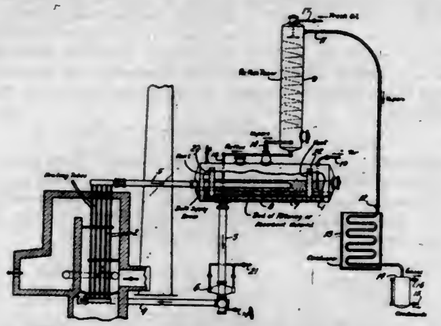
1,683,181. AUTOMATIC ANIMAL TRAP. ARTHUR M. HAYMAKER, Pittsburgh, Pa. Filed Jan. 8, 1927. Serial No. 159,841. 6 Claims. (Cl. 43—69.)



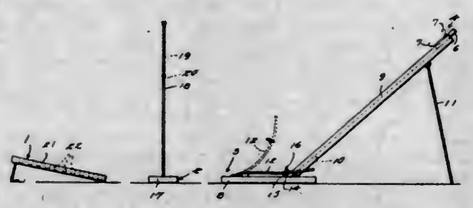
1. In a device of the type described, a base of receptacle form, a cover for the base, a tunnel carried by the base, a bait box in the tunnel, an opening in the cover within the tunnel between the entrance for the tunnel and the bait box, and entrapping mechanism within the confines of the cover opening for precipitating an animal into the base, said mechanism including a pair of pivoted doors which engage each other at their adjacent edges to prevent pivoting while the weight of an animal is entirely upon one of said doors, said door edges being freed from each other by the transfer of the weight of the animal to the second door.

1,683,182. COMPRESSOR. CHARLES L. HEISLER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 6, 1927. Serial No. 238,191. 9 Claims. (Cl. 230—177.)

1. A compressor comprising a fixed member, a plurality of cylinders rotatably mounted on said member, a piston in each cylinder, a fixed eccentric, means connecting the eccentric with the pistons, said fixed member and said cylinders being provided with communicating intake passages controlled by the relative movements of said pistons.



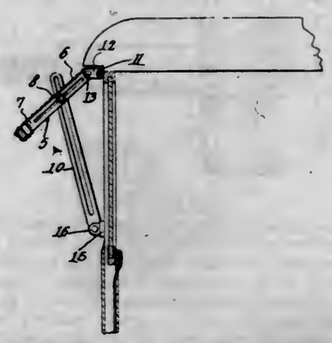
1,683,183. SEED HARVESTER. JOHN HEER, near Lebanon, Ind. Filed June 24, 1925. Serial No. 39,868. 9 Claims. (Cl. 56—128.)



8. In a seed harvester, a stripping brush, a seed receiving compartment, means between said brush and said compartment for rejecting straw, and fan means for creating a blast of air from said brush through said straw rejecting means and into said seed receiving compartment.

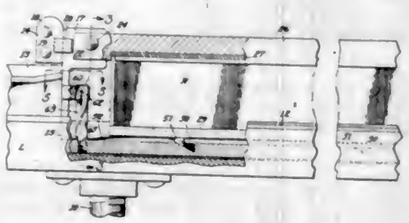
1,683,184. APPARATUS FOR CRACKING HYDROCARBONS. EUGENE C. HERTHEL, Chicago, Ill., assignor to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed June 11, 1927. Serial No. 198,246. 2 Claims. (Cl. 196—108.)

2. In a pressure still comprising a bulk supply drum in which a bed of filtering or absorbent material is arranged extending entirely across the drum and below the normal liquid level therein, a battery of heating tubes and connections for circulating oil from the space in the bulk supply drum beneath the bed of filtering or absorbent material through the battery of heating tubes and back to the space in the bulk supply drum above the bed of filtering or absorbent material, a reflux tower, connections for conducting vapors from the upper part of the bulk supply drum thereto and liquid return connections from the reflux tower discharging beneath the bed of filtering or absorbent material, venting means connecting the upper part of the space beneath the bed of filtering or absorbent material and the space in the upper part of the bulk supply drum above the normal liquid level therein.



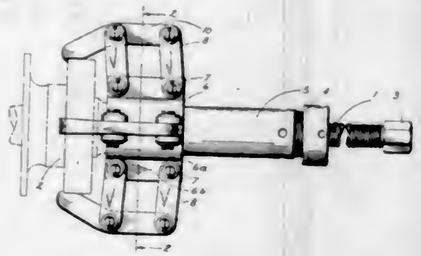
1,683,185. GAME APPARATUS. CHARLES A. HEWETT, Colorado, Tex. Filed July 30, 1927. Serial No. 209,579. 8 Claims. (Cl. 273—101.)

1. Game apparatus comprising a catapulting device, a piece adapted to be thrown by the catapulting device, said piece being weighted at one end, a target having openings adapted to receive the weighted end of the piece, and means interposed between the target and the catapult and in the approximate line of flight of said piece having coaction with said piece whereby when it is properly engaged thereby, it interrupts the piece in its flight.



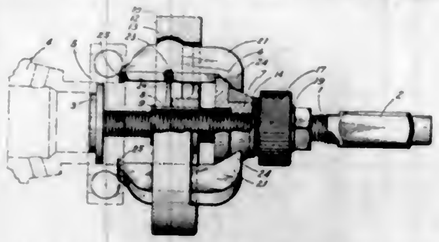
1,683,186. SUN SHIELD. JOSEPH DE WITT HIRES, Luxora, Ark., assignor to Hires Auto Awning Company, Incorporated, Blytheville, Ark. Filed Sept. 14, 1925. Serial No. 56,343. 1 Claim. (Cl. 156—15.)

In an awning structure, a bar having right angled ends formed with openings, said bar adapted to be secured adjacent to a window, said bar adapted to be secured between



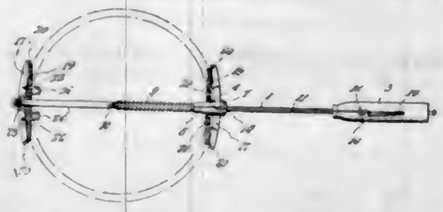
the bar and window, side members, pins extending through the end portions of the bar and side members to pivotally connect the side members to the bar, said side members having elongated openings, a bar connecting the free ends of the side members, said wire mesh member being stretched over the bar, adjusting arms pivotally supported adjacent to the side of the window and having elongated openings, bolts extending through the side members, and adjusting arms to adjustably connect the adjusting arms and side members.

1,683,187. ADJUSTABLE LOOM REED. ELBRIDGE R. HOLMES, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 18, 1927. Serial No. 227,018. 3 Claims. (Cl. 139—188.)



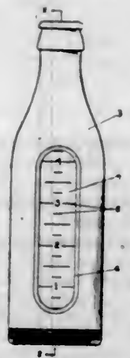
1. In a loom having a lay end and a reed, in combination, a flexible member underlying said reed and having a plurality of wedges formed thereon, a suspension member pivotally connected to said lay end, a back stay secured to said suspension member and receiving the lower end of said reed, said suspension member having recesses with inclined surfaces to receive said wedges on said flexible member, a projection extending from the suspension member and lying over an auxiliary recess lying thereunder in the back stay, and a positioning member attached to the projection and extending downwardly and into the auxiliary recess and having the lower end thereof stepped to cooperate with the flexible member, the latter to engage any one of the steps to vary the longitudinal position of the flexible member and wedges relatively to the inclined surfaces of the back stay.

1,683,188. BEARING PULLER. JAMES W. HOWELL, Cleveland, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 21, 1927. Serial No. 185,459. 6 Claims. (Cl. 39—85.)



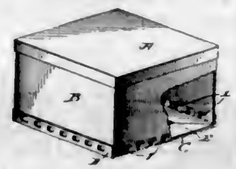
1. A tool comprising a screw, a nut threaded thereon, a tubular carrier carried by said nut, there being a plurality of longitudinally extending ribs upon the exterior of said carrier, two pivots extending transversely through each rib, links of equal length carried on each end of each pivot, a gripping arm carrying two pivots similarly spaced to those on each rib, the pivots of one gripping arm being carried by the outer ends of the links on one rib, whereby the gripping arms remain always parallel to the axis of the tool.

1,683,189. BEARING PULLER. JAMES W. HOWELL, Cleveland, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 23, 1927. Serial No. 185,932. 8 Claims. (Cl. 29—88.2.)



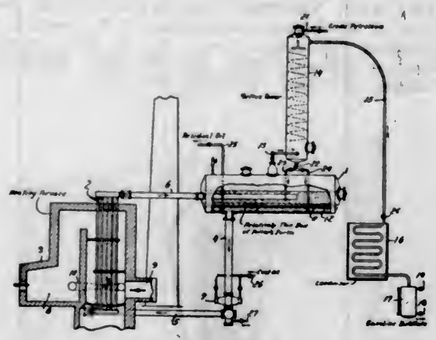
1. A tool comprising a chuck having a plurality of gripping jaws, cam-means for causing the jaws to exert gripping pressure on an object, a longitudinally movable pressure-exerting element engageable with the support of the object, and a second cam-means carried by said element causing the jaws to exert additional gripping pressure on the object when said element exerts pressure between the object and its support.

1,683,190. PAN LIFTER. VIRGIL D. HUGHEY, OSCAR R. MULLINS, and IRVIN M. HUGHEY, Calhoun, Ga. Filed July 7, 1927. Serial No. 204,056. 7 Claims. (Cl. 294—31.)



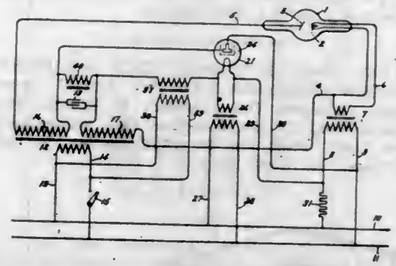
1. A pan lifter comprising a shank having a depending supporting arm at one end, a slide carried by said shank and movable longitudinally thereof, and pan-engaging jaws carried by said slide and arm, each jaw including a cross bar and yieldable pan-engaging means carried by the cross bar.

1,683,191. LIQUID GAUGE. GEORGE J. HUNTLEY, Baltimore, Md., assignor, by mesne assignments, to Crown Cork & Seal Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 18, 1926. Serial No. 155,580. 3 Claims. (Cl. 73—54.)



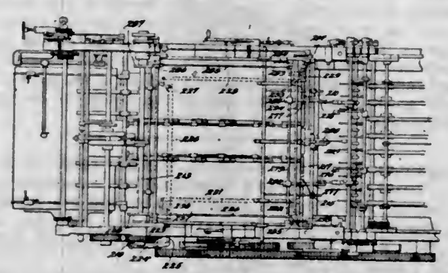
1. A measuring device, for use in testing charges delivered by packaging machines, comprising an outer non-breakable shell of the size and shape of the containers to be filled, and an inner transparent measuring cup, the shell being cut away to render the cup and its contents visible for reading.

1,683,192. BOX. JOSEPH G. HUYE, New Orleans, La. Filed July 26, 1924. Serial No. 728,394. 3 Claims. (Cl. 229—23.)



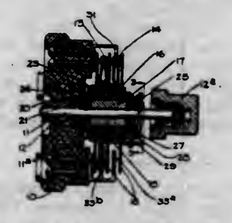
1. A receptacle comprising two paper board sections, one of said sections being provided with integral resilient tongues having abrupt free faces, and the other of said sections being formed with cooperating sockets having upper and lower edges, and means for holding said sections spread and resisting their deformation to maintain said tongues and sockets respectively, in correct, cooperating, interlocking relation, said tongues, in the assembled relation of the parts, extending at an inclination into the respective sockets, and each said tongue engaging with its free edge face the opposed upper edge of its cooperating socket and engaging with its laterally outer face the lower edge of said socket, at a point intermediate its point of connection to its corresponding section and its free edge face, to limit its lateral outward movement and brace it against strain and buckling under load.

1,683,193. DISTILLATION OF CRUDE PETROLEUM. EDWARD W. ISOM, Scarsdale, N. Y., and EUGENE C. HERTHEL, Chicago, Ill., assignors to Sinclair Refining Company, New York, N. Y., a Corporation of Maine. Filed June 11, 1927. Serial No. 198,250. 3 Claims. (Cl. 196—59.)



1. An improved method of producing gasoline from crude petroleum, which comprises maintaining a body of oil in a vaporizing zone and maintaining a bed of finely divided absorbent or filtering material within said body and extending entirely across it, circulating oil from said body from beneath said bed of finely divided material through heating tubes and back to the body of oil above said bed of finely divided material and heating it to a mild cracking temperature therein, supplying crude petroleum to the circulating body of oil, taking off vapors including vapors of the gasoline product from said vaporizing zone, and taking off residual oil from the body of oil from beneath said bed of finely divided material.

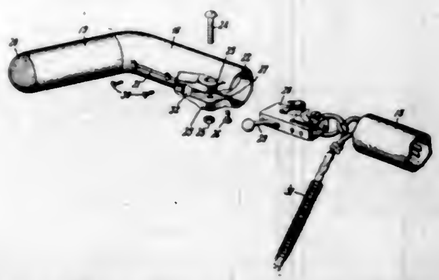
1,683,194. REGULATING SYSTEM FOR THERMIONIC DEVICES. WILLIAM K. KEARSLEY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 24, 1927. Serial No. 178,106. 8 Claims. (Cl. 250—34.)



1. The combination of a main thermionic device, means for delivering impulses of current to the cathode of said device, thermionic regulating means for decreasing said current impulses, means for initiating the operation of said regulating means when the space current in said main thermionic device has reached a predetermined value thereby opposing further increase of space current.

1,683,195. SHEET-FEEDING MECHANISM. WILLIAM M. KELLY, Westfield, N. J., assignor to American Type Founders Company, Jersey City, N. J., a Corporation of New Jersey. Original application filed Aug. 6, 1921, Serial No. 490,290, and in Great Britain July 27, 1922. Divided and this application filed Apr. 15, 1927. Serial No. 184,122. 27 Claims. (Cl. 271—S.)

1. In a sheet feeding mechanism, a side register device, a pivoted member carrying said register device and means to actuate said device including an element coaxial with the pivots of said member and movable in an axial direction.



1,683,196. ELECTRIC HEATING SYSTEM. LESLIE A. KEMPTON, Bridgeport, Conn., assignor to General Electric Company, a Corporation of New York. Filed Nov. 17, 1927. Serial No. 233,968. 6 Claims. (Cl. 219—20.)

4. The combination with a heating resistor provided with an intermediate connection point, of a supply source provided with two outside wires and a neutral wire, two rotary switching members, electrical connections whereby

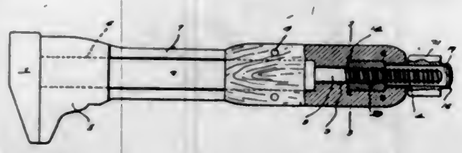
one of said switching members connects one end of said resistor to an outside wire in any one of three positions, and electrical connections whereby the other switching member connects one end of said resistor to the other outside wire in one position, said intermediate point to said neutral wire in a second position, and one end of said resistor to said neutral point in a third position.

1,683,197. HANDLE CONSTRUCTION FOR ELECTRIC VACUUM CLEANERS AND THE LIKE. HENRY T. LANG, Cleveland, Ohio, assignor to Electric Vacuum Cleaner Company, Inc., Cleveland, Ohio, a Corporation of New York. Filed Jan. 26, 1927. Serial No. 163,786. 3 Claims. (Cl. 200—157.)

1. In a handle assembly of the character described, the combination of a tube, a switch casing, said casing having an open end in which the end of the tube is located and being split from said open end to a point adjacent to its other end to form a longitudinally extending groove, a switch in the casing, the operating handle of the switch extending out through said groove, a connector cord which extends through the tube, is connected to said switch and projects out through said groove, a spring surrounding said cord, and means for clamping the end of the spring in said groove and the split end of the casing to the end of the tube.

1,683,198. PROCESS FOR THE EXTRACTION OF BUTYRIC ACID AND ITS HOMOLOGUES. JACQUES LEFRANC, Paris, France, assignor to Societe des Brevets Etrangers Lefranc & Cie., Paris, France. Filed Jan. 25, 1927, Serial No. 163,571, and in France Aug. 27, 1926. 6 Claims. (Cl. 260—122.)

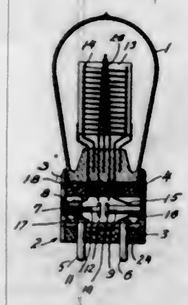
1. A process of extraction of aliphatic acids from their alkali and alkali-earth salts which consists in treating said salts with hydrochloric acid, the aliphatic salt being in slight excess, in filtering the resulting liquid whereby the excess of aliphatic salt is recovered and in separating the lower layer formed by the solution of chloride produced, from the major part of the insoluble aliphatic acids forming the upper layer.



1,683,199. ARTIFICIAL THREAD AND PROCESS FOR MAKING SAME. LEON LILIENFELD, Vienna, Austria. Filed Dec. 23, 1926, Serial No. 156,751, and in Austria June 20, 1925. 32 Claims. (Cl. 18—54.)

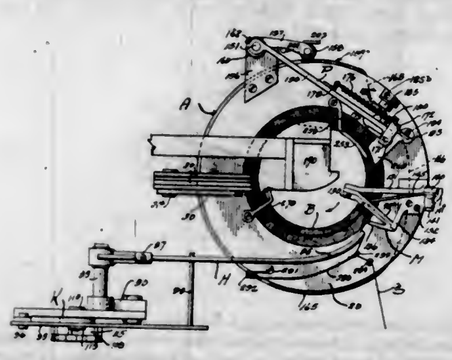
1. Process for manufacturing artificial threads of high dry tenacity, exceeding 2 grammes per denier, from viscose, which comprises causing a viscose to pass through suitably formed openings into contact with a liquid which contains not less than about 65 per cent of sulphuric acid monohydrate.

1,683,200. ARTIFICIAL MATERIAL AND PROCESS FOR MAKING SAME. LEON LILIENFELD, Vienna, Austria. Filed June 3, 1926, Serial No. 113,583, and in Austria June 20, 1925. Renewed July 26, 1928. 20 Claims. (Cl. 18—54.)



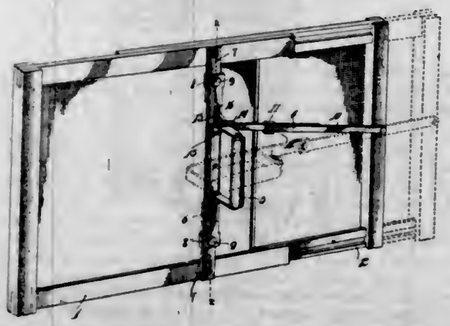
1. Process for manufacturing artificial materials from viscose, which comprises bringing a viscose containing not more than 5 per cent of caustic alkali (calculated as NaOH), into the form of an artificial material and acting upon it with sulphuric acid, containing not less than 45 but less than 55 per cent of sulphuric acid monohydrate.

1,683,201. SLIDING-JAW WRENCH. EDWARD LINDQUIST, Omaha, Nebr. Filed Jan. 25, 1927. Serial No. 163,405. 1 Claim. (Cl. 81—169.)



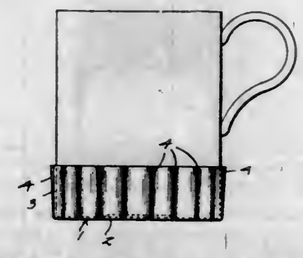
A wrench consisting essentially of a sliding jaw having an integral shank provided at its rear end with a reduced and threaded portion, a body including a jaw with a longitudinal passage therein through which said shank extends, longitudinal spaced bars extending rearwardly from last named jaw and provided with rear internally recessed portions, and an intermediate portion joining the bars immediately in front of said recesses and extending laterally in opposite directions from the plane of the bars and having a longitudinal passage through it, sections of material different from that of the body, arranged in front and rear of the laterally extending parts of the intermediate portion of the body and abutting against and arranged flush with said lateral parts and connected to opposite sides of the longitudinal bars, and an adjusting member journaled in the longitudinal bars of the body and in the rear sections of material different from that of the body and extending rearwardly beyond the longitudinal bars and said sections, and having a flange at its inner end disposed in the said recesses of the body bars and also having a threaded portion receiving and engaging the thread on the shank.

1,683,202. ELECTRON-DISCHARGE DEVICE. WILLIAM A. MACDONALD, Little Neck, N. Y., assignor to Hazeltine Corporation, Jersey City, N. J., a Corporation of Delaware. Filed Apr. 9, 1926. Serial No. 100,826. 7 Claims. (Cl. 250—27.5.)



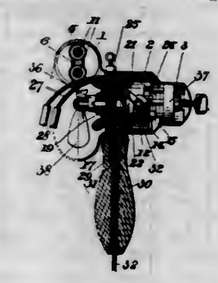
1. In an electron discharge device including more than two electrodes enclosed in an evacuated envelope, a plurality of means ontside said envelope mechanically attached to said device and directly connected to two of said electrodes for adjusting the effective electrostatic capacity between said two electrodes within capacity values of an order of magnitude commensurate with the value of capacity naturally inherent between said electrodes, at least one of said means being manually adjustable for varying said effective electrostatic capacity.

1,683,203. CIRCULAR-KNITTING MACHINE. HARRY MCADAMS, Philadelphia, Pa., assignor of one-half to Jesse W. Starr, 3d, Atlantic City, N. J. Filed Sept. 18, 1926. Serial No. 136,276. 20 Claims. (Cl. 66—49.)



1. In a knitting machine, a rotary needle cylinder, needles carried thereby for receiving a body yarn and including a set of needles for receiving a splice yarn, means for directing a body yarn to the needles of the cylinder, means for supporting a splice yarn, means for operably dividing the splice yarn receiving needles from the remainder of the needles, and means cooperating with said last mentioned means for guiding and controlling the splice yarn with respect to said splice yarn needles to entirely knit said splice yarn in a continuous knitted relation with the body yarn along a splice section which extends about part only of the circumference of the article being knit, and without float portions, during full rotary knitting action on the article while the cylinder is rotating.

1,683,204. FLY SCREEN. EDGAR T. MILLS, Millville, W. Va. Filed Oct. 12, 1926. Serial No. 141,160. 5 Claims. (Cl. 156—38.)

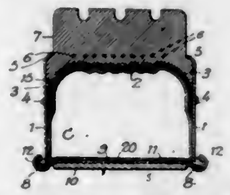


1. Operating mechanism for an extensible screen comprising a support adapted to be secured to one section of a screen in a vertical position, a handle pivoted to said support intermediate its length, a link having one end pivoted to said handle adjacent one end thereof and adapted to extend therefrom longitudinally of the screen with its other end pivoted to another section of the screen, and a latch carried by the handle to releasably secure the handle in a set position with the screen adjusted.

1,683,205. CUP-DRIP ATTACHMENT. EDWARD S. PACKARD, Holyoke, Mass. Filed Aug. 11, 1927. Serial No. 212,313. 3 Claims. (Cl. 215—100.)

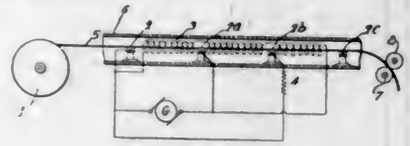
1. A cup drip attachment comprising a blank of porous material originally in the form of a disk, said blank having central and marginal areas, the marginal area being provided with creases radially disposed with relation to the blank, and a coating of adhesive applied to the central area of the blank and extended in radial lines across the marginal area of the blank.

1,683,206. SURGICAL MOTOR. ADOLF PFEIFFER, Berlin, Germany, assignor to the Firm Elektrizitäts-Gesellschaft "Sanitas" m. b. H., Berlin, Germany. Filed June 27, 1925, Serial No. 40,070, and in Germany July 8, 1924. 9 Claims. (Cl. 172—36.)



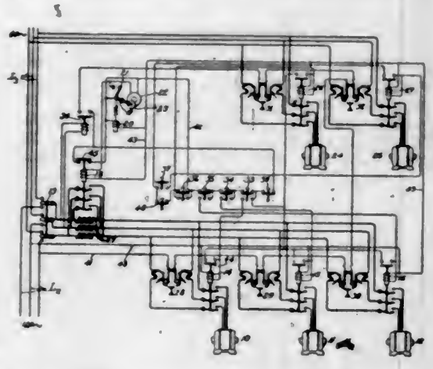
1. The combination, with a casing, an electromotor mounted therein, a supporting plate fixed to the inner wall of said casing and having inwardly projecting lugs, and sleeves and plugs provided respectively on said lugs and motor, said sleeves and plugs opposing each other in the direction of insertion of the motor so as to make direct contact with each other when inserting the motor.

1,683,207. FLEXIBLE INDEX STRIP. FRANK D. POWELL, Chicago, Ill., assignor to Acme Card System Company, Chicago, Ill., a Corporation of Illinois. Original application filed July 14, 1922, Serial No. 574,913. Divided and this application filed July 2, 1926. Serial No. 120,020. 4 Claims. (Cl. 40—2.)



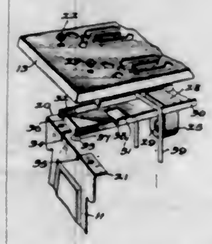
1. Separated flexible index strips comprising strips of wood faced with a sheet material which will take print readily.

1,683,208. PNEUMATIC TIRE. JOHN POWELL, Carlton, Victoria, Australia. Filed Dec. 17, 1926, Serial No. 155,445, and in Australia Dec. 23, 1925. 2 Claims. (Cl. 152—33.)



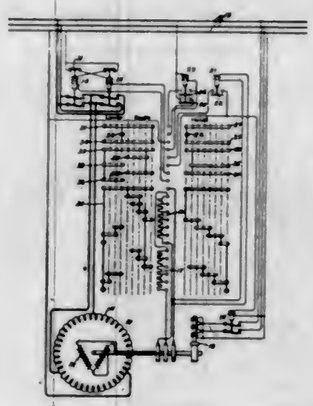
1. A pneumatic tire comprising a casing approximately U-shape in cross-section consisting of a peripheral strip having inwardly bent edges fixed to the sides of said casing, said sides extending outward beyond the strip and curved inwardly at their extremities, a tread fitted to said strip and sides, a pneumatic tube within the casing, and a wheel rim slightly narrower than the width of the casing to prevent undue lateral movement thereof and on which said tube is seated.

1,683,209. METHOD FOR INCREASING THE CONDUCTIVITY OF METALS. SAMUEL RUBEN New York, N. Y. Filed Feb. 15, 1926, Serial No. 88,433. Renewed May 12, 1927. 6 Claims. (Cl. 148—10.)



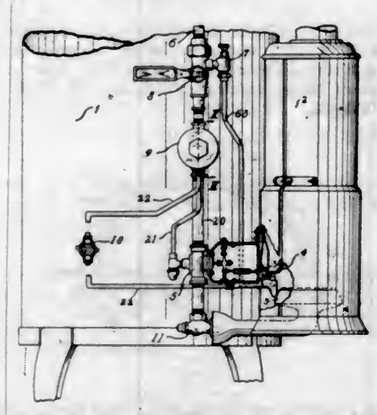
1. The method of increasing the conductivity of a metal body which consists in heating said body to a temperature below its melting point by an electric current discharge therethrough, in an electromagnetic field parallel to the direction of said discharge, and cooling said body in an electromagnetic field parallel to the direction of said discharge.

1,683,210. MOTOR-CONTROL APPARATUS. CLAUDE C. RUNNER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 6, 1925. Serial No. 48,636. 12 Claims. (Cl. 172—179.)



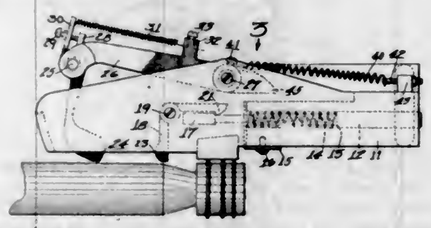
6. In a motor control system, the combination with a plurality of electric motors having a common supply circuit, of a common current limiting means connected in the common supply circuit for the motors, switch mechanism for successively connecting the motors to said common supply circuit, and cooperating switch mechanism and connections whereby the said current limiting means is inserted in the supply circuit when each motor is connected thereto.

1,683,211. ELECTRIC HEATER. ALBERT H. SIMMONS, Wheaton, Ill., assignor to Edison Electric Appliance Company, Incorporated, Chicago, Ill., a Corporation of New York. Filed Sept. 25, 1925. Serial No. 58,522. 9 Claims. (Cl. 219—19.)



6. A toaster comprising a heating element, a pair of slice holders pivoted on opposite sides of said heating element, a compression spring, and connections between the ends of said spring and said slice holders whereby said spring is supported at its ends solely by said slice holders, said connections being at such points with relation to the pivots of said slice holders that said slice holders are secured by said spring in either one of two positions.

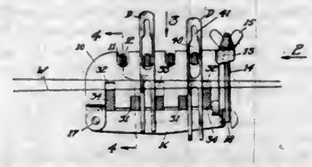
1,683,212. MOTOR-CONTROL SYSTEM. HANS TENGSTRÖM and KURT BÜHRING, Berlin, Germany, assignors to General Electric Company, a Corporation of New York. Filed Mar. 9, 1925, Serial No. 14,276, and in Germany Mar. 31, 1924. 8 Claims. (Cl. 172—152.)



1. In a motor control system, the combination with a reversible electric motor, of switch mechanism for controlling the power connections of the motor to reverse the torque thereof when the motor is rotating in one direction, a brake for the motor, and electro-responsive means in circuit with the motor for applying the brake upon a predetermined reduction in the speed of rotation of the motor in said one direction to thereby insure against the reversed motor torque causing rotation of the motor in the other direction, said brake being applied while the power connections of the motor are maintained by the switch mechanism.

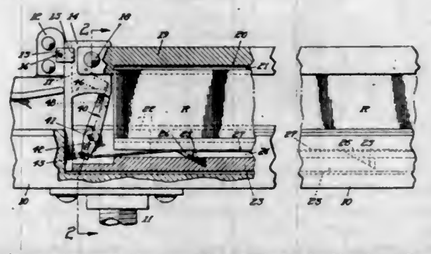
1,683,213. FLUID-FUEL-CONTROL SYSTEM. EDMUND J. TE PAS, Lakewood, Ohio, assignor to The Patrol Valve Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 12, 1926. Serial No. 121,910. 20 Claims. (Cl. 236—33.)

1. In a valve, a valve casing with passages arranged therein, a valve seat formed in said casing, a partition element providing a second valve seat and housed in said casing, a pair of tandem arranged valve heads coacting with said valve seats, and means to actuate the valve heads.



1,683,214. WEFT DETECTOR IN REGULARLY-MOVING TRANSFERRER. RICHARD G. TURNER, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed July 3, 1926. Serial No. 120,491. 10 Claims. (Cl. 139—271.)

1. In a weft detector for looms having a surface to be detected, a side slipping weft detector movable along the surface to be detected to give an indication of weft exhaustion, a carrier for the detector with regard to which the latter is movable angularly, a supporting structure on which the carrier is mounted and with respect to which the same is movable, means to move the supporting structure toward the surface to be detected and to arrest movement thereof toward the surface, and resilient means to hold the carrier in normal position away from the surface, the carrier and detector being moved toward the surface by the structure and overcoming the resilient means solely by the inertia force of said carrier and detector and tending to have an indicating movement when the motion of the structure is arrested.



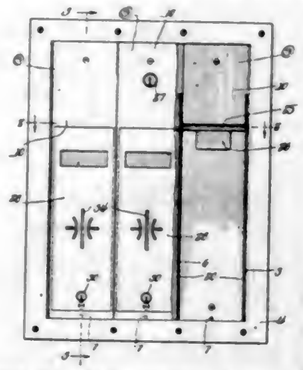
1,683,215. SEPARATOR FOR WARP STOP MOTIONS. WALTER H. WAKEFIELD, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed May 27, 1927. Serial No. 194,804. 8 Claims. (Cl. 139—369.)

1. A separator for high outer and low intermediate separator bars which lie below the outer bars and oscillating detectors of a warp stop motion, said separator having a body portion with provision for clamping the same to

certain of the intermediate separator bars and having provision for loosely guiding the outer separator bars which extend above the bars to which the separator is clamped.

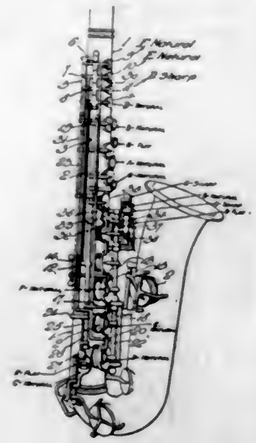
1,683,216. REED ADJUSTMENT FOR LOOMS. WALTER H. WAKEFIELD, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Nov. 25, 1927. Serial No. 235,576. 3 Claims. (Cl. 139—188.)

1. In a loom, a lay provided with an inclined surface, a reed, a member having an inclined face in contact with the inclined surface on the lay, and affording support for the reed, a flexible element connected to the member and movable relatively to the lay, a lever pivotally mounted with respect to the lay and connected to the flexible element, and means to hold said lever in any one of a plurality of angular positions, whereby the element may be retained in different positions relatively to the lay to give the reed a plurality of vertical positions.



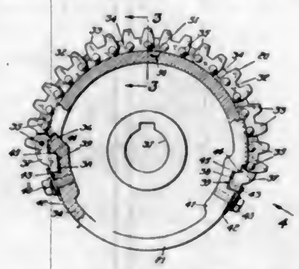
1,683,217. MAIL BOX. JAMES H. WARD, Jr., Buchanan, Mich., assignor to James H. Ward & Son, Inc., Buchanan, Mich., a Corporation of Indiana. Filed Apr. 21, 1926. Serial No. 103,445. 7 Claims. (Cl. 232—25.)

1. In a mail box, in combination, a bottom member, side walls and partition walls forming a plurality of compartments, a front closure member, said closure member being



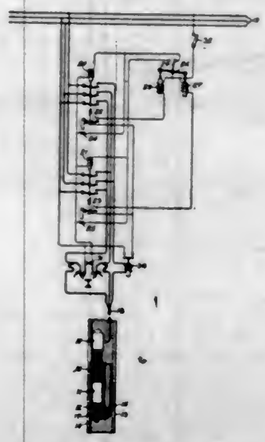
swingingly and removably mounted with relation to said bottom wall, and chute walls swingingly mounted in parallel relationship with said first mentioned walls, said chute walls being removably connected to said closure member and having limited sliding movement with relation to said first mentioned walls, said front closure member being provided with individual doors permitting access to the several compartments.

1,683,218. MAIL BOX. JAMES H. WARD, Jr., Buchanan, Mich., assignor to James H. Ward & Son, Inc., Buchanan, Mich., a Corporation of Indiana. Filed July 21, 1927. Serial No. 207,328. 10 Claims. (Cl. 232—25.)



1. A closure comprising a plurality of elongated members having their side edge portions provided with flanges, said flanges being provided with two sets of aligned apertures, rods extending through said sets of apertures to hold said members in one plane, and gripping members engaging adjacent flanges of neighboring members to hold said members against displacement in said plane.

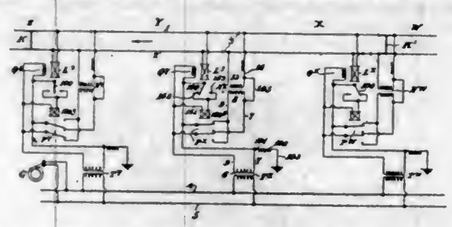
1,683,219. SAXOPHONE. HARRY J. WATERS, San Francisco, Calif. Filed Sept. 17, 1924. Serial No. 738,229. 5 Claims. (Cl. 84—385.)



1. A saxophone embodying a mechanism of the class described, said mechanism including operating means for the valve utilized for producing the tone high-D, said operating means comprising a rotatably mounted shaft connected at one end to the valve and provided at its opposite end with a sleeve, a finger-piece provided with a second sleeve having its inner end arranged in abutting relation with the corresponding end of the first named sleeve, a needle spring carried by said finger-piece, and a hook carried by the first named sleeve, the free end of said spring being connected with said hook.

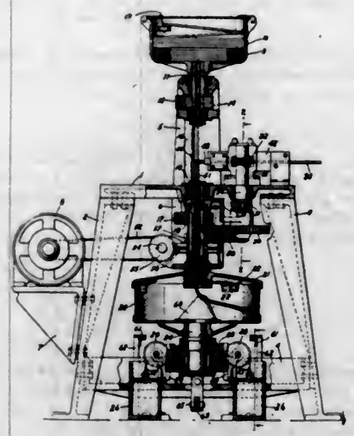
1,683,220. CYLINDER FOR KNOWLES HEADS. WILLIAM M. WATTIE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 25, 1927. Serial No. 215,495. 12 Claims. (Cl. 139—77.)

1. In a pattern mechanism for a loom having a toothed element to be rotated, a rotatable driving member, and a chain secured to said member and rotating therewith and covering a portion of said member, said chain having links provided with teeth to be operatively related to the element to rotate the same.



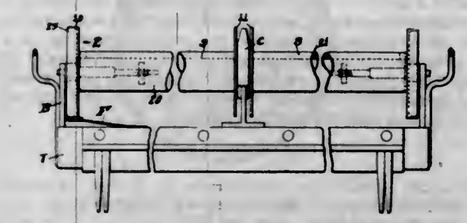
1,683,221. MOTOR CONTROL. LOUIS J. WEBER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 15, 1926. Serial No. 122,726. 13 Claims. (Cl. 172—240.)

1. The combination with an electric motor, of means for automatically reversing the operation of the electric motor comprising a device for mechanically retarding the motor to cause the motor current to increase and an electromagnetically controlled reversing switch responsive to such increase in current.



1,683,222. TRACK-CIRCUIT SYSTEM. ABBA G. WILLIAMSON, Carnegie, Pa., assignor to Pittsburgh Train Control Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Apr. 5, 1922. Serial No. 549,662. Renewed Feb. 3, 1928. 6 Claims. (Cl. 246—34.)

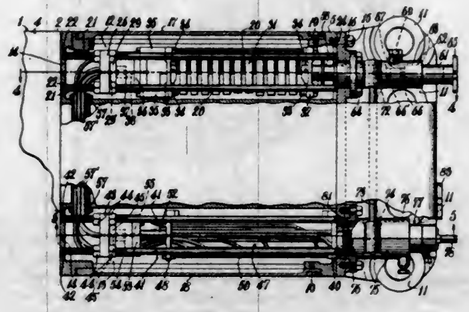
1. A track circuit system comprising: traffic rails divided into blocks, a circuit including both rails of a block, a circuit between ground and at least one of said rails for maintaining voltage above ground potential on



at least one of said rails, and a pole changer controlled from a preceding block and controlling both circuits of the local block.

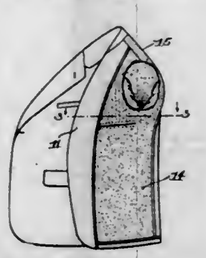
1,683,223. METAL-TUBING MACHINE. CHARLES E. WILSON and HENRY HUENERKOPF, Bridgeport, Conn., assignors to General Electric Company, a Corporation of New York. Filed Apr. 30, 1925. Serial No. 27,034. 9 Claims. (Cl. 113—35.)

1. A metal tubing machine comprising pan means for supporting a loose coil of core material so as to be freely paid out therefrom, means freely to form a metal strip helically into a flexible tube about said core, power means to propel the metal strip into and through said tube forming means, and means freely to receive the product from the said forming means.



1,683,224. SPOOL FOR AXMINSTER LOOMS. WILLIAM H. WILSON, Burlington, Vt., assignor to Vermont Spool & Bobbin Co., Burlington, Vt., a Corporation of Vermont. Filed July 5, 1927. Serial No. 203,446. 4 Claims. (Cl. 242—124.)

1. In an Axminster loom spool having a barrel with a longitudinal slot therein, a head having an opening to register with the slot, and interengaging grooves and

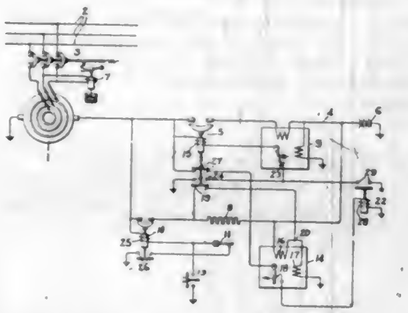


corrugations on the barrel and head, respectively, ears extending from the head on opposite sides of the opening and located to align with certain of the grooves in the barrel to be guided with respect to the slot so that one ear lies on each side of the slot.

1,683,225. CONTROLLING APPARATUS. CHARLES W. WYMAN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Oct. 31, 1924. Serial No. 747,065. 34 Claims. (Cl. 262—30.)

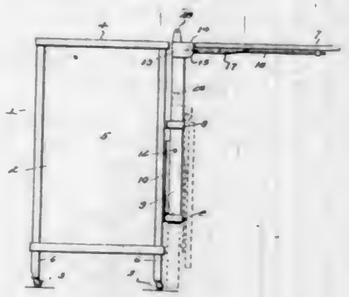
1. In an electric controlling mechanism, a casing having a chamber, supporting members disposed within said chamber, electrical controlling apparatus disposed in said chamber comprising relatively movable elements for effecting current control and end brackets, and means for slidably guiding said apparatus as a whole along said supporting members with said brackets engaging the latter.

1,683,226. GARMENT CONSTRUCTION. NICHOLAS ZUCK, Rochester, N. Y. Filed Apr. 23, 1927. Serial No. 186,065. 1 Claim. (Cl. 2—272.)



In a coat or similar garment, a coat front comprising a felt portion, one side of which is positioned adjacent to the garment fabric, a piece of haircloth positioned adjacent to the other side of the felt portion, and a single layer of stiffening material adjacent to said haircloth, said single layer of stiffening material being so constructed as to function both as a stiffener and also as a lining for the coat.

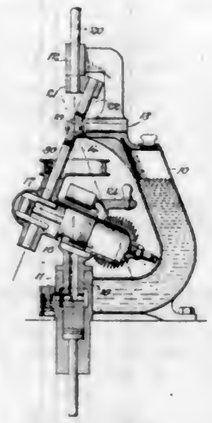
1,683,227. ELECTRICAL-DISTRIBUTION SYSTEM. ARVID E. ANDERSON, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 9, 1925. Serial No. 7,776. 7 Claims. (Cl. 175—294.)



1. In a system of electrical distribution, a supply circuit, a load circuit arranged to be supplied with current by a plurality of sources, a rotary transformer for transferring electrical energy from one of said circuits to the other, current limiting means, means responsive to the

direction of the current flowing between said transformer and said load circuit for effecting the connection of said current limiting means in series between said rotary transformer and one of said circuits when said rotary transformer transfers energy from said load circuit to

said supply circuit, and a relay comprising a winding connected in parallel with said current limiting means for effecting the connection of said one of said circuits directly to said rotary converter when said rotary converter is in a condition to transfer energy from said supply circuit to said load circuit.

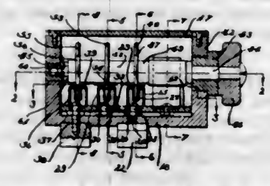


1,683,228. ADJUSTABLE SHELF SUPPORT. EDWARD R. ARMSTRONG, Columbus, Ohio, assignor to F. O. Schoedinger, Columbus, Ohio. Filed Dec. 10, 1926. Serial No. 153,789. 3 Claims. (Cl. 45—51.)

3. In apparatus of the character set forth, a support including a vertical side wall, a standard slidably mounted in bearings carried by said wall, a shelf carried by the upper end of said standard, a stationary rack bar carried by the side wall of said support, a pinion carried by the standard and mounted for engagement with said rack bar, a spring pressed latch engaging with said pinion and having an operating handle located above said standard, and a lifting handle secured to the upper end of said standard located above and adjacent to the operating handle of said spring pressed latch.

1,683,229. EXPLOSIVE ENGINE OF THE ROTATING-CYLINDER TYPE. DORSEY F. ASBURY, Washington, D. C. Filed May 13, 1921. Serial No. 469,141. 10 Claims. (Cl. 121—58.)

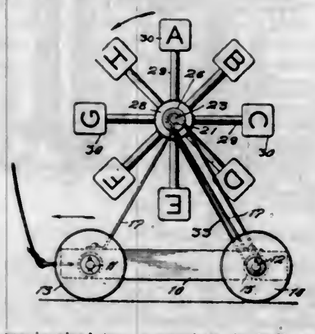
8. An engine of the reciprocating piston type including a cylinder, means to cause said cylinder to rotate about a fixed axis during operation of the engine, the axis of the bore of said cylinder being disposed at an angle between 0 and 90° to its axis of rotation and the axis of rotation of said cylinder intersecting the axis of its bore between the ends of the cylinder, whereby different points along the length of the cylinder travel in different planes during its rotation and whereby the centrifugal force



set up in one end of the cylinder during its rotation is substantially balanced by the centrifugal force set up in the other end thereof.

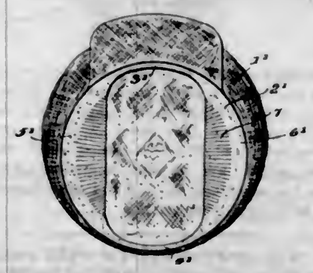
1,683,230. HIGH-FREQUENCY SIGNALING SYSTEM. WALTER R. G. BAKER, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 5, 1926. Serial No. 106,966. 4 Claims. (Cl. 179—171.)

1. The combination in a high frequency signaling system of a source of high frequency current of substantially a single frequency, a plurality of amplifying units which are excited from said source, the output circuit of each of said amplifying units being tuned to the frequency of said high frequency current, a transmitting circuit and an independent coupling between each of said output circuits and said transmitting circuit.



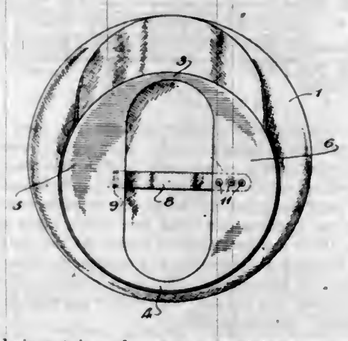
1,683,231. SWITCH. ALEXANDER H. BAYNE, Windsor, Ontario, Canada. Filed Feb. 19, 1927. Serial No. 169,436. 5 Claims. (Cl. 200—6.)

5. A switch comprising: a rotatable shaft; a plurality of pairs of stationary contacts, each contact being doubled upon itself, the doubled over portion being spaced from the main body and faced inwardly toward the cooperating contact which is spaced therefrom; a plurality of discs mounted on and rotatable with said shaft; and a contact mounted on opposite sides of each of said discs and extending around its periphery for a portion of its length,



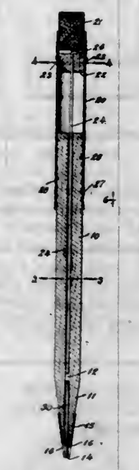
and adapted, upon rotation of said shaft to a predetermined position, for engaging, at its opposite faces, the doubled over portion of each of a pair of said contacts and closing the circuit therebetween, the contacts on the faces of said discs being varisized and staggered in circumferential relation.

1,683,232. MECHANICAL TOY. JOHN JACOB BECKER, New York, N. Y. Filed June 1, 1926. Serial No. 112,925. 2 Claims. (Cl. 46—48.)



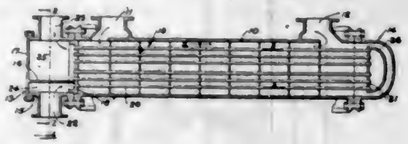
1. In a mechanical toy, a carriage including a base, an axle and wheels on the axle, brackets secured to and rising from said base, a shaft journaled in the brackets, a rotor fixedly secured to said shaft and including a series of radially disposed arms having enlargements at their outer ends and said enlargements being cubical in shape presenting flat faces having educational characters thereon, such as letters and numerals, and means whereby to rotate the rotor when the carriage is rolled over a surface.

1,683,233. HEAD COVERING. HAROLD T. BLUM, Glenmont, Ohio. Filed June 23, 1927. Serial No. 201,002. 2 Claims. (Cl. 2—190.)



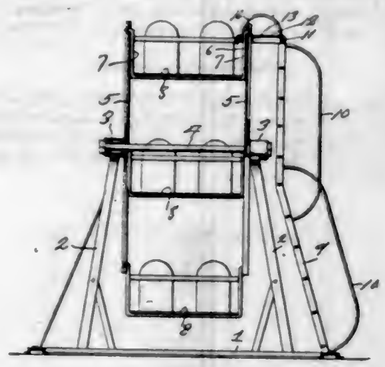
1. A sweat band for head coverings comprising a body having comparatively wide opposite side portions and comparatively narrow forward and rearward portions, said body being adapted to have snug engagement throughout its area with the head of a wearer.

1,683,234. SWEATBAND FOR HEAD COVERINGS. HAROLD T. BLUM, Glenmont, Ohio. Original application filed June 23, 1927, Serial No. 201,002. Divided and this application filed Sept. 19, 1927. Serial No. 220,547. 3 Claims. (Cl. 2—190.)



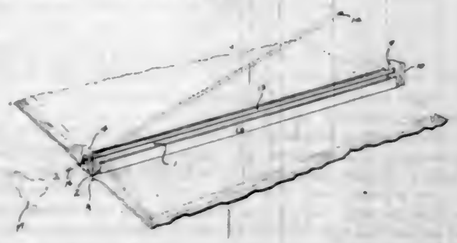
1. A hair retainer for caps comprising a dome shaped body portion, means for attaching the lower edges of said body portion to the cap whereby it will extend within the head receiving opening thereof, the medial part of said body portion being cut away to form a pair of oppositely disposed flanges and an adjustable strap extending across the cut away portion of said body and connecting said flanges.

1,683,235. PENCIL. CLAES WM. BOMAN, Brooklyn, N. Y., and CHARLES KAISER, Carlstadt, N. J., assignees to Eagle Pencil Company, New York, N. Y., a Corporation of Delaware. Filed May 17, 1922. Serial No. 561,556. 4 Claims. (Cl. 120—18.)



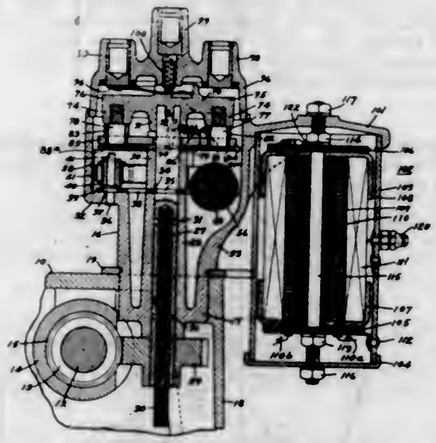
3. A propelling pencil, comprising a solid wooden pencil-body having a small axial bore therethrough and having a conical portion at its front end, a thin-walled conical ferrule permanently seated on the conical portion of said body to compress the front end thereof and reduce the diameter of the end of the bore, said ferrule extending slightly beyond the end of the body and having in its apex a hole aligned with the bore in the body, and means to engage the rear end of a lead in the bore and force it forward and through the hole in the ferrule, the main portion of the bore being of a size to permit the lead to slide freely therethrough and the reduced end of the bore being of a size to lightly grip the lead, and the hole in the ferrule being of a size to support the lead.

1,683,236. HEAT-EXCHANGING APPARATUS. CARL F. BRAUN, Pasadena, Calif. Filed Aug. 31, 1926. Serial No. 132,694. 1 Claim. (Cl. 257—236.)



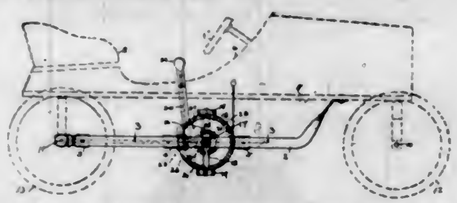
In a device of the character described, a shell through which a fluid flows longitudinally from end to end of the shell and returns in a single pass in each direction, a tube nest extending longitudinally of the shell and through which a cooling medium flows, means at the opposite ends of the tube nest for dividing the tubes into three times as many groups as there are longitudinal passes of the fluid in the shell and creating a circulation of a cooling medium through said tubes in a manner to establish a countercurrent flow of the two fluids in a ratio of one portion parallel current to two portions countercurrent.

1,683,237. LAWN SWING. CHESTER H. BROWN, Kopperl, Tex. Filed June 25, 1925. Serial No. 39,484. 1 Claim. (Cl. 272—49.)



The combination with a Ferris wheel having seat frames pivotally connected to arms of the wheel, a ladder adjacent one side of said wheel, of a platform hingedly connected to the ladder, walls carried by said platform and formed by an opening therein, said walls of the platform formed by the opening engaging one of the arms of the wheel and the pivoted seat frame carried thereby to the inside of the arm and at opposite sides of the pivoted seat frame pivotal point.

1,683,238. TEMPORARY BINDER. ANTONE J. CARDOZA, Oakland Calif. Filed Oct. 31, 1927. Serial No. 229,922. 6 Claims. (Cl. 129—38.)



1. A binder device, comprising a longitudinal channel adapted to receive the fold of a publication, upwardly extending perforated lugs at each of the opposing ends of said channel, a rod extending through openings in both of said lugs and adapted to be removably engaged thereby in such manner that the fold of the publication is held by said rod within the channel, said rod having one end removably engaged in the opening in one lug and the other end of said rod being headed so as to tightly impinge against the other of said lugs when the opposite end of the rod is tightly held by the first mentioned lug.

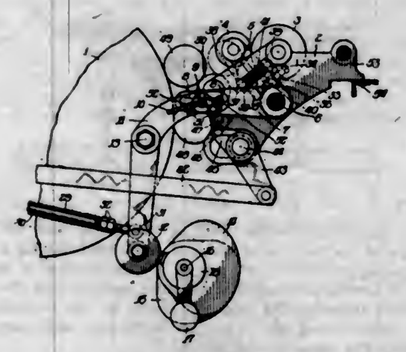
1,683,239. IGNITION APPARATUS. WILLIAM A. CHRYST, Dayton, Ohio, assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Original application filed May 23, 1922, Serial No. 563,145. Divided and this application filed May 26, 1925, Serial No. 33,072. Renewed Apr. 11, 1927. 7 Claims. (Cl. 123—148.)

1. The combination with an ignition distributor of a laterally extending bracket integral therewith; a vertical ignition coil mounted on the underside of the bracket, the bracket forming an end enclosure for the coil; and an axial bolt in the coil and secured to the bracket, the coil being separated from the bracket by detaching the bolt from the latter.

1,683,240. CHILD'S VEHICLE. BENJAMIN F. COLVIN, Fremont, Ohio. Filed Nov. 9, 1925. Serial No. 67,763. 3 Claims. (Cl. 208—55.)

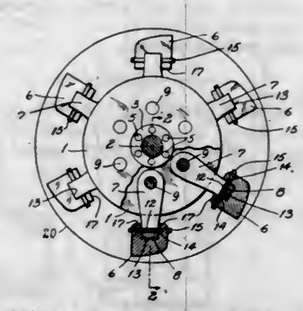
1. In a child's vehicle, the combination of a frame, wheels supporting the same, a shaft connected to drive certain of said wheels, a pedal shaft, freely engageable gearing comprising drive gears on said pedal shaft and driven gears slidably connected on said first-named shaft, the teeth of said gears having tapered and sloping lead-in portions, and means for selectively sliding the driven gears into engagement with the drive gears.

1,683,241. FILLING CONTAINER WITH PRESERVING, FLAVORING, AND CONDIMENT LIQUIDS. PEIRCE CUTLER, Burlingame, Calif., assignor to Edward J. Judge, Alameda, Calif. Filed Apr. 9, 1927. Serial No. 182,542. 6 Claims. (Cl. 99—8.)



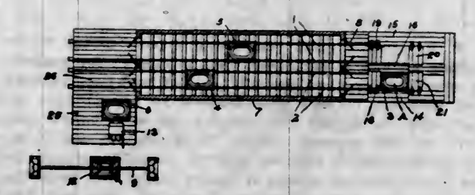
6. The improvement in the art of filling product-containers with preserving, flavoring and condiment liquids, which consists in supplying the container with a concentrated solution of said liquid; subjecting said container with its product-content and concentrated liquid solution to the heat of a first cook; filling in on top of the concentrated solution and product-content in the container a volume of hot reducing liquid capable when mixed with said solution of bringing the liquid-content of the container to the proper strength; then immediately hermetically sealing the container; and finally subjecting the sealed container to the heat of the second or final cook.

1,683,242. SCORE DEVICE. EMIL DEISTER, Jr., Fort Wayne, Ind. Filed Jan. 29, 1927. Serial No. 164,404. 3 Claims. (Cl. 273—148.)



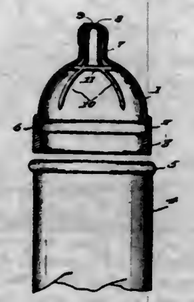
1. A card game scoring device comprising a cylindrical member, a table on the member consisting of a plurality of peripheral columns of indicia, the items of which are also arranged in longitudinal parallel rows, one of said columns containing a sequence of numerals to indicate the number of tricks bid, others of said columns indicating the several card suits and the remainder of said columns indicating the values of the said tricks according to the said suits, and an apertured sleeve slidably and rotatably mounted on the member and adapted to be adjusted to indicate any suit and to cause the aperture to expose the value of the number of tricks bid in said suit.

1,683,243. PRINTING-PRESS DUCTOR MECHANISM. JOSEPH R. BLAINE, Oak Park, Ill., assignor to The Miehle Printing Press & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 28, 1927. Serial No. 171,510. 22 Claims. (Cl. 101—148.)



1. In lithographic printing press dampening mechanism, the combination of a water fountain, a fountain roller, water distributing means, a ductor roller intermittently engaging said fountain roller and said distributing means for conveying water from the former to the latter, means for timing the operation of said ductor roller to vary its time of contact with said fountain roller and the amount of water conveyed therefrom, and means for adjusting the water fountain as a unit a variable distance towards and away from the printing plate of the press.

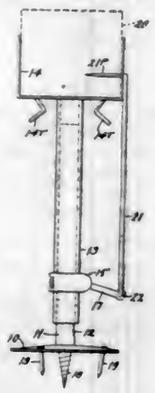
1,683,244. DISINTEGRATOR. WILLIAM M. DUNCAN, Alton, Ill. Filed Aug. 1, 1927. Serial No. 209,809. 5 Claims. (Cl. 83—11.)



1. In a disintegrator, a rotary carrier, a hammer-holder pivoted to said carrier, interlocking elements extending from the sides of said holder, a hammer-head having interlocking elements slidable on the first-mentioned elements, and a keeper cooperating with said head and holder to prevent displacement of said head.

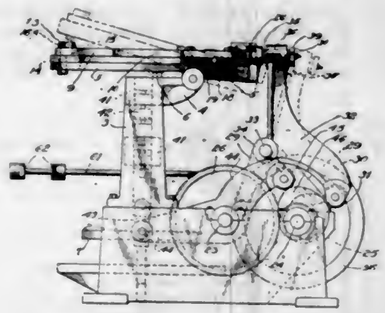
1,683,245. APPARATUS FOR FORMING AND HANDLING CLAY POTS. WILLIAM J. GOLIGHTLY, Kokomo, Ind., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Apr. 18, 1922. Serial No. 555,267. 1 Claim. (Cl. 25—2.)

Apparatus for building and drying pots comprising a working platform, a drying room, a track extending through the platform and through the drying room, a series of tucks mounted on the track with their stops adjacent the level of the platform, and movable floor sections for bridging the spaces in the platform at the ends of the trucks.



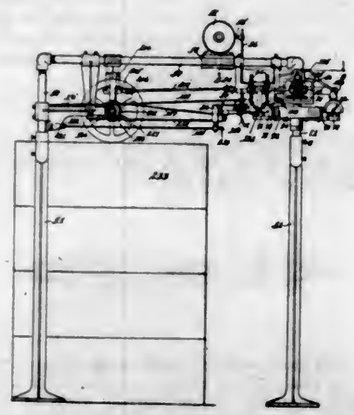
1,683,246. BOTTLE NIPPLE. RICHARD T. GRIFFITHS, Akron, Ohio, assignor to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 30, 1926. Serial No. 98,581. 3 Claims. (Cl. 128—252.)

3. A nursing nipple for wide mouthed bottles comprising a breast portion having at the base an external relatively wide annular flange, forming a base ring, said



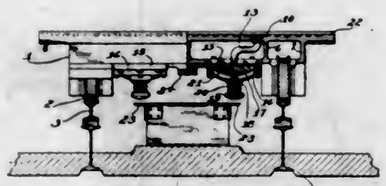
ring being provided with an annular channel in its inner face adjacent the lower edge of the breast and extending into proximity to the outer periphery of the flange providing a relatively wide and strong retaining band connected to the breast portion by a thin elastic web at the bottom of the annular channel.

1,683,247. SCREED SUPPORT. VERNER G. H. GROTHE, St. Paul, Minn., assignor to Harold L. Fagley, St. Paul, Minn. Filed Mar. 19, 1927. Serial No. 176,805. 8 Claims. (Cl. 72—122.)



8. A screed support comprising a post, means for securing an end of said post upon a support for concrete, a screed holder upon the other end of said post, telescoping members of said post adapted to be extended and retracted to adjust the spacing of said holder relative to said support, means for retaining said holder in predetermined position relative to said support and an arm connected to said retaining means and projecting out from the normal surface of concrete upon said form whereby said retaining means may be operated to adjust the height of said holder without removing a screed held in said holder.

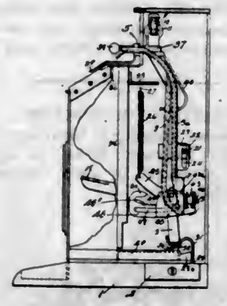
1,683,248. BARREL-MAKING MACHINE. CHARLES G. GROTNES, Chicago, Ill. Filed Sept. 12, 1921. Serial No. 500,142. 12 Claims. (Cl. 147—4.)



1. A machine of the class described comprising, in combination, a support for a barrel, clamping means operable to compress one end of the barrel to permit removal and replacement of an end hoop, and simultaneously operable means adapted to engage with a bilge hoop located below the mid-portion of the barrel, the last mentioned means being movable in a direction toward said support whereby to remove the bilge hoop.

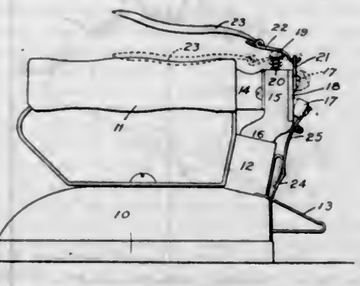
1,683,249. SORTING MACHINE. ANGUS F. HANNEY, Chicago, Ill., assignor to Gammell-Hanney Mfg. Co., Chicago, Ill. Filed Mar. 27, 1925. Serial No. 18,669. 55 Claims. (Cl. 209—75.)

1. A sorting machine comprising a constantly moving conveyor; an intermittently moving conveyor associated therewith and arranged to receive laundry articles at a point remote from said continuously moving conveyor and transfer said laundry articles to the same; and selective means including a shiftable cam block operated by said moving laundry articles for discharging them from said continuously operating conveyor, substantially as described.



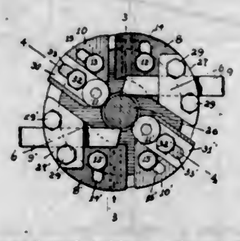
1,683,250. APPARATUS FOR HOLDING GLASS PLATES UPON GRINDING AND POLISHING TABLES. HALBERT K. HITCHCOCK, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed May 1, 1925. Serial No. 27,170. 3 Claims. (Cl. 51—235.)

1. The combination with a surfacing car or table mounted for movement along a track and having a glass supporting surface, of means for producing a suction effect intermediate said supporting surface and the glass carried thereby, and means operated by the movement of the table along the track for actuating said means to secure the glass to the table.



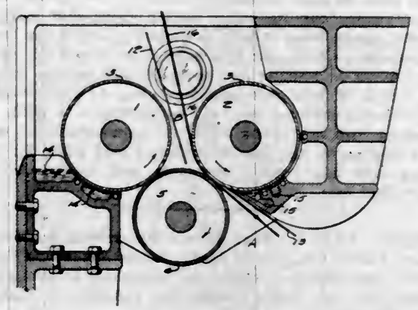
1,683,251. VARIETY VENDING MACHINE. VICTOR H. KELLEY, Madison, Wis. Filed Aug. 27, 1925. Serial No. 52,931. 3 Claims. (Cl. 312—93.)

1. In a vending machine of the type described, the combination of a cabinet having vertical partitions dividing the same into a plurality of storage bins, sliding drawers underlying the respective bins, and drawer-actuating and locking mechanism comprising a horizontal trolley rail in the upper portion of said cabinet, a beam suspended by a trolley wheel on said rail, means for shifting said beam along said rail, pivoted latches on said drawers normally locking the latter closed, said latches having latch-actuating portions adapted for coupling engagement with the lower end of said beam when the



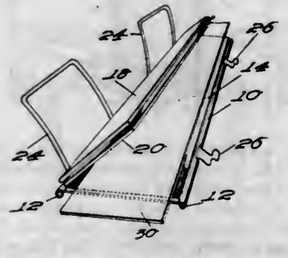
latter is moved into register therewith, and means for swinging said beam in the direction of movement of said drawers.

1,683,252. THERMOELECTRIC CONTROL DEVICE. THOMAS J. MADIGAN, Brooklyn, N. Y. Filed Oct. 16, 1926. Serial No. 141,964. 4 Claims. (Cl. 200—138.)



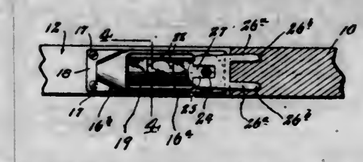
1. The combination with an electric sadiron, of an attachment plug adapted to fit the terminals of the iron, a current control switch on said plug, a handle grip to throw said switch into "on" position, said switch being adapted to be retained in the "on" position by engagement with the surface upon which the iron rests when the iron is tilted back, and thermostatically controlled means to disengage said switch from the surface when the temperature of the iron reaches a predetermined point.

1,683,253. WORK AND TOOL HOLDER. WALTER J. MCCONNELL, Cleveland, Ohio. Filed Mar. 9, 1927. Serial No. 173,996. 2 Claims. (Cl. 82—35.)



1. In a work and tool holder, a threaded body portion formed with a shank, a head formed of slotted segments slidable radially on the front end of the body, bolts extending through the slots and into the body, tools clamped to the front ends of the segments, and a wedging screw collar carried by the body and engaging the rear ends of the segments for positively adjusting the same.

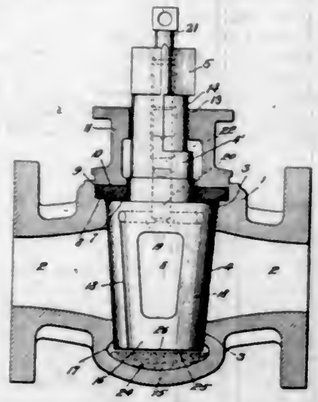
1,683,254. VACUUM SEAL AND APPARATUS. OGDEN MINTON, Greenwich, Conn. Filed Dec. 10, 1926. Serial No. 153,851. 4 Claims. (Cl. 34—48.)



1. In a seal for the passages of a vacuum chamber, three rotatable members mounted in the passages in sliding engagement with the walls of said chamber and in air-tight engagement relatively to each other, two of said members mounted to rotate in the same plane, the other of said members mounted below and pressed against the surfaces of the other two members, and a liquid in contact with the surfaces of said members whose axes are in the same plane.

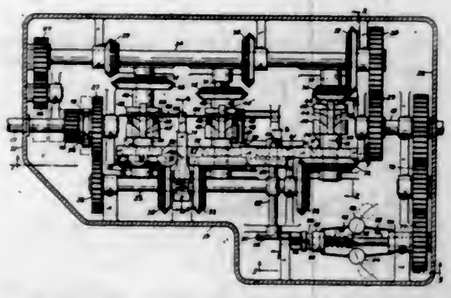
1,683,255. TIE PRESS. OSCAR W. MORTENSON, GUNNAR E. THELIN, and KARL FRANK NORRHAGEN, Chicago, Ill. Filed Mar. 25, 1927. Serial No. 178,200. 1 Claim. (Cl. 100—57.)

A tie press, including a base, a cover hingedly mounted on the base, and a strip of relatively soft material hingedly mounted between the base and the cover, and hinged means for locking said cover in position with respect to the base and said soft material, said means comprising U-shaped metallic bars curved upwardly from the cover to afford a resilient pressure when in locked position, the hinge axis of said locking bars being parallel to the hinge axis of the press cover.



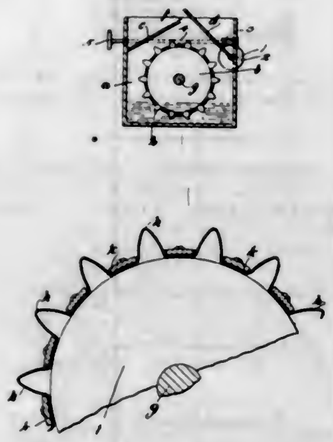
1,683,256. CARPENTER'S LEVEL. WILLIAM L. MYERS, St. Louis County, Mo. Filed Apr. 22, 1925. Serial No. 25,055. 2 Claims. (Cl. 33—213.)

1. In a device of the class described, the combination of a straight edge provided with a rectangular opening, a tube carrier arranged in said opening and provided with a sight opening, a spirit tube arranged in said carrier and



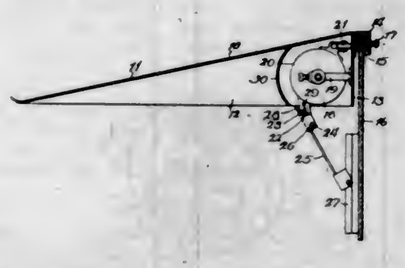
visible through said sight opening, an attaching lip formed integral with one end of said carrier and disposed longitudinally relative thereto, said lip being offset laterally and outwardly from said tube carrier and secured to one of the walls of said rectangular openings for spacing said carrier throughout its entire length from said wall, a threaded shank fixed to and extending transversely from the opposite end of said tube carrier, a bifurcated guide for receiving said shank and provided with prongs driven into a wall of said rectangular opening at right angles to the first mentioned wall for supporting said guide in alignment with said shank, and disks screw-seated on said shank bearing on the opposite sides of said guide for adjusting said tube carrier angularly with respect to its longitudinal axis.

1,683,257. VALVE. SVEN JOHAN NORDSTROM, San Francisco, Calif., assignor to Merco Nordstrom Valve Company, San Francisco, Calif., a Corporation of Delaware. Filed Oct. 18, 1927. Serial No. 226,867. 2 Claims. (Cl. 251—93.)



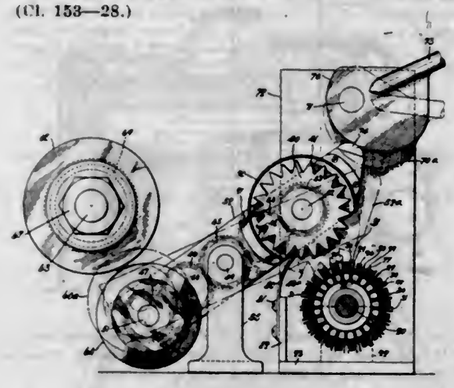
1. A valve comprising, a casing having a passageway therethrough and a valve seat formed transversely of the passageway, a plug seated in the valve seat and having a hole adapted to register with the passageway, said casing having a space forming a chamber into which the smaller end of the plug projects, powdered mica filling said chamber up to substantially the smaller end of the plug and means for forcing lubricant under pressure into the chamber to compress the mica and fill the space between the mica and the end of the plug.

1,683,258. VARIABLE-SPEED TRANSMISSION. HAYES M. PASSMORE, Oakland, Calif. Filed Apr. 8, 1927. Serial No. 181,981. 9 Claims. (Cl. 74—97.)



1. In a device of the character described, drive and driven shafts, a plurality of intermediate shafts operatively connected to one of said first shafts, fixed gears on the other of said first shafts, gears splined to each of said intermediate shafts and movable therealong for engagement with different of said first gears, and means mechanically controlling the positioning of said movable gears on said intermediate shafts and directly operative to prevent the engagement of more than one of said movable gears with the co-operating gear of said first gears.

1,683,259. CENTRIFUGAL SPRINKLER. JOHN C. PENDUE, Methuen, Mass., assignor to Manufacturers' Machine Company, North Andover, Mass., a Corporation of Massachusetts. Filed Oct. 3, 1925. Serial No. 60,191. 7 Claims. (Cl. 299—63.)

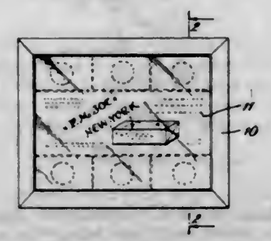


1. In an atomizer having impact surfaces, a centrifugal distributer revolubly mounted in said atomizer and comprising a central core and foraminous water lifters secured to said core, extending longitudinally thereof and projecting radially therefrom.

1,683,260. COMBINED WINDSHIELD VISOR AND WIPER MOTOR. THOMAS B. POLK, Seattle, Wash., assignor, by mesne assignments, to Trico Products Corporation, Buffalo, N. Y. Filed Jan. 26, 1924. Serial No. 688,894. 7 Claims. (Cl. 15—253.)

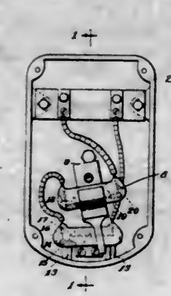
1. In combination, a vehicle visor; a windshield cleaner motor supported thereby in housed relation and underneath the shade portion thereof; a windshield cleaner yieldably connected to said motor, and means for adjustably mounting the visor and motor as a unit upon a vehicle windshield for varying the field of vision through the latter while permitting the cleaner to remain in operative position with respect to the windshield.

1,683,261. APPARATUS FOR SPREADING THE RISER BARS OF COMMUTATORS. LORA E. POOLE, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed July 6, 1926. Serial No. 120,761. 4 Claims. (Cl. 153—28.)



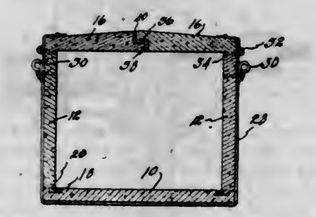
1. Apparatus for bending the riser bars of a commutator, comprising in combination, means for supporting a shaft carrying a commutator having segment sand a pair of bendable spaced riser bars associated with each of its segments, the riser bars of each pair defining an armature conductor receiving space, said shaft carrying a bar wound armature having the ends of its bar conductors located in certain of said spaces; a member having teeth each adapted to enter between the adjacent risers of adjacent commutator segments in order to increase the space between said risers by bending the risers toward the armature conductor bar ends adjacent thereto, the spacing of said teeth corresponding to the spacing of the pairs of risers; means for rotating the shaft while the commutator is engaged by the toothed member; and means for moving the tothed member toward or away from the commutator.

1,683,262. PROCESS OF CHEMICALLY TREATING AND WASHING PULP. GEORGE A. RICHTER and MILTON O. SCHUR, Berlin, N. H., assignors to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Apr. 19, 1927. Serial No. 185,020. 8 Claims. (Cl. 92—16.)



1. A process which comprises subjecting pulp to a series of alternating chemical treatments and washings, and employing the wash water effluent from one washing of the pulp in another washing of the pulp wherein the contaminations in such effluent do not deleteriously affect the pulp or materially interfere with its succeeding chemical treatment.

1,683,263. DISPLAY DEVICE. JOHN GREER RUCKELSHAUS, Newark, N. J., assignor, by mesne assignments, to Fantum Mirror, Inc., New York, N. Y., a Corporation of New Jersey. Filed Apr. 20, 1927. Serial No. 185,103. 8 Claims. (Cl. 40—52.)

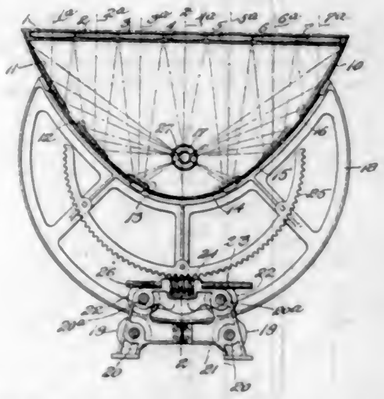


1. A display device comprising the combination of a reflecting screen, a plurality of advertisement areas behind the screen and normally concealed thereby, the screen being capable of transmitting light rays when powerfully illuminated from the rear, and means behind the areas for separately illuminating them to render them visible through the screen.

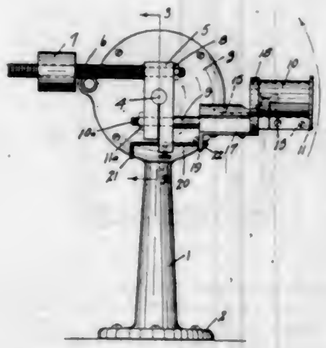
1,683,264. THERMOSTAT. HERBERT J. SAUVAGE, Chicago, Ill., assignor to Drying Systems, Inc., Chicago, Ill., a Corporation of Illinois. Filed Sept. 27, 1926. Serial No. 138,098. 3 Claims. (Cl. 200—138.)

1. In a thermostat, a housing for the thermostat, a switch movably mounted in said housing for controlling a circuit, means mounted on the housing for moving said switch, and gravity operated safety means mounted in the housing for rendering said switch ineffective if the housing is not in the proper position.

1,683,265. CONCRETE BURIAL BOX. OTTO E. SCHEEL, Detroit, Mich. Filed Feb. 21, 1927. Serial No. 169,780. 1 Claim. (Cl. 72—7.)



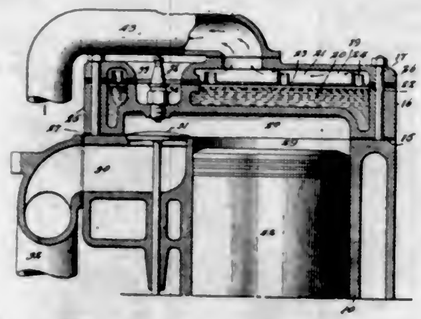
A burial box consisting of a floor, sides, and ends, each comprising a unitary concrete slab, each side and end slab having a tongue along its lower edge positioned substantially nearer the inner face of the slab than the outer face, each tongue having an inner face sloping downwardly and away from its outer face and at an angle to the inner face of the slab, said floor provided with grooves within which the tongues of the ends and sides are received, each groove having a width greater than that of the tongue received therein and having its inner side wall sloping downwardly and away from its outer side wall whereby it has a greater width at the bottom than at the top providing a wedge-shaped space within the groove alongside the inner face of the tongue which space is open to the interior of the box along the inner face of the side or end slab provided with the tongue, and a cementitious filler compound completely filling said space and wedging the tongue against the opposite side wall of the groove.



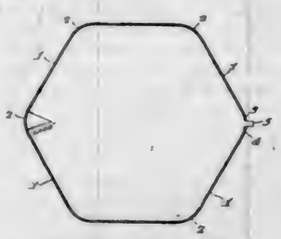
1,683,266. SOLAR HEATING APPARATUS. LEWIS H. SHIPMAN, Boston, Mass. Filed Aug. 5, 1925. Serial No. 48,323. 2 Claims. (Cl. 126—271.)

1. In an apparatus for utilizing solar heat the combination of a parabolic reflecting structure comprising a plurality of flat longitudinally extending reflectors disposed

parallel with the focal axis of said structure; a plurality of longitudinally extending lens bars disposed parallel with the focal axis of said structure and supported in position at the front of said structure so as to concentrate the rays on to said reflectors, and a conduit whose axis is coincident with the focal axis of said reflecting structure.



1,683,267. CENTRIFUGAL CASTING MACHINE. CHESTER P. SHOUDY, Spokane, Wash., assignor to Shoudy Manufacturing and Developing Company, Spokane, Wash., a Corporation. Filed Aug. 1, 1927. Serial No. 209,683. 4 Claims. (Cl. 22—65.)

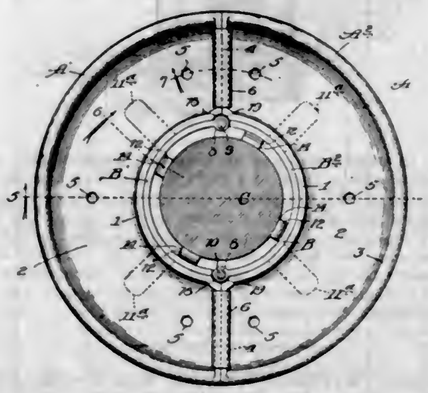


1. The combination with a motor shaft and operating means therefor, of a block secured on the shaft and a counterbalance for the shaft, an arm carried by the block and a mold fixed at the free end of the arm, an adjustable carrier on the arm, and a crucible supported on said carrier.

1,683,268. ENGINE HEAD. ALBERT B. STREETER, New York, N. Y. Filed Feb. 15, 1926. Serial No. 88,188. 8 Claims. (Cl. 123—173.)

1. An internal combustion engine comprising a cylinder block provided with piston containing chambers open through the top of the block and provided with water jacket spaces, a head for the block with its underside recessed to provide combustion chambers for each of the piston chambers, means for demountably securing the head to the block, said head provided with a liquid chamber adapted to contain a liquid, and provided with an air intake discharging into said chamber adjacent its bottom and into the liquid therein below its level, and said head provided with a discharge conduit leading off from the upper portion of said liquid chamber and from the free space above the liquid level therein, and a baffle provided with discharge vents positioned in the head and separating the liquid chamber into a lower liquid containing chamber and an upper gas or vapor containing chamber.

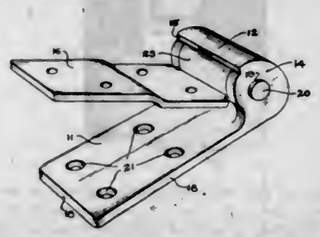
1,683,269. PISTON-RING SPRING. OTTO E. SZEKELY, Moline, Ill., assignor to John A. Ramsey, St. Louis, Mo. Filed June 1, 1925. Serial No. 33,938. 1 Claim. (Cl. 74—109.)



An integral piston ring spring having six equal sides joined together by curves of substantially equal radii and divided at the center of one of said curves, the curved ends of the spring having the same radius as the other curves, the radius of each curve being substantially 0.469 inches and the sides between said curves being substantially straight, whereby the ends of the spring will exert substantially the same pressure as the other curves and thus assure uniformity of stress distribution throughout the entire spring.

1,683,270. RADIATION RECEIVING CONDUCTOR. MARCIA ESTABROOK TAYLOR and JOHN BELLAMY TAYLOR, Schenectady, N. Y. Filed Aug. 25, 1923. Serial No. 659,352. 4 Claims. (Cl. 250—33.)

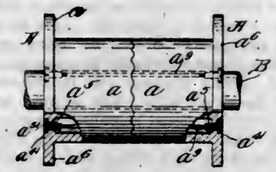
1. In combination with a collapsible frame structure adapted to be opened and closed comprising a central supporting rod and ribs pivotally secured thereto and radially extended therefrom, a sleeve adapted to slide along said rod, struts pivoted to said sleeve and to said ribs and controlling the movement of said ribs, hinged tips on said ribs to which a flexible radiation conductor may be secured, links each of which is pivoted on one end to one of said hinged rib tips and on the other end to one of said struts whereby said tips are maintained substantially parallel to said central rod when said frame is in its open position, a self-supporting stand for said structure, and an adjustable clamp mechanically inter-connecting said structure and said stand, whereby said radiation conductor may be given any desired position in altitude and azimuth.



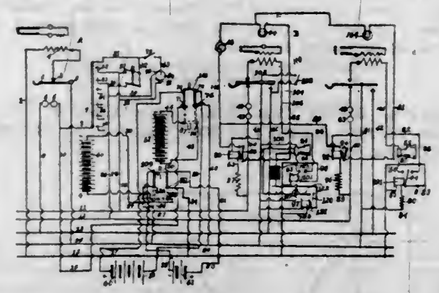
1,683,271. FLOWERPOT DEVICE. ROBERT JOHN THOMPSON, Paris, France, and CHARLES FISHER, New York, N. Y. Filed June 4, 1925. Serial No. 34,861. 7 Claims. (Cl. 47—34.)

1. A flower pot device comprising a post-clamping bracket-ring provided with depending outturned arms, and an annular flower pot supported on said arms comprising hollow arcuate sectors open at their upper sidee.

2. A flower pot device comprising a bracket-ring, adjustable wedges within and movably attached to said ring, and arcuate flower pot sectors mounted on and embracing said ring.



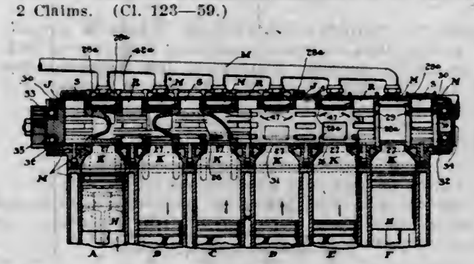
1,683,272. DUSTPROOF HINGE. MORTON TUCKER, Philadelphia, Pa. Filed May 9, 1927. Serial No. 189,945. 11 Claims. (Cl. 29—11.)



1. The herein described process of manufacturing the female butt of a dust proof hinge, which consists in producing in one operation a drop-forged blank including a curved portion at one end thereof having diverging side enclosures, and then straightening said enclosures into substantial parallelism.

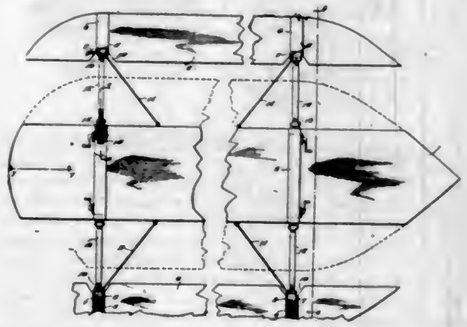
1,683,273. SPOOL AND THE LIKE. HANS H. WANDERS, Boston, Mass. Filed Feb. 14, 1927. Serial No. 168,190. 5 Claims. (Cl. 242—118.)

1. As a new article of manufacture, a molded one-piece end member for use in making an article of the character described comprising a cylindrical barrel section; an integral internal end wall at the outer end of said barrel section radial sinuous corrugations providing alternating projections and recesses at the inner end of said barrel section, and a longitudinally extending conduit groove upon the exterior of said barrel section communicating at its inner end with one of said recesses.



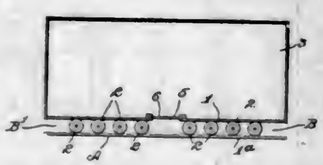
1,683,274. ELECTRICAL POLICE SIGNAL. FERDINAND PAUL AUGUST WEYLER and HORACE FREED, Philadelphia, Pa. Filed Sept. 20, 1926. Serial No. 136,630. 6 Claims. (Cl. 179—5.)

1. In a police alarm system, having a central station, and a series of outlying boxes which are callable and communicable with both individually and collectively from the central station, the combination of a signal light and its circuit placed at each box, a relay set in parallel with the ringing circuit at each of these boxes, and operative when the circuit is traversed by a current of higher electro-motive force and inoperative when a current of less electro-motive force traverses the ringing circuit of the box and means operatable from the station for increasing the potential of the sources of electrical current traversing these ringing circuits, and a circuit including the signal light, and a source of electrical lighting energy and the armatures of said relays and closed by these relays.



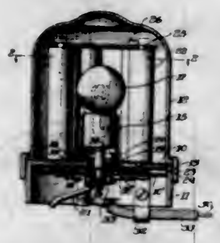
1,683,275. ROTARY VALVE FOR INTERNAL-COMBUSTION ENGINES. ADOLF A. J. WESTMAN, Montreal, Quebec, Canada. Filed Apr. 14, 1925. Serial No. 23,072. 2 Claims. (Cl. 123—59.)

1. An internal combustion engine valve comprising a cylindrical sleeve internally partitioned to provide a plurality of exhaust chambers separated from one another by



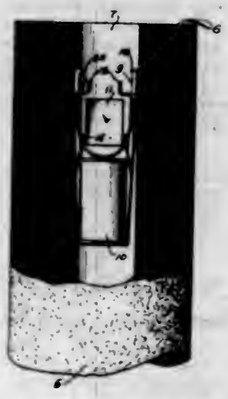
intervening gas admission chambers, the cylindrical wall of each chamber being formed with a series of openings spaced therearound, the series of openings communicating with the exhaust chambers constituting the outlets from said chambers while the series of openings communicating with the gas admission chambers constitute gas inlets thereto, each gas admission chamber being provided with a pair of outlet openings located at opposite sides of the inlet openings to said chamber and in alignment circumferentially of the sleeve with a pair of inlet openings communicating with the exhaust chambers between which said gas admission chamber is located, a lining sleeve in which said valve is inserted, said lining sleeve comprising cylindrical portions surrounding the portions of the valve in which are formed the outlets from the gas admission chambers and the inlets to the exhaust chambers and being each provided with a port adapted to align with said inlets and outlets in the operation of the valve, spacing ribs connecting the aforesaid cylindrical portions of the lining sleeve, said cylindrical portions of the lining sleeve being provided with interior circumferentially extending lubricant grooves intersecting radial openings extending from the inner to the outer surface of the lining sleeve, each cylindrical portion of the lining sleeve being further provided interiorly thereof with a plurality of longitudinally disposed grooves to which oil is conveyed from the circumferentially extending groove via small grooves formed in the outer surface of the valve.

1,683,276. BOAT. CHARLES L. WOODS, Alton, Ill. Filed Feb. 27, 1926, Serial No. 91,106. Renewed Feb. 18, 1928. 6 Claims. (Cl. 114—61.)



1. A boat including a hull comprising independent sections, arms forming connecting means between adjacent sections and pivoted thereto, means for adjusting the effective point of connection between the arms and one of the sections for varying the relative adjustment of the sections and means for adjusting the sections vertically, whereby they simultaneously receive a lateral adjustment.

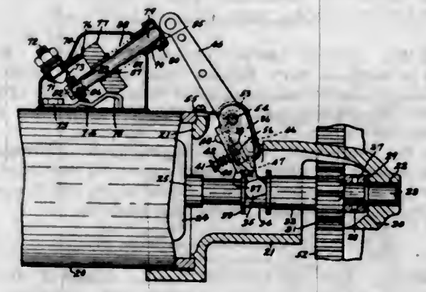
1,683,277. TIDE-WATER SYSTEM. FRANK M. ZOTTOLI, Boston, Mass. Original application filed June 6, 1922, Serial No. 566,396. Divided and this application filed Nov. 27, 1923. Serial No. 677,310. 6 Claims. (Cl. 61—20.)



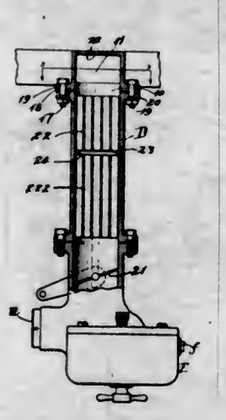
1. In combination with a sluiceway open to tide water at all times at both ends and having at all times a free and open passage throughout its length from tide water to tide water, a turbine set to rotate on a vertical axis in said sluiceway, a reservoir, a passage between the reservoir and the sluiceway so located that tide water can enter the reservoir only by first entering the sluiceway and a gate controlling said passage.

1,683,278. VEHICLE SIGNAL. VLADISLAV ALTMAN, Racine, Wis. Filed May 11, 1927. Serial No. 190,402. 9 Claims. (Cl. 116—63.)

1. In a signal device of the character described, the combination with a lamp, of a curtain comprising a group of translucent members pivoted side by side on parallel axes opposite said lamp, said members having colored and uncolored portions on corresponding opposite sides thereof respectively, and means for simultaneously rotating said members through a half turn whereby to expose either of said portions to view from a point on the opposite side of said curtain from said lamp.



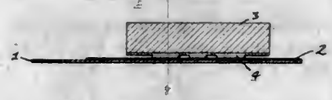
1,683,279. MATERIAL HOLDER. KARL EDWARD ANDERSON, Chicago, Ill. Filed Mar. 9, 1927. Serial No. 173,854. 12 Claims. (Cl. 206—59.)



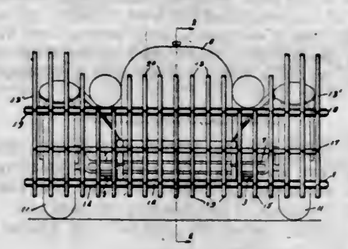
1. A device of the class described adapted to be inserted in an opening through a roll of roofing material, having means for holding a can of cement therein; additional means for individually holding a box of nails therein and means for frictionally engaging the walls of said opening and spring means for increasing and maintaining said frictional engagement.

1,683,280. VARIABLE-RESISTANCE SWITCH. JAMES L. ARTHUR, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 29, 1925. Serial No. 65,670. 2 Claims. (Cl. 201—48.)

2. An electric switch comprising pairs of stationary contacts, a rigid, high total resistance contact for bridging one pair of stationary contacts, a low total resistance contact for bridging the other pair of contacts, a spring urging the high resistance contact toward switch-closing position, an operating member movable in one direction for retaining the high resistance contact in switch-open position and movable in the other direction first to permit said high resistance contact to be moved by said spring into switch-closing position and then to move the low resistance contact into switch-closing position, and a spring for resisting the last described movement of the operating member.

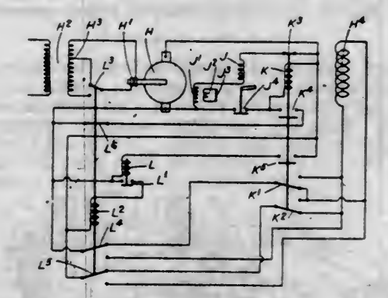


1,683,281. INTAKE MANIFOLD. HORACE W. ASIBE, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 21, 1925. Serial No. 3,822. 4 Claims. (Cl. 123—52.)



1. A device for distributing fuel mixture from a source of supply to the several cylinder intake ports of a multicylinder internal-combustion engine, comprising in combination, a manifold having a plurality of conduits symmetrically disposed about a mixture-receiving space; a riser connecting the source of fuel mixture with said mixture-receiving space; straighteners provided in the riser for at least a portion of its length and affording a plurality of straight passageways adapted to deliver, under normal operating conditions, all of the fuel mixture passing through the riser in a straight, unobstructed flow to the mixture-receiving space; and an equalizer ring in the riser located anterior to at least a portion of the straighteners, said ring being adapted to obstruct the flow of fuel mixture along the wall of the riser and to direct it toward the center thereof.

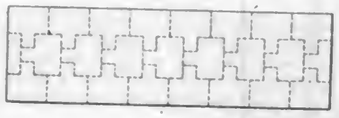
1,683,282. METHOD OF DECORATING TRANSPARENT SURFACES. GEORGE C. ASHLEY, San Francisco, Calif. Filed July 5, 1927. Serial No. 203,372. 12 Claims. (Cl. 41—38.)



1. The method of decorating transparent materials comprising, painting a surface of transparent material with an adhesive coating forming a design in said adhesive coating by forcing a portion of the coating within a predetermined area sideways and removing the remainder of the coating within said area.

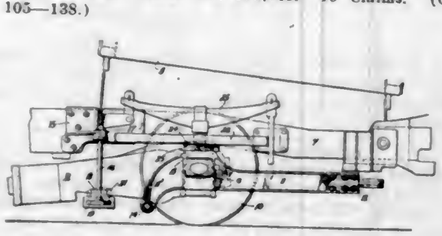
1,683,283. SAFETY BUMPER. HARVEY M. BOWMAN, Mountain View, Calif. Filed Oct. 15, 1927. Serial No. 226,419. 3 Claims. (Cl. 293—32.)

1. A safety bumper comprising a U-shaped frame, spring means connecting said frame with an automobile, flexible members extending transversely to said frame, and upwardly therefrom.



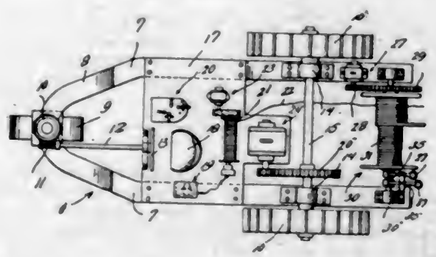
1,683,284. STARTING AND SYNCHRONIZING OF ALTERNATING-CURRENT DYNAMO-ELECTRIC MACHINES. WILLIAM ANTHONY AMBROSE BURGESS, Monkseaton, England, assignor to A. Reyrolle & Company Limited, Hebburn-on-Tyne, England, a Company of Great Britain. Filed Apr. 8, 1926, Serial No. 100,700, and in Great Britain May 9, 1925. 9 Claims. (Cl. 172—280.)

1. In starting and synchronizing apparatus for an A. C. dynamo-electric machine, the combination with the main field winding of the machine whose connections to the machine terminals are reversed when starting operations commence, of an A. C. supply circuit for the machine, a D. C. circuit associated with the field of the machine, a polarized relay connected to the D. C. circuit and responsive to the beat between the supply voltage and the voltage of the machine, means for preventing operation of the



relay until the frequency of the beat has fallen to a predetermined value, and means whereby the field connections are brought into their normal condition when the relay operates.

1,683,285. COMPOSITION ROOFING SHINGLE. NAASON Z. BUTTERICK, Miami, Fla. Filed Feb. 4, 1927. Serial No. 165,973. 1 Claim. (Cl. 108—7.)



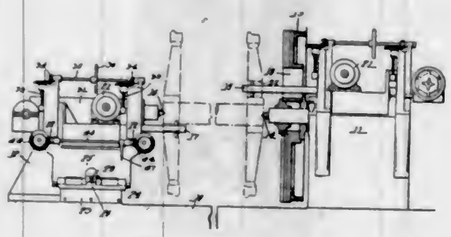
An individual shingle having a substantially rectangular body portion and an upward extension projecting from the upper edge of the body portion, said extension having a height equal to the intended exposure of said shingle, with the height of extension being substantially one-half the length of the body and the breadth being substantially one-third of the breadth of the body, whereby the shingles can be cut from a continuous strip without any waste by arranging opposed pairs transversely of the strip and separated by centrally positioned shingles extending longitudinally of the strip.

1,683,286. LOCOMOTIVE BOOSTER DEVICE. WILLIAM F. J. CASEY and GUSTAVE CAVIN, Kingston, Ontario, Canada, assignors, by mesne assignments, to C-S Engineering Company, a Corporation of Delaware. Filed Aug. 3, 1922. Serial No. 579,445. 15 Claims. (Cl. 105—138.)

1. The combination with a locomotive of a truck having an axle and wheels, a booster motor for driving said wheels in part supported on said truck, and means also supporting the motor from the locomotive structure including a suspension member and a substantially universal connection.

1,683,287. ELECTRIC-POWER TRUCK. WILLIAM H. COBURN and CHARLES KIERNAN, Morgantown, W. Va., assignors of one-third to Ernest H. Gilbert, Morgantown, W. Va. Filed Sept. 29, 1927. Serial No. 222,919. 2 Claims. (Cl. 191—12.)

1. In a power supply apparatus for use in coal mine headings employed in a system of mining of the class described, a self-propelled wheeled truck constructed for movement in said heading, a rotary reel carried by said truck, a power take-off device associated with the reel and adapted to accommodate auxiliary current conducting lines leading to cutting machines, conveyors and the like, and a power supply cable wound on said reel, said power supply cable being suspended from and electrically connected with a main source of supply in a main heading in a mine.

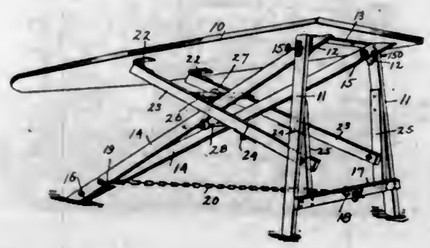


1,683,288. ART OF IMPROVING MINERAL OILS. FORREST WAYLAND ELEY, Newark, Ohio, assignor, by mesne assignments, to Anglo-California Trust Company. Filed Mar. 15, 1923. Serial No. 625,262. 6 Claims. (Cl. 196—39.)

1. The process of removing polymerizable constituents from mineral oils which comprises subjecting such mineral oil to the action of a solution of glacial acetic acid in ether, and separating resultant polymerized products.

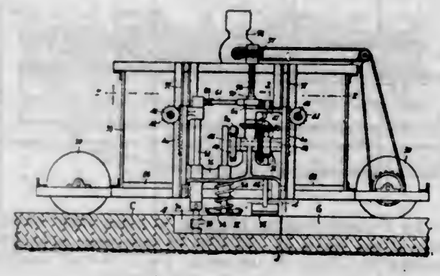
1,683,289. ART OF REFINING OIL. HARRY F. GLAIR and OSCAR E. BRANSKY, Whiting, Ind., assignors to Standard Oil Company, Whiting, Ind., a Corporation of Indiana. Original application filed July 7, 1922, Serial No. 573,473. Divided and this application filed Oct. 10, 1925. Serial No. 61,774. 2 Claims. (Cl. 196—19.)

1. The method of removing wax from lighter wax-bearing, substantially uncracked oil distillates which consists in admixing with such distillates a paraffin wax-bearing oil of higher viscosity than the burning oils and of lower viscosity than the oil under treatment, chilling and filter-pressing the mixture.



1,683,290. QUARTERING AND THIRDING ATTACHMENT. ARTHUR C. GOUGH and VLADIMIR CHARUSHIN, Fitchburg, Mass., assignors, by mesne assignments, to Shaw Crane-Putnam Machine Company, Inc., a Corporation of Delaware. Filed June 30, 1927. Serial No. 202,719. 10 Claims. (Cl. 29—27.)

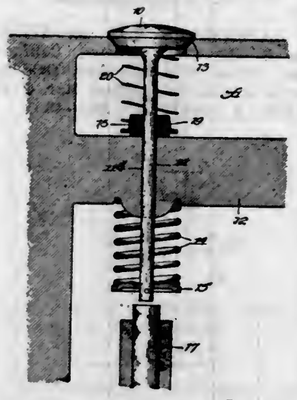
1. In a metal working machine, the combination with a pair of centers for supporting the work, metal working means adjacent to one center and offset therefrom for operating on the work at that end, and means adjacent to the other center and offset therefrom in a different direction for operating on the work at that end, of an attachment for holding the second means, adjustable in two directions, to permit change in the positions around the centers at which the work is done.



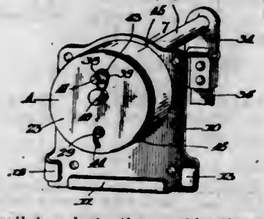
8. In a quartering and thirding machine for driving wheel sets, the combination with a head and tail stock, each having a center for supporting the sets at their ends, of a support provided with a guide extending upwardly at an angle of 30° toward said centers, an angular block having a bottom surface located parallel with said guide and resting thereon and its top surface horizontal, means for adjusting the block up and down the incline, means for clamping the block in adjusted positions, a stop for preventing the movement of the block toward the centers beyond a certain point, the block having horizontal guides along its upper surface, a frame adjustable along said horizontal guides toward and from the centers, and an attachment carried by said frame and having a guide for a metal working tool parallel with the axis of the centers, said attachment being adjustable.

1,683,291. IRONING TABLE. JAMES G. HAUGH, Bascom, Ohio. Filed June 26, 1926. Serial No. 118,817. 2 Claims. (Cl. 68—10.)

1. An ironing table comprising a board, a pair of legs pivoted to the underside of the board near one end thereof, and constituting separated floor-engaging members, a single point floor-engaging member composed of bars pivoted to the ironing board at the same end as said legs, and spaced apart where they are pivoted and converged to meet at the floor-engaging point, a pair of hinged braces pivoted to the underside of the board at separated points at substantially midlength thereof and pivotally connected to said legs, said braces having hinges that permit the same to break towards the board when the sections of said members are in a straight line and a flexible tension member connected to said pair of legs at a point below the pivotal connection of said braces therewith and extending directly to and connected with said single point floor engaging member near the floor engaging end thereof.



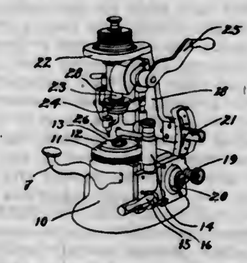
1,683,292. METHOD OF AND MEANS FOR GROOVING PLASTIC MATERIAL. JOSEPH WILLIAM HELTZEL, Warren, Ohio. Filed Mar. 11, 1926. Serial No. 93,978. 37 Claims. (Cl. 94—45.)



1. The method of grooving plastic material consisting in advancing a cutting member in the material while moving it transversely of the line of advance movement.

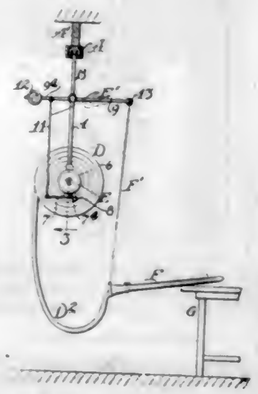
1,683,293. PACKING DEVICE FOR VALVE STEMS. ALBERT C. LINDBLOOM, Chicago, Ill. Filed Dec. 19, 1923. Serial No. 681,515. 3 Claims. (Cl. 251—144.)

1. In combination, an internal combustion engine, having a valve guide, a valve having a stem slidable in said guide, a spring for normally holding said valve on its seat, packing surrounding said stem and located within the intake passage of the engine, a cup-like washer around said packing, a flange at the lower edge of said washer, and a helical spring of flat cross-section partly enclosing said washer and bearing against said flange to press said packing against the guide, the spring when collapsed being substantially the length of said washer whereby it will accommodate valve guides of varying height.



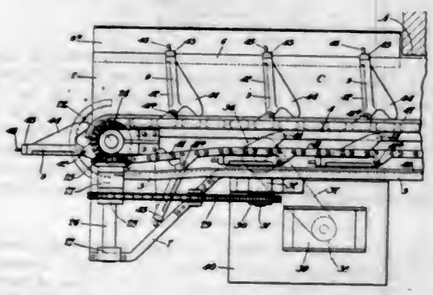
1,683,294. MAIL-BAG LOCK. ARCHIE EDGAR LOW, Ottawa, Ontario, Canada. Filed Jan. 22, 1927. Serial No. 162,771. 2 Claims. (Cl. 70—2.)

1. In a mail bag lock, the combination with an apertured casing having spring actuated locking dogs pivotally mounted therein, of a locking bolt engaging with the casing apertures and protruding therebeyond, said bolt being formed adjacent the protruding end with a groove to automatically engage with said dogs on the bolt being inserted through the casing, the protruding end of the bolt being cone-shaped and formed with an opening therein.



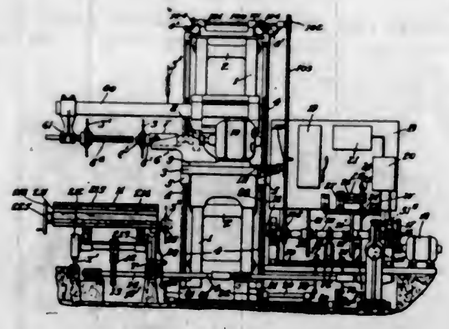
1,683,295. LENS CUTTER. ALBERT E. MAYNARD, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Original application filed July 22, 1922, Serial No. 576,846. Divided and this application filed Apr. 28, 1924, Serial No. 709,508, and in Great Britain July 6, 1922. 9 Claims. (Cl. 33—28.)

9. In a device of the character described, a former, a swinging arm, a pair of contact arms pivoted on the



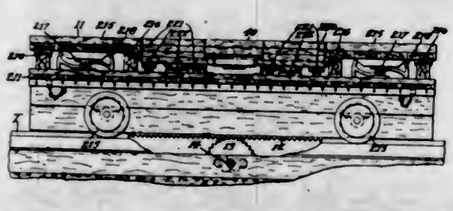
swinging arm, former contacts on each pivoted arm, and yielding means to hold the former contacts against the former.

1,683,296. APPARATUS FOR STUFFING PLAITS. ALLISTER S. MITCHELL, Oakland, Calif., assignor to California Cotton Mills Company, Oakland, Calif., a Corporation of California. Filed Mar. 9, 1927. Serial No. 173,877. 5 Claims. (Cl. 226—43.)



1. Plait-stuffing apparatus comprising a reel, a brake controlling said reel, an insertion-tool controlling the operation of said brake.

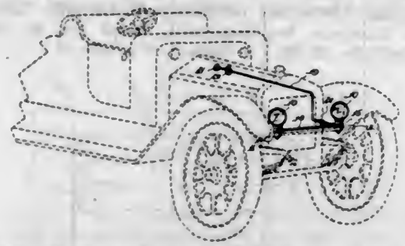
1,683,297. MINING MACHINE. EDWARD O'TOOLE, Gary, W. Va. Filed June 14, 1926. Serial No. 115,908. 1 Claim. (Cl. 262—9.)



A longwall combined mining and loading machine comprising an elongated main frame composed of a base plate, rear and front beam members secured along the longitudinal edges of said base plate for the major part of the length of said frame, a link chain trained over sprockets at each end of said frame and adapted to travel longitudinally thereof, conveyer flights having their rear ends on a materially higher plane than their body portion and said rear ends being pivotally secured to said chain, said conveyer flights having the forward ends of their body portions projecting beyond the forward edge of said machine frame and overlying the floor of the mine, cutter bits removably mounted in the forward free ends of said conveyer flights, and an integral supporting wing on the body portion of each of said conveyer flights adapted to engage the forward edge of said base plate to support said flights in extended position during their cutting and conveying operation and to underlie said chain on the return travel of said chain.

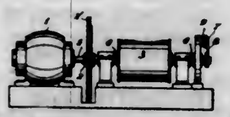
1,683,298. STONEWORKING MACHINE. GEORGE D. PITKIN, Montpelier, Vt., assignor to Lane Manufacturing Company, Montpelier, Vt., a Corporation of Vermont. Filed Apr. 8, 1926. Serial No. 100,490. 8 Claims. (Cl. 125—13.)

1. In a stone working machine, a reversible driving source, an automatic reversing device therefor, a main shaft driven from said driving source, a pair of independent drives loosely mounted on said shaft, a clutch, a manually operable shipper lever for selectively shifting said clutch into engagement with either driver to couple the same to said main shaft, a countershaft operatively connected with said reversing device and with said clutch, a pair of ways, a stone table and a saw head respectively traversing said ways, a table feed adapted to be driven from one of said drivers on the main shaft, a head feed adapted to be driven from the other driver, a reversing mechanism for the table feed and an independently operating reversing mechanism for the head feed, and independent connections from said reversing mechanisms to said countershaft.



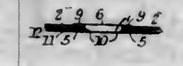
1,683,299. WORKTABLE. GEORGE D. PITKIN, Montpelier, Vt., assignor to Lane Manufacturing Company, Montpelier, Vt., a Corporation of Vermont. Original application filed Apr. 8, 1926, Serial No. 100,490. Divided and this application filed Oct. 22, 1926. Serial No. 143,467. 4 Claims. (Cl. 125—35.)

1. In a stone working machine, a stone table having a pair of end ways, an end slide in each way, means for adjusting the slides in the ways, and a central support rotatably mounted between the end supports.



1,683,300. DIRIGIBLE HEADLIGHT. ANSIL S. RAMSAY, Troy, Ala. Filed Oct. 20, 1926. Serial No. 142,926. 1 Claim. (Cl. 240—61.)

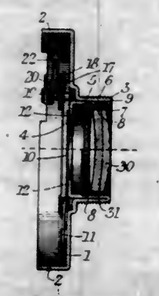
In an automobile, the combination with the dirigible headlights and supporting brackets therefor comprising plates secured to the underside of the lamps and connected by a rod for turning said lamps in unison, of an operating member connected to one of the aforementioned plates to extend laterally therefrom and having an upstanding flange at its inner edge with slots in the flange and body portion of the member, and a stop on the plate to engage the supporting bracket for positioning the lamps to project the headlights forwardly; together with a rod slidable longitudinally through the radiator frame of the automobile and through the slot in the flange of the operating member, the outer end of said rod being bent to engage in the slot in the body portion of said operating mem-



ber, a spring encircling the rod and interposed between the radiator frame and flange of the operating member for moving the lamps or headlights to normal position, an extension from the rod for convenience in moving the same against the action of the spring, and means for holding the rod temporarily.

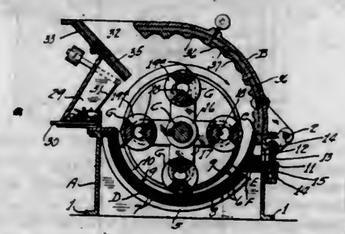
1,683,301. DEVICE FOR SYNCHRONIZING INDIVIDUALLY-DRIVEN PARTS AT A TRANSMITTER AND A RECEIVER STATION. HORST RASSOW, Berlin-Wilmersdorf, Germany, assignor to Siemens & Halske, Aktiengesellschaft, Siemensstadt, near Berlin, a Corporation of Germany. Filed Aug. 28, 1926, Serial No. 132,164, and in Germany Sept. 12, 1925. 18 Claims. (Cl. 178—53.)

1. In a device for synchronizing individually driven parts at a transmitter and a receiver station by synchronizing current impulses dispatched from the transmitter station across the connecting line between said stations, more particularly for the telegraphic transmission of pictures, in combination, at the receiver station a centrifugal clutch adapted to transmit the main driving force and a magnetic clutch adapted to be energized by said synchronizing current impulse when the speed of the transmitter differs from that of the receiver.



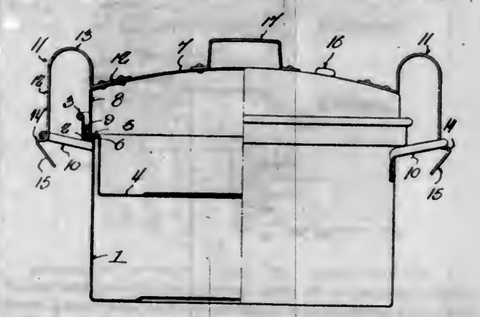
1,683,302. CAMERA COVERING AND METHOD OF MAKING SAME. FRANK H. REYNOLDS, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed July 13, 1926. Serial No. 122,263. 14 Claims. (Cl. 220—1.)

1. In a camera, a covering therefor made of cellulosic material, and a cellulosic binding member covering and united to the edges of the cellulosic covering, whereby a reinforced decorative edge is produced.



1,683,303. SHUTTER CASING. WILLIAM A. RIDDELL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed July 21, 1925. Serial No. 45,129. 9 Claims. (Cl. 95—53.)

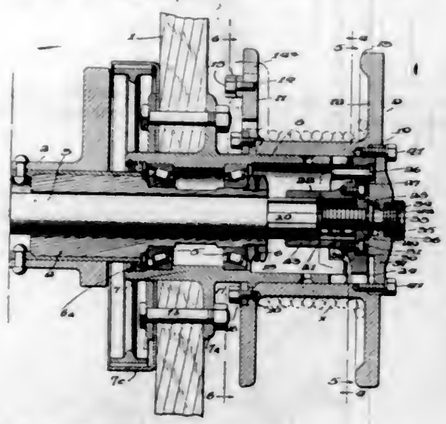
1. In a photographic shutter, the combination with shutter mechanism, of a shutter casing for enclosing the shutter mechanism comprising an integral structure, said structure including an annular base plate, a flange extending around the periphery of the base plate and a double-walled tubular extension from the base plate between the flange and the aperture of the annular member,



the walls of the double-walled tubular extension lying in contact whereby a reinforced tubular extension is provided.

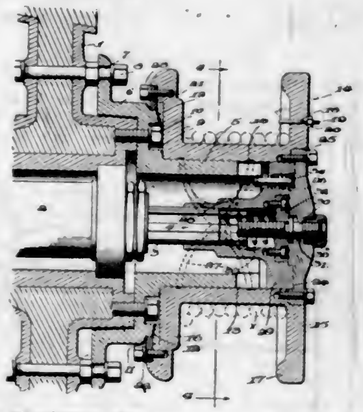
1,683,304. PULVERIZING MACHINE. ERNEST T. ROEBKE, St. Louis, Mo., assignor to American Pulverizer Company, St. Louis, Mo., a Corporation of Missouri. Filed Mar. 12, 1927. Serial No. 174,848. 11 Claims. (Cl. 83—11.)

1. In a machine of the class stated, in combination with a casing, an arcuate grinding surface within the casing, and a carrier mounted for rotation within the casing, of an annular series of cylindrical hammers supported by the carrier and rotatable both with and axially relatively to the carrier for co-operation with the grinding surface, each of said hammers including spaced annuli and arcuate circumferentially spaced bars disposed between and connecting the annuli and having their outer peripheral surface in the circumferential plane of the annuli.



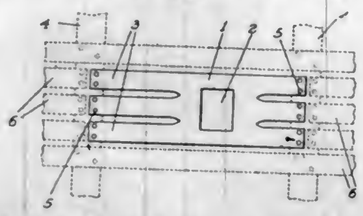
1,683,305. WATERLESS COOKER. ADOLPH L. ROSENHEIMER, Jr., Kewaskum, Wis., assignor to Kewaskum Aluminum Company, Kewaskum, Wis. Filed Oct. 10, 1927. Serial No. 225,208. 2 Claims. (Cl. 53—1.)

1. A cooking vessel comprising a bottom container provided with a lateral seat adjacent its upper edge, a cover having a lower rim removably positioned within said lateral seat, said bottom container having outwardly



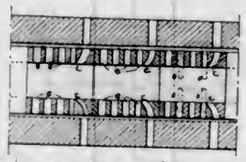
projecting looped handles, inverted U-shaped, upwardly arched, spring latching members carried by said cover in corresponding positions to the handles on the bottom container, each of said latching members having one of the arms rigidly secured to said cover and having its other arm extending downwardly for passage through the corresponding handle, and provided with an outwardly projecting cam portion adapted to snap beneath the handle and draw the cover downwardly.

1,683,306. ATTACHMENT FOR MOTOR VEHICLES. CHARLES E. RYAN and THOMAS J. SCHUETZ, Tulsa, Okla. Filed Oct. 12, 1925. Serial No. 62,065. 19 Claims. (Cl. 180—53.)



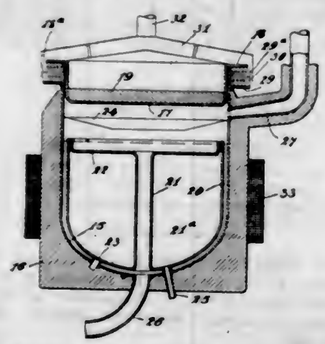
1. A mechanical movement comprising a driving member, two driven members, means whereby said driving member will alternately engage each of said driven members and spring actuated means whereby the engaging parts of said driving member and driven members will automatically become in alignment for all relative positions of the parts.

1,683,307. ATTACHMENT IN MOTOR VEHICLES. CHARLES E. RYAN and THOMAS J. SCHUETZ, Tulsa, Okla. Filed Oct. 12, 1925. Serial No. 62,066. 3 Claims. (Cl. 180—53.)



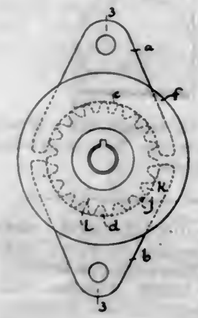
1. An attachment for motor vehicles comprising a flange adapted to fit over the hub of the vehicle wheel, means for securing said flange to the hub and to the wheel proper, a sleeve integral with said flange and angularly disposed with relation thereto, a drum rotatably mounted on said sleeve, a split ring adapted to be screwed to said drum and co-act with a recess in said flange, for retaining the drum on said sleeve, means for lubricating the contacting surfaces of said drum and sleeve, means for lubricating said ring and mechanism for rotating the drum free from the wheel and the wheel free from the drum.

1,683,308. WOODEN OUTLET-BOX FRAME. EUGENE L. SCRANTON, Hughson, Calif. Filed Feb. 20, 1926. Serial No. 89,598. 3 Claims. (Cl. 247—22.)



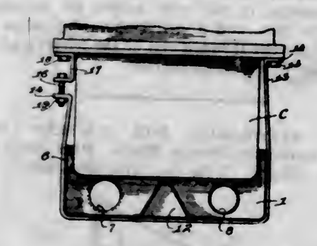
2. An outlet box frame for application to a frame building having spaced studs to receive lath strips, comprising a flat board having an opening cut therethrough intermediate its ends to receive an outlet box and being slit longitudinally from its end toward the opening, to form plaster locks, the length of the board on each side of the opening being approximately equal to the distance between studs adjacent which the board will be mounted.

1,683,309. TUNNEL KILN FOR CERAMIC INDUSTRY. VICTOR SELLIEZ, St.-Ghislain, Belgium. Filed Dec. 2, 1925, Serial No. 72,843, and in Belgium Dec. 2, 1924. 1 Claim. (Cl. 25—142.)



In a baking apparatus, a tunnel kiln, cars movable through the kiln, said cars having hollow floors provided with central communicating canals and lateral ducts communicating with the canals for receiving combustible gas, and means for admitting combustible gas to said ducts.

1,683,310. APPARATUS FOR THE GENERATION AND DISTRIBUTION OF MERCURY VAPOR AND SEALING MEANS THEREFOR. FRANK SHORT, Poughkeepsie, N. Y., assignor to Chemical Machinery Corporation, a Corporation of New York. Filed Sept. 2, 1924. Serial No. 735,495. 19 Claims. (Cl. 219—47.)



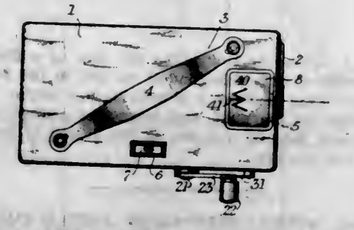
1. A mercury boiler including a body, a removable cover member and a mercury seal between the body and cover member, and means for preventing the loss of sealing mercury by vaporization.

1,683,311. TOOL OR APPLIANCE FOR FACILITATING THE MOUNTING OF SHAFT COUPLINGS. FREDERICK RICHARD SIMMS, London, England, assignor of one-half to Simms Motor Units Ltd., London, England. Filed Aug. 25, 1927, Serial No. 215,434, and in Great Britain Aug. 7, 1926. 1 Claim. (Cl. 29—84.)

A tool or appliance for facilitating the relative adjustment of the opposed members of shaft couplings of the kind referred to, comprising a pair of flat metal plates of a thickness corresponding to the amount of space or play desired between the said opposed members when mounted on the shafts to be coupled, and between which members, the said plates are inserted from diametrically opposite points, each of the plates being formed at one end with a semi-circular recess such that it can partly encircle a boss of the coupling part thereon.

1,683,312. CRANK-CASE-HEATING DEVICE. HENRY F. SINNING, Grundy Center, Iowa. Filed Dec. 20, 1926. Serial No. 156,029. 3 Claims. (Cl. 184—104.)

1. An engine crank case heater comprising a closed fluid tight hollow pan having inlet and outlet ports therein, fluid tight hollow walls communicating with and extending upwardly from the sides and one end of said pan and adapted to snugly and embracingly receive the lower portion of the crank case, baffle means of substantially inverted V-shaped cross sectional formation received in said hollow pan having their upper and lower sides secured to adjacent portions of said pan and bracing the top and bottom thereof, and strap brackets embracingly engaged about bottom and sides of said pan and adjustably secured to portions of the engine.



1,683,313. BOTTLE CAP. ROY N. STEWART, Natick, Mass., assignor to Stewart Manufacturing Company, Boston, Mass. Filed Dec. 14, 1926. Serial No. 154,777. 4 Claims. (Cl. 215—38.)

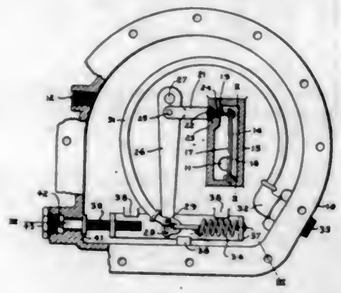
1. A milk bottle closure comprising a body having a depending outwardly flared locking lip, the lower face of the lip being provided with a rounded surface for engaging the lower wall of the closure seat of the milk bottle, the upper edge of the lip extending beyond the rounded face and constituting a shoulder for engaging the side wall of

the bottle closure seat, and a cap connected with the body extending beyond the periphery thereof having a depending annular skirt.

1,683,314. POWER-DRIVEN CAMERA WITH MOTOR SIGNAL. RAY L. STINCHFIELD, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Apr. 30, 1925. Serial No. 27,018. 13 Claims. (Cl. 88—17.)

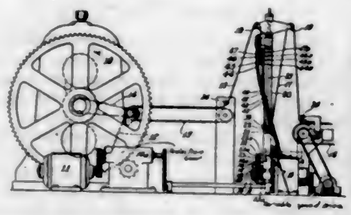
1. In a motion picture camera having a finder, a spring motor of the type in which energy may be stored for operating the camera, and a signal movably mounted relative to the finder operatively connected to and controlled by the motor adapted to give an indication in the finder relative to the energy stored in the motor.

1,683,315. PROCESS OF MAKING ANTISTATIC NITROCELLULOSE FILM. RAY L. STINCHFIELD, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Oct. 9, 1926. Serial No. 140,695. 4 Claims. (Cl. 95—9.)



1. The process of lowering the static tendency of flexible, transparent, static-producing nitrocellulose film which includes treating the rear face of said film with a solution of an alkali until it is superficially hydrolyzed, the treatment being stopped before its flexibility and transparency are impaired.

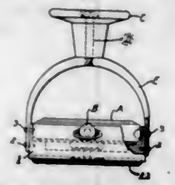
1,683,316. HEARING APPARATUS. ANTON VON SUCHORZYNSKI, Breslau, Germany. Filed July 27, 1925, Serial No. 46,372, and in Germany Feb. 5, 1925. 5 Claims. (Cl. 181—23.)



4. Apparatus for persons who are hard of hearing, comprising in combination a sound receiving diaphragm in the concha, a spiral spring fixed at one end to said diaphragm, a tube of soft rubber sheathing said spiral spring and having its free end formed as a membrane bag in contact with the membrane of the tympanum.

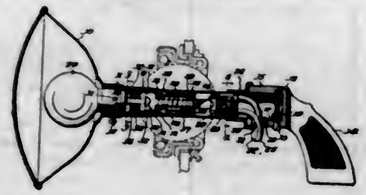
1,683,317. DEVICE FOR CONTROLLING THE FLOW OF FLUIDS. RICHARD E. B. WAKEFIELD, Chester, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 13, 1923. Serial No. 657,267. 8 Claims. (Cl. 236—92.)

1. In a device for controlling the flow of a fluid, the combination of a flexible conduit subject to the pressure of a controlling medium, a bi-metallic bar subject to the temperature of the fluid, and means for controlling the flow of said fluid in response to the flexing of both the conduit and the bar.



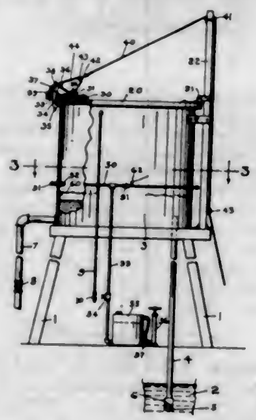
1,683,318. SPEED-CONTROLLING DEVICE FOR CONTINUOUS-STRIP-FEEDING MEANS. HARRY E. WANER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 20, 1927. Serial No. 207,119. 5 Claims. (Cl. 271—2.3.)

1. In combination with means for supporting a variable reserve supply of continuous strip material, means for feeding the material into the said supply, means for feeding the material out of the said supply, a variable-speed device interposed operatively between the two feeding means, and means responsive to the amount of material in the said supply for controlling the speed ratio of the said variable-speed device, the controlling means comprising fluid-pressure means having connection to the variable-speed device, feeler means mounted in position to be actuated by variation of the amount of material in the supply, and valve mechanism actuated by the feeler means and controlling the operation of the fluid-pressure means.



1,683,319. TIME STAMP. JOSEPH W. ADLON, St. Louis, Mo. Filed Dec. 20, 1926. Serial No. 155,904. 4 Claims. (Cl. 245—55.)

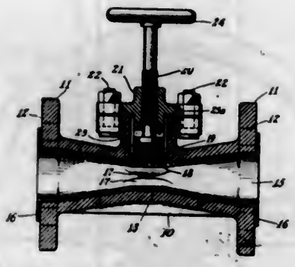
1. In a time stamp, a housing, a watch mounted in said housing, an elongated lever operatively connected to and extended radially from the shaft carrying the minute hand of said watch, a rotary member operatively associated with said lever and provided with a slot through which said elongated lever extends, a series of members operatively associated with said slotted member for moving two time-indicating pointers, one denoting the



hour and the other the minute, and a printing pad having time-indicating characters thereon associated with said time-indicating pointers.

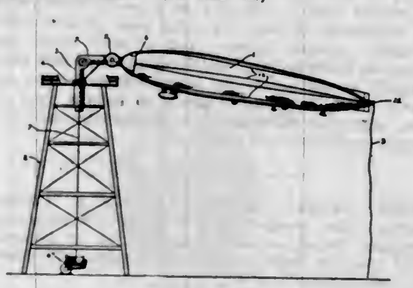
1,683,320. SPOT-LIGHT SWITCH. GEDOR W. ALDEEN, Rockford, Ill., assignor to Fyrac Manufacturing Co., Rockford, Ill., a Corporation of Illinois. Filed Feb. 20, 1925. Serial No. 10,500. 6 Claims. (Cl. 240—61.)

6. In combination, a tube, a lamp plug and a switch plug in said tube, the latter plug being oscillatory, current-supply wires connected to said switch plug, the tube having an opening from one end through which said wires are adapted to pass and emerge from the bottom of the tube, a handle having a barrel portion adapted to telescope over said end of the tube and having an opening from one end adapted to receive said wires and to register with said opening in the tube, means for securing said handle on the tube, and a switch-operating collar on the tube fitting over the forward end of the barrel and closing the end of the wire opening therein.



1,683,321. APPARATUS FOR RAISING WATER. CHARLES ANDERSON, Seattle, Wash. Filed July 14, 1927. Serial No. 205,684. 5 Claims. (Cl. 103—251.)

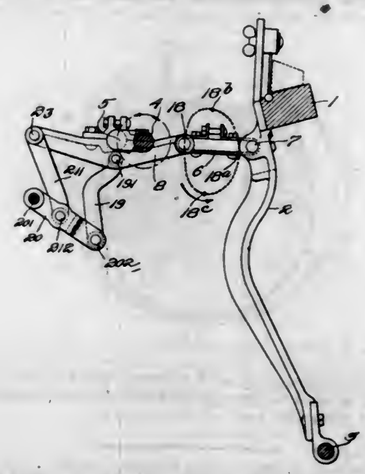
1. An apparatus for raising water, comprising a frame, a tank mounted on the frame, an inlet pipe, a discharge pipe, an air vent pipe, a cover for the tank, means for



providing an airtight connection between the cover and the tank, means for locking the cover to the tank, means for unlocking and raising the cover, and means for creating flames within the tank whereby a vacuum may be established therein for raising water through the inlet pipe into the tank.

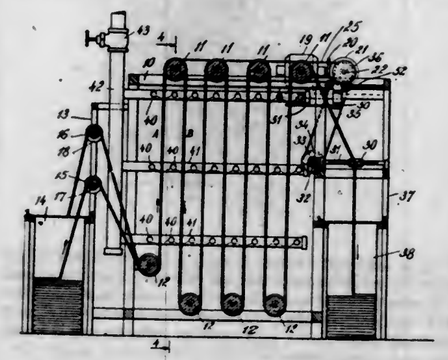
1,683,322. VALVE. BURTON B. ANNIS, Akron, Ohio, assignor to The B. F Goodrich Company, New York, N. Y., a Corporation of New York. Filed June 7, 1926. Serial No. 114,163. 3 Claims. (Cl. 251—5.)

1. A valve comprising a rigid casing, a removable, collapsible, conduit constituting a lining therefor, and means traversing a wall of the casing for collapsing the conduit, an inner cross-sectional contour line of the said conduit constituting a figure tapering outwardly with reverse curvature to an acute apex at each hinge-line of the conduit when the conduit is in uncollapsed form.



1,683,323. AIRSHIP ANCHORAGE. WILLIAM AUBERLIN, Northfield, Ohio. Filed Dec. 27, 1927. Serial No. 242,657. 1 Claim. (Cl. 244—2.)

A mooring rope attachment for airships, comprising a ring to which the rope is connected, a cap attached to said ring and covering the end of the airship, reenforcing bands of flexible material extending from end to end of the airship, and cable connections between said cap and the reenforcing bands, said cable connections being attached to the inside of the cap.

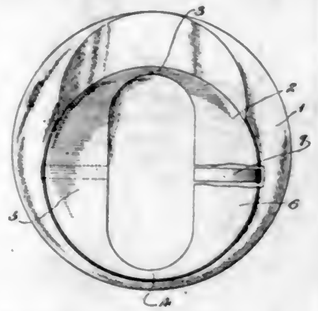


1,683,324. LAY MOTION FOR LOOMS. WILLIAM H. BAKER, Boston, Mass. Filed Oct. 4, 1927. Serial No. 223,932. 3 Claims. (Cl. 139—190.)

1. An improved lay-motion for looms, comprising in combination with an actuator-crank, a loom-lay, and a pitman having its front end connected with the lay, a lever having its front portion in pivotal connection with the rear end of said pitman, its intermediate portion operatively engaged with the actuator-crank, and its rear portion controlled by a fulcrum movable forward and rearward as said lever is moved by the actuator-crank, and means for raising and lowering the said fulcrum during each cycle of the actuator crank, through a less amplitude than the throw of the

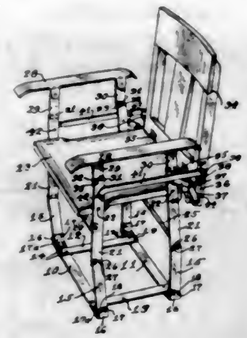
said actuator-crank, the parts coacting to cause the said point of pivotal connection between the lever and the pitman to travel in a vertically elongated orbit.

1,683,325. PROCESS AND APPARATUS FOR WASHING FABRICS. OLAV BERG, Paterson, N. J. Filed Feb. 1, 1923. Serial No. 616,233. 6 Claims. (Cl. 8—19.)



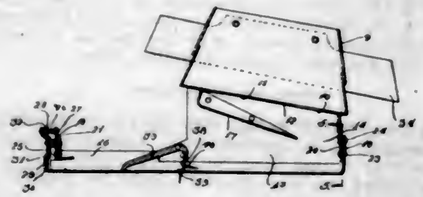
1. The process of washing fabrics which consists of supporting and feeding a plurality of lengths of fabric in rope form, substantially vertically and directing liquid mainly at an acute angle and as a substantially wholly undercutting stream, against the upwardly travelling and downwardly travelling laps of said fabric, said liquid being directed against opposite sides of the fabric and in the same plane, whereby to deflect the fibers of the fabric and facilitate cleaning thereof, while maintaining a steady travel of the laps in their respective planes.

1,683,326. SWEATBAND FOR HEAD COVERINGS. HAROLD T. BLUM, Glenmont, Ohio. Original application filed June 23, 1927, Serial No. 201,002. Divided and this application filed Sept. 19, 1927. Serial No. 220,546. 1 Claim. (Cl. 2—190.)



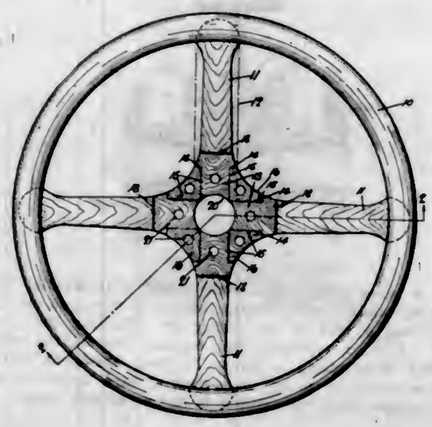
A combined sweat band and hair retainer for caps comprising a body of flexible material secured to the cap within the head receiving opening thereof, and adapted

to have snug engagement throughout its area with the head of the wearer, said body having a restricted front and back portion and widened side portions, and a stiffening



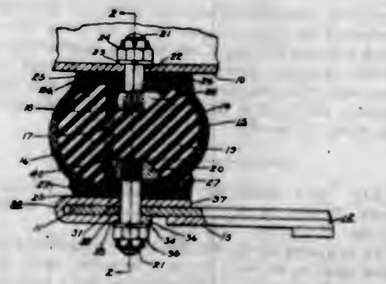
element associated with each widened side portion of the body and adapted to urge and hold said portions in close engagement with the head of the wearer.

1,683,327. FOLDING CHAIR. SLIMAN E. BOUHAROUN, Waterbury, Conn. Filed Oct. 25, 1927. Serial No. 228,577. 8 Claims. (Cl. 155—32.)



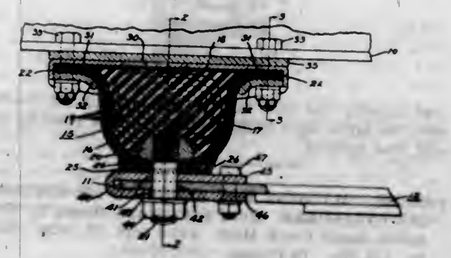
1. In a collapsible chair, a seat, a bottom frame, front and rear vertical jointed legs all pivoted to said seat and said bottom frame, a back hinged to said seat, and means operated by the swinging of said back for flexing said jointed legs and causing said chair to collapse into a small space upon said frame.

1,683,328. NAIL CONTAINER AND DISPENSER. OSCAR BREITHAUPT, Detroit, Mich. Filed July 9, 1927. Serial No. 204,508. 3 Claims. (Cl. 1—49.7.)



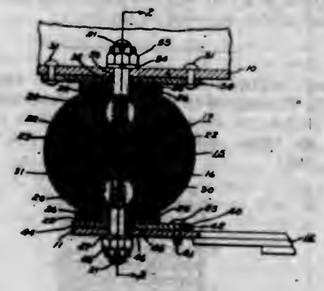
1. In a nail holder of the class described having a nail receiving trough open at one end; a closure for said open end of said trough, said closure having an opening formed centrally therein in registration with the center of said trough; and a separate closure for engaging in the opening in said closure and serving as a closure for said trough upon movement of said first mentioned closure to inoperative position.

1,683,329. STEERING WHEEL. RALPH H. CHILTON, Dayton, Ohio, assignor to the Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 31, 1923. Serial No. 683,536. 6 Claims. (Cl. 74—33.)



1. A steering wheel having a wood spider including, a plurality of wod spokes whose inner ends extend inwardly to a central bore, a plurality of separate wood blocks lying alternately between the inner ends of said spokes and rigidly secured thereto; and a wood cover plate covering the joints between said inner ends and said blocks and rigidly secured to the top surfaces of said inner ends and said blocks by adhesive means to form a rigid hub portion, said cover plate having a feather edge joint with the upper surface of said spokes.

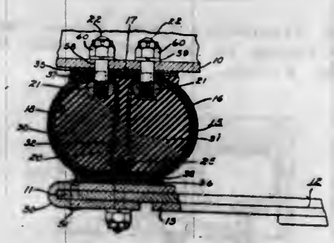
1,683,330. SPRING SHACKLE. RALPH H. CHILTON, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 29, 1927. Serial No. 179,361. 13 Claims. (Cl. 267—30.)



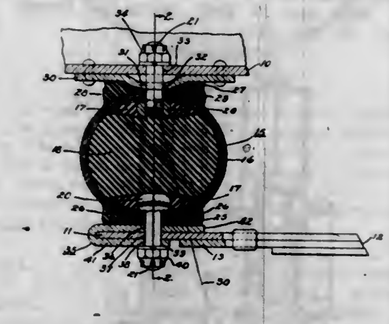
1. An extension shackle connecting two relatively movable members, said shackle comprising: a flexible rubberized fabric casing having opposite portions connected respectively to said movable members, an elastic soft rubber block within said casing and vulcanized thereto, and a flexible rubberized fabric tension web extending through said rubber block and having its ends secured to said movable members respectively.

1,683,331. SPRING SHACKLE. RALPH H. CHILTON, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 22, 1927. Serial No. 185,706. 6 Claims. (Cl. 267—30.)

1. An extension shackle connecting two relatively movable members, said shackle comprising: a flexible rubberized fabric web of approximately U-shape and having its two ends fixed to one of said movable members and its central portion fixed to the other of said movable members, and elastic rubber material within said web and vulcanized thereto for taking compression loads upon said shackle.



1,683,332. SPRING SHACKLE. RALPH H. CHILTON, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 22, 1927. Serial No. 185,707. 12 Claims. (Cl. 267—30.)



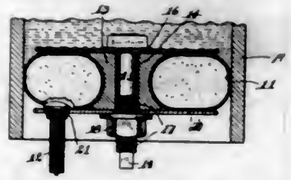
1. An extension shackle connecting two relatively movable members, said shackle comprising: a molded unit having a flexible rubberized textile casing vulcanized upon an interior elastic soft rubber block, means for fixing opposite portions of said unit to said movable members respectively, and a separately formed flexible transverse web extending through said rubber block and secured to said movable members respectively.

1,683,333. SPRING SHACKLE. RALPH H. CHILTON, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 30, 1927. Serial No. 187,836. 9 Claims. (Cl. 267—30.)

1. An extension shackle connecting two relatively movable members, said shackle comprising: a flexible rubberized fabric casing vulcanized upon an interior elastic rubber block, means for fixing opposite portions of said casing to said movable members respectively, and a flexible transverse loop of rubberized fabric extending through said rubber block and secured to said movable members respectively, said rubberized fabric loop being formed from strips of bias cut fabric whereby diagonally extending threads in one web of said loop extend at substantially equal and opposite angles in the other web of said loop.

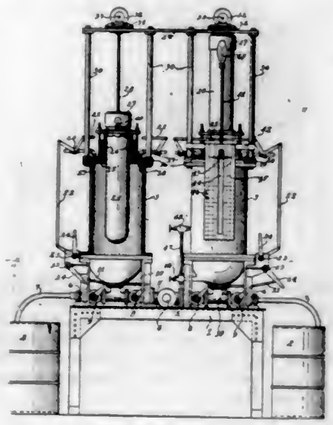
1,683,334. SPRING SHACKLE. RALPH H. CHILTON, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 30, 1927. Serial No. 187,837. 9 Claims. (Cl. 267—30.)

1. An extension shackle connecting two relatively movable members, said shackle comprising: a flexible rubberized fabric casing having opposite portions connected respectively to said movable members, and elastic rubber material filling said casing and vulcanized thereto, said rubber material being more elastic adjacent said movable members than in the intermediate portion thereof.



1,683,335. NAPKIN FOLD. PETER J. CHRISTMAN, Green Bay, Wis., assignor to Paper Converting Machine Co., Inc., Green Bay, Wis., a Corporation of Wisconsin. Filed June 25, 1926. Serial No. 118,433. 1 Claim. (Cl. 206—57.)

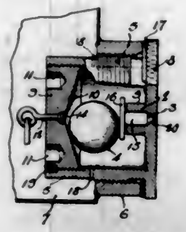
A folded rectangular sheet having a multi-ply body portion with the upper plies reversely folded intermediate their edges to provide a pleat on the upper side and with the lower plies folded intermediate their edges to provide a pleat in its lower side, whereby a body portion is formed



having a pleat on its upper side and having a pleat on its lower side, the pleats being distinct from each other, the upper and lower edges projecting outwardly in the same direction beyond the pleated body portion.

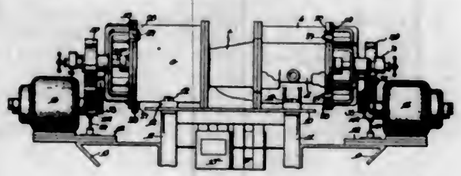
1,683,336. PLUMBING DEVICE. THOMAS PATRICK CUMMINGS, Chicago, Ill. Filed Oct. 22, 1927. Serial No. 228,094. 4 Claims. (Cl. 137—76.)

1. A plug of the kind described, comprising an annular inflatable member; a spool within said annular member, a pair of discs adapted to cooperate with said spool and inflatable member, means to clamp said discs to said spool, said means comprising a threaded member having a shank provided with a square end in order to prevent rotation of the threaded member when adjustments thereto are desired, and means whereby said inflatable member may be expanded.



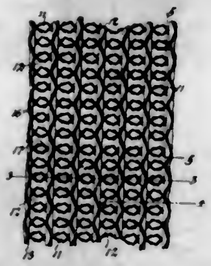
1,683,337. BARREL-FILLING APPARATUS. WILLIAM ERNEST, Martinez, and EMANUEL H. BAER, Associated, Calif. Filed Apr. 23, 1927. Serial No. 186,000. 4 Claims. (Cl. 221—113.)

1. An apparatus for the described purpose comprising a closed measuring receptacle having a liquid inlet and outlet; a vent in the upper portion of said receptacle; a connection for introducing air under pressure into the upper portion of said receptacle; valves in said vent and said pressure connection; means interconnecting said valves for simultaneous and opposite operation; and an adjustable displacement body within said receptacle for varying its volumetric capacity.



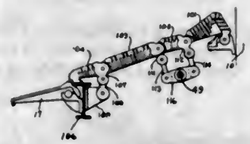
1,683,338. TANK CLOSURE. OLE EVINRUDE, Milwaukee, Wis., assignor to Elto Outboard Motor Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 20, 1924. Serial No. 757,189. 8 Claims. (Cl. 251—130.)

1. A cap of the character described comprising a casing provided with a vent opening leading directly to the atmosphere, a substantially spherical member arranged in said casing for movement therein laterally of the vent opening upon tilting of said cap, a valve interposed between said



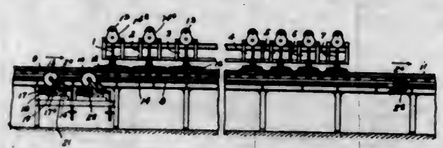
vent opening and said member and adapted for coaction with the latter upon such movement of the same to close said vent opening.

1,683,339. MACHINE FOR REBORING OR REFINISHING CYLINDERS. BURT J. FARR and MOSES H. WESTBROOK, Battle Creek, Mich. Filed Sept. 15, 1924. Serial No. 737,679. 12 Claims. (Cl. 77—3.)



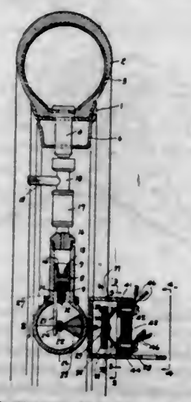
1. In mechanism for re-boring cylinders, the combination of a base for supporting a cylinder to be bored, a frame adapted to be removably connected to and supported by the cylinder, a boring-bar carried by the frame, a motor mounted on the base, driving means for the bar carried by the frame and shiftable as a unit into driving relation with the motor and a tool-carrier mounted on the bar.

1,683,340. RADIATOR CORE. JOHN M. FEDDERS, Buffalo, N. Y., assignor to Fedders Manufacturing Company, Inc., Buffalo, N. Y., a Corporation of New York. Filed Dec. 20, 1926. Serial No. 155,855. 3 Claims. (Cl. 257—130.)



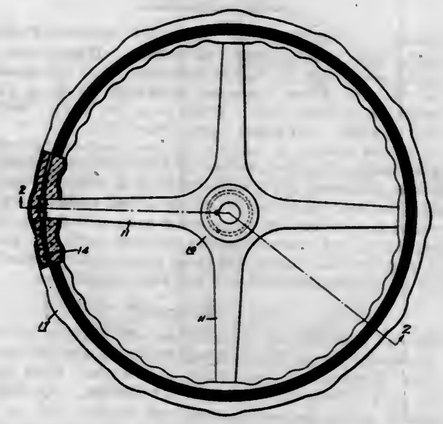
1. A radiator core and having a plurality of water passages and a plurality of air tubes arranged between said water passages each of said water passages having opposing walls formed between two strips of sheet metal the central part of each consisting of a row of wall sections which meet at their longitudinal edges and which have their end edges off-set, forming flanges which engage one another, and said air tubes being formed by a plurality of loops each having its edges connected with the meeting edges of two adjacent wall sections, and the summit of each loop engaging with a wall section of an adjacent strip.

1,683,341. STOKER. ROBERT A. FORESMAN, Moore, and JOHN E. LARRABEE, East Landsdowne, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 28, 1926. Serial No. 138,250. 22 Claims. (Cl. 110—44.)



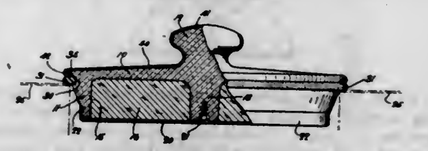
10. In a stoker, a retort, a ram in the retort, a progressive feed overfeed grate section pivotally support adjacent a side of the retort and receiving fuel therefrom, said grate section comprising a plurality of series of relatively narrow grate members having lateral recesses providing tuyère openings, the members of each series being pivotally connected together in end-to-end relation, means for raising and lowering a portion of each of the sections at an intermediate pivotally connected point thereof, an air box beneath the section, and yielding means for constraining the series of the section in abutting side-by-side relation.

1,683,342. APPARATUS FOR SURFACING PLATE GLASS. JOHN H. FOX, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Nov. 4, 1924. Serial No. 747,759. 7 Claims. (Cl. 51—240.)



1. The combination with a series of surfacing machines and a series of cars or tables mounted for movement therebeneath so as to carry glass sheets mounted upon the tops of the cars beneath the machines, of driving means applied at the rear end of the series of cars to move them forward, and a retarding means at the forward end of the series of cars adapted to engage and release each car in turn, so that the cars intermediate the driving means and retarding means are placed under compression.

1,683,343. TIRE-PRESSURE INDICATOR. JOHN H. GARTNER, San Francisco, Calif., assignor of one-fifth to Patrick S. Higgins, one-fifth to James D. Skelly, and one-fifth to William Shackleton. Filed Feb. 15, 1927. Serial No. 168,374. 4 Claims. (Cl. 177—311.)



3. In a pressure indicator for a pneumatic tire, a movable magnetic element revolving with the tire, means for moving the same in response to changes in the tire pressure, and an electric circuit having a switch element mounted in operative proximity of the tire so as to be periodically passed by the magnetic element and to be subject to the influence thereof, the switch element being a pivoted lever and the magnetic element being mounted so as to normally pass the fulcrum thereof and to leave the lever unaffected but to move in the direction of one of the arms of the lever under the influence of a change in the tire pressure for operating the said arm.

1,683,344. STEERING WHEEL. HARVEY D. GEYER, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 12, 1926. Serial No. 101,341. 1 Claim. (Cl. 74—33.)

A steering wheel for automotive vehicles, comprising: a molded rubber rim having a reinforcing endless metal hoop possessing resilient qualities molded in place therein, and a metal spider having arms, the outer ends of said arms being recessed and secured directly to said hoop whereby said arms are prevented from piercing the body of the driver in case of a crash.

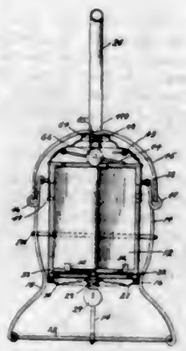
1,683,345. ICE-CREAM-CABINET LID AND METHOD OF MANUFACTURING THE SAME. HARVEY D. GEYER, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed Sept. 9, 1927. Serial No. 218,553. 4 Claims. (Cl. 18—59.)

1. A removable lid for a container comprising: a main body member molded to shape from a bituminous plastic composition and having an outer celluloid casing molded in situ and interlocked with the molded material around the periphery of the lid.

1,683,346. METAL MOLDING. REMI J. GITS, Riverside, Ill. Filed Apr. 29, 1927. Serial No. 187,564. 1 Claim. (Cl. 296—135.)

A soft metal molding strip comprising a base, non-resilient lips on said base at the marginal edges, extending upwardly and inwardly and terminating in spaced relation to each other, in combination with a combined filler and sealing strip, said strip having a body portion of substantially the same width as the space between the lips, and a neck portion, said neck portion being of narrower width than said body portion, and a head portion,

said head portion being of greater width than said neck portion and said body portion, the body portion of said filler and sealing strip being adapted to freely pass between said lips, and the head portion being adapted to en-

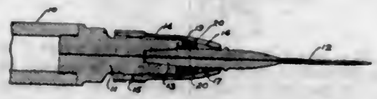


gage the top side of said lips and when forced downwardly towards said base to permanently crimp said lips in engagement with said neck portion for retaining said filler strip and base in assembled relationship.

1,683,347. PROCESS OF MAKING CHLOROFORM-SOLUBLE CELLULOSE ACETATE. HARRY LE B. GRAY and CYRIL J. STAUD, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Aug. 25, 1927. Serial No. 215,520. 3 Claims. (Cl. 260—101.)

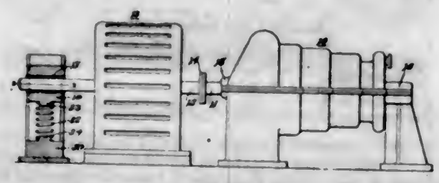
1. In the process of making cellulose acetate, pretreating the cellulose with glacial acetic acid containing a mixed catalyst of sulfuric and phosphoric acids in which the latter acid is at least equal to the weight of the former, mixing acetic anhydrid into the pretreated mass to complete the acetylation, and conducting the reaction until the product is chloroform-soluble, the same mixed catalyst serving both in the pretreatment and the final acetylation.

1,683,348. ELECTRIC LANTERN. WILLIAM S. HAMM, Hubbard Woods, Ill., assignor to The Adams & Westlake Company, a Corporation of Illinois. Filed Mar. 8, 1924. Serial No. 697,922. 11 Claims. (Cl. 240—10.5.)



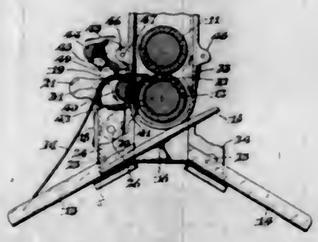
1. An electric lantern comprising a frame, a supporting member on said frame, a battery container on said member, a closure for said container, a reflector supported between said container and said member, and means for holding said closure on said container and for clamping said container and reflector on said supporting member.

1,683,349. HYPODERMIC SYRINGE AND MEANS FOR RETAINING SAME. GEORGE N. HEIN, San Francisco, Calif. Filed Oct. 4, 1926. Serial No. 139,245. 8 Claims. (Cl. 28—221.)



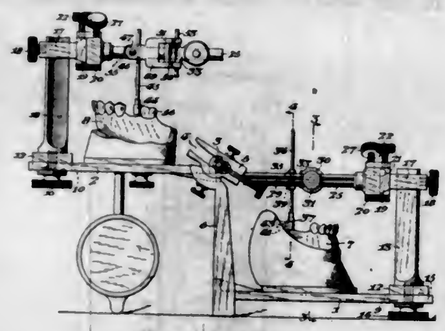
1. In a hypodermic syringe, a barrel and a detachable needle therefor, the latter formed with a smooth, tapered stem to enter a tapered socket on the barrel, and a coupling member between the needle and barrel having means to rotate the needle and cause the tapered stem to seat in the socket with a wiping effect, said coupling device being operative to release the needle without being removed from the barrel.

1,683,350. LOCK FOR HYPODERMIC NEEDLES AND THE LIKE. GEORGE N. HEIN, San Francisco, Calif. Filed Oct. 4, 1926. Serial No. 139,246. 4 Claims. (Cl. 128—221.)



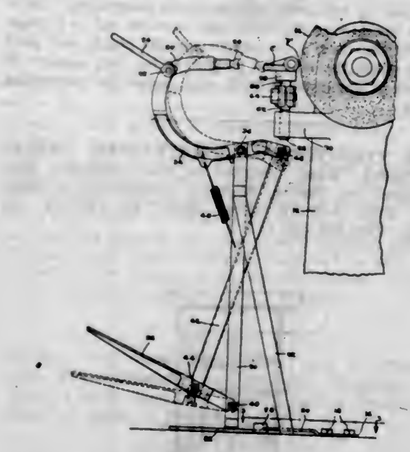
1. In a syringe, a nipple having a socket, and a needle having a base to fit within the socket of a locking device comprising a sleeve threaded onto the nipple, a clutch ring of slotted spring metal within the sleeve and surrounding the base of the needle, and means whereby, when the sleeve is screwed onto the nipple, the clutch ring will be compressed into locking engagement with the stem.

1,683,351. SHAFT BEARING. HERBERT T. HERR, Merion, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 10, 1922. Serial No. 535,527. 2 Claims. (Cl. 308—26.)



1. In an organization comprising a pair of shafts, fixed bearings for one of the shafts, a rigid coupling connecting the shafts end to end in power transmitting relation, a bearing resiliently supporting the other end of the second shaft, and means restricting motion of the movable bearing to a vertical plane, whereby the alinement of said bearings is maintained.

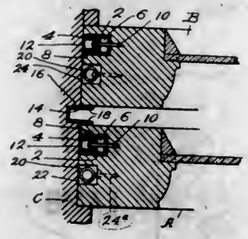
1,683,352. WRINGER. EMIL A. HERNER, Allentown, Pa. Filed Dec. 15, 1927. Serial No. 240,089. 12 Claims. (Cl. 68—32.)



1. In a wringer, a pair of cooperating squeeze rollers, a feeding means including a relatively movable member with a tongue adapted to be overlapped by a margin of the material which is to be wrung for presentation of the material before the squeeze rollers, and means to advance the folded edge of the material into the bight between said squeeze rollers.

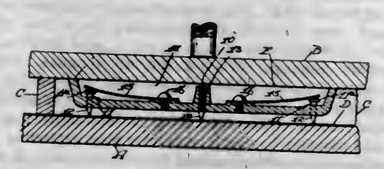
1,683,353. PARALLELING MECHANISM. GEORGE M. HOLLENBACK, Los Angeles, Calif. Filed Oct. 7, 1924. Serial No. 742,160. 16 Claims. (Cl. 32—10.)

1. A device of the class described, comprising a support, a forwardly directed spindle adjustable bodily in a lateral direction on said support, in a lineal path, and a tool carried thereby and mounted to rotate about three relatively normal axes, and arranged to move in three relatively angular planes.



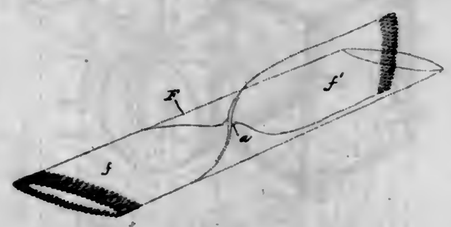
1,683,354. GRINDING-MACHINE ATTACHMENT. VERNON G. HONSTAIN and ARTHUR SMITHSON, Minneapolis, Minn. Filed Feb. 9, 1927. Serial No. 166,999. 4 Claims. (Cl. 51—240.)

1. A grinding machine attachment comprising a work rest upon which the article to be ground is adapted to be supported in proximity to the grinding wheel, a horizontal plate, means for adjustably securing said plate to the floor, a vertical support extending up from said plate, a movable member carried by the upper end of said support and adapted to engage said article, and means for exerting force upon said member for holding said article against the grinding wheel.



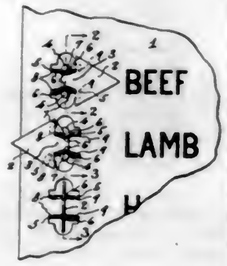
1,683,355. WEATHER STRIP. EARNEST R. HOPKINS, Kansas City, Mo. Filed Aug. 2, 1926. Serial No. 126,624. 1 Claim. (Cl. 20—52.4.)

A device of the character described consisting of channel bars of the same length as and adapted to be installed in grooves formed in edges of the window sash, bars of hollow rectangular cross section movably mounted in said channel bars, spring means interposed between the channel bars and said rectangular bars to force the latter against the window frame, and means for holding said bars and said spring means in assembled position in the window sash



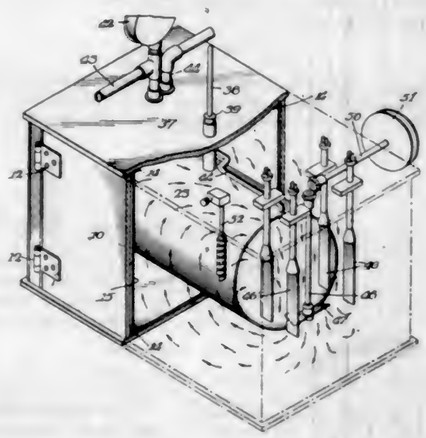
consisting of a plurality of elements extending loosely through the rectangular bars and the channel bars and firmly secured in the window sash.

1,683,356. CORE MEMBER FOR CASTING PRINTING PLATES. IRA E. HURLBUT, Prairie du Chien, Wis. Filed Dec. 7, 1925. Serial No. 73,636. 7 Claims. (Cl. 22—5.)



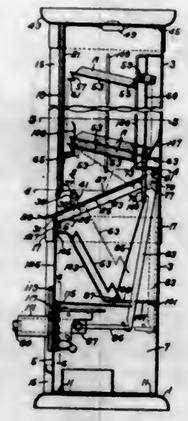
1. A core member for casting printing plates having pressure points mounted for protruding from its inner face for stepping on the matrix, said core member comprising a core body less than type height, the pressure points being afforded by pins set through the core body for protruding from the face, means for yieldingly holding the pins protruded, and means for limiting the protruded length, said protruded length being more than the deficiency in type height of the core body; whereby said pressure points stepped upon the matrix uphold the core body to a height in excess of type height.

1,683,357. METALLIC ABRASIVE SCOURING DEVICE. RUSSELL B. KINGMAN, Orange, N. J. Filed Apr. 23, 1926. Serial No. 104,007. 2 Claims. (Cl. 15—208.)



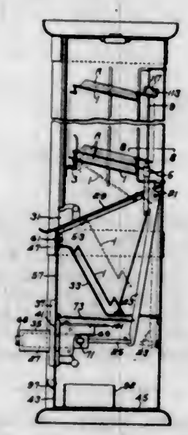
1. A scouring ball, comprising a tubular abrasive fabric twisted together intermediate its ends to provide a fixed restricted portion to divide the same into two sections, one section being balled together to form a substantially spherical center core, the other section being folded around said center core to form a continuous enveloping outer cover member, the free end portion of said cover member being intertwisted together with the adjacent underlying portion of said center core to interlock such portions together and thereby secure the cover member against separation from the core.

1,683,358. INDICATOR FOR MEMORY-CHECKING DEVICES. RUSSELL B. KINGMAN, Orange, N. J., assignor to Useful Products Company, West Orange, N. J., a Corporation of New Jersey. Filed May 27, 1927. Serial No. 194,602. 3 Claims. (Cl. 116—134.)



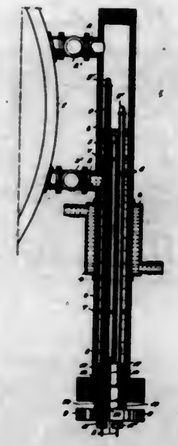
1. In a memory-checking device having a metallic plate inscribed on its face with itemized information, pointer members adjacent to and corresponding to the respective items of information, said pointer members having at their rearward ends laterally and oppositely projecting journal tongues, perforate ears struck up out of said metallic plate to provide bearings for said journal tongues, yieldable means on said ears and cooperative with said pointer members adapted to retain the latter against accidental displacement from either indicating or non-indicating position, said pointers having a respective part extending therefrom adapted for stopping said pointer members in spaced relation to said plate when occupying either indicating or non-indicating position.

1,683,359. VACUUM OVEN. PAUL E. KLOPSTEG, Chicago, Ill., assignor to Central Scientific Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 23, 1926. Serial No. 156,628. 18 Claims. (Cl. 219—35.)



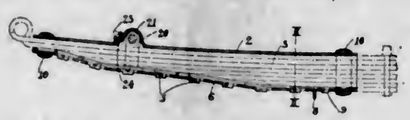
1. In a vacuum oven, a bath comprising a container with oil therein, a vacuum chamber projecting into the oil from one side of the container, a cluster of removable electric heating units projecting into the oil from above and adjacent to the end of the vacuum chamber, and means to force the oil to travel in a circuit passing the heating element and about the vacuum chamber.

1,683,360. VENDING MACHINE. CHARLES LEA, Boston, Mass., assignor to The Automatic Merchandizer Inc., Boston, Mass., a Corporation of Delaware. Filed July 15, 1926. Serial No. 122,623. 16 Claims. (Cl. 312—94.)



1. A vending machine having, in combination, means for maintaining a stack of articles comprising a plurality of superimposed article-supporting-members, means engaging the lowermost member for supporting the stack, and means for successively releasing said members comprising a movable part for moving the lowermost member out of engagement with said means for supporting the stack, said part acting to guide the released member after said member is moved out of engagement with said means for supporting the stack.

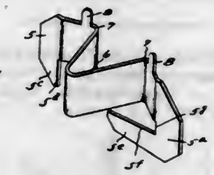
1,683,361. COIN-CONTROLLED MECHANISM. CHARLES LEA, Boston, Mass., assignor to The Automatic Merchandizer Inc., Boston, Mass., a Corporation of Delaware. Filed July 15, 1926. Serial No. 122,624. 21 Claims. (Cl. 194—57.)



1. A coin controlled apparatus having, in combination, a reciprocatory member, a locking member, a part for engagement with said locking member connected to said reciprocatory member for relative movement to permit limited movement of said reciprocatory member, and means rendered operative by a coin when inserted for disengaging said part and locking member upon such limited movement of said reciprocatory member to permit extended movement of said reciprocatory member.

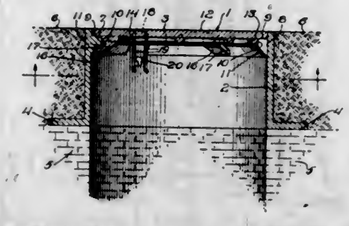
1,683,362. FLUID-LEVEL INDICATOR AND LEADING-IN ARRANGEMENT FOR ELECTRODES IN HOT HIGH-PRESSURE ROOMS. STEPHAN LÖFFLER, Berlin-Charlottenburg, Germany. Filed May 22, 1925, Serial No. 32,115, and in Germany May 31, 1924. 9 Claims. (Cl. 200—152.)

1. A liquid level indicator for fluid containing chambers in which a high temperature and a high pressure exists, comprising a vessel and connection therefrom to said chamber, said vessel having a terminal portion thereof extending beyond the joints of said connections to said vessel in a direction such that said portion will form a dead space through which there will be no circulation of the fluid from said chamber, an electrical conducting liquid contained within said vessel, a cooling jacket for said vessel, an electrode passing through the end of said portion, extending into said vessel and terminating adjacent to said joints, and packing for forming a liquid tight, electric insulating joint at the passing-in place of said electrode.



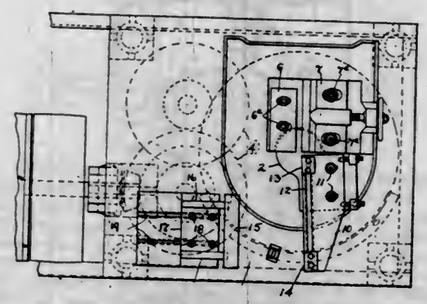
1,683,363. GAITER FOR USE ON SUSPENSION SPRINGS. HERBERT LORD, Coventry, England. Filed June 19, 1926, Serial No. 117,078, and in Great Britain June 23, 1925. 3 Claims. (Cl. 267—37.)

1. A cover for a vehicle spring comprising a piece of flexible material provided with wedge shaped projections at intervals along the edges thereof, a flexible closure plate provided with corresponding wedge shaped apertures adapted to engage the aforesaid projections.



1,683,364. CLAMPING DEVICE. JAMES F. LOUCKS, Cleveland, Ohio, assignor of one-half to Harry Gillett, Gates Mills, Ohio. Filed June 6, 1924. Serial No. 718,213. 5 Claims. (Cl. 189—35.)

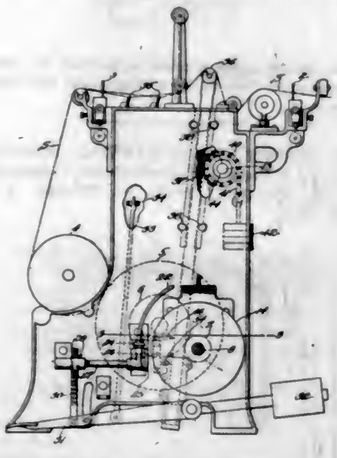
3. As an article of manufacture, a clamp for securing a metal sheet to a structural beam, said clamp comprising an intermediate spacing and supporting portion, means projecting upwardly from each end thereof for securing the same to a metal sheet and beam engaging portions projecting downwardly therefrom for securing said clamp to a



beam, said intermediate portion being bent to permit the beam engaging portions to be sprung apart for application to said beam.

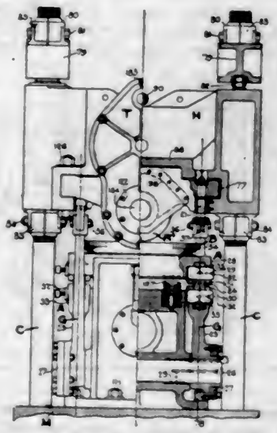
1,683,365. STREET-MANHOLE COVER. HENRY LOUDENSLAGER and WALTER J. LOUDENSLAGER, Columbus, Ohio. Filed Sept. 26, 1927. Serial No. 221,935. 4 Claims. (Cl. 94—35.)

1. A manhole closure comprising a base section and a separable cover section, said base section being formed to include a plurality of internally situated, relatively spaced seating flanges, a plurality of spaced lugs integrally formed with the under side of said cover section and arranged for registration with the spaces provided between said flanges, whereby upon partial rotation of said closure section said lugs may be moved into locking engagement with the under surfaces of said flanges, and a handle member carried by said cover section and arranged for engagement with a stationary tongue formed with said base section to lock said cover section against rotary movement of an accidental character.



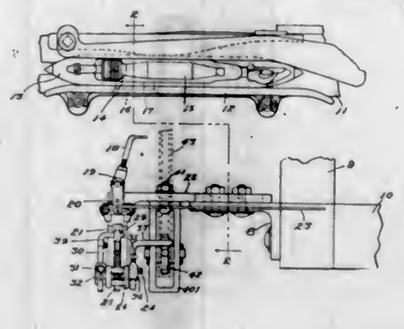
1,683,366. BAR-BENDING MACHINE. STANLEY MACOMBER, Massillon, Ohio, assignor to The Macomber Steel Company, Canton, Ohio, a Corporation of Ohio. Filed Sept. 21, 1925. Serial No. 57,608. 6 Claims. (Cl. 153—16.)

1. In mechanism of the character described, the combination of a pair of parallel blocks adapted to grip a length of bar therebetween; an arm oscillatorily mounted about an axis adjacent one end of said blocks; two blocks relatively adjustably mounted on said arm and adapted to contact at longitudinally spaced points with a portion



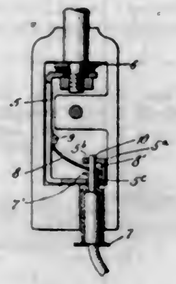
of such bar projecting beyond said first-named blocks; and a stop located in the path of travel of the outer of the blocks on said arm and, having a stop-face lying substantially parallel with said gripping blocks.

1,683,367. WARPER. JAMES TURNER MELCHOR, Mooresville, N. C., assignor to Saco-Lowell Shops, Boston, Mass., a Corporation of Massachusetts. Filed Nov. 4, 1924. Serial No. 747,785. 12 Claims. (Cl. 28—50.)



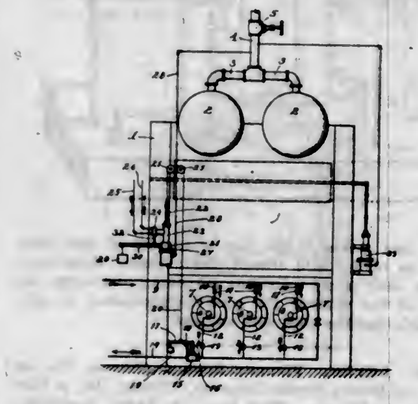
1. In a warper having an automatic, detector-controlled stop motion, the combination of a rise roll, and mechanism under control of said rise roll for interrupting the operation of said stop motion after its action has been initiated and preventing the completion of said operation until the rise roll has been lowered to substantially its normal running position.

1,683,368. MACHINE FOR ROLLING WHEEL DISKS. EMIL A. NELSON, Abington, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 9, 1925. Serial No. 21,797. 54 Claims. (Cl. 80—16.)



1. A machine of the character described comprising a head carrying a radially traversing blank working roll and a rotating blank support, said head and support having a relative movement of approach and separation to present the work to and remove it from the action of said roll, means for traversing said roll, and means operative as a result of said traverse to effect said approach and separation movements.

1,683,369. LOOM FEELER MECHANISM. PATRICK F. O'BRIEN, Franklin, Mass. Filed Sept. 23, 1925. Serial No. 58,067. 7 Claims. (Cl. 139—270.)

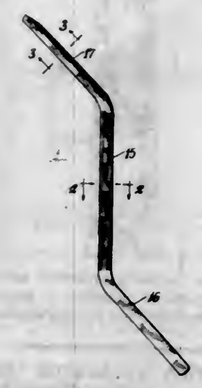


1. In an intermittent feeler mechanism for looms, in combination, a feeler having an inclined cam shoulder, and a detent having a roller engaging said shoulder when the feeler is in retracted position to lock the same in inoperative position and to impart to said feeler an additional retractive movement.

1,683,370. CONNECTING PLUG. LOUIS GERARD PACENT, Winfield, N. Y., assignor to Pacent Electric Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 14, 1923. Serial No. 618,887. 1 Claim. (Cl. 173—361.)

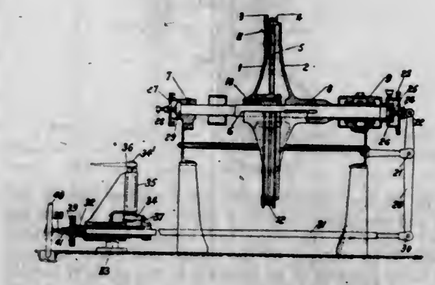
A device for making electrical connections comprising a rigid conducting member having a pair of substantially aligned apertures, a push button slidably disposed in one of said apertures, the other of said apertures being adapted to receive a conductor, said push button being apertured to permit the insertion therethrough of the said conductor, a resilient member fixed at one end and having means at its free end portion for engaging and restraining the said conductor against withdrawal, said push button being operable to flex said resilient member for disengaging the latter from the said conductor to permit its withdrawal.

1,683,371. METHOD AND APPARATUS FOR CONTROL OF THE BURNING OF LIQUID FUEL. ERNEST H. PEABODY, Pelham Manor, N. Y., assignor to Peabody Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 17, 1922. Serial No. 582,471. 12 Claims. (Cl. 236—26.)



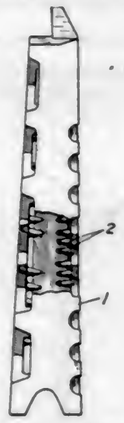
1. A method of burning liquid fuel in the combustion chamber of a boiler which comprises delivering the fuel under pressure to a point of atomization, controlling the amount of air supplied, returning an unatomized portion of the fuel from a point adjacent the point of atomization, controlling the amount of fuel atomized by varying the amount returned, regulating the amount returned by the pressure variation of steam generated in the boiler, and controlling the air supply by a predetermined higher pressure of the steam both when the pressure is rising and when it is falling.

1,683,372. CONTROL MEANS FOR GAS APPARATUS. PIERRE PLANTINGA, Cleveland, Ohio; The Cleveland Trust Company executor of said Pierre Plantinga, deceased. Filed June 4, 1924. Serial No. 717,873. 4 Claims. (Cl. 277—1.)



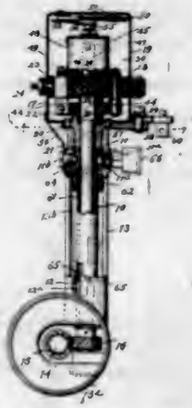
4. The combination of a gas duct; valve mechanism associated therewith and including two spaced valve discs forming an intermediate chamber; means for actuating said discs to assume their opening and closing positions; and a second and independent source of cooling fluid communicating with said chamber, said cooling fluid being under pressure greater than that of the gas in said duct.

1,683,373. JOINTER. WILLIAM ROSS and EDWARD ROSS, Brooklyn, N. Y. Filed Apr. 26, 1927. Serial No. 186,615. 1 Claim. (Cl. 72—138.)



A slicker comprising a handle of rectangular cross-section, a pair of work elements formed integrally at the ends of said handle in planes parallel to each other, one of said elements being half-round in cross-section and the other of said elements being similar in cross-section to said handle.

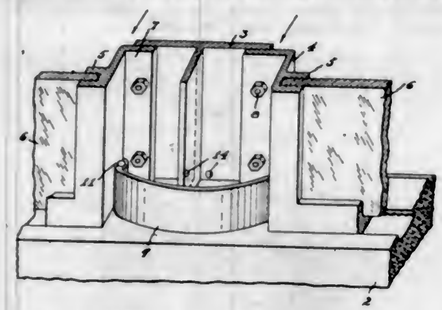
1,683,374. DRIVING MECHANISM FOR PAPER AND OTHER MACHINES. JOHN WHITE, Edinburgh, Scotland. Filed Jan. 28, 1928, Serial No. 250,161, and in Great Britain Feb. 2, 1927. 3 Claims. (Cl. 64—8.)



1. Driving mechanism for paper-making and like machines comprising an expansion pulley constituted by axially separable cone pulley portions, at least one idle pulley embraced by said pulley portions, thrust-receiving means tending to resist axial separating movement of said pulley portions, adjustable means for determining the axial spacing of said pulley portions, and a controlling device for said thrust receiving means, said controlling device operable manually to permit relative movement apart of said pulley portions away from a position determined by the setting of said adjustable means, to interrupt transmission of the drive through said expansion pulley, and to effect relative return movement of said pulley portions to exactly the same determined position.

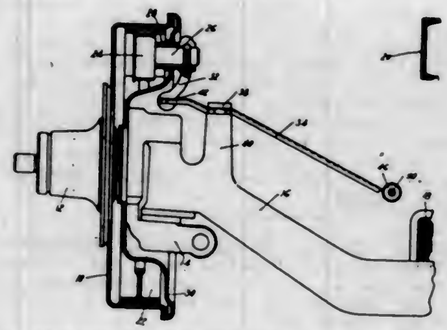
1,683,375. RADIANT FOR HEATERS AND THE LIKE. OSCAR WIEDERHOLD, Philadelphia, Pa. Filed Nov. 10, 1927. Serial No. 232,247. 4 Claims. (Cl. 126—92.)

1. A radiant of ceramic material having projections thereon, said projections including a porous oxide incandescent at comparatively low temperatures.



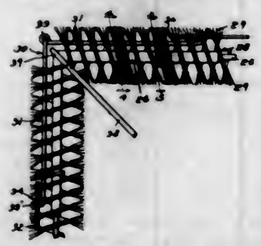
1,683,376. IGNITION APPARATUS. JOSEPH A. WILLIAMS and ALBERT G. KARKAU, Cleveland, Ohio, assignors to the K-W Ignition Corporation, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 7, 1924. Serial No. 684,723. 20 Claims. (Cl. 123—146.5.)

1. In an ignition apparatus for a system having primary and secondary circuits, a rotor carrying a brush and a case enclosing the rotor and having spaced contacts adapted to be engaged by the brush, said brush and contacts being adapted to be included in the primary circuit, said case additionally enclosing a circuit breaker for interrupting the circuits established by the engagement of the brush with the contacts, and a condenser for bridging the contact points of the circuit breaker, said condenser being carried by the rotor.



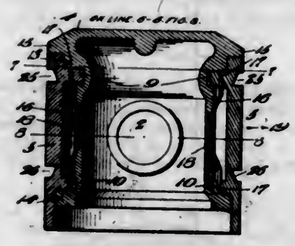
1,683,377. WATER BARRIER FOR WINDOWS AND THE LIKE. CHARLES H. WILSON, Pelham, N. Y. Filed Nov. 28, 1927. Serial No. 236,208. 9 Claims. (Cl. 20—70.)

1. A water barrier adapted to be used on a window sill in conjunction with a window frame subject to rain seepage on the interior thereof comprising a plate adapted to be sprung into operable position with respect to said sill and frame providing a trough like chamber thereby, gutter means integral with said plate, means associated with said gutter means adapted to retain said plate in watertight condition in sprung position relative to said frame



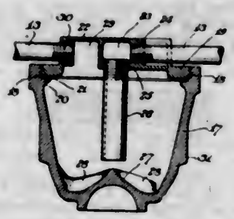
and sill, and means at the line of contact of said plate and sill to render said trough like chamber watertight, means in said frame providing an outlet discharge the exterior of the window for water accumulated in said trough like chamber thru rain seepage.

1,683,378. LEVER. VINCENT BENDIX, Chicago, Ill., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 15, 1926. Serial No. 135,538. 1 Claim. (Cl. 74—5.)



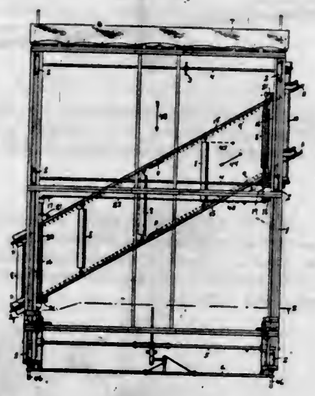
A brake-applying lever comprising a substantially flat stamping having a pivot bearing between its ends and formed at one end with a thrust portion, the opposite end of the stamping being twisted to a plane at right angles to the body of the lever and dished to form a semi-spherical socket adapted to form part of a ball-and-socket joint for attachment to operating connections.

1,683,379. CHIMNEY CLEANER. CLARENCE R. BICKFORD, Northwood Narrows, N. H. Filed Feb. 21, 1927. Serial No. 169,961. 6 Claims. (Cl. 15—249.)



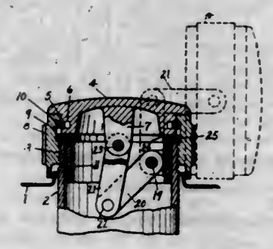
1. A chimney cleaner comprising a support embodying a plurality of sides, tubular brushing elements mounted upon said sides and adapted to turn thereon, and an adjustable clamping frame having sides corresponding in number and arrangement to the sides of the frame and adapted to engage with the tubular brushing elements to prevent their turning movement, and means to move the frame.

1,683,380. SELF-EXPANDING PISTON. JOSEPH A. BROCKMEYER, Brookline, Pa. Filed July 16, 1925. Serial No. 43,903. 4 Claims. (Cl. 74—108.)



1. A piston comprising an inner core member, an outer shell surrounding said core and formed of a plurality of longitudinal segments, and a resilient means operatively interposed between each of said segments and said core, urging the former outwardly of the latter in a yieldable manner; the contiguous longitudinal edges of said segments being alternately provided with opposed tongue and groove portions extending longitudinally of said edges, which telescope into one another in the operative position of said shell, thereby to seal the joint between said edges.

1,683,381. WATER COOLER. HARRY K. BUSH, Pottstown, Pa., assignor to Reading Foundry and Supply Co., a Corporation of Pennsylvania. Filed Oct. 31, 1925. Serial No. 65,968. 2 Claims. (Cl. 257—196.)



2. In a water cooler, a unit comprising a hollow frustoconical casing integrally closed at its smaller end, said smaller end of the casing having an internal extension and curved vanes associated therewith adapted to impart a swirling motion to water passing through the unit, a removable cap member secured in the larger end of said casing, said cap member having two chambers, an inlet pipe connected to the cap member and in communication with one of said chambers, a pipe mounted in said cap member in communication with said chamber and extending within the casing and terminating adjacent the smaller end thereof, and an outlet pipe connected to the cap member and communicating with the other chamber thereof.

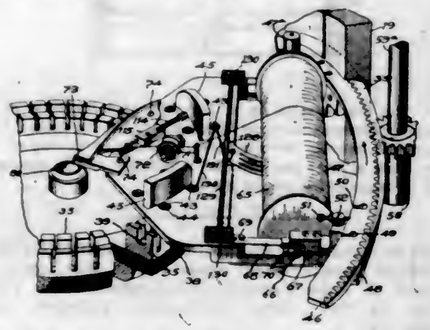
1,683,382. CONCRETE-ROAD MACHINE. EDWARD G. CARR, Shorewood, Wis., assignor to The Lakewood Engineering Company, Lakewood, Ohio, a Corporation of Ohio. Filed Nov. 20, 1919. Serial No. 339,306. 6 Claims. (Cl. 94—50.)

1. The combination in a concrete road machine of a frame, a squeegee arranged longitudinally of the frame, and means for moving the squeegee diagonally with respect to the frame so that the effective movement of the squeegee will be transversely of the road.

1,683,383. CLOSURE FOR RADIATORS AND THE LIKE. GEORGE LEHMAN CHAPEL, Grand Rapids, Mich., assignor to W. B. Jarvis Company, Grand Rapids, Mich. Filed Oct. 15, 1927. Serial No. 226,394. 8 Claims. (Cl. 220—24.)

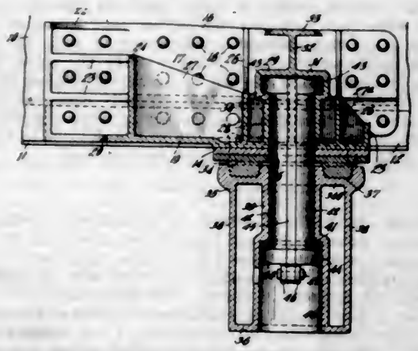
5. The combination of a threaded neck, a cap having an annular external groove, a collar internally threaded to coact with said neck and having an internal annular groove, a slit ring disposed in said groove in said cap to engage said groove in said collar whereby the collar is rotatably connected to the cap, an anchoring member disposed within the neck, and links pivotally connected to each other and to said cap and anchoring member permitting the cap to be swung upwardly and to the side of the neck when said collar is unscrewed from the neck.

1,683,384. WRENCH HANDLE ATTACHMENT. JOSEPH EDWARD DURHAM, Jr., and DAVID HUME, Allentown, Pa., assignors to Bonney Forge & Tool Works, Allentown, Pa., a Corporation of Pennsylvania. Filed May 3, 1927. Serial No. 188,434. 2 Claims. (Cl. 81—177.)



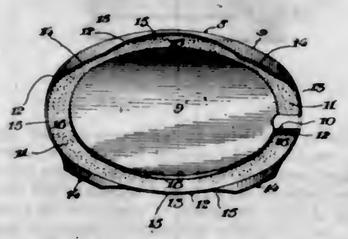
1. As a new article of manufacture, a socket wrench attachment comprising in combination a rod forming a handle, a one piece member, having a socket wrench formed integral therewith which is of lesser length than said member and slidable along said rod, said member being apertured to form a ball seat, the longitudinal axis of said

aperture at right angles to the longitudinal axis of said rod, with the longitudinal medial line of said aperture in a plane above the longitudinal medial line of said rod, a



spring pressed ball abutting against said rod tangentially to the upper periphery thereof, and a closure to maintain said spring pressed ball in frictional tangential contact with said rod.

1,683,385. CIRCULAR LOOM. OTTO A. FREDERICKSON, Wethersfield, Conn., assignor to The Wiremold Company, Hartford, Conn., a Corporation of Connecticut. Filed Mar. 3, 1924, Serial No. 696,458. Renewed July 7, 1928. 19 Claims. (Cl. 139—13.)



1. A circular loom, comprising in combination, a supporting frame, a fixed drum supported by the frame and having a shuttle race-way formed as a groove in the inner wall of the drum, a warp ring within the drum and positioned below the inner portion of the shuttle, a shuttle supported by the warp ring, means for driving the shuttle, and a wear plate extending radially from the shuttle into the groove of the race-way and adjustably secured to the shuttle for adjustment therenpon to take up wear.

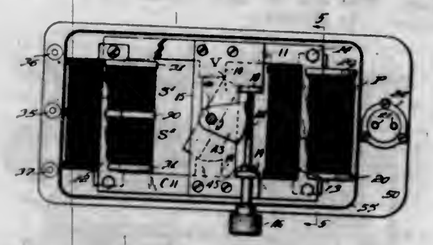
1,683,386. CAR CONSTRUCTION. WILLIAM A. GRIGER, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed June 4, 1927. Serial No. 196,542. 8 Claims. (Cl. 105—199.)

1. In car construction, the combination with the underframing of a railway car, including center sills and a body bolster; of a filler casting having side walls secured to said center sills and a bottom wall connecting said side walls, and a cylindrical center pin receiving member opening through said bottom wall, formed integrally therewith and extending upwardly therefrom, said cylindrical member being provided with an enlargement closing the upper portion thereof and providing an annular shoulder; a truck bolster provided with a center pin opening and having means providing an off-set forming an annular shoulder; and a split locking pin comprising side members having flanges at their opposite ends, and insertable into the cylindrical member in the filler casting and the king pin opening in said truck bolster, and a spreader connected to said pin for maintaining the side members in spaced relation to cause engagement of the flanges thereof with the annular shoulders of said filler casting and of said truck bolster.

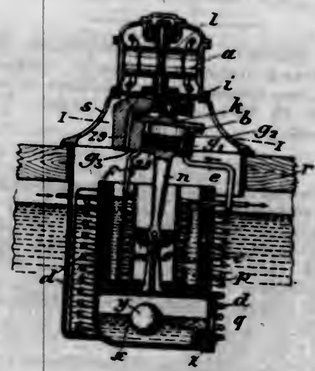
1,683,387. COMBINED CAP OR CLOSURE AND LINER PLATE. CHARLES HAMMER, Hollis Court Boulevard, N. Y., assignor to American Metal Cap Company, Brooklyn, N. Y., a Corporation of New York. Filed July 27, 1925. Serial No. 46,221. 5 Claims. (Cl. 215—38.)

1. A metal liner plate or sealing disk for use with a cap, said sealing disk having a gasket therein and a shallow depending flange extending below the gasket and provided with a plurality of recesses for the insertion of a vacuum releasing instrumentality, said recesses having their upper edges located at the under side of the gasket whereby the gasket is completely covered and protected all around its outer edge by the depending flange.

1,683,388. COMBINED LUG CAP AND LINER PLATE. CHARLES HAMMER, Hollis Court Boulevard, N. Y., assignor to American Metal Cap Company, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 7, 1927. Serial No. 231,511. 9 Claims. (Cl. 215—44.)



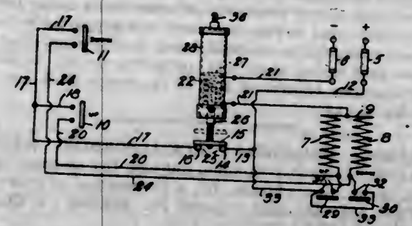
1. A combined cap and liner plate having a gasket, said cap and plate each having a depending flange, the flange of the cap having inwardly extending locking lugs and the flange of the plate having recesses in number and size to permit the cap lugs to register and pass therethrough on the backward rotation of the cap, thereby to permit the cap to be readily removed without first releasing the liner plate.



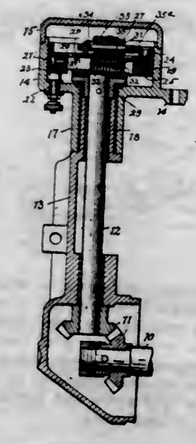
1,683,389. TRANSFORMER. FRANK J. KAEHNI and WILLIAM L. KAEHNI, Cleveland, Ohio. Filed June 8, 1922. Serial No. 566,807. 2 Claims. (Cl. 171—119.)

1. In a transformer, the combination of a closed magnetic core in substantially rectangular form, a primary winding associated with one leg of the core, a secondary winding associated with the opposite leg, inwardly projecting pole pieces carried by the remaining legs of the core, a shaft located midway between the pole pieces, a shunt block of magnetic material carried by the shaft and

having curved surfaces complementary to said pole pieces, the width of the block being substantially equal to the width of the pole pieces, means associated with the core for supporting said shaft and for holding it in adjusted position, said means permitting rotation of the shunt block but preventing axial and lateral movement thereof.

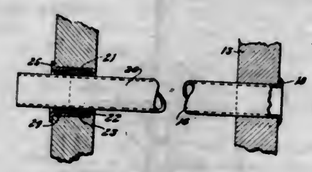


1,683,390. COMPRESSER. EMIL KÄGI, Winterthur, Switzerland, assignor to the Firm Sulzer Freres Societe Anonyme, Winterthur, Switzerland. Filed Sept. 3, 1926, Serial No. 133,321, and in Switzerland Sept. 7, 1925. 10 Claims. (Cl. 230—137.)



1. A compressor comprising a shallow casing, a disk shaped displacement member disposed therein, and means for imparting an orbital movement to said casing to produce a relative movement between said member and said casing.

1,683,391. ELECTRICALLY-CONTROLLED DUMB-WAITER. JAMES G. MACLAREN, Mamaroneck, N. Y. Filed July 5, 1924. Serial No. 724,544. 3 Claims. (Cl. 187—29.)



3. In electrical controlling means for dumb-waiters, a starting circuit, a main car control circuit, a circuit controller arranged to open or close a gap in the starting circuit, said circuit controller being arranged to be set into operation to open the gap when current flows through the starting circuit and to be maintained in gap-opening condition by the flow of current in the main control circuit, said controller operating to automatically close the gap in the starting circuit upon cessation of the flow of current in the main circuit, and adjustable means for retarding the gap-closing operation of the controller to provide a time interval following the stopping of a car at a station before the car can be again started.

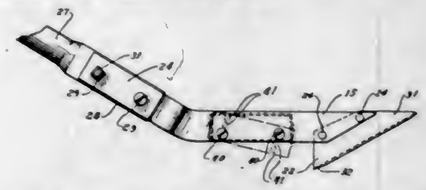
1,683,392. TIMER. MARION MALLORY, Toledo, Ohio, assignor, by mesne assignments, to The K-W Ignition Corporation, Cleveland, Ohio. Filed Dec. 26, 1922. Serial No. 608,890. 2 Claims. (Cl. 200—21.)

1. In a timer for ignition systems, a stationary element in the form of an insulating ring having segments and a circuit breaker cam ring attached thereto, a rotor within the rings carrying a radially disposed brush for successively engaging the segments and a circuit breaker having a contact member fixed to the rotor and a radially disposed, slidable, spring-pressed contact member electrically connected to the brush and engageable with the cam.

1,683,393. CONDENSER. DAVID W. R. MORGAN, Swarthmore, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 9, 1922. Serial No. 580,719. 2 Claims. (Cl. 285—45.)

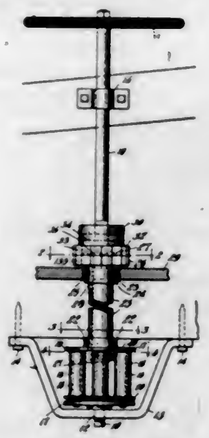
1. A condenser tube fastening for slidably mounting a tube in a tube sheet with a fluid tight fit, comprising a tube sheet having openings therein, certain of said openings having smooth walled counterbores, a ferrule engaging a portion of said counterbore with a driven fit and a packing between the tube and the ferrule and between the tube and that portion of the counterbore which is not engaged by the ferrule.

1,683,394. TRACK LEVEL. DAN K. NEWMYER, Houston, Tex. Filed Feb. 16, 1926. Serial No. 88,509. 2 Claims. (Cl. 33—145.)



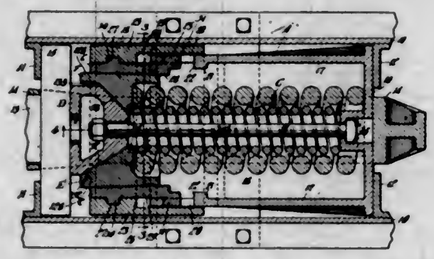
1. In a track level a rigid body member, a stop member at one end on the lower side thereof, a staff at the opposite end on the vertical side thereof, said staff comprising an

upright plate and a foot member extending beneath and transversely of the body member to engage the rail, said plate being adjustable vertically and also in various an-



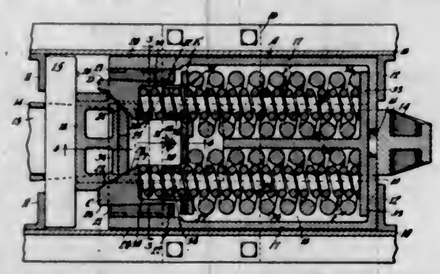
gular positions on said body, whereby said staff may lie parallel with said member, said foot engaging the end of said member, and a scale formed on one side of said staff in the manner described.

1,683,395. CULTIVATING IMPLEMENT. MARTIN OAKLAND, Chicago, Ill. Filed Apr. 5, 1927. Serial No. 181,084. 9 Claims. (Cl. 97—58.)



1. In a cultivating implement, a downwardly inclined scoop having a forward cutting edge, a pair of lateral supporting members extending forward from said scoop, an elongated handle secured to said supporting members, means for adjustment of said supporting members on said handle, and a flat member supported by said lateral members intermediate said scoop and handle for determining the depth of cut of said scoop.

1,683,396. HAND BRAKE. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Oct. 9, 1922. Serial No. 593,187. 10 Claims. (Cl. 254—149.)

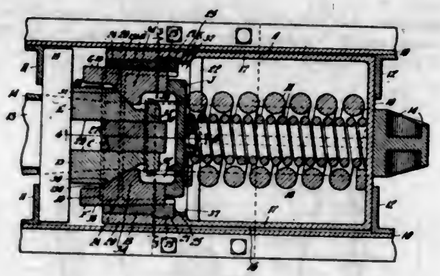


1. In a hand brake for railway cars; the combination with a manually operable vertical staff about which the brake chain is adapted to be wound; of a member rotatable on said staff about which the brake chain is adapted to be wound also; a clutch interposed between said member and staff; a ratchet secured to said staff; a ratchet secured to said member; and pawl mechanism coacting with each of said ratchets, said pawls being relatively movable, and being engageable with one another so as to be operable in unison to disengage from said ratchets.

1,683,397. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Jan. 31, 1927. Serial No. 164,884. 12 Claims. (Cl. 213—24.)

1. In a friction shock absorbing mechanism, the combination with a spring cage less than the full compression stroke of the mechanism; of a friction shell, said shell and cage being relatively movable; removable means for lining said shell, said removable means being anchored to the spring cage, said anchorage providing for limited longitudinal movement between the shell and cage; friction means co-operating with the lining means of the shell; and spring resistance means opposing movement of the shell and friction means inwardly of the cage.

1,683,398. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Apr. 22, 1927. Serial No. 185,890. 3 Claims. (Cl. 213—32.)

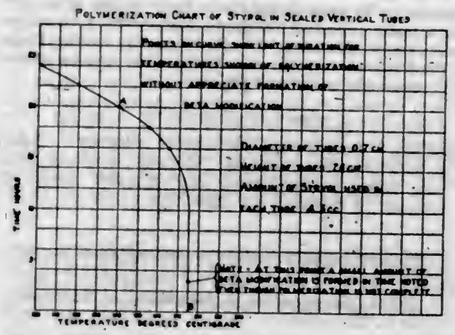


1. In a friction shock absorbing mechanism, the combination with a combined spring cage and friction shell having opposed side walls provided with interior friction surfaces; of a pair of friction shoes engaging the shell friction surfaces; a block having wedging engagement with the shoes and limiting outward movement thereof; anchoring means for the wedge block having abutment means at the inner end thereof; twin arranged spring resistance elements interposed between the shoes and said abutment means, said spring resistance elements being under initial compression and having the inner end supported entirely by said abutment means; and a lost motion connection between said wedge block and anchoring means, including inter-engaging transverse ribs on the wedge block and anchoring means.

1,683,399. FRICTION SHOCK-ABSORBING MECHANISM. JOHN F. O'CONNOR, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corperation of Delaware. Filed July 18, 1927. Serial No. 206,564. 8 Claims. (Cl. 213—32.)

1. In a friction shock absorbing mechanism, the combination with a friction shell; of friction shoes co-operating with the shell; a wedge block having engagement with each shoe, one of said blocks and the shoe co-operating therewith having engaging wedge faces disposed at a relatively keen wedge acting angle with respect to the longitudinal axis

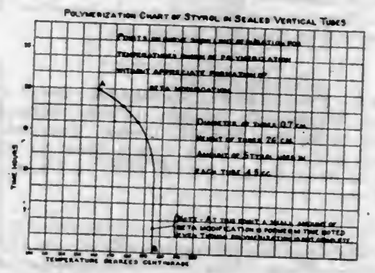
of the mechanism, and the other wedge block and shoe having engaging wedge faces disposed of at a relatively blunter angle to said axis; a friction element interposed



between said wedge blocks, said element being laterally displaceable; and spring resistance means opposing inward movement of the shoes.

1,683,400. [WITHDRAWN.]

1,683,401. PROCESS FOR MAKING SUBSTANTIALLY HOMOGENEOUS MASSES OF POLYMERIZED STYROL FROM A NONHOMOGENEOUS MASS OF POLYMERIZED STYROL. IWAN OSTROMISLENSKY and MORRIS G. SHEPARD, New York, N. Y., assignors to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed May 7, 1924. Serial No. 711,588. 11 Claims. (Cl. 260—2.)



1. A process for making a homogeneous mass of tough transparent polymerized $Ar.CH:CH_2$ where Ar represents an aryl nucleus which comprises combining unpolymerized $Ar.CH:CH_2$ with a non-homogeneous tough transparent polymerized $Ar.CH:CH_2$, and polymerizing said unpolymerized $Ar.CH:CH_2$ to the tough transparent modification substantially free from unpolymerized $Ar.CH:CH_2$.

1,683,402. POLYMERIZED STYROL AND ITS HOMOLOGUES AND PROCESS FOR THE POLYMERIZATION OF STYROL AND ITS HOMOLOGUES. IWAN OSTROMISLENSKY, New York, N. Y., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed July 12, 1924. Serial No. 725,658. 5 Claims. (Cl. 260—2.)

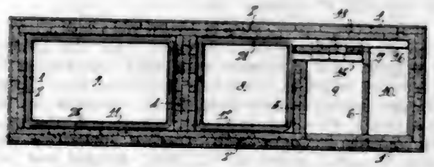
1. A process for forming alpha meta styrols which comprises heating styrols of approximately 92% purity or greater between approximately 140° C. and approximately 175° C. for 20 to 3 hours, maintaining time-temperature relations in accordance with the curve which is approximately defined by the time versus temperature values 20 hours—140° C., 18 hours—155° C., 16 hours—165° C., 10 hours—175° C., 5 hours—175° C.

1,683,403. POLYMERIZED STYROL AND ITS HOMOLOGUES AND PROCESS FOR THE POLYMERIZATION OF STYROL AND ITS HOMOLOGUES. IWAN OSTROMISLENSKY, New York, N. Y., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Original application filed July 12, 1924, Serial No. 725,658. Divided and this application filed Jan. 30, 1925. Serial No. 5,893. 2 Claims. (Cl. 260—2.)

1. A process for forming vitreous beta meta styrol which comprises heating the styrol of approximately 92% or greater purity in a substantially horizontal tube for approximately 40 hrs. in an air bath heated to approximately 140° C.

1,683,404. POLYMERIZED STYROL AND ITS HOMOLOGUES AND PROCESS FOR THE POLYMERIZATION OF STYROL AND ITS HOMOLOGUES. IWAN OSTROMISLENSKY, New York, N. Y., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Original application filed July 12, 1924, Serial No. 725,658. Divided and this application filed Jan. 30, 1925. Serial No. 5,894. 6 Claims. (Cl. 260—2.)

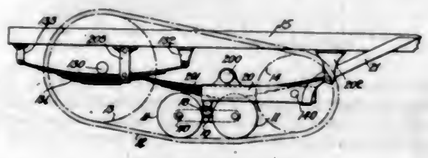
1. A process for making gamma meta $ArCH:CH_2$, where Ar represents aryl, which comprises treating $ArCH:CH_2$ with a peroxide.



1,683,405. PROCESS FOR MAKING VITREOUS POLYMERIZED STYROLS AND PRODUCTS OBTAINED THEREBY. IWAN OSTROMISLENSKY, New York, N. Y., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Original application filed May 7, 1924, Serial No. 711,584. Divided and this application filed Jan. 31, 1925. Serial No. 6,002. 5 Claims. (Cl. 260—2.)

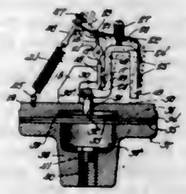
1. A process for producing vitreous polymerized styrols from crude petroleum oil which comprises cracking the crude oil vapors at approximately 650° C. and collecting the condensable portion of this fraction, heating the styrols in said fraction to form brittle, impure resinous polymerized styrol, heating the resinous polymerized styrol to form unpolymerized styrol of greater purity, and repolymerizing said unpolymerized styrol to form tough vitreous polymerized styrol.

1,683,406. ICE-CREAM CABINET AND MEANS FOR AUTOMATICALLY MAINTAINING MORE THAN ONE TEMPERATURE THEREIN SIMULTANEOUSLY. JACOB G. PECK, Portland, Oreg. Filed June 9, 1925. Serial No. 35,996. 8 Claims. (Cl. 62—95.)



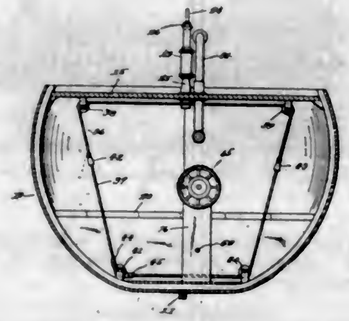
1. A cabinet of the class described comprising a suitably insulated encasing housing including side and end walls, a bottom, and partitions for forming a plurality of compartments, brine reservoirs in certain of the compart-

ments, each reservoir comprising an open ended body composed of thin hollow walls adapted to retain brine within said walls, a cooling coil in the hollow walls of each body, the coil of one body being of greater capacity



than that of an adjacent body, the walls of each said body lying in close proximity to the coils, whereby to provide brine holders of relatively small brine capacity but large surface area and whereby said hollow-walled bodies will encase a maximum of storage space.

1,683,407. ENDLESS-TRACK VEHICLE. OSCAR STYLES PENN, Wandsworth Common, London, England, assignor to Roadless Traction, Limited, Hounslow, Middlesex, England. Filed Feb. 1, 1924. Serial No. 690,079, and in Great Britain Feb. 9, 1923. 3 Claims. (Cl. 305—9.)

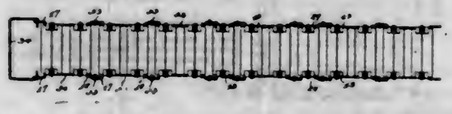


1. In endless track vehicles, the combination of laterally flexible tracks, universally mounted bogies having wheels which run thereon, and supporting means for said tracks comprising two wheels, both the wheels and the portion of the track directly beneath them being normally out of contact with the ground, one of said wheels being a driving wheel for the track and the other an idler, and a spring connected to the chassis and the bogie mounting and also supporting one of said wheels.

1,683,408. ELECTRICAL SWITCHING DEVICE. LOUIS A. M. PHELAN and CLIFFORD HOTCHKISS, Beloit, Wis. Original application filed June 17, 1922, Serial No. 604,162. Divided and this application filed Mar. 5, 1925. Serial No. 13,039. 14 Claims. (Cl. 200—83.)

9. An electric switch comprising a mercury contactor tube, means for tilting said contactor tube to and from open or closed circuit position, said means comprising a tiltable actuator embodying two substantially coextensive portions that are connected together and one of said portions being movable about a knife edge, adjusting means for predetermining the point of response of said tiltable actuator comprising a spring the tension of which may be varied, said spring being attached to one end of one of said two portions, other adjustable means for said two portions, and a contactor tube support associated with said tiltable actuator and operated thereby, said tube support being movably mounted and being adapted to be moved by said tiltable actuator.

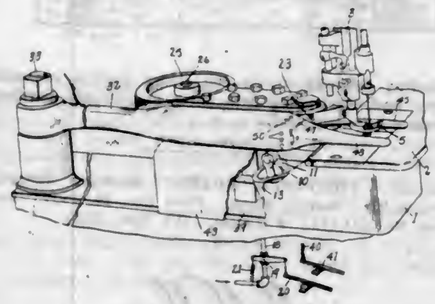
1,683,409. LIFE-SAVING APPARATUS. JOHN PICCO, New York, N. Y. Filed Mar. 8, 1926. Serial No. 93,168. 3 Claims. (Cl. 9—4.)



1. In combination with a life boat having an inclosed hull, rotatable members mounted within said hull, an endless element passing around said members, hand holds positioned on the side branches of said element and means adjustably mounted on both sides of one of said members to prevent slippage of said element.

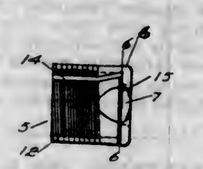
1,683,410. SKIN CLEANSING AND MASSAGING DEVICE. WALTER J. RANCOURT, Boston, Mass. Filed Feb. 13, 1928. Serial No. 253,926. 5 Claims. (Cl. 128—304.)

1. A skin cleansing and massaging device comprising a thimble, to fit upon intermediate finger of the hand, having a blade extending forwardly and laterally therefrom presenting a wing adapted to be engaged by another finger of the hand whereby the edge of the blade may be pressed firmly upon and moved over the skin.



1,683,411. PORTABLE TRACTION DEVICE. HARRY C. REMMERS, Baltimore, Md., assignor to Henry Goodman, Baltimore, Md. Filed Aug. 13, 1926. Serial No. 129,036. 8 Claims. (Cl. 238—14.)

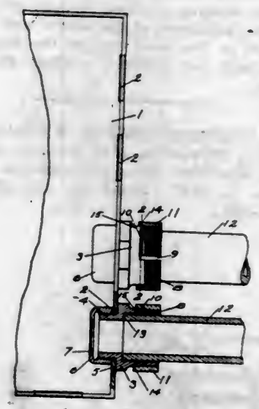
1. A traction device comprising a plurality of crossbars with link plates secured at opposite ends of said bars said link-plates projecting fore and aft with respect



to said bars and means for pivotally connecting the ends of one link-bar with the ends of the bars at the front and rear thereof.

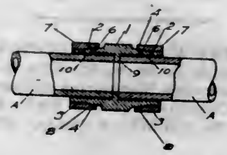
1,683,412. PRESSING MACHINE. LESTER F. ROSENBAUM and ERNEST C. BOWERS, Kalamazoo, Mich.; said Bowers assignor to said Rosenbaum. Filed May 14, 1925. Serial No. 30,276. 6 Claims. (Cl. 68—9.)

6. A seam pressing means comprising a bed member provided with a heating means, a driven belt adapted to travel over said bed member, a coacting pressing member, a pivoted arm by which said pressing member is carried, said arm being adapted as a support for the work, and means for actuating said pressing member.



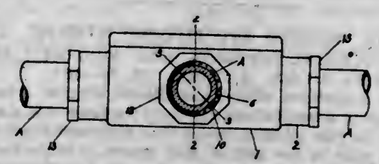
1,683,413. CONDUIT FITTING. HOWARD A. SELAH, Erie, Pa., assignor to Erie Malleable Iron Company, Erie, Pa., a Corporation of Pennsylvania. Filed Apr. 15, 1925. Serial No. 23,348. 6 Claims. (Cl. 247—25.)

1. In a conduit fitting, the combination of a body having a conduit receiving opening therein; and a contractible sleeve in the opening, the walls of the opening and the sleeve having wedging surfaces and a screw thread at its smaller end, the wedging surfaces contracting the sleeve into clamping engagement with an inserted conduit when the sleeve is drawn axially through the action of the screw and the sleeve having an axial slot extending from its outer end inwardly and a circumferential slot extending from the axial slot, the inner surface of the end of the sleeve presenting a continuous wall.



1,683,414. CONDUIT FITTING. HOWARD A. SELAH, Erie, Pa., assignor to Erie Malleable Iron Company, Erie, Pa., a Corporation of Pennsylvania. Filed June 30, 1925. Serial No. 40,540. 1 Claim. (Cl. 247—25.)

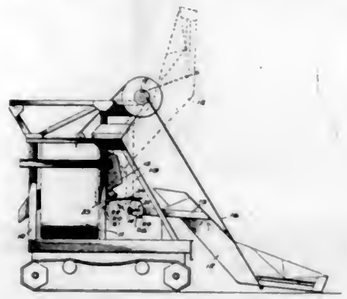
In a conduit fitting, the combination of a body having an extension, said extension having a cylindrical surface and in continuation thereof a screw-threaded end and an axially extending slot extending into the screw-threaded portion, said axially extending slot terminating in a circumferential slot; and a nut on the screw-threaded extension adapted to contract the same, said nut having



a cylindrical projection adapted to close a circumferential slot, said cylindrical projection telescoping the cylindrical portion on the extension.

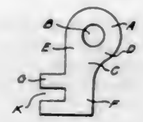
1,683,415. CONDUIT FITTING. HOWARD A. SELAH, Erie, Pa., assignor to Erie Malleable Iron Company, Erie, Pa., a Corporation of Pennsylvania. Filed June 30, 1925. Serial No. 40,541. 5 Claims. (Cl. 247—27.)

1. In a conduit fitting, the combination of a body having a continuous annular wall and having oppositely projecting extensions, each having a screw-threaded end and an axial slot extending inwardly from the end into a circumferential slot; and a nut on each end having a tapered engagement with the extension and contracting the same as the nut is advanced thereon, said nut covering the slot.



1,683,416. CONDUIT FITTING. HOWARD A. SELAH, Erie, Pa., assignor to Erie Malleable Iron Company, Erie, Pa., a Corporation of Pennsylvania. Filed Aug. 31, 1925. Serial No. 53,482. 1 Claim. (Cl. 247—25.)

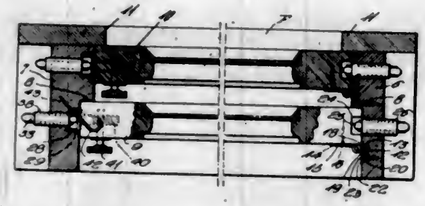
In a conduit fitting, the combination of a body having a conduit-receiving opening; a sleeve in the opening having its inner end in the form of a continuous annular



wall, said sleeve having a slot extending from its outer end inwardly terminating in a circumferential slot and a screw thread on its outer end, the circumferential slot extending in a direction opposite to the tightening direction of the screw thread, the walls of the opening and sleeve having wedging surfaces brought into engagement by the endwise movement of the sleeve; and a nut on the screw threads at the outer end of the sleeve operating against the body and adapted to effect the contraction of the sleeve.

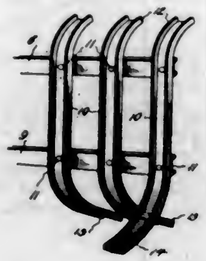
1,683,417. CONCRETE-MIXING MACHINE. SAMUEL SHAFER, Jr., Milwaukee, Wis., assignor to Chain Belt Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 7, 1927. Serial No. 197,125. 7 Claims. (Cl. 214—130.)

1. In a concrete mixing machine, the combination with a loading skip and a sub-chute adapted to receive material from said skip, of means operable by the movement of said skip for striking said sub-chute to loosen material adhering to the walls thereof.



1,683,418. TERMINAL FOR CONDUCTORS. JOHN C. SHAW and ROBERT D. SHAW, Brooklyn, N. Y., assignors to Keller Mechanical Engineering Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Nov. 12, 1926. Serial No. 147,877. 3 Claims. (Cl. 173—269.)

1. A terminal for conductors, comprising a washer-like head, an arm extending therefrom, said arm being off-center, so that its outer edge is substantially tangential to said washer head, and conductor holding clip lugs extending from said tangential edge and adapted to be bent over the conductor on one side of the arm to form rights and lefts.



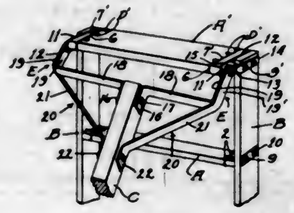
1,683,419. SLIDING AND PIVOTED WINDOW. LENHART G. SILLER, Sacramento, Calif. Filed Oct. 7, 1927. Serial No. 224,658. 3 Claims. (Cl. 20—50.)

1. In a combined pivoted and slidable window, a frame stile having a longitudinal groove in its inner side, a sash having an edge slidably contracting with said inner side of said stile at one side of said groove, a hinge having one leaf secured to said sash and another leaf extending into said groove, said other leaf being right angular in horizontal section providing it with inner and outer longitudinal portions, said inner longitudinal portion being disposed at one side wall of said groove while said outer longitudinal portion projects toward the opposite side wall of said groove, and a strip extending longitudinally of and secured to said inner side of the stile, said strip

projecting laterally across the major portion of said groove and overlapping said outer longitudinal portion of said other hinge leaf.

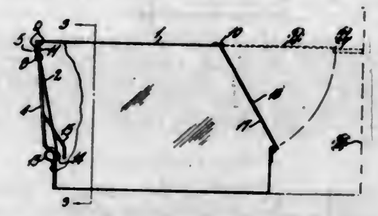
1,683,420. FIREPLACE GUARD. MATHIAS JOSEPH SKUBE, Jr., Seattle, Wash. Filed Dec. 19, 1927. Serial No. 241,112. 4 Claims. (Cl. 126—202.)

1. A fireplace guard comprising a plurality of horizontal bars, and a series of vertical bars secured to said horizontal bars, a number of said vertical bars having their lower ends projected forwardly, and others of said vertical bars having their lower ends projected rearwardly, said forwardly and rearwardly projected bar ends having their lower extremities disposed in a single horizontal plane to rest on a fireplace hearth and support the guard against tipping either forwardly or rearwardly



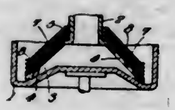
---

1,683,421. SCREEN FRAME. JOHN E. SODERGREN, Minneapolis, Minn. Filed Apr. 3, 1925. Serial No. 20,387. 4 Claims. (Cl. 156—14.)



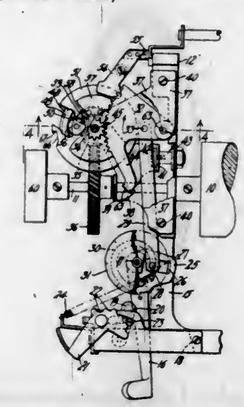
4. A screen comprising a frame member formed to provide a reinforced edge, an open groove with side walls having resilient edges slightly overhanging said groove, a flat surface between said edge and one side of said groove, and a flat surface between the other side of said groove and the other edge of said frame member, a screen fabric extending into said groove and across said flat surfaces, a rod held in said groove by said resilient edges to secure said screen under tension to said frame member, and a second frame member including an edge reinforcement co-operating with the reinforcement on said first named member to constitute a reinforced frame and a flat surface designed to lie opposite the flat surfaces on said first named member and fastening elements securing said members together with the screen fabric clamped between the opposing flat surfaces.

1,683,422. LADDER. JAMES W. STEVENSON, Riverside, Calif. Filed Apr. 11, 1927. Serial No. 182,550. 2 Claims. (Cl. 228—58.)



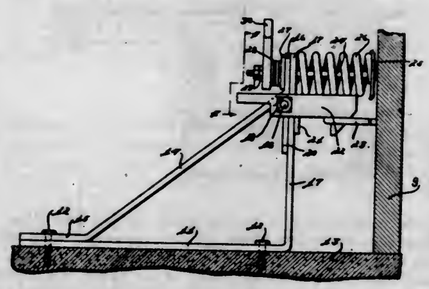
2. A ladder fixture comprising a bond for surrounding a tread adjacent an end theerof to prevent splitting; a pair of bolts of substantially L-shape for extension through the tread and through a stile, said bolts adapted to engage the bond at both its top and bottom faces; a plate to connect the bolts to overlie the stile, and nuts on said bolts.

1,683,423. TRAP NEST. FRANK STRICKLAND, Oklahoma City, Okla. Filed Feb. 23, 1928. Serial No. 256,184. 2 Claims. (Cl. 119—50.)



1. In a trap nest, a box having an opening, a gate hinged from the upper margin of the opening, the said gate being adapted to open inwardly only and having downwardly extended stems, the outer stems for impinging the inner side of the lower margin of the said opening to prevent the gate swinging outwardly, the medial stems being offset inwardly from the said lower margin to facilitate the entrance of the fowl.

1,683,424. CENTRIFUGAL SEPARATING MACHINE. KARL JOHAN SVENSSON, Lidingo Villastad, and KARL AXEL PATRIK NORLING, Sodertorns Villastad, Sweden. Filed Jan. 7, 1927, Serial No. 159,614, and in Sweden Sept. 10, 1926. 2 Claims. (Cl. 233—21.)

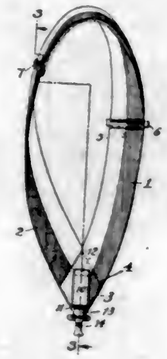


1. A centrifugal machine for the continuous separation of two or more liquids of different specific gravities, comprising a drum, intermediate conical plates spaced apart in said drum, said conical plates having apertures in the conical parts thereof, adapted for the introduction and distribution between said plates of an incoming supply of liquid, a distributor formed with openings constituting an inlet to the spaces between said conical plates adapted to receive and distribute the incoming liquid to said apertures, and a bottom plate provided with apertures for co-operation with the openings in said distributor to vary the position of said inlet according to the required liquid separation upon rotation of the bottom plate.

1,683,425. TYPEWRITING MACHINE. LINDEN A. THATCHER, Belleville, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed July 9, 1926. Serial No. 121,352. 21 Claims. (Cl. 197—114.)

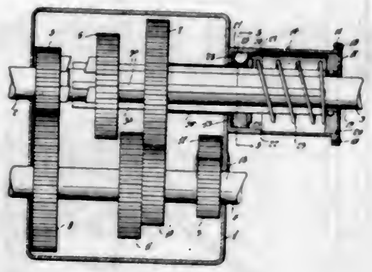
1. In a typewriting machine including a revoluble platen and a line-space lever, the combination of motion-multiplying mechanism operable to rotate the platen, including an internal gear, a pinion always in train within the gear, and means operatively connectible to the line-space lever to render the pinion operative or inoperative to drive the gear.

1,683,426. DOOR LATCH AND OPENER. RAY H. THRASHER, Ferndale, Mich. Filed Oct. 10, 1927. Serial No. 225,071. 5 Claims. (Cl. 292—198.)



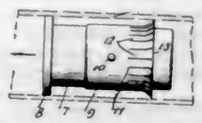
1. A device of the class described adapted for use with a swingably mounted door, comprising: a supporting member; a latch swingably mounted on said supporting member; a U-shaped clip mounted on said door and adapted for engagement with said latch, said latch, through gravity, locking upon its engagement with said U-shaped member; a horizontally disposed slidable member mounted on said supporting member; a swingably mounted releasing member on said horizontally disposed member adapted, upon downward swinging, for engaging and unlatching said latch; and a resilient member for frictionally retaining said swingably mounted releasing member in inoperative position.

1,683,427. DECORATIVE BELT. HOWARD B. TURNER, Mount Sterling, Ky., assignor of one-half to J. Oldham Greene, Mount Sterling, Ky. Filed May 5, 1927. Serial No. 188,898. 1 Claim. (Cl. 241—12.)



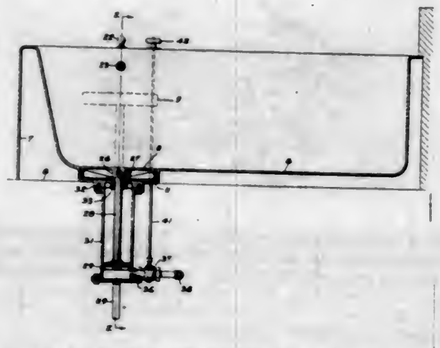
An ornamental baldric type belt comprising a pair of flexible members one end of each being diagonally crossed over the corresponding end of the other and stitched there-

to, the opposite ends of said members being adjustably connected, a resilient strip secured at one terminal to the rear face of said members within the area of the crossed portions



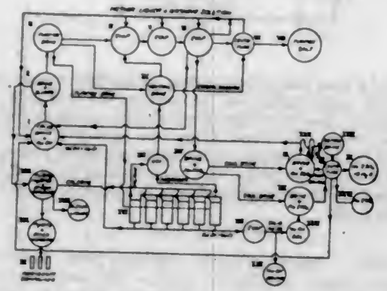
and having its free end encompased within said area, and a clasp secured to the free end of said strip and adapted to be connected to a garment normally worn by the wearer.

1,683,428. AUTOMATIC SHAFT LOCK FOR AUTOMOBILES. WALTER B. UFFERT, Freeport, N. Y. Filed June 2, 1927. Serial No. 196,010. 9 Claims. (Cl. 192—4.)



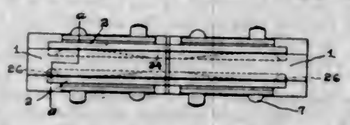
2. In combination, a transmission gearing including a sliding gear shaft and gears slidably associated with said shaft, a stationary ratchet, a rotatable ratchet slidably fixed to said shaft and provided with an extension contacting with one of said gears, and means yieldingly holding the rotatable ratchet in operative position with respect to the stationary ratchet.

1,683,429. PLUG FOR CLEANING TUBES. EDWARD WALKER, Grantwood, N. J. Filed Nov. 17, 1926. Serial No. 148,945. 3 Claims. (Cl. 15—104.06.)



1. A plug for cleaning condenser tubes and the like, including a body composed entirely of rubber and having a flange at one end thereof, and a scraper including a sleeve fitted over said body and having one end split longitudinally to form a plurality of blades, the free extremities of which are flared outwardly and which combine to form a circumferential scraping edge.

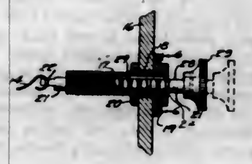
1,683,430. BATHTUB ATTACHMENT. EDWARD A. WRIGHT, Fresno, Calif. Filed Dec. 8, 1926. Serial No. 153,317. 9 Claims. (Cl. 4—185.)



1. In a bath tub, a seat adapted to rest on the bottom thereof, a cylinder adjacent said bath tub, a piston in said cylinder directly connected to said seat for raising said seat from the bottom of said tub, and manually operated means for controlling the flow of fluid to and from said cylinder.

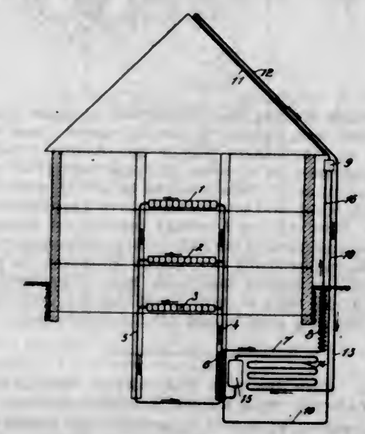
1,683,431. METHOD OF MAKING BLEACH LIQUOR AS BY-PRODUCT IN SALT PURIFICATION. VICTOR YNGVE, Lakewood, Ohio. Original application filed Apr. 9, 1925, Serial No. 21,844. Divided and this application filed Jan. 12, 1927. Serial No. 160,648. 3 Claims. (Cl. 23—86.)

1. The process of obtaining bleach liquor as a by-product in the purification of salt which comprises mixing with a brine containing magnesium and calcium an amount of sodium hydroxide in excess of the amount necessary to precipitate the magnesium and calcium, heating the mixture to about 100 degrees, separating the precipitated hydroxide sludge and chlorinating the said sludge only to the extent that no appreciable amount of magnesium hydroxide is chlorinated.



1,683,432. INSULATED RAIL JOINT. EMIL CARL ZIMMERMAN, New York, N. Y., assignor to Q & C Company, New York, N. Y., a Corporation of Maine. Filed Nov. 23, 1925. Serial No. 70,767. 2 Claims. (Cl. 235—159.)

1. In an insulated rail joint, the rail ends, oppositely positioned splice bars, insulating members interposed between the rail ends and the splice bars, said splice bars

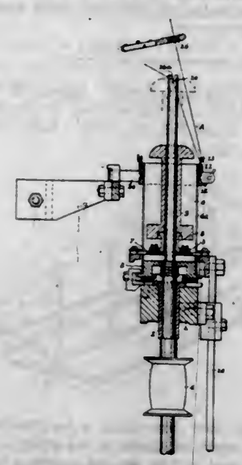


being of the fish plate type composed of vertical web portions having upper and lower shoulder extensions providing fishing surfaces and said bars having their central portion reinforced by the thickening of the web upon the inner sides thereof and said bars being formed at their end portions with web thickening fillets connecting the fishing shoulder extensions, substantially as described.

1,683,433. DEVICE FOR CONTROLLING RADIATOR SHUTTERS. WILLIAM A. ALLEN, New York, N. Y. Filed Jan. 8, 1926. Serial No. 79,968. 12 Claims. (Cl. 74—39.)

1. A control device for automobile radiator shutters, comprising, a stationary tubular guide adapted to be mounted on the instrument board of the automobile, and a plunger accessible from the front of the instrument board and carried in the guide, the plunger and guide having cooperative devices to permit axial movement of the plunger only when in a predetermined angular position and to permit angular movement of the plunger only when in predetermined positions along the axis of the guide, said devices having such configuration as to effect a wedging action and cause binding of the parts when the plunger is turned to the limit of its angular movement.

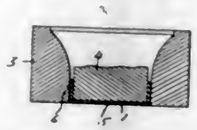
1,683,434. METHOD OF HEATING BUILDINGS. EDMUND ALTENKIRCH, Alt-Landsberg-Sud, Germany, assignor to Siemens-Schuckertwerke Gesellschaft mit beschrankter Haftung, Siemensstadt, Germany, a Corporation of Germany. Filed Sept. 17, 1925, Serial No. 56,966, and in Germany Jan. 9, 1924. 4 Claims. (Cl. 62—170.)



1. The method of heating, which consists in utilizing existing temperature differences to raise heat of the existing higher temperature to a still higher temperature level, obtaining the heat for heating purposes by the absorption of a gas in a liquid, expelling the gas again from the solution at lower pressure by means of the existing higher temperature, condensing said gas by the existing lower temperature, and evaporating it again at higher pressure by the existing higher temperature.

1,683,435. TANDEM-BARREL WELL PUMP. MERTON T. ARCHER, Pittsburgh, Pa., assignor to The National Supply Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 18, 1927. Serial No. 184,554. 9 Claims. (Cl. 103—184.)

1. In a pump, a well tubing having its lower portion of greater diameter, tandem pump barrels insertible through the upper portion of the well tubing and into the lower portion, means for supporting the pump barrels in the said lower portion, tandem valved pistons in the pump barrels, means blocking the passage of fluid from one barrel to the other and from the space around one barrel to the space around the other, a standing valve in the well tubing, and a passage connecting the space in the upper barrel and below its piston to the space surrounding the lower barrel, a passage connecting the space in the lower barrel and above its piston to the space surrounding the upper barrel, and means for operating the pistons.

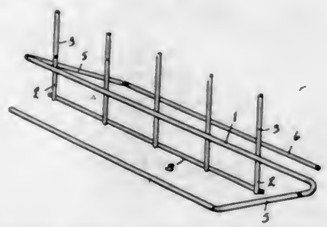


1,683,436. SPINNING MACHINE. ROBERT BARBOUR, Paterson, N. J., assignor to Barbour Flax Spinning Co., Paterson, N. J., a Corporation of New Jersey. Filed July 9, 1927. Serial No. 204,570. 3 Claims. (Cl. 118—64.)

1. The combination of supporting means, a spindle projecting therefrom and journaled therein, a core member penetrated by and mounted on and rotative with the pro-

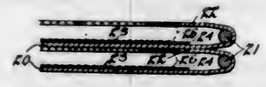
jecting portion of the spindle, a yarn-guide offset from the free end of the spindle, a yarn-guide rotative around the core, means to effect relative reciprocation lengthwise of the spindle as between the same and the latter yarn-guide, said spindle having its free end constantly projecting from the latter yarn-guide and being formed with means to secure the yarn preparatory to the winding of the yarn on said core member.

1,683,437. METHOD OF FORMING DRAWN ARTICLES. JOSEPH E. BATIE, Detroit, Mich., assignor to Kelsey Wheel Company, Inc., Detroit, Mich., a Corporation of New York. Filed June 13, 1927. Serial No. 198,677. 4 Claims. (Cl. 113—51.)



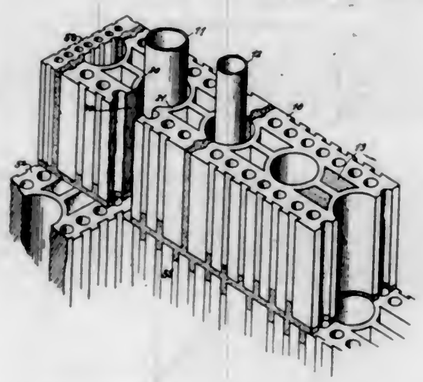
1. The method of forming a drawn article, which includes heating a blank and using a fused mineral salt to protect the blank from oxidation, and then drawing the blank and using the salt thereon as a lubricant during the drawing.

1,683,438. ROOF-FRAMING RULE. GEORGE P. BILLINGS, Albany, Wis. Filed Aug. 22, 1927. Serial No. 214,627. 14 Claims. (Cl. 33—161.)



1. A roof framing rule comprising a pair of telescopically connected bars, one of which is provided with a scale having a zero point and consisting of graduations spaced longitudinally of the bar and suitably designated to indicate progressively increasing angles of roof inclination, the other of said bars having an end adjustable along the scale into register with any one of said graduations and having a measuring point thereon, each graduation on the scale being spaced from the zero point a distance such that the distance from the zero point to the measuring point when the rule is set to the graduation is equal to a selected unit of measurement multiplied by the secant of the angle indicated by the graduation on the scale with which the end of the second bar register.

1,683,439. STRUCTURAL UNIT. DEWEY H. BITNEY, Albion, Mich., assignor to Union Steel Products Company, Albion, Mich. Filed Feb. 12, 1927. Serial No. 167,678. 7 Claims. (Cl. 72—122.)

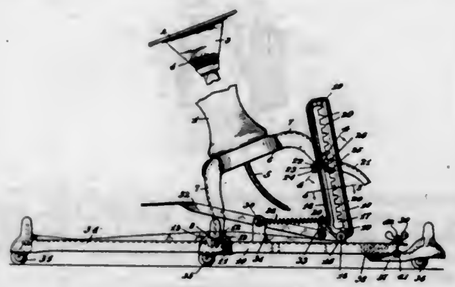


7. A structural unit comprising a longitudinal rod having downwardly inclined struts at its ends, a plurality of legs secured to said rod in spaced relation between said struts, and longitudinal base members at the lower ends of said struts disposed in planes at the sides of the said longitudinal rod.

1,683,440. RECORD HOLDER FOR TALKING MACHINES. PAUL D. BODWELL and HENRY W. BELLOWS, Waynesboro, Pa., assignors to Deca Disc Phonograph Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Aug. 13, 1925. Serial No. 50,062. 6 Claims. (Cl. 274—1.)

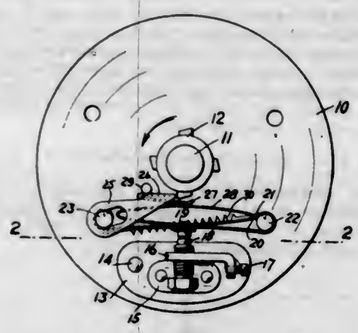
5. A protective holder for supporting disk records in a manner to permit them to be easily removed from the holder comprising a plate having a central hole for a phonograph spindle said plate being turned up at its edge and bent inwardly to form an overhanging flange, a stiffening ring disposed between the overhanging flange and the plate, a soft record supporting lining for said plate adapted to provide frictional driving engagement between the holder and a record supported thereon and having its outer edge terminating beneath said overhanging flange, substantially as set forth.

1,683,441. HOLLOW CLAY TIRE BUILDING BLOCK. RUSSELL GLENN BONE, Milledgeville, Ga. Filed Nov. 7, 1927. Serial No. 231,762. 5 Claims. (Cl. 72—41.)



2. A hollow building block comprising an inner and an outer hollow wall disposed in parallel spaced apart relation and an intermediate cellular construction including thin curved webs of uniform thickness with their ends merging at an acute angle into and integrally connecting the exterior walls, said exterior walls having approximately the same width and said cellular construction having a width measured between the walls substantially equal to the sum of the widths of the two exterior walls, and the mass of material comprising said block being distributed approximately one third in each of said hollow exterior walls and the remaining third in said cellular construction.

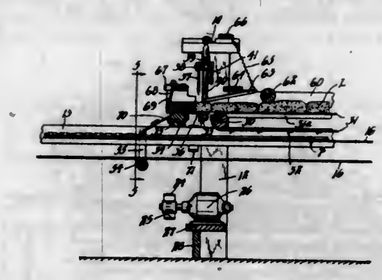
1,683,442. PROCESS FOR PREPARING DEPILATORY SUBSTANCES. RENÉ BOTSON, Auderghem-Brussels, Belgium, assignor to Société Industrielle des Applications Chimiques, Société Anonyme, Brussels, Belgium. Filed Aug. 19, 1926, Serial No. 130,341, and in Belgium Aug. 21, 1925. 3 Claims. (Cl. 149—2.)



1. A process for preparing a depilatory product from an alkali sulphide, comprising the treatment of the alkali sulphide with dry steam until liquefication has taken place, and adding to the liquid thus obtained, after decantation and filtration, a solution of caustic soda, the solution obtained being afterwards filtered, concentrated and crystallized, substantially as described.

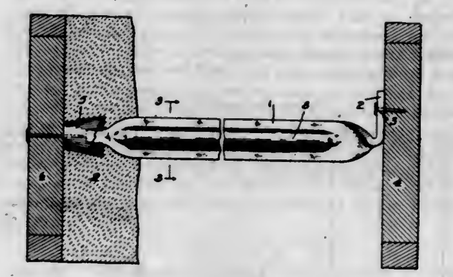
1,683,443. MOUNT FOR DRAWING TABLES AND THE LIKE. ERNEST J. BRASSEUR, Chicago, Ill., assignor to A. B. Dick Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 19, 1924. Serial No. 700,235. 13 Claims. (Cl. 45—131.)

1. A mount for apparatus of the class described, having supporting legs, said mount including a base and seats to receive a plurality of said legs tiltingly, and a holding-device mounted on said base and having means to be secured adjustably to another of said legs, to hold said apparatus in different tilted positions relatively to said base.



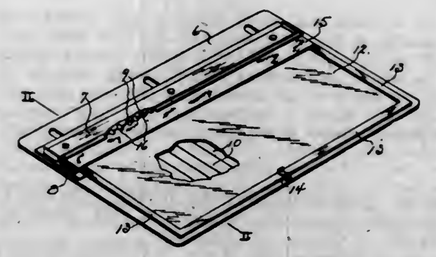
1,683,444. CONTACT MAKER AND INTERRUPTER. WILLIAM C. BRINTON, Jr., Kennett Square, Pa., assignor to Philbrin Corporation, Kennett Square, Pa., a Corporation of Delaware. Filed Dec. 1, 1920. Serial No. 427,493. 10 Claims. (Cl. 200—30.)

3. A make and break device for ignition circuits comprising a fixed contact, a spring-supported movable contact, vibrating means, and a vibrator interposed between the movable contact and the vibrating means arranged to vibrate the vibrator when moved in one direction and to be shifted without operating the vibrator when said means is moved in the reverse direction.



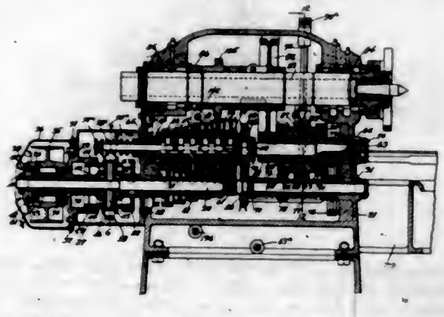
1,683,445. BREAD-SLICING MACHINE. EDWIN C. BROCK, Minneapolis, Minn. Filed June 5, 1926. Serial No. 113,927. 4 Claims. (Cl. 146—155.)

1. In a bread slicing and panning machine, the combination with a slow moving pan carrier, of an intermittently moving loaf carrier, a slotted bed and a slicing knife with its edge working through the slot of said bed, an inclined guide reaching from near the rear edge of said bed to a point overlying the pans of said pan carrier, and a series of slice retaining and delivering devices operative to yieldingly hold the cut slices in their normal vertical position abutting the cut loaf on the bed and then to deliver the foremost slices intermittently from said bed, with the bottom edges foremost and with the sides of the slices



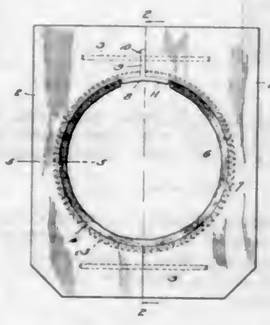
substantially parallel to the guide, onto said guide and therefrom to said pans, under the successive feed movements of said loaf carrier, substantially as described.

1,683,446. METALLIC SPREADER FOR WOOD FORMS. EARL GORDON BROWN, Oakland, Calif. Filed Oct. 26, 1927. Serial No. 228,769. 9 Claims. (Cl. 25—131.)



2. A spreader for wood forms comprising a metallic strap provided at one end with a right angularly disposed foot, and at its other end with a relatively soft head.

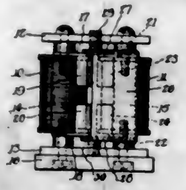
1,683,447. VISIBLE INDEX. CLAUDE M. CONGER, Kansas City, Kans., assignor to Irving-Pitt Manufacturing Company, Kansas City, Mo., a Corporation of Missouri. Filed June 4, 1926. Serial No. 113,680. 4 Claims. (Cl. 129—34.)



1. In combination with a sheet holder having a plurality of sheets hingedly carried in overlapped relation, a transparent guard member movable to and from a position against all of said sheets and a means for securing said guard member in position against the sheets.

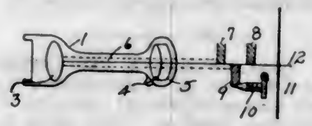
1,683,448. SELECTIVE GEARED HEAD LATHE. CONRAD M. CONRADSON, Madison, Wis., assignor to Joseph T. Ryerson and Son, Chicago, Ill., a Corporation of Illinois. Filed Dec. 15, 1919, Serial No. 344,845. Renewed Nov. 30, 1925. 8 Claims. (Cl. 74—58.)

1. The combination with a head stock, of a driving shaft journaled in the lower portion thereof and having a driving connection at one end, an intermediate shaft journaled in said head stock, gears secured on said driving shaft, a clutch control gear unit on said intermediate shaft engaging the gears of said driving shaft, a work-supporting spindle adjacent said intermediate shaft, a pinion secured on said intermediate shaft, a sleeve having a driving connection with said pinion and geared to said spindle, and a second sleeve geared to said pinion and having a driving connection with said first-named sleeve.



1,683,449. DUST GUARD. WILLIAM F. CREMEAN, Toledo, Ohio. Filed Aug. 14, 1926. Serial No. 129,175. 6 Claims. (Cl. 286—6.)

1. A car axle dust guard having a body formed with an opening of larger diameter than the dust guard journal of the axle, and provided with flexible means bordering the margin of said opening and projecting inwardly toward the center of the latter for engagement with said journal, and having a resilient expansion ring retaining said flexible means in assembled relation to said body.

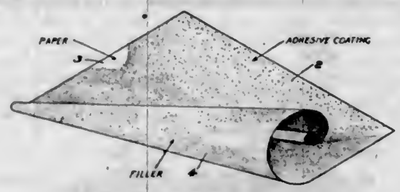


1,683,450. ELECTROMAGNETIC DEVICE. WILLIAM P. CROCKETT, Chicago, Ill. Filed Dec. 26, 1924. Serial No. 758,021. 9 Claims. (Cl. 175—336.)

1. In an electromagnetic device, the combination of a pair of electromagnets, bars of non-magnetic material securing said electromagnets together in substantially parallel relation, pole pieces having curved outer edges and substantially parallel adjacent edges at each end of said electromagnets separated by a substantial air gap, polar extensions from the pole pieces of each electromagnet extending towards each other and having cylindrical outer surfaces, the cylindrical surfaces of said extensions being coaxial, and an armature pivotally supported by said bars for oscillation about the common axis of said cylindrical

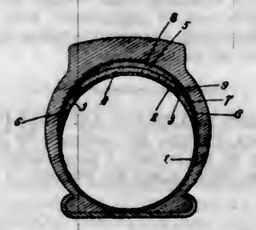
surfaces, said armature comprising a body portion having a cylindrical inner surface separated from said cylindrical surfaces of said polar extensions by a small air gap and laterally extending ends for engaging its pivotal supports.

1,683,451. SOUND RECORDING AND REPRODUCING APPARATUS. LEE DE FOREST, New York, N. Y., assignor to De Forest Phonofilm Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 19, 1925. Serial No. 76,471. 6 Claims. (Cl. 179—100.1.)



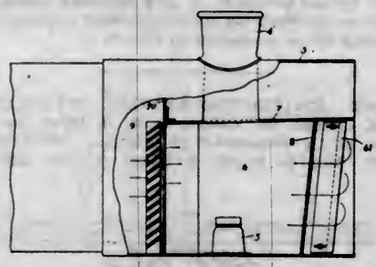
5. In a sound reproducing and recording device, a source of illumination, means comprising three opaque plane members two of which lie in separate parallel planes on one side of the center line of the light source, and a third member on the opposite side in a plane between the other two, said third member being adjustable with respect to the other two, and the other two members having thin edges in the same plane to vary the thickness of the beam of light passed, and means for recording variations in intensity of said source of light.

1,683,452. HYDROMETER. LEO EDELMANN, Chicago, Ill., assignor to E. Edelmann & Co., Chicago, Ill., a Corporation of Illinois. Filed May 22, 1925. Serial No. 32,199. 7 Claims. (Cl. 265—45.)



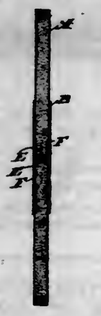
4. The combination with the barrel of a hydrometer syringe, of a cylindrical rubber member surrounding the barrel and having a projecting perforated ear.

1,683,453. COATED PAPER. FREDERICK W. FARRELL, Brookfield, Mass., assignor to McLaurin-Jones Co., Brookfield, Mass., a Corporation of Massachusetts. Filed July 17, 1925. Serial No. 44,358. 3 Claims. (Cl. 91—68.)



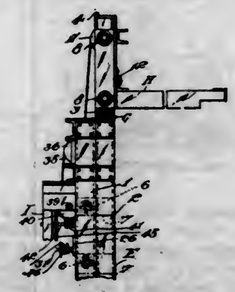
1. An article of the character described comprising paper having one side thereof coated with a filler and its opposite side coated with a water soluble adhesive which is tacky under normal atmospheric conditions.

1,683,454. SELF-HEALING INNER TUBE. WILLIAM FETTER, Baltimore, Md. Filed Oct. 13, 1924. Serial No. 743,244. 4 Claims. (Cl. 152—13.)



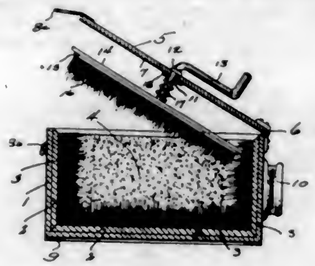
1. In an inner tube for pneumatic tires, a tubular member of vulcanized rubber having a channel extending longitudinally of the tread portion, puncture-healing plastic in the channel, and a cover strip covering channel and secured to the tube at each side of the channel.

1,683,455. LOCOMOTIVE STRUCTURE. GUY T. FOSTER, Dayton, Ohio, assignor to Leroy Thompson, New York, N. Y. Filed Dec. 31, 1926. Serial No. 158,205. 5 Claims. (Cl. 110—147.)



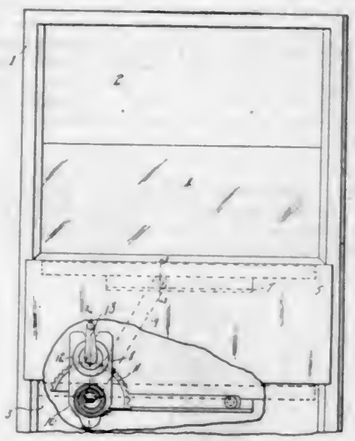
1. In a locomotive boiler structure including fire-box, boiler flues, and a cylindrical, horizontally extending smoke-box, and smoke-stack and injection nozzle arranged in vertical axial alignment in the top and bottom of the smoke-box, a horizontally extending partition arranged within the smoke-box and extending longitudinally from the rear to the front wall of the smoke-box and closing off an upper idle space within the cylindrical outer wall of the smoke-box and a bifurcated vertically extending partition arranged within the smoke-box and beneath the said horizontally extending partition and extending from the rear and on opposite sides of the axis upon which smoke-stack and injection nozzle are aligned, and affording passageways for the gases forwardly from the boiler flues in bifurcated course adjacent the side walls of the smoke-box, and then rearwardly in united course at the center of the smoke-box toward the vertical axis in which smoke-box stack and injection nozzle are aligned.

1,683,456. BRUSH. CLINTON E. FROST, Chippewa Lake, Ohio, assignor to The Specialty Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 18, 1926. Serial No. 142,304. 1 Claim. (Cl. 15—179.)



As an article of manufacture, a brush section, comprising a disc shaped bristle body having a central opening and a pair of sheet metal clamping plates between which said bristle body is secured, and locking means for said body and plates comprising pointed lugs extending inwardly from the inner opposite sides of said plates, the pointed ends of said lugs being turned over the outer sides of said bristle body, said lugs being integrally formed from said plates, leaving corresponding openings therein, the extremities of the lugs in one plate lying against the opposite outer face of said body and enclosed in one of said openings.

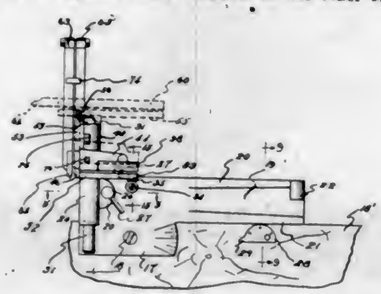
1,683,457. PORTABLE ELEVATOR. HENRY S. GERMOND, Jr., Bayonne, N. J., and HAROLD GREEN, Yonkers, N. Y., assignors to said Germond. Filed July 24, 1925. Serial No. 45,795. 20 Claims. (Cl. 187—11.)



10. Elevating apparatus comprising a vertical frame including a plurality of relatively longitudinally movable sections, cable hoisting means for relatively moving said sections to extend and collapse said frame, a load sustaining platform mounted to move vertically on said frame, a second cable hoisting means for raising and lowering said platform, and means cooperating with said two hoisting means to cause unwinding and winding of cable by said platform hoisting means simultaneously with and in compensation of the extending and collapsing respectively of said frame and to permit raising and lowering of said platform independently of the extension and collapse of said frame.

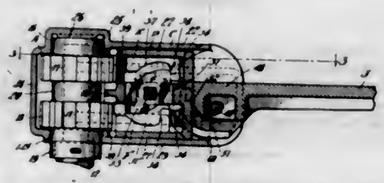
1,683,458. CLEANING DEVICE FOR FALSE TEETH. HARRY GARRISON HALL, Williams, Ariz. Filed Dec. 5, 1927. Serial No. 237,828. 3 Claims. (Cl. 15—21.)

1. A device of the character described comprising a hollow receptacle, bristles carried on the inner walls of the receptacle, a cover for the receptacle, a rotatable plate on the cover and extending into the receptacle and mounted for movement toward and away from the cover, a spring for urging the plate away from the cover, and bristles carried by the plate and extending into the receptacle.



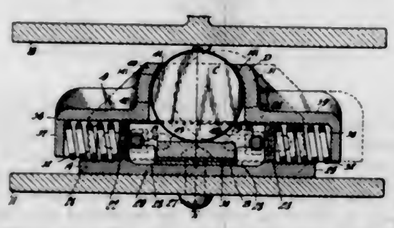
1,683,459. CONNECTION BETWEEN CLOSURES AND CONTROL ARMS OF WINDOW REGULATORS. MILES G. HANSON, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed Feb. 23, 1926. Serial No. 90,107. 7 Claims. (Cl. 268—126.)

1. The combination with a closure and a regulator for operating said closure including an angularly movable sheet metal member operatively connected to said closure, of means for operatively connecting said sheet metal member and closure including a sectional bearing extending transversely of said angularly movable member and having a section integral with and struck out from said angularly movable member.



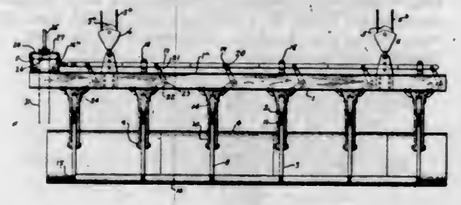
1,683,460. MITER BOX. HARVEY M. HARTWAY, Highland Park, Mich. Filed Apr. 28, 1924. Serial No. 709,456. 8 Claims. (Cl. 143—88.)

8. A miter box of the class described, comprising a vertically extending supporting member; an abutment member carried by said supporting member having a pair of spaced bosses projecting from the upper surface thereof; an engaging member swingably mounted on said supporting member and having a pair of openings, spaced apart, each adapted for the reception of one of said spaced bosses; a saw guide mounted on said engaging member; a pair of parallel extending yokes, one of said yokes being pivotally mounted at its opposite ends to said saw guide; a saw guide fixedly mounted on the other of said



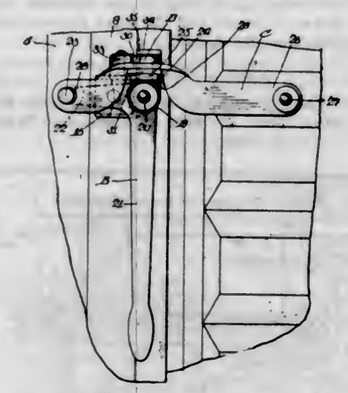
yokes, the upper end of said post projecting beyond said engaging member, said pivotally mounted yoke being adapted for engaging, when swung to horizontal position, the upper end of said supporting member for raising said engaging member out of engagement with said spaced bosses, for permitting the free rotation of said yokes about said post as an axis.

1,683,461. HAND BRAKE FOR RAILWAY CARS. STACY B. HASELTINE, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Oct. 20, 1923. Serial No. 669,660. 8 Claims. (Cl. 74—116.)



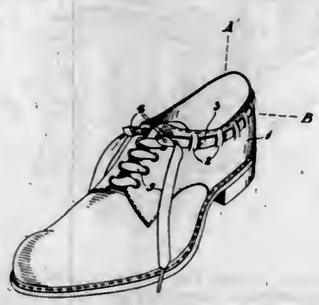
8. In a brake, the combination with a rotatable brake tightening means; of operating means movable to operative and inoperative positions; and ratchet mechanism controlled by the movement of said operating means, said ratchet mechanism being operable to effect rotation of said tightening means in opposite directions.

1,683,462. ANTIFRICTION BEARING. STACY B. HASELTINE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 1, 1926. Serial No. 91,328. 5 Claims. (Cl. 308—226.)



1. In an anti-friction bearing, the combination with a support having a vertically adjustable bearing surface; an anti-friction element adapted to move back and forth on said bearing surface; a housing loosely fitting about said anti-friction element and detachably connected to said support for movement in a horizontal plane substantially constant when in assembled relation and parallel to said support, said housing being provided with surfaces arranged to engage said anti-friction element above the central axis thereof, and being so formed as to permit vertical adjustment of said element and said bearing plate without interference with the operation of said bearing, said support and said housing being provided with oppositely extending rigid portions adjacent their ends; and yieldable means interposed between said oppositely extending portions.

1,683,463. HOISTING MECHANISM. ELLIS C. HEALY, East Orange, N. J., assignor to International Paper Company, a Corporation of New York. Filed July 9, 1927. Serial No. 204,443. 7 Claims. (Cl. 294—106.)

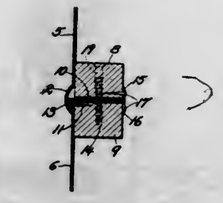


2. In a hoisting mechanism, the combination of a supporting mechanism adapted to be raised and lowered, pairs of opposed gripping arms supported by said frame and movable to and from each other, rotatable rollers carried by and extending longitudinally between said arms and constituting opposing longitudinal members adapted to engage on opposite sides of the object to be lifted, and means for moving the arms to and from each other.

1,683,464. DOOR-OPERATING MECHANISM. HAROLD H. HENRICKS, Chicago, Ill., assignor to The Youngstown Steel Door Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 27, 1925. Serial No. 18,791. 11 Claims. (Cl. 268—44.)

1. In a door operating mechanism for a sliding door member having a frame member associated therewith, the combination with an actuating element pivotally mounted on one of said members; of a transmitting member pivotally associated with said actuating element and the other of said members, said actuating element being adapted to impart combined longitudinal and lateral movement to the transmitting member, said actuating element being provided with means projecting into the path of movement of said transmitting member to limit the movement thereof in one direction; and a latch mounted on one of said members and movable substantially at right angles to the plane of movement of said transmitting member and engageable with the latter to prevent movement thereof in the opposite direction.

1,683,465. BOOT OR SHOE. WILLIAM LADBROOK HILL, Leicester, England. Filed Oct. 7, 1926, Serial No. 140,109, and in Great Britain Feb. 23, 1926. 2 Claims. (Cl. 36—50.)

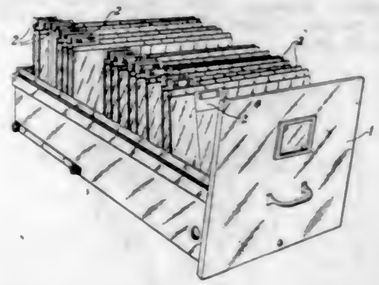


1. In a boot or shoe, a strap or band encircling the upper, elements formed from parts of said upper through which the strap is interlaced without passing through to the interior of the shoe, and a plurality of perforations at the strap ends for accommodating the usual shoe lace and enabling the degree of tightness of the strap and consequently also of the upper about the ankle to be adjusted.

1,683,466. CAPSULE. JOSEPH A. HORIGAN, Kansas City, Mo. Filed May 9, 1927. Serial No. 190,138. 5 Claims. (Cl. 167—2.)

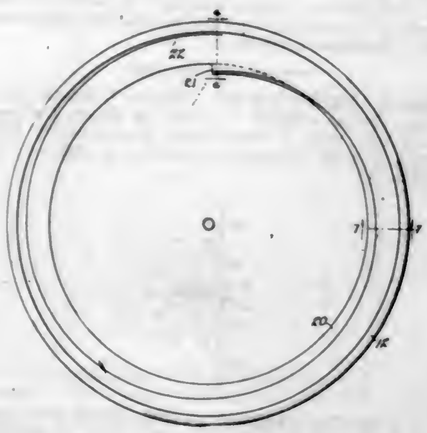
2. A capsule or container holding in its walls a benzoin preparation and adapted for use in intestinal administration of medicines or the like.

1,683,467. VEHICLE BODY. FRANCIS T. HOULE, Amesbury, Mass., assignor to Biddle & Smart Company, Amesbury, Mass., a Corporation of Massachusetts. Filed Apr. 4, 1922. Serial No. 549,439. 2 Claims. (Cl. 296—29.)



1. A vehicle body comprising a frame having two parallel portions forming between them a slot, and a covering of sheet material, said covering having a marginal portion bent at an angle to the remainder thereof and extended through said slot, the inner edge of said marginal portion being slitted to form tongues which are bent alternately in opposite directions and secured to the inner sides of said frame portions respectively.

1,683,468. METHOD OF INDEXING. RICHARD A. JONAS, Brooklyn, N. Y. Filed Oct. 20, 1921. Serial No. 508,922. 3 Claims. (Cl. 129—16.5.)



1. The method of indexing a particular file which comprises forming an assumed maximum number of guide cards having tabs projecting above the upper margin of the

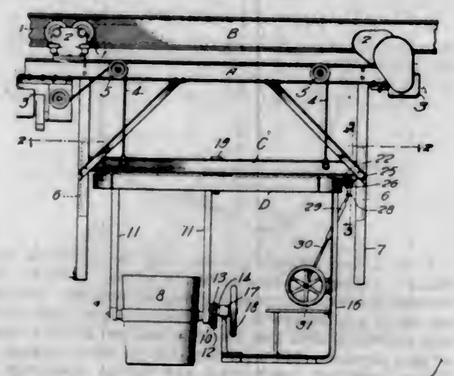
respective guide cards, each of said tabs being located at substantially the extreme left-hand side of the guide card, said tabs bearing indications of solely single alphabetical characters serving as the main divisions of the assumed maximum list, applying to said maximum number of guide cards respectively designations in numerical sequence in

correspondence to their alphabetical sequence, and groups of solely alphabetical characters serving as the subsidiary divisions of the assumed maximum list, selecting a list of main and subsidiary divisions from the assumed maximum list to meet the requirements of the particular file and arranging the main and subsidiary guide cards corresponding to the selected list in a common file.

1,683,469. RECORD HOLDER FOR TALKING MACHINES. WILBUR KELSO KAUFFMAN, Waynesboro, Pa., assignor to Deca-Disc Phonograph Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Dec. 10, 1926. Serial No. 153,989. 6 Claims. (Cl. 274—1.)

6. A device for supporting a centrally perforated disk record upon a talking machine comprising a substantially flat body provided with a rim of greater thickness than the thickness of the record to be supported, a frictional lining upon the upper surface of said body, a centering device for engaging the perforation in the center of the record, and means disposed within the confine of said rim for reducing the record holding portion of the body for accommodating a record of a smaller size, said means having a lip disposed in a position to permit a reproducing needle to slide therefrom onto the surface of the record, said inserted means being provided with a spiral groove extending from its outer edge to said lip, substantially as set forth.

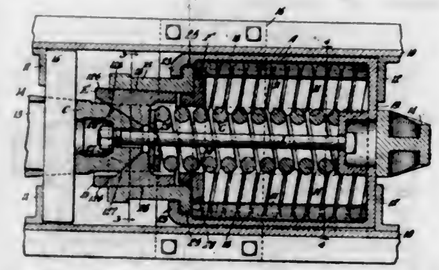
1,683,470. PROCESS FOR THE PRODUCTION OF WATERPOOF TEXTILE MATERIAL, PAPER, AND THE LIKE. CARL KNOPF, Hamburg, Germany. Filed Apr. 24, 1925, Serial No. 25,709, and in Germany Dec. 23, 1924. 1 Claim. (Cl. 8—20.)



Process of parchmentizing paper and like material by a continuous operation, comprising the following successive procedures, the material to be parchmentized is artificially dried, immediately thereafter it is treated in a bath containing amyloid-forming salts, after leaving the chemical bath it is scraped at both sides, squeezed between pressure rollers and heated to mature the amyloid formed by the chemical treatment, subsequently it is cooled sufficiently to prevent retrogression or deterioration of the amyloid formed, and finally it is lixiviated, washed and dried.

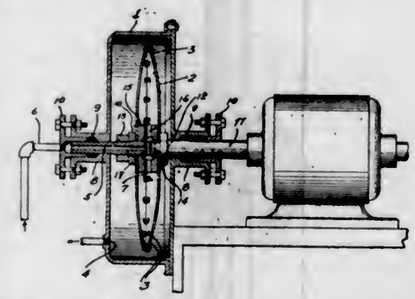
1,683,471. PRESSURE GAUGE. HENRY P. KRAFT, Ridgewood, N. J.; Edgar J. Phillips and Earl A. Darr executors of Henry P. Kraft, deceased. Filed Mar. 25, 1921, Serial No. 455,680. Renewed Jan. 7, 1927. 3 Claims. (Cl. 73—111.)

2. A pressure gauge for tire valves or the like, comprising a casing, a pressure-responsive member therein a slidable gauge bar detached from but adapted to be moved by said pressure-responsive member in one direction, the one having a socket or recess, and the other entering said recess and adapted to tilt therein.



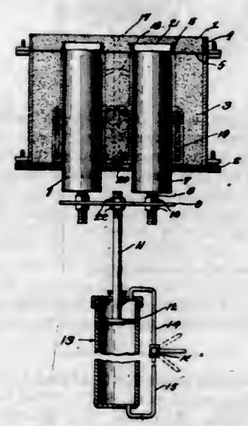
1,683,472. LADLE CRANE. HENRY M. LANE, Detroit, Mich. Filed Jan. 7, 1926. Serial No. 79,855. 8 Claims. (Cl. 22—182.)

8. A ladle crane comprising a trolley frame having depending guide members, a transverse member slidable in said guide members, a ladle frame positioned beneath said



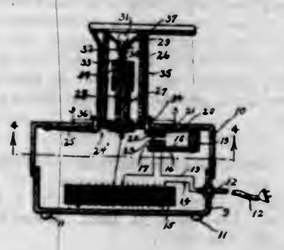
transverse member and pivotally supported thereby, a ladle carried by said ladle frame, means for tilting the ladle, a rack carried by said ladle frame, a pinion engaging said rack, gear members for operating said pinion and means connected to said gear members for controlling the movement thereof for swinging the ladle frame transversely across the line of travel of the crane.

1,683,473. FRICTION SHOCK-ABSORBING MECHANISM. GOODRICH Q. LEWIS, Wheaton, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed July 15, 1926. Serial No. 122,541. Renewed Dec. 17, 1927. 7 Claims. (Cl. 13—32.)



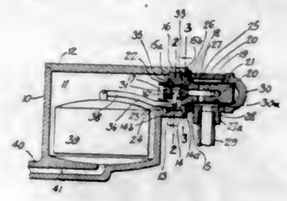
2. In a friction shock absorbing mechanism, the combination with a hollow spring cage casting open at one end, all of the walls of said cage being solid and continuous, the hollow portion of said cage providing a spring space, said opening of the cage being of less area than the cross sectional area of the spring space thereof, whereby an end abutment face is provided, said cage being provided with overhanging flanges at the open end thereof; of a friction shell having an end flange adapted to be inserted between the end abutment face and the overhanging flanges of the cage for detachably connecting the shell to the cage; spring resistance means occupying substantially the entire spring space of the cage, said spring resistance including a plurality of elements insertible through the open end of the cage; and a friction system co-operating with the shell.

1,683,474. BLOWER. GARRETT B. LINDERMAN, Jr., Erie, Pa., assignor to American Meter Company, Incorporated, New York, N. Y., a Corporation of Delaware. Original application filed May 27, 1924, Serial No. 716,223. Divided and this application filed Mar. 4, 1927. Serial No. 172,602. 1 Claim. (Cl. 230—126.)



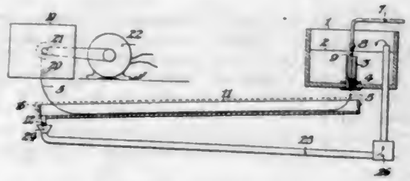
A rotor for blowers and the like, comprising a hollow shaft, a pair of opposed wall forming members mounted thereon and provided with peripheral openings and arranged with their peripheral edges inclined toward each other and with portions of the peripheral edge of one wall overlapping and bent down over the peripheral edge of said other wall, and a spacer centrally disposed between said walls and having a conduit positioned to afford communication between the recess in said hollow shaft and the interior of the blower.

1,683,475. PROCESS AND APPARATUS FOR CASTING. NELSON LITTELL, New York, N. Y. Filed May 18, 1923. Serial No. 639,771. 8 Claims. (Cl. 22—177.)



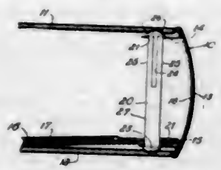
1. The process of casting a ferrous metal cylinder with a chill-hardened inner surface and an unhardened exterior which consists in introducing molten metal into a refractory mold around a rigid chill core, and withdrawing the core after the core-contacting skin of the casting has solidified, but before the casting shrinks upon the core, the withdrawal of the core commencing soon after the pouring is started and continuing until after the pouring is completed.

1,683,476. MANICURING LIGHT. CHARLES L. McMURDIE, Ferndale, Mich. Filed Nov. 17, 1927. Serial No. 233,832. 6 Claims. (Cl. 240—2.)



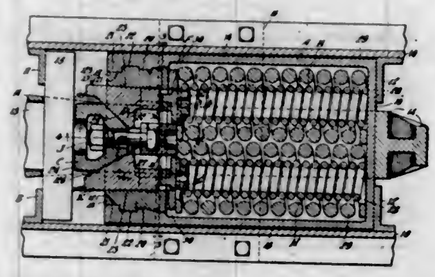
5. A device of the class described, comprising: a housing; a tubular supporting member projecting upwardly from said housing and having its bore enlarged at its upper end; a coil spring positioned in the enlarged portion of said bore; a rod projected through said bore and through said coil spring; a tube projecting upwardly from said housing, concentrically to said supporting member, and spaced therefrom; a reflector mounted on said tube; a light bulb mounted in said reflector and engaging the end of said rod; an electric circuit connected to said light bulb through said rod and through said reflector; an outer tube positioned on said first-mentioned tube in concentric relation and slidable axially thereof; and a supporting member on the upper end of said tube having an opening formed therein in alignment with said light bulb.

1,683,477. INLET MECHANISM FOR CARBURETORS. ANILO MIJARES, Yonkers, N. Y. Filed Oct. 19, 1926. Serial No. 142,654. 5 Claims. (Cl. 137—104.)



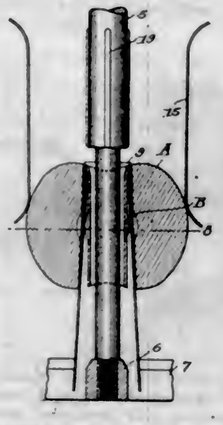
2. In a carburetor, a fuel well having a recess in the top of its vertical wall, a removable inlet unit comprising a shank set within the said recess and projecting outwardly and inwardly of the said well, a shoulder on the said shank inwardly of and adjacent the said recess, a fuel inlet connection at the outwardly projecting end of the shank, a float in said well operably connected to its inwardly projecting end, a valve slidably disposed within the said shank for regulating the admission of fuel into the well and operable by the said float, and means at the outwardly projecting end of the said shank cooperating with its said shoulder to clamp the said inlet unit to the said well.

1,683,478. VISCOSE-TREATING APPARATUS. SAMUEL A. NEIDICH, Edgewater Park, N. J. Filed June 30, 1926. Serial No. 119,591. 5 Claims. (Cl. 18—8.)



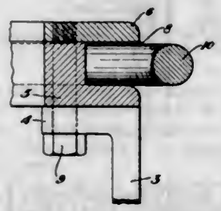
1. In a viscose treating apparatus: means constructed and arranged to automatically, longitudinally, progress a viscose filament by a fluid; comprising a conduit and means arranged to cause said fluid to progress thru said conduit; said conduit having a short restricted passageway opening into a long passageway of greater cross sectional area; and means arranged to extrude a viscose filament directly into said restricted passageway; whereby, the rate of flow of said fluid is accelerated at said restricted passageway, and said fluid subjects said filament to maximum longitudinal stress, local to said extruding means, to progress said filament.

1,683,479. PHONOGRAPH-RECORD ALBUM. MARTIN NYSTROM, Chicago, Ill., assignor to The Brunswick-Balke-Collender Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 24, 1923. Serial No. 627,288. 1 Claim. (Cl. 129—23.)



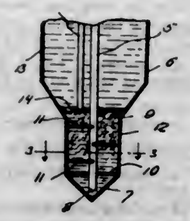
In an album a pair of stiff covers and a back connecting said covers, a pair of stiff side strips having aligned apertures, a stiff back strip rigidly connecting said side strips, and a pin extending through the apertures in said strips for retaining leaves between said covers, said side strips being immediately adjacent said covers and said pins having heads with faces engaging the outer sides of said strips, said heads being shallow and occupying the narrow space between said covers and said side strips, said pin having in one end a longitudinal slot dividing one of said heads into two parts so that they may be forced together to permit withdrawal of said head through all of said apertures, said last mentioned head having a curved outer surface to facilitate insertion of said pin through all of said apertures.

1,683,480. FRICTION SHOCK-ABSORBING MECHANISM. ROLAND J. OLANDER, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Dec. 16, 1926. Serial No. 155,151. 3 Claims. (Cl. 213—32.)



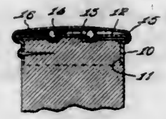
1. In a friction shock absorbing mechanism, the combination with a friction shell having longitudinally disposed friction surfaces; of friction shoes co-operating with said friction surfaces; a pressure transmitting element having wedging engagement with the shoes; and spring resistance means co-operating with the shoes, said spring resistance means including sets of members disposed at opposite sides of the mechanism, one of the members of each set opposing movement of the shoes during the entire compression stroke of the mechanism and maintaining said shoes in wedging engagement with the pressure transmitting elemnt when the mechanism is released and the other member of each set opposing movement of the shoes after a predetermined compression of the mechanism.

1,683,481. METHOD OF AND APPARATUS FOR SEED-CELLING APPLES. JOHN W. PEASE, Rochester, N. Y., assignor to Winnifred N. Pease, Rochester, N. J. Filed Mar. 4, 1927. Serial No. 172,832. 11 Claims. (Cl. 146—40.)



1. A method of trimming the interiors of apples which embodies coring the apple axially of its stem to remove the seeds and leave a relatively small core hole and then longitudinally cutting back the walls of the core hole in an axially longitudinal direction and on a diameter greater than that of the core hole and less than the maximum diameter of the seed cell pockets of the apple.

1,683,482. WIRE-DRAWING BLOCK. JAMES STUART PHIFER, Allentown, Pa., assignor to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed July 30, 1924. Serial No. 729,109. 1 Claim. (Cl. 205—20.)

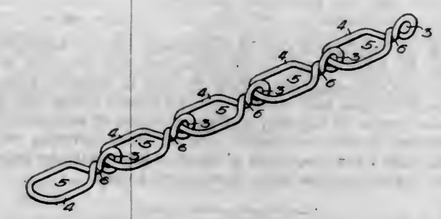


A wire drawing block comprising a drum portion, a skeleton reel-like extension extending upwardly from said drum portion and terminating in a retaining rim, said rim being cut away around its periphery to form an offset, the base portion of said offset portion having its outer edge rounded, a circular ring-like plate secured to the upper face of said retaining rim and projecting outwardly over the base portion of said offset portion to form a groove, a one-piece continuous rigid ring mounted in said groove, said ring being of round cross-section and having a materially greater internal diameter than the greatest distance between two diametrically opposite points on the back wall of said groove, and of a less internal diameter than the greatest distance between two diametrically opposite points on the outer periphery of said retaining rim, said ring being adapted to be frictionally rotated with said block and being free to move relative to said block in an eccentric path, and the wire being withdrawn from said block being passed between said ring and said retaining rim.

1,683,483. CLARIFIER. PERCY S. PINE, Salina, Kans. Filed Aug. 21, 1926. Serial No. 130,616. 3 Claims. (Cl. 210—48.)

1. In a liquid clarifier, a container having an alkali chamber, a reticulated plate member in the bottom portion of said chamber, a fluid inlet opening into the chamber below said reticulated plate member, baffle plates within the chamber above said plate member and a sediment level regulating pipe arranged within the container with its intake end disposed at the upper end of said chamber.

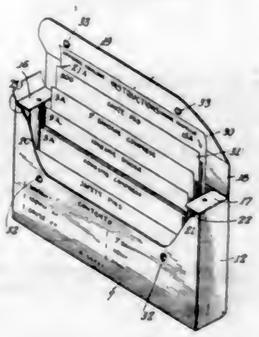
1,683,484. REVOLVING-GRIP SCREW DRIVER AND THE LIKE. FRED G. POST, Kenmore, N. Y. Filed May 25, 1927. Serial No. 194,183. 4 Claims. (Cl. 145—61.)



1. A rotary hand engaging means for a tool handle comprising a relatively stationary member disposed upon and extending over the end of a tool handle, means for securing said member to the tool handle, whereby it will be stationary, said member having an outwardly extending bead at its periphery, and a cap rotatably mounted upon the bead, the cap being crimped about the bead to conformingly engage thereagainst.

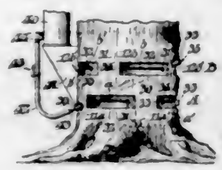
1,683,485. COMBINATION IMPLEMENT. GLEN J. RALL, Oxford, N. C. Filed Mar. 13, 1928. Serial No. 261,382. 2 Claims. (Cl. 120—21.)

1. In a compound instrument of the class described, an elongated barrel, the same being open at one end, a shank open at one end and adapted for disposition in the open end of the barrel, a pair of spring arms secured at one end to the shank adjacent the other end thereof, said spring arms engaging the barrel to frictionally hold the shank therein, a lead for disposition in the open end of the shank, one of the spring arms projecting beyond the open end of the shank, a laterally disposed eye portion formed on the outer end of said last mentioned spring arm for engagement with the projecting end of the lead to hold the same in clutched manner.



1,683,486. CHAIN. MARTIN O. REHFUSS, Philadelphia, Pa., assignor to United States Chain and Forging Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 23, 1924. Serial No. 708,435. 3 Claims. (Cl. 59—8.)

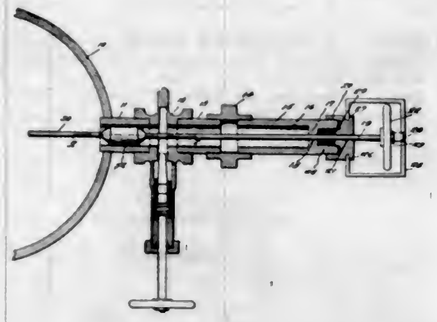
1. A chain made of a series of links in which the body portions of the links are on the same plane, each link being a continuous wire and having a body portion and a single



strand eye, the wire being twisted between the body and the eye to form a cross-bar, the eye being at right angles to the plane of the body portion.

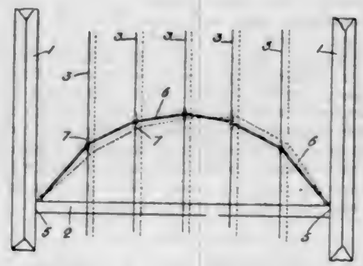
1,683,487. FIRST-AID KIT. ERNEST REMLEY, East Orange, N. J., assignor to Hygienic Fibre Company, Incorporated, a Corporation of Massachusetts. Filed Feb. 12, 1926. Serial No. 87,852. 7 Claims. (Cl. 206—63.2.)

1. A first aid kit comprising a box opening along one edge, a carrier mounted in the box and having a plurality of flexible leaves of different heights with titles printed along the upper edge portions, said leaves being free from said box on at least three sides thereof and flat packages between said leaves, one side of the box being cut down to permit inspection of said titles and flexing of said leaves in the cut down portion.



1,683,488. IMPREGNATION OF WOOD AND THE LIKE. HERBERT RENNER, Philadelphia, Pa., assignor, by mesne assignments, to Chemicolor Wood Preserving Co., a Corporation of Delaware. Filed Feb. 7, 1925. Serial No. 7,522. 3 Claims. (Cl. 47—58.)

2. The method or step of preparing a tree for impregnation by introduction of impregnating fluid into its sap ducts, which comprises boring the tree in different planes and directions and sawing from each bore across one or more sectors of the tree, so that the areas of severance in different planes marginally overlap, thus severing substantially all the sap ducts of the trees but leaving its upper and lower portions with interlocked tenons.

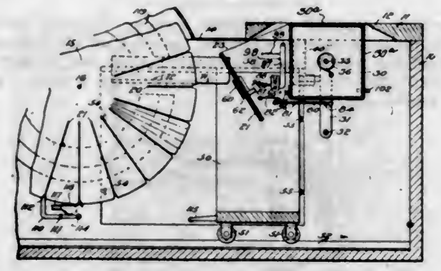


1,683,489. SCALE AND CORROSION DETECTOR. CYRUS WILLIAM RICE, Pittsburgh, Pa. Filed June 15, 1927. Serial No. 199,048. 4 Claims. (Cl. 116—114.)

1. In a device of the class described, a tubular element for connection with a steam main or the like, a valve connected with said element, a second tubular element connected with the valve, a rod extending thru the second tubular element, a corrosion detector element adapted to project into the steam main, and removable from the main

by imparting longitudinal movement to the rod, and a coupling of insulating material between the rod and the detecting element.

1,683,490. CONSTRUCTION OF AIRSHIPS. VINCENT CRANE RICHMOND and FREDERICK MICHAEL ROPE, Cardington, England. Filed Dec. 15, 1927, Serial No. 240,302, and in Great Britain Aug. 12, 1926. 17 Claims. (Cl. 244—3.)

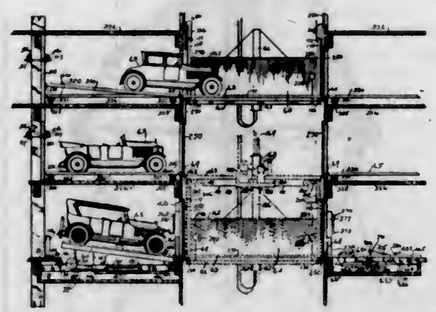


1. In a rigid airship wherein the hull framework is composed of transverse rings secured to longitudinal girders, a system of wires or the like for restraining each gasbag and for transmitting the resulting loads to anchor points on the hull framework comprising circumferential wires lying in planes normal to the axis of the airship for dealing with the radial and tangential forces due to the pressure of each gasbag, speaking relatively to the axis of the airship.

1,683,491. SELECTOR. FRANCIS F. C. RIPPON, New York, N. Y. Filed June 19, 1923. Serial No. 646,400. 36 Claims. (Cl. 129—16.1.)

1. In a device of the character described, a record magazine, a plurality of card carrying members carried by said magazine in a substantially radial position, means for revolving the magazine varying predetermined distances with said card carrying members, a platen on which the card carrying members are adapted to be supported in position for the cards to be used, and a reciprocating carrier adapted to slide a given card carrying member from said magazine and transport it to said platen.

5. In a device of the character described, a record storage member, a pivoted support adapted to display a record, a traveling carrier separate from said support and



adapted to carry a record from said storage member to said support, and means on said pivoted support for removing the record from said carrier.

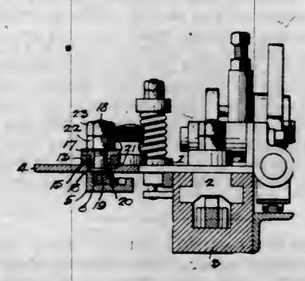
15. A card carrying assembly consisting of a flat plate having a plurality of oppositely disposed tabs, a plurality of guides on said plate each having a rounded forward end, and a band secured to said plate and adapted to carry a plurality of record cards.

28. In a card selector system, means for supporting a book typewriter and having an opening therein through which said book typewriter may operate, a flat platen, means for moving said platen relatively to said opening, a plurality of card carrying members having spaces for a plurality of cards, means for bringing a desired card into registry with said platen while in inoperative position and for moving said platen and said card into typewriting position.

1,683,492. MULTISTORY GARAGE. CONANT W. RUTH, Chicago, Ill., assignor to The C. W. Ruth Engineering Company, Chicago, Ill., a Corporation of Illinois. Filed May 14, 1923. Serial No. 639,009. 122 Claims. (Cl. 214—16.1.)

1. A garage comprising a loading platform arranged to receive an automobile over one end thereof, an elevator car having a supporting floor normally on the same horizontally level with said loading platform, and means independent of the movement of the elevator car for lifting said end of said platform to cause said automobile to pass over the opposite end of said platform onto said elevator car.

1,683,493. ROAD COMPOSITION AND METHOD OF MAKING SAME. SAMUEL S. SADTLER, Springfield Township, Montgomery County, Pa., assignor to Amiesite Asphalt Company of America, Philadelphia, Pa., a Corporation of New Jersey. Filed Mar. 24, 1926. Serial No. 97,143. 8 Claims. (Cl. 106—31.)

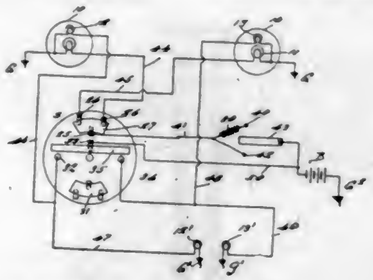


1. The method of forming a road composition, which consists in taking a mineral aggregate, mixing with said aggregate a water-in-oil emulsion of a bitumen liquefier carrying a mineral filler, and thereafter coating the aggregate with bitumen.

1,683,494. BRUSH. FRANK SIKORSKI, Bridesburg, Pa. Filed Sept. 1, 1926. Serial No. 132,982. 5 Claims. (Cl. 15—173.)

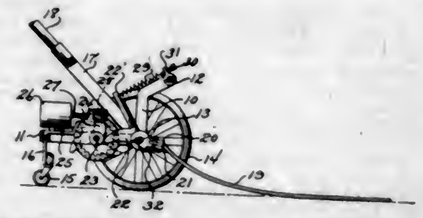
1. A brush comprising a handle housing, a clamp member arranged in said housing, brush bristles slidably positioned on said clamp member and received in said housing, said housing having one end thereof reduced in size so as to provide tapered surfaces, and means for holding said clamp member in position to clamp the bristles between the same and said tapered surfaces.

1,683,495. HOOK MOUNTING FOR PILE-WIRE-CONTROLLING MECHANISM FOR LOOMS. WILLIAM E. SMITH, Milltown, N. J., assignor to Gulbenkian Seamless Rug Company, New Brunswick, N. J., a Corporation of New Jersey. Filed May 22, 1926. Serial No. 111,019. 5 Claims. (Cl. 139—42.)



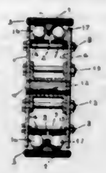
1. In a pile wire controlling mechanism for looms, comprising a wire withdrawing controlling carriage and a wire hook, a mounting for said hook, comprising a bushing adapted to be firmly clamped to the said wire controlling carriage, and on which the said wire withdrawing hook is adapted to pivot, and a flange overlying said hook, preventing vertical movement thereof relative to said carriage.

1,683,496. SIGNAL. JOHN L. STEVENS, Chandler, Ariz. Filed Feb. 13, 1925. Serial No. 9,008. 1 Claim. (Cl. 200—6.)



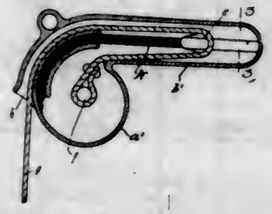
A switch comprising a stationary member and a rotatable member, said stationary member carrying spaced groups of relatively off-set contacts, a contact plate carried by the rotatable member for each of said groups, two of said contact plates normally engaging all of the contacts of their respective groups and operable to selec-

tively eliminate one contact of each group when the rotatable member is operated in either direction, and the remaining one of said contact plates normally engaging one



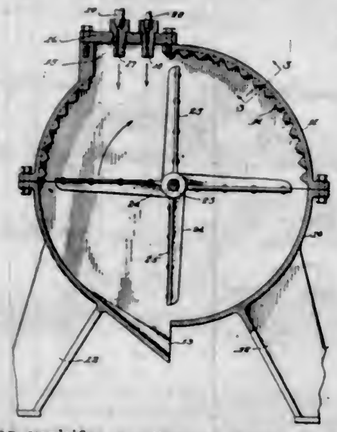
contact of its group and operable when the rotatable member is turned in either direction to engage another of the contacts of its group.

1,683,497. BEATER. LORREN STILES, Woodbury, N. J. Filed Dec. 27, 1926. Serial No. 157,297. 1 Claim. (Cl. 15—92.)



A beater comprising a wheel supported frame including an axle, beater arms mounted for free pivotal movement upon said axle, a finger rigid with each arm, a shaft mounted on the frame, means to rotate the shaft, fingers rigid with the shaft to engage the arm carried fingers for raising said arms and releasing the same when the arms are elevated an appreciable distance, an upwardly inclined finger rigid with each beater arm, arms extending upwardly from the frame at each end of the axle, a bar disposed above the axle and connecting the frame arms, springs having one of their ends connected with the upwardly inclined fingers, and means adjustably connecting the other ends of the springs with the bar to force the arms downward when the latter are released and to regulate the impact of the stroke.

1,683,498. TRACK-LAYING DEVICE. ISAAC SANTOS Y SUAREZ and ANGEL ACOSTA Y VELO, Habana, Cuba. Filed May 26, 1927. Serial No. 194,410. 4 Claims. (Cl. 305—4.)

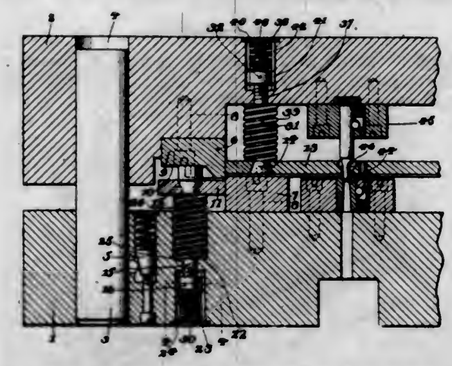


4. A track-laying device comprising a pair of opposed, spaced plates, means for connecting the plates together and for maintaining them in spaced relation, means to provide a pair of ball races between said plates, two spaced sets of spaced bearing balls, each set associated with a race, a cage for each set of balls to maintain the balls of the set in spaced relation, said balls extending beyond said plates, an endless, articulated track-laying element travelling on said sets of balls, and means on the inner face of said element and extending between said sets of balls for separating said sets relatively to each other.

1,683,499. SHOCK ABSORBER. AUGUST THOMAS, Berlin-Baumschulenweg, Germany, assignor of one-half to Carl von Haryes, Berlin, Germany. Filed Oct. 3, 1927, Serial No. 223,752, and in Germany July 2, 1926. 2 Claims. (Cl. 267—10.)

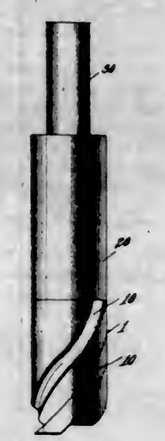
1. A shock absorber for road vehicles comprising the combination with a wheel axle of a casing constituted by a round part and a tangential extension to the said round part, a sliding member capable of sliding in the said extension, a guide for the said sliding member, a leaf spring attached to the said sliding member and a pull strap having one of its ends fixed to the wheel axle of the vehicle, the pull strap passing in the casing around the said sliding member, whereby, on the vehicle being subjected to jolts, the spring is pushed into the round part of the casing, as set forth.

1,683,500. EMULSIFIER. WILLIAM THORDARSON, New York, N. Y. Filed Apr. 13, 1927. Serial No. 183,600. 7 Claims. (Cl. 259—9.)



1. In an emulsifier, a cylindrical casing having a portion of its inner wall provided with acutely edged corrugations parallel to its axis and with an outlet at its lower part, a shaft extending axially through said casing and revolvable at high speed, flat paddle blades supported from said shaft to revolve therewith in position substantially radial to the axis of the casing, and a plurality of fluid delivery means arranged to drop a plurality of fluids successively into the path of said revolving blades so that the fluid drops will be struck by the blades while in mid-air.

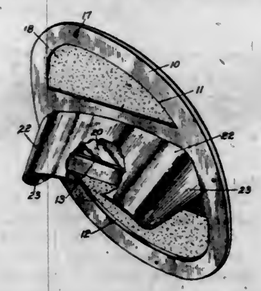
1,683,501. REMOVABLE STRIPPER APPLIANCE. MAX EMIL TOBELEN, Detroit, Mich. Filed Oct. 27, 1927. Serial No. 229,143. 5 Claims. (Cl. 164—110.)



1. A removable stripper appliance for dies comprising a threaded coupling member for extension through a stripper plate and provided at one end with a head engaging

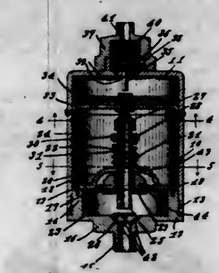
the plate, a non-rotative nut connected to the other end of said member for connecting the latter to a part of a die press in alignment with the die, a stripper plate con-

trolling spring surrounding said member and adapted to bear against the plate, and a positioning spring for said nut.



1,683,502. ROTARY DRILL BIT. HERBERT R. TUNNELL, Butte, Mont. Filed July 22, 1927. Serial No. 207,741. 1 Claim. (Cl. 255—61.)

The combination with a bit holder provided with a longitudinal bore and having spiral slots for the reception of the cutters, cutters removably mounted in said slots and spiraled to conform to the shape of the slots, each cutter having tempered cutting edges and provided at its upper end with a reduced extension with a shoulder at its inner end to abut the inner end of the slot in which it is mounted to limit its insertion in the holder and a feed rod operable in said holder and having fingers to engage the ends of said extension and move the cutters forwardly during the drilling operation.



1,683,503. HEADLIGHT CLOSURE FOR MOTOR VEHICLES. EDWARD ADRIEN PERK VAN LITH, Holyoke, Mass. Filed Dec. 13, 1926. Serial No. 154,578. Renewed July 25, 1928. 1 Claim. (Cl. 240—48.4.)

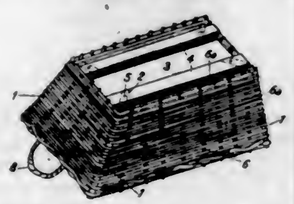
A headlight closure comprising a plate having upper and lower cut-out openings therein and an intermediate cut-out opening, a glass plate supported by the back of said plate and having a clear field in register with said intermediate cut-out opening and translucent fields in register respectively with said upper and lower cut-out openings, and a shield mounted on the front of said plate

and disposed over and forward of said intermediate cut-out opening and terminating on a horizontal plane with the bottom edge of said clear field.

1,683,504. AIR-VENT VALVE FOR COMBUSTION ENGINES. JOHN J. VERTREES, Jr., Nashville, Tenn. Filed Nov. 16, 1926. Serial No. 148,697. 8 Claims. (Cl. 123—124.)

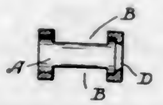
1. A device of the character described, comprising a body, normally closed spring controlled means carried by said body for admitting atmospheric air when open, a thermostatically controlled device within said body and active upon said normally closed means to automatically open the same, and normally open means within the body for delivering air therefrom into an intake manifold of an internal combustion engine and automatically closed by vacuum within said manifold to arrest delivery of air to the latter.

1,683,505. GOLF BLINDER. NORMAN STEWART WALKER, New York, N. Y., assignor to The Golfada Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 5, 1927. Serial No. 173,156. 5 Claims. (Cl. 2—14.)



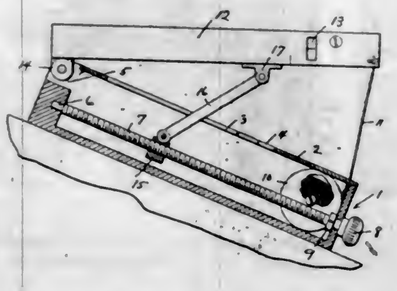
1. A device of the character described, having a sight opening therein, and a swinging gravity operated unbalanced shutter adapted to close said opening.

1,683,506. BATTER AND CANDY MEASURE. JOSEPH W. WEAVER, Lebanon, Pa. Filed Sept. 15, 1927. Serial No. 219,668. 12 Claims. (Cl. 107—28.)



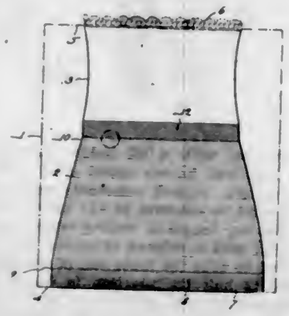
1. A machine for the purpose set forth comprising a housing providing a pump chamber, a revoluble pump cylinder extending lengthwise of and through said chamber, a series of spaced partitions secured within said cylinder and providing a series of chambers, said cylinder having two opposed, spaced sets of longitudinally spaced combined intake and discharge openings, the openings of one set being alternately disposed with respect to the openings of the other set and with an opening of each of said sets common to a chamber, said housing having its top formed with a supply slot common to a set of openings, a pump rod extending through said cylinder and carrying spaced, fixed plungers each operating in one of the chambers in the pump cylinder, plugs mounted in the ends of the pump cylinder and through which extends said pump rod, means connected to one of said plugs for revolving said cylinder and for reciprocating said pump rod, said housing having its bottom formed with a set of spaced cavities each for alternate registration with an opening of each set of openings, and a discharge nipple leading from each cavity.

1,683,507. PROCESS OF PRODUCING BASKETS AND OTHER BASKETWORK STRUCTURES. RICHARD WEBER, Dresden-Uebigau, Germany. Filed Oct. 31, 1927. Serial No. 230,129. 3 Claims. (Cl. 139—17.)



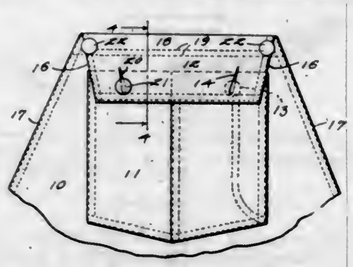
1. The process of producing baskets and other basket work structures, in which a bottom is placed on a rotatable base plate, stakes are run through the said bottom and the base plate is removed after weaving the walls of the basket, consisting in securing in a suitable manner to a base plate a frame provided with a plurality of holes for the reception of the stakes, in placing the bottom on the frame and inserting the said stakes through the bottom in the holes of the frame until they strike the base plate, and in connecting the ends of the stakes projecting beyond the bottom after removing the frame by weaving in longitudinal strands and clamping the said ends about the last strand.

1,683,508. CIGARETTE OR CIGAR MOUTHPIECE OR HOLDER. ALFRED WEINTRAUB, London, England. Filed July 19, 1926. Serial No. 123,579, and in Great Britain Aug. 26, 1925. 2 Claims. (Cl. 131—10.)



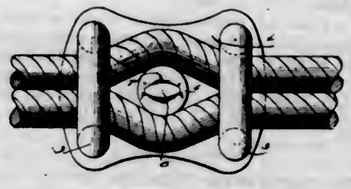
1. A cigarette holder consisting of two similar sized non-expansible rings connected together in spaced relation, one of said rings forming a mouthpiece to permit the lips to contact the surface of the cigarette beyond the same and having an internal shoulder to limit the introduction of the cigarette within the holder.

1,683,509. MECHANIC'S LEVEL. HARVEY M. WESCOTT, Brooklyn, N. Y. Filed Apr. 11, 1927. Serial No. 182,798. 1 Claim. (Cl. 33—88.)



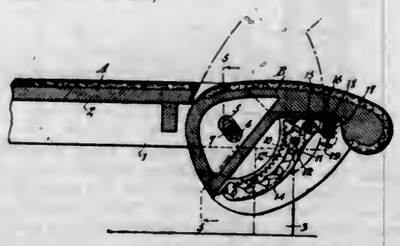
In a level of the class described, a box-like base section, a longitudinally disposed screw threaded shaft mounted for rotation in said base section, a relatively movable cover section cooperable with the base section, spirit levels on said cover section, a hinge connection between one end of the movable cover section and said base section, a casing located in and carried by said base section, a drum in said casing, a measuring tape wound upon said drum, the free end of said tape being connected with the swingable end of said movable section, a nut movable along the screw threads on said shaft, a bracket carried by the movable section, and an operating link pivotally connected to said nut and to said bracket, whereby when said shaft is rotated, said movable cover section will be moved toward and from the base section in order to actuate the measuring tape.

1,683,510. CORSET. OTTO CARL WIESE, Newton, Mass. Filed Mar. 18, 1927. Serial No. 176,583. 3 Claims. (Cl. 2—37.)



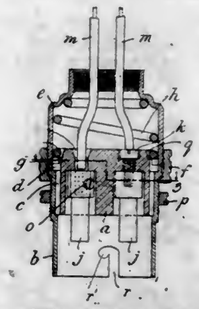
3. A shaped seamless one-piece tubular corset formed of elastic knit material, consisting of fabric yarn and laid in rubber yarn, said fabric yarn being adapted to extend from above the bust line to a position below the hip line when the corset is in use and said rubber yarn extending from the waistline to the bottom of the corset, said rubber yarn being so positioned that there is a rubber yarn in each course at the waistline and at the bottom of the corset presenting tubular bands at the waistline and at the bottom of the corset, and rubber yarns in spaced courses between said bands.

1,683,511. BIB CONSTRUCTION FOR OVERALLS. CHARLES D. WILLIAMSON, Fort Worth, Tex. Filed Dec. 17, 1927. Serial No. 240,813. 2 Claims. (Cl. 2—227.)



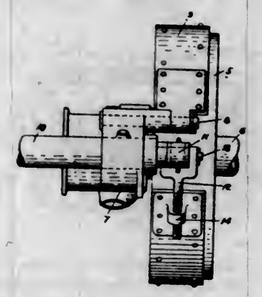
2. A garment bib having an open-topped edge thereof, an integral flap of material upon said upper edge folded back upon the front face of and secured to the bib and forming a closure flap for said pocket, said flap having a facing attached thereto at the front face thereof, the facing being of greater depth than said flap, and suspender buttons at the upper edge of the bib and at the front face of the flap, said buttons being secured to the bib by securing means extending through the bib, the flap and through the facing at opposite sides of the bib.

1,683,512. ROPE CLIP. HOWARD WISBAUER, Buffalo, N. Y. Filed Oct. 5, 1927. Serial No. 224,228. 8 Claims. (Cl. 24—135.)



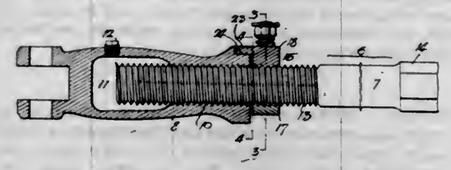
1. In a device of the character described, a base carrying adjacent to its opposite ends transversely extending inverted U-bolt clamps and having upstanding centrally therefrom between said U-clamps, a strand spreading stud.

1,683,513. RECLINING COUCH. THOMAS WOLF, Union City, N. J. Filed June 27, 1927. Serial No. 201,707. 1 Claim. (Cl. 5—73.)



An article of furniture, including a body portion, a head section having slots in its side walls, a pivot rod extending through the slots and mounted in the body portion, rollers on said rod in the slots, a shaft mounted in the body portion, a pinion on the shaft, a toothed segment on the head section engaged by the pinion, means on one end of the said shaft for manually turning the same, and ratchet means engaging the shaft to hold the head section in any position of pivotal adjustment.

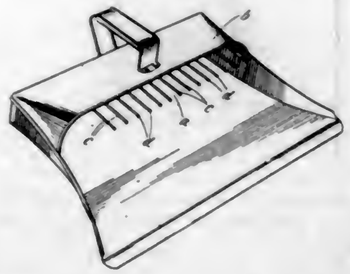
1,683,514. ELECTRIC-LAMP HOLDER. JOSEPH WILLIAM WYATT, Redcar, England. Filed Mar. 15, 1926. Serial No. 94,904, and in Great Britain Apr. 17, 1925. 1 Claim. (Cl. 173—328.)



A lamp holder of the class described comprising a cap member, a spring member, lugs on said cap member for supporting said spring member, an insulating support having grooves, a lower member having means for connection to said cap member, lugs on said lower member, contact making pins mounted on said insulating member, said lugs on said cap and lower member entering said grooves on the insulating member whereby relative rotative movement is prevented between said insulating member, cap member and lower member.

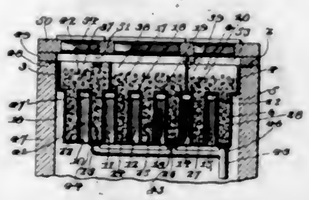
1,683,515. BRAKE MECHANISM. HARRY C. ZIMMERMAN, Washington, D. C. Filed Mar. 2, 1925. Serial No. 12,782. 3 Claims. (Cl. 188—77.) (Granted under the act of Mar. 3, 1883, as amended Apr. 30, 1928, 370 O. G. 757.)

2. The combination with a drum brake including a brake band of a swinging arm pivoted at a point within the circumference of the band and actuated by release of the band to move outwardly from the drum.



1,683,516. BRAKE ROD. WALTER S. ADAMS, Philadelphia, Pa., assignor to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 7, 1926. Serial No. 114,259. 2 Claims. (Cl. 151—2.)

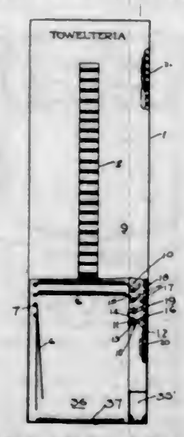
1. A threaded clamping member made in two parts, one part having a projection adapted to a notch in a threaded head mounted on the same threaded rod as the clamping



member; bolts extending through the two parts of the clamping member; and springs on the bolts for exerting a yielding pressure to frictionally retain the clamping member on the rod.

1,683,517. DUSTPAN AND THE LIKE. MARGUERITE EDITH BENTLEY, Longfield, England. Filed Jan. 26, 1927, Serial No. 163,771, and in Great Britain Jan. 28, 1926. 1 Claim. (Cl. 65—20.)

A dust-pan or the like, having a cowl, a handle secured to said cowl, a series of forwardly projecting parallel teeth in the form of short lengths of wire secured to the front edge of said cowl, and enlarged ends to said teeth whereby a brush can be cleaned and the hairs uninjured by drawing its hairs through said teeth.

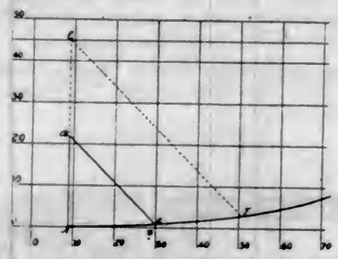


1,683,518. COOLING TANK FOR REFRIGERATORS. CHARLES J. BERTHEL, Wilson, N. C., assignor to Hackney Brothers, Inc., Wilson, N. C. Filed Aug. 24, 1927. Serial No. 215,173. 4 Claims. (Cl. 62—69.)

1. A cooling tank for refrigerators comprising a one-piece body portion having spaced means arranged therein to provide the upper part thereof with a plurality of independent, upper refrigerant receiving compartments and its lower part with sets of spaced refrigerant receiving troughs, said sets being spaced from each other by air chambers and with each set opening into the bottom of an upper compartment, said troughs forming air chambers therebetween, said chambers opening at the bottoms thereof, said body portion having the lower portion of each side thereof inset with respect to the upper portion thereof whereby the combined width of said trough will be less than the combined width of said compartment, said troughs being rectangular in cross section, said body portion being open at its top and provided at its upper end with an outwardly disposed right angularly extending flange coextensive therewith.

1,683,519. TOWEL-VENDING DEVICE. ORVILLE M. BLAIR and WILLIAM E. WILLIAMS, San Francisco, Calif., said Orville M. Blair assignor to Minnie Blair, San Francisco, Calif. Filed Nov. 8, 1926. Serial No. 146,908. 4 Claims. (Cl. 312—94.)

1. An apparatus of the class described, comprising the combination with a casing forming an article-enclosing magazine, of a plurality of superposed article-supports carried by said casing, each of which has one edge hingedly secured thereto, pawl means mounted in said casing adapted



to engage in interlocked V-shaped formation and to also engage the free ends of said supports, and a tripping mechanism coactively associated with said pawls.

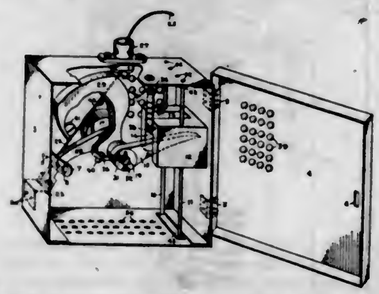
1,683,520. PROCESS FOR TREATING CRAPE WASTE. GEORGES BONNARD, Le Touvet, France. Filed Apr. 30, 1927, Serial No. 188,049, and in France May 10, 1926. 16 Claims. (Cl. 19—66.)

1. A process for treating crape waste material which comprises running said waste through a waste opening machine to break up the threads into substantially equal lengths, carding said waste material, immersing said waste material in boiling water, drying said waste material and subsequently recarding said waste material for the purpose set forth.

1,683,521. PROCESS OF TREATING WATER. JULIANUS WILHELM MEUSER BOURGOGNION and CARL LUDWIG PHILIPS, Nijmegen, Netherlands. Filed May 17, 1927, Serial No. 191,923, and in the Netherlands May 10, 1926. 2 Claims. (Cl. 210—23.)

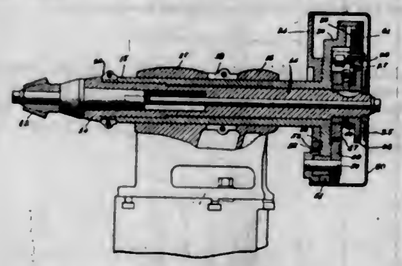
1. The process of treating water, which comprises increasing the temporary hardness thereof by treatment with a hardening agent selected from the group including lime and calcium carbonate, and the corresponding magnesium compounds, taking care always, that the quantity of free CO_2 present in the finished product is equal to the corresponding CO_2 of the new hardness.

1,683,522. METHOD OF DAMPING OSCILLATIONS FOR USE WITH SUSPENSION LEAF SPRINGS AND THE LIKE. FERNAND LOUIS BROUSSOUSE, Paris, France. Filed July 12, 1924, Serial No. 725,570, and in France July 12, 1923. 2 Claims. (Cl. 267—47.)



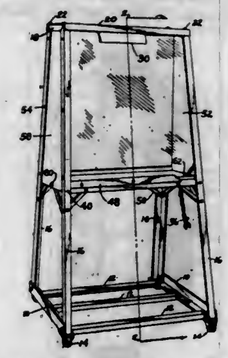
1. A plurality leaf spring of the character described, the leaves having a curved body portion and extremities,

the extremities of one or more of said leaves having a curvature differing in form from that of the general curvature of the spring, and means for forcing the extremities of



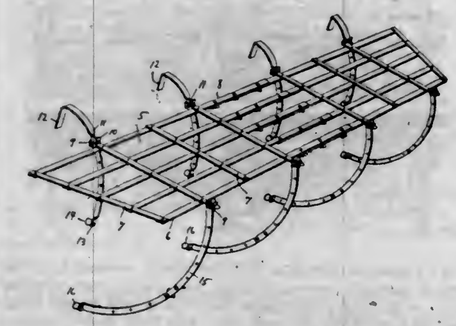
such leaves under tension into contact with the other leaves forming the body of the spring, said means consisting of a maintaining strap.

1,683,523. VALVE MECHANISM. ERNEST P. BUCKLEY, New York, N. Y., assignor, by mesne assignments, to Permex Corporation of America, a Corporation of New Jersey. Filed Feb. 1, 1927. Serial No. 165,116. 4 Claims. (Cl. 137—162.)



1. In valve operating mechanism of the class described, a valve spindle, a weight normally supported at one side of the center of said spindle for holding the valve open, another weight normally retained against gravity by a fusible link and adapted when said link is fused to throw said first mentioned weight over the center of said spindle, whereby said valve is closed and the first mentioned weight retains said valve in closed position, said second mentioned weight mounted independently of said spindle.

1,683,524. INDEXING MECHANISM. EDWARD W. BULLOCK and GEORGE H. BRYAN, Rochester, N. Y., assignors to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed July 18, 1921. Serial No. 485,505. 49 Claims. (Cl. 90—56.)

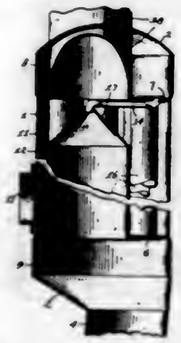


1. In a gear generating machine, the combination with a generating sleeve and means for imparting an oscillatory motion thereto, of a blank spindle rotatable within the sleeve, locking means connecting the blank spindle and sleeve and oscillating with the latter, a stationary member for engagement by the locking means during oscillation thereof for releasing the same, a stationary device, and means moved by said oscillating means and engaging said device for effecting rotation of the blank spindle when thus released to effect indexing.

1,683,525. ACCESSORY MERCHANDISER. GUSTAV A. BURANDT and ALGOT W. NORDGREN, St. Paul, Minn., assignors to Marquette Manufacturing Company, St. Paul, Minn. Filed May 21, 1927. Serial No. 193,301. 4 Claims. (Cl. 312—140.)

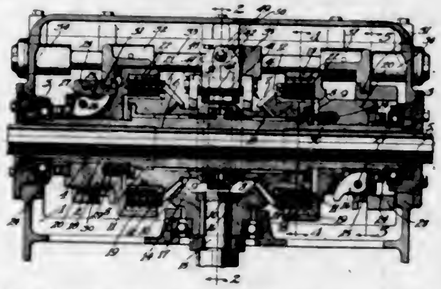
1. In a merchandiser or display device of the kind described, a frame, upright members extending therefrom and arranged in pairs at the ends of said device and inclined toward each other, a top for said device having downturned flanges, said top being connected with said uprights, a floor board supported on said uprights spaced from the bottom of said device, transparent members supported above said floor board at the front and rear of said device, guides on the underside of said top and on the top of said floor board, a partition member received in said guides and closure members for the upper part of said device above said floor board.

1,683,526. FLOWER-DISPLAYING DEVICE FOR COFFIN LIDS. WYATT R. CAMPBELL, New Castle, Pa. Filed Oct. 27, 1927. Serial No. 229,206. 2 Claims. (Cl. 211—86.)



1. In a flower support for casket lids, a frame unit, a plurality of metallic straps secured transversely on said frame unit, the ends of certain of the straps being twisted at right angles, elongated flat bars of arcuate shape, said bars being pivotally connected to said twisted ends of the strap and are twisted to right angles at their upper ends and are bent inwardly to provide hook portions for engagement over the elevated lid of a coffin, and means for supporting the opposite edge of the frame unit.

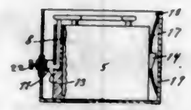
1,683,527. HEATER. ILARIO CAPRIN, San Francisco, Calif. Filed Apr. 4, 1927. Serial No. 180,877. 2 Claims. (Cl. 257—167.)



1. A heater comprising a chamber arranged to be connected between adjacent sections of a chimney; partitions mounted within the chamber to form smoke compartments

within the ends of the chamber and an air heating compartment intermediate the smoke compartments; an air inlet arranged to admit air into the heating compartment; an air outlet connected into the heating compartment and arranged to conduct heated air to a point relatively remote from a chamber; a heating drum mounted within the chamber and having one end opening directly through one of the

partitions into the adjacent smoke compartment, the opposite end being reduced; a relatively small tubular passage connected between the reduced end of the drum and the smoke passage adjacent thereto; and a plurality of smoke passages connected between the partitions to communicate between the smoke compartments through the heating compartment.

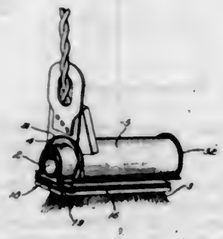


1,683,528. CLUTCH MECHANISM FOR REVERSING GEAR. JACK C. CARLTON, Cincinnati, Ohio, assignor to The Carlton Machine Tool Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 23, 1924. Serial No. 708,555. 1 Claim. (Cl. 192—69.)

In a friction clutch, a sleeve rotatably journaled, a first clutch member journaled upon said sleeve, and confined thereon against axial displacement, a second clutch member, slidable upon and rotatable with said sleeve, friction discs interposed between said clutch members, and housed thereby, a plurality of levers mounted in a hub of said second clutch member, for moving said second clutch member to bring the clutch members and discs into compression, an adjustable abutment on said sleeve, against which said lever engage, and means slidable axially of the sleeve for simultaneously actuating said levers.

1,683,529. AUTOMOBILE BATTERY. DANIEL COHELAN, San Francisco, Calif. Filed Oct. 24, 1927. Serial No. 228,448. 1 Claim. (Cl. 136—171.)

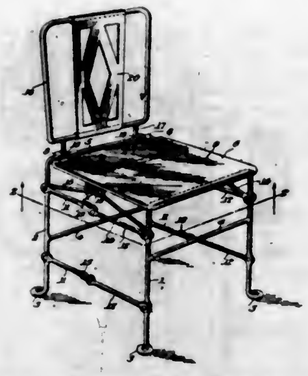
In combination with a storage battery and a case therefor, of terminals positioned on said case and located at a point below the upper surface thereof, means for conducting electric current from said battery to said terminals, a metallic case surrounding the sides and bottom of said battery case, contacts positioned in said metallic case and adapted to be engaged by said terminals, one of said contacts being insulated from said metallic case, a plate positioned within said metallic case, said plate having an open-



ing formed therein, a lug carried on said battery case and adapted to project through the opening in said plate, said plate being curved in a direction so as to cause said terminals to engage said contacts for the purpose specified.

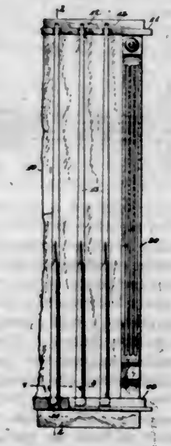
1,683,530. BRUSH. ERIC LEOPOLD HUGO COSBY, Teddington, England. Filed July 1, 1927, Serial No. 202,928, and in Great Britain Mar. 10, 1927. 4 Claims. (Cl. 15—176.)

1. A brush including a back having a longitudinal recess therethrough, a spring actuated rod mounted in said recess and accessible from the exterior of the back, a plurality of catch members carried by said rod and movable therewith, a bristle-carrying member adapted for coextensive alinement with the back, and mating catch members carried thereby to be engaged by the catch members of the rod to hold the bristle-carrying member to the back.



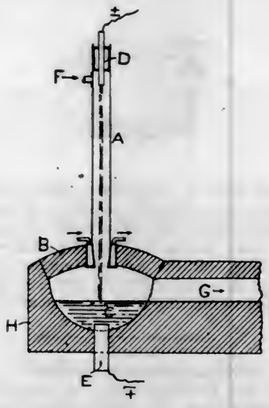
1,683,531. HAIR-WAVING OUTFIT. GEORGE DECKER, Cleveland, Ohio, assignor to Realistic Hair Waving Machine Co., Cleveland, Ohio, a Corporation of Ohio. Filed May 17, 1927. Serial No. 192,067. 5 Claims. (Cl. 132—36.)

3. A hair waving outfit, comprising a clamp for clamping a bunch of hair near the roots, a coil rod for receiving and coiling said hair to produce a coil of hair, a moisture



carrying pad mounted on said coil of hair, a foraminous shell fitted over said pad, a spring holder straddling said shell acting to press the shell snugly against said coil of hair, said rod being rotatable for bringing said hair under tension, means for preventing a reverse rotation of said rod, and heating means removably mounted over said shell.

1,683,532. FOLDING CHAIR. EMEN DERWISH, Fertile, Minn. Filed Jan. 14, 1928. Serial No. 246,887. 3 Claims. (Cl. 155—148.)

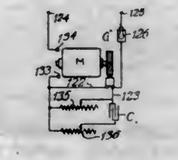


1. A foldable chair constructed of metal and comprising front and rear legs, each of a substantially inverted U-shaped formation and each leg having lower foot portions, brace members connecting the respective front and rear legs, a seat hingedly secured to the connecting element of the rear legs and swingable over the connecting element of the front legs, a back hinged to the connecting element of the rear legs and having a lip to underlie the seat, pivotally associated breakable brace members between the front and rear legs, and pivoted latch rods on the front and rear legs for removable engagement with the seat.

1,683,533. CUE RACK OR THE LIKE. THOMAS DROST, New York, N. Y., assignor to H. Wagner and Adler Co., New York, N. Y., a Corporation of New York. Filed Dec. 2, 1927. Serial No. 237,268. 2 Claims. (Cl. 211—68.)

1. As a new article of manufacture, a cue rack or the like comprising a support having spaced upper and lower horizontal rails, the upper rail having notches in its edges to receive the smaller ends of cues, the lower rail having pockets therein receiving the cue butts, the walls of said pockets being unbroken and inclined, the longitudinal axes of said pockets from top to bottom inclining outwardly away from the support whereby the gravity-assisted camming action of the pocket walls on the cue butts throws the upper ends of the cues into the notches.

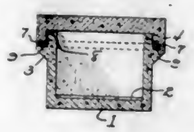
1,683,534. METHOD OF USING HIGH-TENSION ELECTRIC ARCS FOR TREATMENT OF GASES. EMIL EDWIN, Trondhjem, Norway, assignor to Aktieselskapet Norsk Staal Elektrisk-Gas-Reduktion, Trondhjem, Norway. Filed Aug. 24, 1925, Serial No. 52,200, and in Norway Aug. 26, 1924. 4 Claims. (Cl. 266—1.5.)



1. The method of treating gases, which comprises drawing a high tension arc between an upper cold electrode and a lower hot molten electrode of heat-resisting and not materially volatilizable material by passing the gas along and around the arc from the cold electrode to the hot electrode, thereby supplying a greater quantity of heat to the gases.

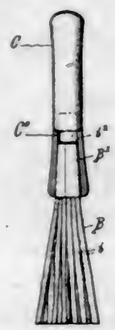
1,683,535. SOLUBLE AND FUSIBLE WHITE ACETONE RESIN AND PROCESS OF MAKING SAME. CARLETON ELLIS, Montclair, N. J. Filed May 25, 1923. Serial No. 641,517. 4 Claims. (Cl. 260—3.)

1. A fusible resin soluble in alcohol prepared from about one mol. of acetone to six mols. of formaldehyde in the presence of aqueous caustic soda, said resin being substantially colorless.



1,683,536. GOVERNOR FOR ELECTRIC MOTORS. MARVIN FERREE, New York, N. Y., and JOSEPH WISSMAR, Cleveland, Ohio, assignors to Picture Transmission Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 31, 1925. Serial No. 5,955. 2 Claims. (Cl. 171—229.)

1. A governor for an electric motor comprising a revoluble member embodying two contact members insulated from each other and adapted to be connected by a movable switch member adapted to be moved away from one of

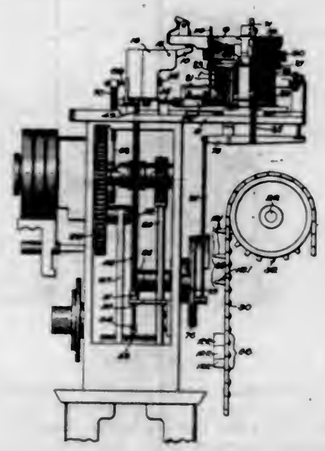


said contacts under the action of centrifugal force to break the motor circuit, means adapted to urge said switch member to the circuit closing position, one of said contact members being adapted to be connected to one of the power terminals and the other of said contact members being adapted to be connected to one of said motor terminals, a condenser, a resistance permanently connected between said motor terminal and the said power terminal, and a second resistance permanently connected to said motor terminal at one end and connected at the other end thereof to one terminal of said condenser the other terminal of which is connected to the corresponding end of the first mentioned resistance.

1,683,537. VAULT. ROBERT L. FOLMAR, Goshen, Ala. Filed Oct. 31, 1927. Serial No. 230,009. 2 Claims. (Cl. 72—7.)

1. A burial vault of reinforced molded concrete having an internal space to receive a casket, a peripheral ledge to support a lid, a lid of reinforced concrete forming an easy fit with the body having an inwardly sloping edge, and a peripheral flange on the lid overlapping the base, said flange having air vents above its botton to permit sealing cement to flow in forming a secure cement locked joint.

1,683,538. SINGLE-SERVICE BRUSH. CLIFFORD J. FRANCOIS, Sr., McDonoghville, La., assignor of one-half to John Harry Haas, Sr., McDonoghville, La. Filed Dec. 6, 1927. Serial No. 238,054. 1 Claim. (Cl. 15—226.)



A brush comprising a substantially cylindrical handle flared outwards near its lower end and provided with a frusto-conical chamber in said lower end, and a body portion composed of a number of wisps of crinkled paper free at their lower ends, and gripped near their upper ends in a paper band, said band and enclosed wisps forming a tapered head for said brush adapted to fit snugly and removably in said frusto-conical chamber in the handle.

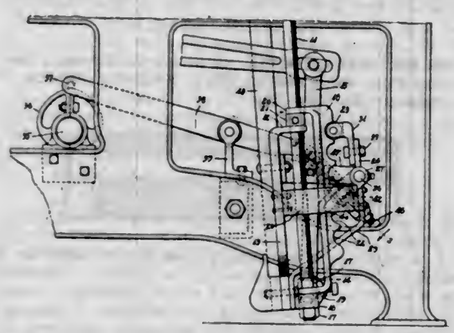
1,683,539. STABILIZER AND PLASTER COMPOSITION CONTAINING THE SAME. ALFRED HUGH GALLAGHER, Chicago, Ill. Filed Sept. 19, 1927. Serial No. 220,640. 5 Claims. (Cl. 106—34.)

1. A stabilized plaster composition comprising gypsum plaster, nitrogenous organic retarding material of such effective strength as to inhibit the setting of the plaster for a predetermined period of time, and crystal-forming calcium sulfate accelerating material of such effective strength as to effect setting of the plaster in a period of time not greatly exceeding that predetermined.

1,683,540. STRIPING ATTACHMENT FOR KNITTING MACHINES. AUGUSTINE GAGNÉ, Central Falls, R. I., assignor to Hemphill Company, Providence, R. I., a Corporation of Massachusetts. Filed Mar. 29, 1921. Serial No. 456,780. 37 Claims. (Cl. 66—140.)

1. In a hosiery knitting machine, auxiliary yarn changing means to effect changes of yarn at the tips of the toe and heel, said means including a pair of yarn guides, a cam member having peripherally positioned thereon two spaced cams sloping toward each other, one of said cams adapted to act in one direction of movement upon one of said yarn guides and the other adapted to act in the opposite direction of movement upon the other yarn guide, and means to impart to and fro movement to said cam means.

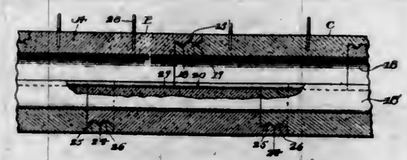
1,683,541. SPRING BUFFER FOR MOTOR VEHICLES. WILLIAM BALLINGTON GLOVER and WILLIAM HENRY RICHARDSON, Subiaco, near Perth, Western Australia, Australia. Filed Sept. 9, 1927, Serial No. 218,520, and in Australia May 11, 1927. 1 Claim. (Cl. 293—55.)



In a buffer for motor vehicles, a guard comprising two spaced plates connected together at their ends, two conical spiral springs forming a resilient support for said guard, and means for attaching each spring at its larger end to the plates, said means including an outer clamping strap extending across the space between said plate and engaging the outer face of both plates, a bolt connected to the strap and extending between the plates, a disk plate mounted upon the bolt and bearing against the inner faces of both of the plates and against which the spring abuts, a second clamping plate also mounted on said bolt and having recessed terminals to engage the terminal of the spring and be clamped thereagainst to hold the spring upon the disk, and a nut upon the bolt and bearing against the rear side of said second clamping plate for locking the parts in clamped relation.

1,683,542. CANDY PACKAGE. GEORGE W. GREENWOOD, Wilmington, Del., assignor to Stephen F. Whitman & Son, Inc., Philadelphia, Pa. Filed June 24, 1927. Serial No. 201,232. 2 Claims. (Cl. 206—46.)

1. A candy package comprising a plurality of similar pieces of candy superposed on one another, and having notches formed in their edges diametrically opposite one another, and flexible means passed around said package and seated in the notches of a candy piece forming one end of the package to prevent separation of the candy pieces from each other and of the said means from the package as a whole.

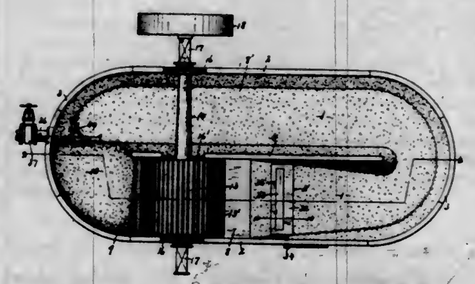


1,683,543. AUTOMATIC BOX LOCK FOR DROP-BOX LOOMS. JOHN D. GROVES, Milltown, Me., assignor of one-third to Lemuel R. Groves, East Millinocket, Me. Filed Oct. 3, 1927. Serial No. 223,819. 7 Claims. (Cl. 139—182.)

1. In a loom, an oscillatory lay member, a slidable shuttle box lifting member movable therewith and slidable relatively thereto, a latch carried by the oscillatory member for locking the slidable member in different positions, a mechanically operable member movable in synchronism with said oscillatory member, and a connection between the mechanically operable member and latch including a spring and so arranged that the movement of the oscillatory member in one direction and the movement of the mechanically operable member in the corresponding direction will jointly move the latch to unlocking position and that the joint movements of the oscillatory and mechanically operable members in the opposite directions will move the latch to locking position under spring pressure.

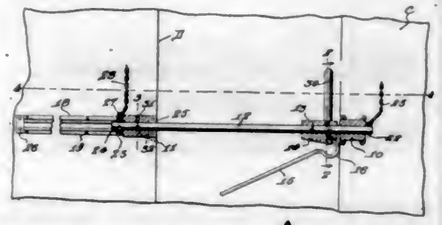
1,683,544. SECTIONAL PIPE, CONDUIT, OR CULVERT UNIT. CHRISTIAN LUDVIG HANSEN, Charles City, Iowa. Filed May 17, 1927. Serial No. 192,072. 3 Claims. (Cl. 72—51)

1. In a pipe, conduit or culvert, a unit of polygonal cross sectional contour and comprising a pair of superposed sections each having its inner face formed with a lengthwise extending groove of less width than the width of said face, said grooves registering to provide a channel, each of said sections further having its inner face at one end formed with a pocket conforming in contour to the shape of the grooves, the wall of said pocket formed with spaced ribs, each of said sections further having its other end provided with an extension spaced from the outer periphery of the section, conforming in contour to the shape of the grooves and having spaced grooves in its outer periphery to receive the ribs on the wall of a pocket, and said sections having the inner faces thereof formed with



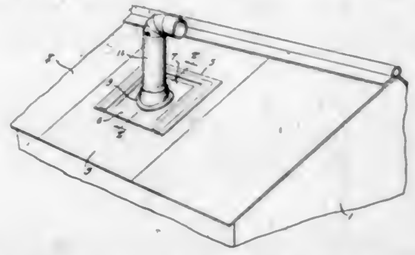
inherent interengaging coacting means adjacent the grooves in said faces to prevent lateral shift of the sections relative to each other and to provide a joint therebetween, the pockets of one unit adapted to receive the extensions of an adjacent unit to provide joints therebetween.

1,683,545. ARTICLE OF JEWELRY. RAY A. HARRIS, North Windham, Conn. Filed Dec. 14, 1927. Serial No. 239,990. 1 Claim. (Cl. 63—1.)



An article of jewelry comprising an ornament in the form of a container having openings therein, means to detachably secure the lower end of the container to the front of a garment at the top of the latter, chains having their inner ends secured to the top of the container, and means at the outer ends of the chains for detachable connection with the shoulder straps of a garment to support said container in upright position and hold said shoulder straps in place.

1,683,546. BEATING ENGINE. JOHN D. HASKELL, Fulton, N. Y., assignor to Dilts Machine Works Incorporated, Fulton, N. Y., a Corporation of New York. Filed May 18, 1926. Serial No. 109,898. 21 Claims. (Cl. 92—24.)

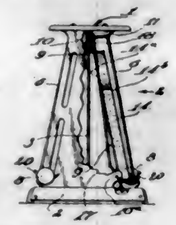


1. A closure for shaft openings in paper stock containers, comprising a flexible diaphragm having a gland for receiving the shaft.

1,683,547. MAIL-CAR DEVICE. WILLIS R. HOLE, Salem, Ohio. Filed Oct. 26, 1927. Serial No. 228,889. 3 Claims. (Cl. 258—21.)

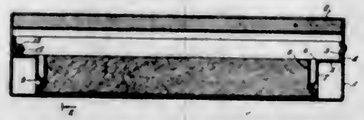
2. The combination with a mail car, of a horizontally disposed rod, a stationary bearing secured to the car at one side of the car door to removably receive one end of the rod, a bearing located upon the opposite side of the car to slidingly and rotatably support the rod, means to slidingly mount the last mentioned bearing, means to hold the bearing against movement and means to prevent longitudinal or rotary movement of the rod.

1,683,548. PIPE COLLAR. RICHARD A. HUGHEY, Sprott, Ala. Filed July 11, 1927. Serial No. 204,980. 2 Claims. (Cl. 285—31.)



1. A roof attachment including a metal sheet designed to be fixedly secured on the roof of a building and said sheet having an opening therethrough, a guide flange on the sheet comprising a substantially U-shaped member having its sides and end portion disposed adjacent the sides and to the end of the opening nearest the top of roof, a plate received in the guide flanges, and soldered to the sheet, said plate having a smoke pipe receiving opening therethrough and an outstanding collar surrounding said opening.

1,683,549. SCRUBBING MOP. ERNEST POLK JONES, Pulaski, Tenn. Filed Mar. 19, 1927. Serial No. 176,745. 4 Claims. (Cl. 15—229.)



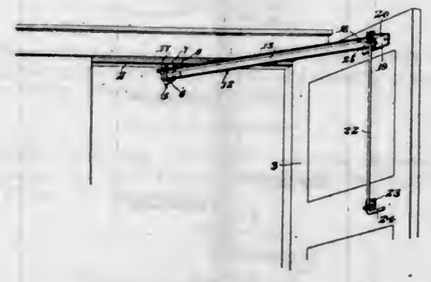
1. A scrubbing mop including a ring, padding secured to the ring and depending therebelow, yarn looped in strands over said ring, stitches connecting the yarn strands below the ring, a handle support, and a supporting cross plate to which said handle support is connected, said plate disposed diametrically across the ring and having recessed ends forming corner extensions, the said extensions being secured around the ring, permitting the yarn to extend substantially continuous around the ring.

1,683,550. TOAST INSPECTOR. DANA E. KEECH, Los Angeles, Calif. Filed Jan. 21, 1924. Serial No. 687,592. 11 Claims. (Cl. 53—5.)

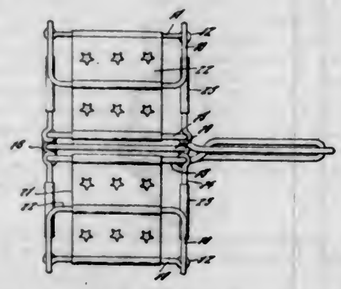
10. In a toaster the combination of: means for supporting a piece of bread on an inclined plane; a horizontally pivoted bread carrier; means for shifting the bottom of the bread outwardly into said carrier so that it will fall upon the carrier with inner face downward; and a member for optionally tilting the top of the bread outwardly so the bread will fall into the carrier, inner face upward.

1,683,551. VANITY CASE. WILLIAM G. KENDALL, Newark, N. J. Filed Feb. 10, 1928. Serial No. 253,429. 7 Claims. (Cl. 132—83.)

1. A vanity case including a body, a cover therefor, a compact plate holder, and means for hingedly connecting the cover with the holder, said means including a looped projection extending from said cover inwardly, an aperture extension forming part of said body, said projection extending through the aperture in said body, and a pintle extending through said looped projection, said pintle overlapping part of said body.



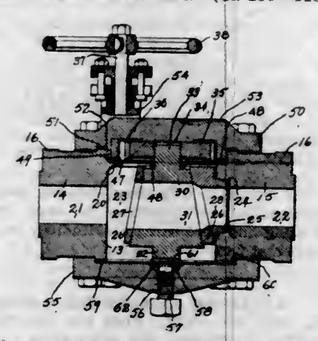
1,683,552. COMPACT-PLATE-HOLDING RING. WILLIAM G. KENDALL, Newark, N. J. Filed Feb. 10, 1928. Serial No. 253,430. 9 Claims. (Cl. 132—83.)



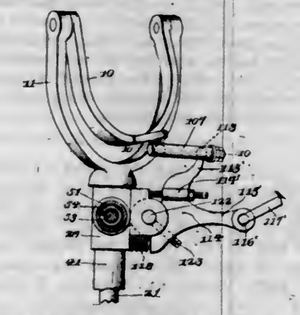
1. In a vanity case, a holding ring for removably holding a compact plate, said ring comprising an L-shaped structure adapted to snugly fit into the vanity case, a plurality of resilient fingers extending from said ring for removably locking the ring in the case, and means extending from the ring interlocking with the compact plate for holding the same in position.

1,683,553. LATCHING MECHANISM. ALVA L. KERR, Mansfield, Ohio. Filed Oct. 25, 1927. Serial No. 228,622. 1 Claim. (Cl. 292—267.)

A latching mechanism for the purpose set forth comprising a stationary, angularly disposed yoke-shaped keeper element providing a combined support and guide, a latching element of L-shaped cross section including a vertical and a horizontal leg and with the horizontal leg extending from the upper end of the vertical leg, said latching element slidably extending through said keeper element and having its vertical leg supported by the keeper element, said latching element bodily shiftable by a door on the opening and closing thereof, a combined releasing and door connecting means for said latching element connected to the horizontal leg thereof, the horizontal leg of said latching element being provided with a notch in proximity to its inner end and a notch in proximity to its outer end, the inner of said notches coacting with the keeper element to latch the door in open position and said outer notch coacting with the keeper element to latch the door in closed position, and an outwardly projecting spring anchored at its forward end to the outer face of said vertical leg in proximity to its inner end and coacting with one side of the keeper element to force the latching element against the other side of the keeper element when the latching element is shifted outwardly.



1,683,554. POTATO-BAKING DEVICE. ROLAND D. KENYON, Carthage, N. Y. Filed Aug. 24, 1927. Serial No. 215,234. 2 Claims. (Cl. 53—6.)

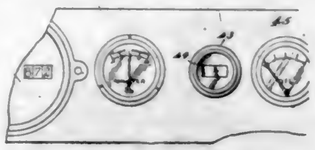


1. A potato baking device comprising companion sections, each section including a substantially U-shaped frame, transverse rods connecting the parallel portions of said frame, a handle carrying frame arranged above the U-shaped frame, vertical rods connecting the said parallel portions of the U-shaped frame with said handle carrying frame, a metallic member arranged along the bottom of the U-shaped frame and including end portions secured to the handle carrying frame, metallic strips arranged at the sides of the sections and secured to said vertical rods, links connecting the handle carrying frame of the respective sections, whereby the latter are hingedly mounted and adapted to be arranged in superimposed relation, and said handles being of loop-like formation and arranged to fit one within the other when the sections are superimposed.

1,683,555. VALVE. FREDERICK E. KEY, East St. Louis, Ill., assignor to Key Boiler Equipment Co., East St. Louis, Ill., a Corporation of Missouri. Filed July 17, 1926. Serial No. 123,091. 13 Claims. (Cl. 251—113.)

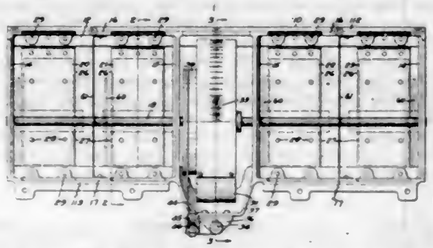
1. A valve comprising a casing, a valve housing adapted to be removably secured within said casing and having its major portion free and unattached, means for securing said housing within said casing, a rotary plug mounted in said housing, means within the casing for operating said rotary plug, means for locking said rotary plug when in opened or closed position, removable caps carried by said casing for affording access thereto for the removal and replacement of the valve housing and rotary plug, and means projecting through one of said caps for placing said rotary plug operating means in operation.

1,683,556. HEADLIGHT-SHIFTING MECHANISM. HARRY M. KINSLEY, CLIFFORD A. CRESWELL, and HARRY F. MESSER, Lancaster, Pa. Filed Aug. 31, 1927. Serial No. 216,706. 4 Claims. (Cl. 240—62.)



4. In a shifting mechanism for the headlights of a motor vehicle, a pair of vertical rotatable shafts, a collar fixed to the lower end of each of said shafts and formed with an arm, a tie rod having universal joint connections with said arms, a connecting rod having a universal joint connection with the tie rod and formed with means to provide a universal joint connection with a steering mechanism, means to normally hold the shafts against rotation, a fixed yoke formed on the upper end of each shaft, a movable yoke pivotally connected with the fixed yoke and adapted for immovable connection with a headlight, a lever carried by each of said supports, and a link having universal joint connections with the lever and movable yoke, said levers being pivoted on horizontal axes and having means for normally preventing pivotal movement.

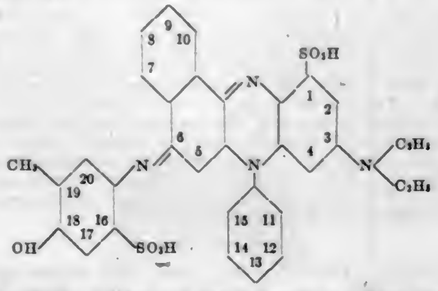
1,683,557. TANK GAUGE. CARL FRED. KOKEMILLER, Story City, Iowa. Filed Sept. 10, 1923. Serial No. 661,946. 2 Claims. (Cl. 116—118.)



2. In combination a support having an opening therein, a tubular housing supported vertically to one side of the support with one end in transverse alignment with the

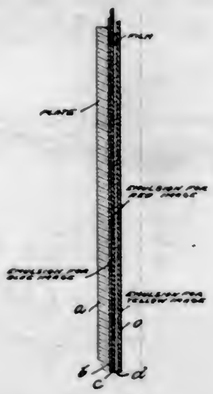
opening, a liquid level responsive indicating element rotatably supported in a horizontal plane on the tubular housing, a horizontally disposed casing open at one end and insertable longitudinally through the opening and

receiving the rotatable indicating element, and provided with a longitudinal slot receiving the upper end of the tubular housing and permitting longitudinal movement of the casing to and from the opening.



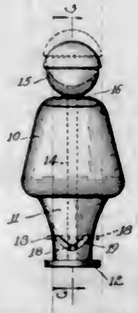
1,683,558. VARIABLE CONDENSER. FREDERICK A. KOLSTER, Palo Alto, Calif. Filed Apr. 28, 1926. Serial No. 105,050. 11 Claims. (Cl. 175—41.5.)

1. A device of the class described comprising a frame adapted to be mounted behind an instrument panel, a plurality of variable condenser structures mounted on said frame, a horizontal shaft parallel to the panel connecting said structures, said frame including a plurality of metallic shielding plates intermediate said condenser structures on more than two sides thereof a control shaft extending normal to said former shaft, and means for operatively connecting said shafts.



1,683,559. MANUFACTURE OF ACID DYESTUFFS OF THE PHENONAPHTHOSAFRANINE SERIES. PAUL LAEUGER, Basel, Switzerland, assignor to the Firm of J. R. Geigy S. A., Basel, Switzerland. Original application filed Feb. 4, 1927, Serial No. 166,021, and in Germany Feb. 13, 1926. Divided and this application filed Dec. 28, 1927. Serial No. 243,210. 2 Claims. (Cl. 260—29.)

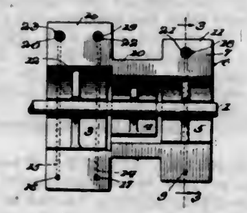
2. As a new article of manufacture, the herein described dyestuff of the phenonaphthosafranine series of the constitution:



constituting a crystalline body, dissolving to a green solution in sulphuric acid and dyeing wool reddish blue tints of good equalizing power and improved fastness to light and alkali.

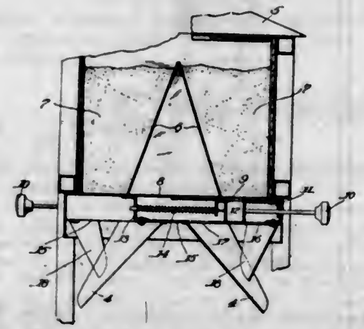
1,683,560. PROCESS FOR THE PRODUCTION OF PHOTOGRAPHIC PLATES, FILMS, AND THE LIKE FOR INDIRECT THREE-COLOR PHOTOGRAPHY. ERNST AUGUST LAGE, Wandsbek, near Hamburg, Germany. Filed Mar. 13, 1926, Serial No. 94,595, and in Germany Oct. 23, 1925. 2 Claims. (Cl. 95—2.)

1. Process for the production of photographic tri-packs for indirect three-color photography, consisting in that a light-sensitive film provided with the coating of emulsion suitable for the red partial image is squeegeed on to a support provided with a coating of emulsion suitable for the blue partial image, after which a suitable coating of emulsion for the yellow partial image is poured on to the squeegeed film.



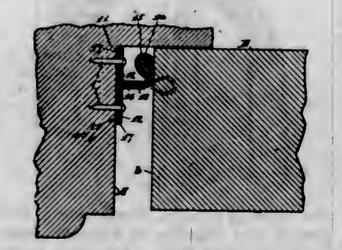
1,683,561. DOLL. RUSSELL C. LETSON, Los Angeles, Calif. Filed Jan. 9, 1924. Serial No. 685,138. 2 Claims. (Cl. 46—40.)

2. A toy doll, comprising a body portion, a bore longitudinally of the body portion, a shaft mounted normally freely rotatable in the bore, a head secured to the upper end of the shaft and adapted to normally rest adjacent the upper end of the body portion, a cam surface in connection with the body portion, inclined relative to the longitudinal axis of the body portion, and means in connection with the shaft, adapted to engage said cam surface, whereby the shaft and head thereon will be moved longitudinally of the body portion upon relative rotation of the two.



1,683,562. PULLEY ATTACHMENT. CHARLES MACKERT, St. Anthony, Idaho. Filed Dec. 12, 1925. Serial No. 75,146. 1 Claim. (Cl. 64—17.)

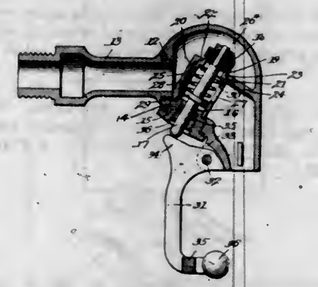
A sleeve covering for pulleys comprising a plurality of segmental sections, adjustable means connecting said sections in series on the periphery of a pulley and operable to clamp said sections to the periphery of said pulley, said



sections being formed so that the sleeve covering which is comprised by the sections will consist of a plurality of portions having different outer diameters.

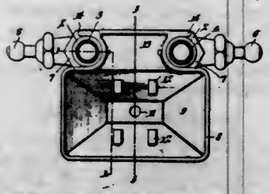
1,683,563. VENDING MACHINE. ABRAHAM MILBERG, Chicago, Ill. Filed Aug. 26, 1926. Serial No. 131,691. 1 Claim. (Cl. 221—104.)

A sheet metal dispensing machine comprising a container having a bottom provided with a discharge opening, a floor arranged directly under and parallel to said bottom and having dispensing openings displaced laterally on opposite sides of said discharge opening, a plunger slidable between said bottom and floor and having an open ended casing extending therethrough adapted to register with the first named opening and one of the second named openings only, yielding means for holding said plunger with its casing normally in registry with the first named opening, the rear edge of said casing contacting with said floor during movement of the plunger to normal position to scrape excess material from said floor into the other of said dispensing openings.



1,683,564. WEATHER STRIP. AUGUSTUS MILLER, East Orange, N. J. Filed Apr. 19, 1927. Serial No. 184,998. 1 Claim. (Cl. 20—69.)

A weatherstrip comprising a base of stiff material presenting a bottom, clamp members integral with the bottom and turned inwardly toward each other overlying the base, and terminal clamp members directed laterally outward

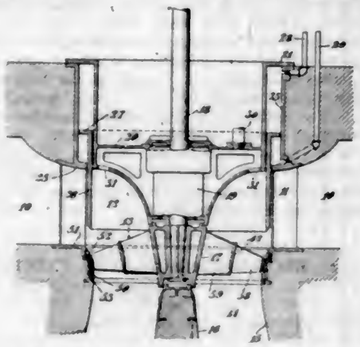


perpendicular to the base and substantially parallel with each other, the inwardly directed members being spaced from the bottom of the base and the terminal clamp members being spaced from each other; together with a weatherstrip of flexible material presenting sides which extend between the terminal clamp members and then laterally outward between the bottom of the base and said inwardly turned members, and a core, wrapped about which is the material of said flexible weatherstrip, the said terminal clamp members of the stiff material integral with the base terminating along a line of the flexible weatherstrip to hold the said weatherstrip closely wrapped about the said core to hold the same tightly within the material of the weatherstrip.

1,683,565. RECEPTACLE-ACTUATED FAUCET. WILLIAM J. MIX, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Oct. 17, 1925. Serial No. 63,094. 14 Claims. (Cl. 251—116.)

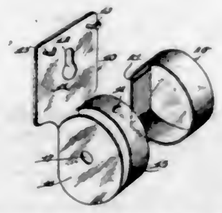
1. A faucet comprising a substantially spherical body portion forming a valve chamber having unbroken top, front and side surfaces, a nozzle leading therefrom, said body portion having a valve therein for controlling the egress of fluid through said nozzle, a valve stem projecting through an opening in the wall of said body portion, and means permitting withdrawal of said valve and stem through said opening, said means comprising a valve seat removably mounted in said casing, and removable means in said opening serving to retain the seat and valve in the body portion.

1,683,566. SOAP DISH. WILLIAM J. MIX, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Nov. 20, 1925. Serial No. 70,379. 3 Claims. (Cl. 45—28.)



1. A soap dish comprising a tray-like body having at its rear a portion adapted to extend between the supply pipe couplings of a double faucet and provided at opposite sides with means to loosely engage said couplings to support the tray in front of said couplings and hold it from lateral movement.

1,683,567. HYDRAULIC TURBINE. LEWIS FERRY MOODY, Philadelphia, Pa. Original application filed June 25, 1924, Serial No. 722,228. Divided and this application filed Nov. 24, 1925. Serial No. 71,074. 28 Claims. (Cl. 253—151.)

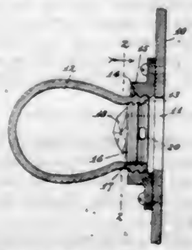


1. In combination with a hydraulic turbine having an intake and discharge, of a propeller type runner comprising an inner series of vanes, a partition ring connecting the

ends of said vanes, and an outer series of unshrouded vanes extending outwardly from said partition ring, the outer

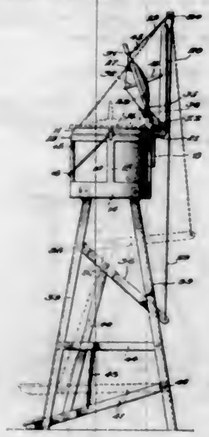
portion of said unshrouded vanes being more nearly horizontal than vertical and the outer series of vanes being greater in number than the inner series of vanes.

1,683,568. WINDOW-CURTAIN FITTING. VIRGIL H. MOODY and CURTIS W. KEMPTON, Glouster, Ohio. Filed Oct. 13, 1927. Serial No. 225,937. 3 Claims. (Cl. 156—29.)



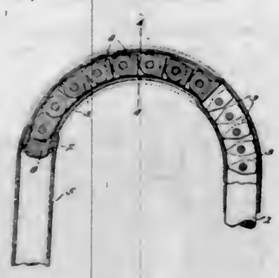
2. A bracket for supporting a shade receiving tubular casing comprising an attaching plate with a depending curved strip carried thereby, a cap for encircling said strip and having a slot extending transversely therethrough to adapt the cap to straddle the attaching plate, the cap and the strip being adapted to receive between them one end of the tubular casing, and means carried by the brackets to receive a plate of the shade roller.

1,683,569. SELECTIVE FLOTATION OF MINERALS. BAYARD S. MORROW and ERNEST KLEPETKO, Anaconda, Mont. Filed Oct. 21, 1925. Serial No. 63,992. 3 Claims. (Cl. 252—9.)



1. As a flotation agent a solution comprising cresylic acid and thio-carbanilid.

1,683,570. INTERCHANGEABLE SIGN ELEMENT. LOUIS N. MOSS, Cedarhurst, N. Y. Filed Nov. 2, 1926. Serial No. 145,880. 3 Claims. (Cl. 240—106.)

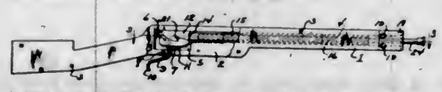


1. In a sign including an apertured base, convertible and interchangeable elements adapted to be respectively illuminated by penetration and flood lighting, said elements including a transparent bulb, interengageable means on the bulb and sign base for connecting the bulb to the base in alignment with the aperture and interengageable means within the open end of the bulb and on a plurality of respectively transparent and reflective plugs to interchangeably connect the plugs within the bulbs whereby to render the bulbs convertible for flood lighting or penetration illumination.

1,683,571. GASOLINE BUCKET. PHILIP MUELLER, Decatur, Ill., assignor to Adolph Mueller, trustee, Decatur, Ill. Filed Oct. 18, 1924. Serial No. 744,514. 10 Claims. (Cl. 220—89.)

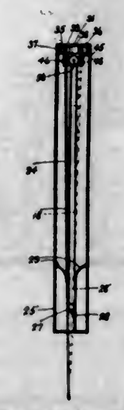
1. The combination of a container, a closure therefor, means to maintain the closure in open position including a member extending through an opening in the closure whereby it will not be positioned between the closure and the edge of the opening controlled thereby when the closure is operative, said member including a combustible section extending over a portion of the inner face of the closure, for the purpose described.

1,683,572. PIPE-BENDING MANDREL. PHILIP MUELLER, Decatur, and ANTON C. SCHUERMANN, deceased, Decatur, Ill., by Helena Schuermann, executrix, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed Oct. 17, 1925. Serial No. 63,186. 5 Claims. (Cl. 153—63.)



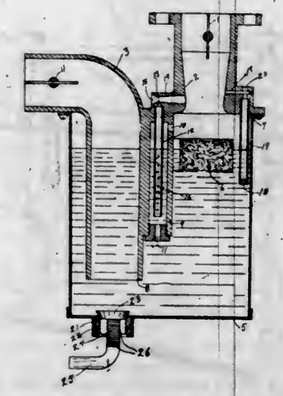
1. A tube bending mandrel comprising a flexible body section, formed of a plurality of pivotally connected elements, a terminal head having the cross sectional form and transverse dimensions of the bore of the tube to be bent, and a flexible connection between the head and body section of a diameter less than those of the members connected by it.

1,683,573. PIPE-BENDING MANDREL OR PUNCH. PHILIP MUELLER, Decatur, and ANTON C. SCHUERMANN, deceased, Decatur, Ill., by Helena Schuermann, executrix, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed Oct. 17, 1925. Serial No. 63,187. 9 Claims. (Cl. 153—63.)



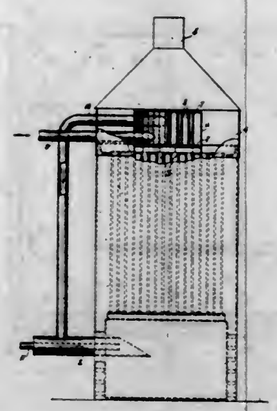
1. A tube bending mandrel comprising a rigid stem, a flexible core formed by a series of members detachably united end to end by a headed projection on each member engaging a socket in the next member of the series and permitting relative lateral movement between said members, one of the terminal members of said series being connected to the stem, a series of substantially spherical, tubular, members fitted over said core and each having a recess receiving a portion of the next section, and means connected to the other terminal member of the core for retaining the core members in engagement and said tubular members in nested engaging relation.

1,683,574. ARROW-SHOOTING GUN. JOSEPH R. MURPHY, Shelbyville, Tenn. Filed Dec. 22, 1926. Serial No. 156,351. 1 Claim. (Cl. 124—14.)



A toy gun of the character described comprising a pair of like sections, formed with recesses to provide a bore and a chamber, a trigger pivotally mounted in said chamber, a trigger arm extending therefrom and passing through an opening formed in the sections, a plunger mounted for slidable movement in said bore and being formed with a shoulder to be received by the trigger for holding the plunger in operative position, an elastic strip passing through said plunger, a bored block arranged in the bore of the sections and securing the end portions of the strip therein, and a projectile adapted to be arranged in a bore formed in the plunger for putting the elastic strip under tension and securing the plunger to the trigger, clamping means for retaining the bored block in operative position and being formed with an opening for the passage of said projectile, and screws cooperating with said clamping means for holding the sections together.

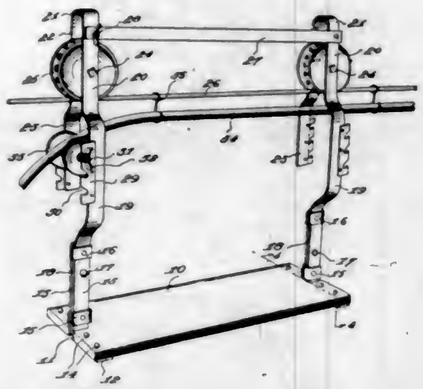
1,683,575. STREET AND STATION INDICATOR. KENNETH O'BRIEN, Calpine, Calif. Filed Dec. 14, 1925. Serial No. 75,415. 2 Claims. (Cl. 40—43.)



1. In a device of the class described, an endless travelling element, an upper roller mounting said element, a lower gravity element for retaining the lower portion of the element first named, a vertical shaft, a worm carried thereby, a worm wheel engaged by the worm, means for driving the upper roller from the worm wheel, a frame including a plurality of U-shaped portions, a bearing box for the shaft, and means for moving the box manually, in order to shift the position of the worm from one side of the worm wheel to the other side thereof and from one of U-shaped portions to the other, these U-elements acting as box retaining means.

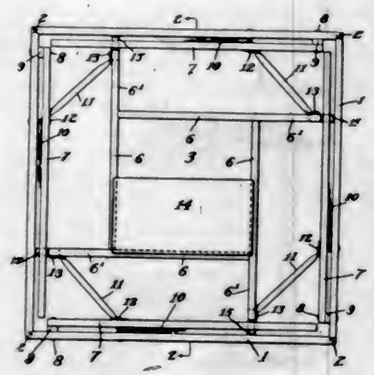
1,683,576. CARBURETOR. JOSEPH C. COULOMBE, Kokomo, Ind. Filed Sept. 5, 1922. Serial No. 586,370. 3 Claims. (Cl. 261—121.)

1. In a carburetor for internal combustion motors having a constant level float chamber, an air outlet for same, a main air intake for said carburetor extending below the fuel level in said float chamber, said air intake being proportioned and located so as to permit a subatmospheric pressure in said float chamber during the operation of said motor, means for injecting fuel from said float chamber into said air outlet, said means comprising a small venturi connecting said air outlet with the atmosphere, and a tube leading from the throat of said small venturi to the fuel in said float chamber.



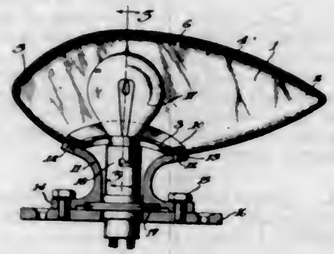
1,683,577. RECUPERATOR. ROBERT C. HOPKINS, Alliance, Ohio. Filed Nov. 21, 1925. Serial No. 70,546. 4 Claims. (Cl. 110—56.)

1. In combination with a boiler having tubes, a fire box at one end of the tubes and a smoke box at the other end of the tubes, a burner in the fire box, a recuperator



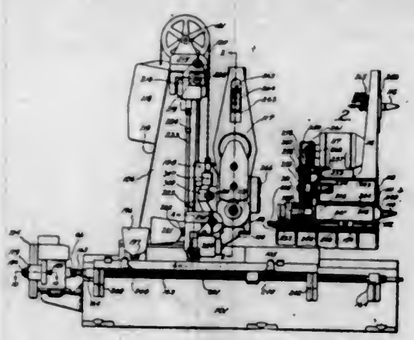
drum in the smoke box in proximity with the tubes, said drum having tubes in alignment with the boiler tubes, and means including inlet and outlet pipes tangentially connected with the recuperator drum for passing an air blast through the recuperator drum to the burner.

1,683,578. CABLE CAR. CURT E. MOBIUS, Brooklyn, and WALTER N. ENGLER, New York, N. Y., assignors to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Oct. 21, 1927. Serial No. 227,776. 6 Claims. Cl. 105—150.)



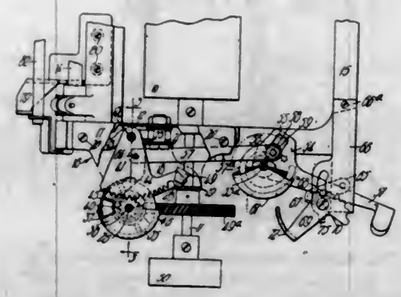
1. A lineman's chair comprising a seat, brackets positioned at opposite ends of said seat, hangers pivoted to said brackets and foldable over said seat, and rollers carried by said hangers and adapted to engage a messenger wire.

1,683,579. FOLDING TABLE. NELSON L. B. PAGE and JOHN C. EMERSON, Auburn, Me., assignors to N. L. Page & Son Co., Auburn, Me., a Corporation of Maine. Filed Mar. 7, 1927. Serial No. 173,280. 7 Claims. (Cl. 45—11.)



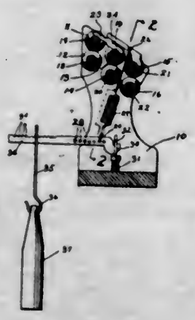
7. A table comprising a top, enclosing frame rails therefor, a quadrilateral truss frame for said top having its truss units extending towards but terminating short of the frame rails, table legs pivoted to said frame rails, and rigid braces for said legs, each brace pivoted at one end to a leg and at its opposite end pivoted to the end of the truss unit opposite said leg, the pivotal connection of the brace with the truss unit being substantially in line with the pivotal connection of the leg with its frame rail.

1,683,580. AEROPLANE LAMP. CHARLES D. RYDER, Covington, Ky., assignor to The Cincinnati Victor Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 18, 1925. Serial No. 16,546. 3 Claims. (Cl. 240—1.)



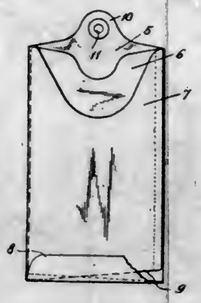
1. A lamp, comprising, an elongated two-piece globe of translucent material, a base therefor, a flange on said base shaped to correspond to the curvature of the globe and to fit about an aperture in the globe side, a ring mounted on the inside of the globe and lying around the margin of the aperture, said ring formed to correspond to the shape of the base flange and nesting therein with the material of the globe clamped between the base flange and the ring, and a light source mounted within the base and extending upwardly through the aperture into the globe at right angles to the longitudinal axis of the globe.

1,683,581. ELECTRICAL OPERATION AND CONTROL OF MACHINE TOOLS. JOHN C. SHAW, Brooklyn, N. Y., assignor to Keller Mechanical Engineering Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Mar. 4, 1924. Serial No. 696,827. 39 Claims. (Cl. 90—13.5.)



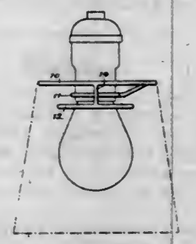
1. In a machine of the character described, the combination with a slide and lead screw for moving the same, of motor driven magnetic clutches for operating said screw for motion in either direction, dogs for limiting said motion, a reversing contactor adapted to be actuated by said dogs and a reversing switch actuated by said contactor for reversing the operation by said magnetic clutches, thereby reversing the drive of the screw.

1,683,582. TYPEWRITING MACHINE. BURNHAM C. STICKNEY, Portsmouth, N. H., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed July 7, 1925. Serial No. 41,933. 36 Claims. (Cl. 197—114.)



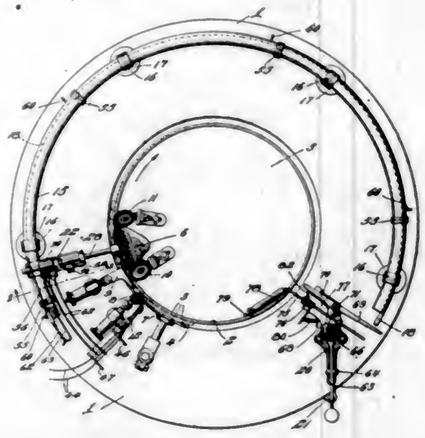
1. A typewriting machine including a revoluble platen, a line-space lever having a fixed fulcrum, a slide movable upon said lever towards and away from the fulcrum of the lever and connected to the platen, to drive the same in line-spacing and means rotatably mounted upon the fulcrum of the line-space lever to adjust the slide microscopically to secure microscopic variations in the extent of the line-space unit of rotation of the platen for the same extent of vibration of the lever.

1,683,583. PRESSURE MECHANISM FOR ROLL STANDS. WILLIAM A. CARPENTER, Hartsville, S. C., assignor of one-half to C. H. Campbell, Hartsville, S. C. Filed May 18, 1927. Serial No. 192,319. 8 Claims. (Cl. 19—136.)



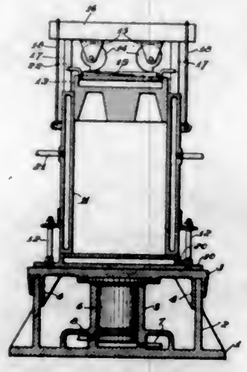
1. A pressure regulating mechanism for drawing rolls and the like, comprising equalizing levers bearing on the rolls, a member engaging the upper equalizing lever and extending downward between the rolls, a section of the said member being in the form of a coiled spring, a hook on the lower end of the member, a lever pivoted to the main frame of the roll stand, a vertically adjustable fulcrum point for said lever, a plurality of holes in the said lever adapted to receive the hooked lower end of the said member, a plurality of notches in the upper edge of the said lever, and a weight adapted to be adjustably secured in any one of the notches.

1,683,584. ENVELOPE. GEORGE FRANCIS HOGAN, Chicago, Ill. Filed Sept. 27, 1927. Serial No. 222,230. 3 Claims. (Cl. 229—56.)



1. An envelope having two separate pockets formed by a rear wall and intermediate and front walls consisting of overlapping lateral flaps each substantially the width of the rear wall, the free lateral edge of the intermediate wall being unattached to the other walls, the free lateral edge of the front wall being gummed at the lateral edge of the envelope and a flap closing the bottom of the envelope, the lower edge of the front wall being cut away to expose a portion of the intermediate wall to the bottom-closing flap and the bottom-closing flap being gummed to both the front and intermediate walls.

1,683,585. LAMP-SHADE FRAME. ALEX LUSTIG, New York, N. Y., assignor to Idealite Electric Lamp Shade Mfg. Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 4, 1927. Serial No. 180,827. 2 Claims. (Cl. 240—108.)



1. A lamp shade frame for use with a lamp bulb and its socket, said frame comprising a shade supporting member, a substantially circular clamping member connected with the shade supporting member for connecting the frame with the socket to hold the frame associated with the lamp bulb whether the lamp bulb is in a depending or upright position, and a second substantially circular member connected with the shade supporting member adapted to support the frame from the lamp bulb in association therewith when the lamp bulb is in an upright position.

1,683,586. KNITTING MACHINE. JOHN F. MALONEY, Woonsocket, R. I.; Mary M. Maloney administratrix of said John F. Maloney, deceased. Filed Jan. 3, 1927. Serial No. 158,486. 12 Claims. (Cl. 66—99.)

12. An attachment for circular knitting machines comprising a rotatable pivotally mounted shaft, a wheel carried by said shaft and normally contacting with the knitted fabric to rotate said shaft, a ratchet wheel carried by said shaft, a thread contacting means provided with a pawl adapted to engage the ratchet upon breakage of the thread, means for moving the shaft about its pivot upon rotation of the shaft after engagement of the pawl with said ratchet, a stop mechanism, a slide for actuating said stop mechanism, and means for moving said slide to actuate the stop mechanism upon movement of said shaft about its pivot.

1,683,587. CARBON ELECTRODE AND METHOD OF MOLDING THE SAME. VICTOR C. DOERSCHUK, Massena, N. Y., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed July 19, 1927. Serial No. 206,922. 12 Claims. (Cl. 18—47.5.)

1. The method of molding into a coherent mass a normally unconsolidated mixture of granular material and a viscous bituminous binder, comprising placing the mixture in a mold, and jarring the mold.

1,683,588. DIRECT PRODUCTION OF RUBBER GOODS FROM RUBBER DISPERSIONS. PAUL KLEIN, Budapest, Hungary, and ALBERT HEALEY, Birmingham, England, assignors to The American Anode Incorporated, New York, a Corporation. Filed Sept. 14, 1927, Serial No. 219,555, and in Great Britain Aug. 4, 1926. 1 Claim. (Cl. 204—1.)

In the manufacture of rubber and the like or articles manufactured therefrom the process which comprises regulating the degree of coagulation by adding soft soap to natural latex in the proportion of 6 to 12 grams of soft soap to 1 litre of latex and depositing the latex by electrophoresis upon an anodic mould.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 374—No. 2. TUESDAY, SEPTEMBER 11, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notice.

U. S. PATENT OFFICE, *Washington, Aug. 11, 1928.*

Union Baking Company, Incorporated, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Fischer Baking Co., of Rose and Livingston Streets, Newark, N. J., for registration of a trade-mark and trade-mark registered September 16, 1924, No. 189,190, to Union Baking Company, Incorporated, of Fifth and Columbia Streets, Vancouver, Wash., and a notice of such declaration sent by registered mail to said Union Baking Company, Incorporated, at the said address having been returned by the post-office as undeliverable, notice is hereby given that unless said Union Baking Company, Incorporated, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

Changes in Classification.

Order No. 3,078, August 25, 1928, directs:

In *class 148, Metal Treatment* (Division 3), establish the following subclass and definition, the patents contained in this subclass having been taken for the most part from class 148, subclass 6, Solid metal, Coating:

Solid metal
Coating
6.5 Iron.

6.5. SOLID METAL, COATING, IRON. The surface coated contains 50% of iron.

In *class 148, Metal Treatment* (Division 3), change the title of subclass 7, Solid metal, Coating, With heat, to read:

Solid metal
Coating
Iron
7 With heat,

cancel the existing definition, and establish in lieu thereof the following definition:

7. SOLID METAL, COATING, IRON, WITH HEAT. The process involves the application of a considerable degree of heat.

Note.—See this class, subclass 6, for processes of coating with heat as applied to material predominantly nonferrous.

Note.—Compare this class, subclass 16, for mere application of a gas to hot metal, even though a coating may be thereby produced.

Note.—Compare class 29, METAL WORKING, subclass 18, Special work, Sheet metal and foil manufacture, Processes.

Disclaimer.

1,431,772.—*John C. Black*, Destrehan, La. PROCESS AND APPARATUS FOR TREATING HYDROCARBONS TO PRODUCE THOSE OF LOWER BOILING POINTS. Patent dated October 10, 1922. Disclaimer filed August 9, 1928, by the assignee, *Gasoline Products Company, Inc.*

Hereby disclaims claims 1 and 3 of said patent, which read as follows:

"1. In an apparatus of the character described the combination of a furnace, a cracking coil in the furnace, means connected with the cracking coil to maintain the hydrocarbons at cracking temperature, said means also decreasing the rate of flow of the hydrocarbons after leaving the cracking coil, a pipe line connected therewith and having a discharge end, a valve located on the line between the cracking coil and the said discharge end and means to produce sufficient pressure on the hydrocarbons to prevent vaporization thereof while at cracking temperature."

"3. In an apparatus of the character described, the combination of a furnace, a cracking coil in the furnace, a digestor of larger cross sectional area than the cracking coil connected therewith, a fractionating apparatus, a pressure regulating valve between the digestor and fractionating apparatus, and means for supplying hydrocarbons to the coil and digestor under pressure and maintaining a sufficient pressure in the system against the regulating valve to prevent vaporization of the hydrocarbons."

Condition of Applications Under Examination at Close of Business August 31, 1928.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Commissioner's Decision.

EX PARTE STODDARD.

Decided August 24, 1928.

APPLICATION—RENEWAL—FEE.

Where an application is renewed and the petition for renewal is accompanied by an amendment containing additional claims, the claims standing allowed in the case plus the additional claims constitute the claims in the application, and an additional fee of one dollar will be required for each claim in excess of 20.

ON PETITION.

Application for patent filed May 14, 1923, renewed July 28, 1928, Serial No. 638,728.

NOTE-SHEET DRIVE FOR PLAYER PIANOS.

Messrs. Emery, Booth, Janney & Varney for the applicant.

ROBERTSON, *Commissioner:*

Applicant petitions that this application be renewed without the payment of the additional fee for the claims in excess of 20.

The application contains 18 allowed claims, and the petition for renewal is accompanied by 38 additional claims, making 56 in all, which requires a renewal fee of $56.

Petitioner contends that there is no statutory authority for the requirement and asks that the application be renewed for the $20 filed with the petition.

The petition sets forth various ways in which the payment of the additional fee could have been evaded. That, however, is a moot question and need not be considered. The only question to be decided is whether the application as presented requires the payment of the additional fee.

Section 4897 of the Revised Statutes, which makes provisions for renewed applications, makes no distinction between original applications and renewed applications, as is apparent from the language "to make an application for a patent for such invention or discovery the same as in the case of an original application."

The proper construction is believed to be that the term "original" in the statute is used only in contradistinction to reissue application, and that the so-called renewal application is the "application" or the "second application" referred to in section 4897, Revised Statutes, and therefore the filing of such "second" application must necessarily be governed as to its fees by the statute which refers to original applications. (*Ex parte Parks and Miller*, 361 O. G., 891, 1927 C. D., 57–59.)

The application in the present case when presented for renewal contained the 18 allowed claims, an amendment with 38 claims, a petition for renewal, and a fee of $20.00, all of which, together with the original file, constitutes the "second application" within the terms of section 4897, Revised Statutes. Obviously this second application contains 56 claims and under section 4934, Revised Statutes, requires a fee of $56 as a prerequisite to the granting of a valid patent. The fees are fixed by the statutes, and the Commissioner has no discretion in the matter. (*Child* v. *Adams*, 1 Fisher 189, Fed. Cas. No. 2073.)

It may be noted that in the case cited the patent was held invalid, the correct fee not having been paid.

The petition is denied.

Court of Appeals of the District of Columbia.

LINCOLN MOTOR COMPANY *v.* LINCOLN MANUFACTURING COMPANY.

No. 1,973. Decided May 7, 1928.

TRADE-MARKS—GOODS OF THE SAME DESCRIPTIVE PROPERTIES—BRAKES AND TIMERS AND AUTOMOBILES.

Brakes and timers intended for use on automobiles *Held* to be of the same descriptive properties as automobiles.

APPEAL from the Commissioner of Patents. Reversed.

Mr. C. R. Halbert, Mr. C. M. Thomas, Mr. F. D. Thomas, and *Mr. E. S. Rogers* for Lincoln Motor Co.

Mr. G. B. Schley and *Mr. Robert Watson* for Lincoln Manufacturing Company.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

VAN ORSDEL, *J.:*

This appeal is from the decision of the Commissioner of Patents dismissing an opposition brought by appellant, Lincoln Motor Company, against the registration of a trade-mark by appellee, Lincoln Manufacturing Company.

The marks of the respective parties consist of the word "Lincoln," with certain embellishments. The mark of appellant company is applied to automobiles known as the Lincoln car, and has been in use since 1920. The mark of appellee company was applied to brakes and timers, manufactured for and used in various cars. It was held by the tribunals of the Patent Office that while the marks were deceptively similar their use was not such as to lead to confusion, and the opposition was accordingly dismissed.

The case has taken a turn where we think it unnecessary to enter into any prolonged discussion as to the respective marks. Since the appeal to this court was taken, an agreement has been entered into between the contending parties whereby appellee company has discontinued and abandoned the use of the name "Lincoln" as a trade-mark for automobile parts, and adopted in its place the word "Limaco," for which appellee company has applied for registration and has not been opposed by appellant.

We are of opinion that the tribunals of the Patent Office were in error in not sustaining the opposition, since the marks are not only deceptively similar but were applied to goods of the same descriptive properties, to an extent that would inevitably lead to confusion.

In order that the record may be cleared and appellant company be permitted to use its mark un-

encumbered by anything arising out of this proceeding, the decision of the Commissioner should be reversed with directions to enter an order sustaining the opposition.

Inasmuch as that portion of the record which was brought into this court by certiorari was unnecessary in the determination of the case, the costs of the same are assessed against the appellee.

The decision of the Commissioner is reversed.

Court of Appeals of the District of Columbia.

IN RE MOULTON.

No. 2,002. Decided March 5, 1928.

PATENTABILITY—LIGHT PROJECTOR.

Claims for a light projector, including an elliptic paraboloidal reflector, with a light source arranged adjacent to one of the foci of said reflector, *Held* unpatentable in view of the prior art.

APPEAL from the Commissioner of Patents. Affirmed.

Mr. J. T. Bassecches for Moulton.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, VAN ORSDEL, Justice, and SMITH, Judge U. S. Court of Customs Appeals.

VAN ORSDEL, *J.*:

This appeal is from a decision of the Commissioner of Patents denying appellant's application for a patent for an invention relating to light projectors for vehicle headlights. The application is set forth in 17 claims, of which the following are illustrative:

1. The method of treating light from a source which includes the step of reflecting all the rays from the source in the form of a beam diverging substantially in one plane only.

4. A light projector comprising, in combination, a cup-shaped reflector, a mirror and a source of light disposed therebetween including an incandescent filament arranged symmetrically transversely of the axis of the reflector.

9. A light projector comprising, in combination, an elliptic paraboloidal reflector having three axes, a mirror having the form of a sector of a sphere, and a source of light arranged adjacent to one of the foci of said reflector, including an incandescent filament arranged transversely of the major axis of the reflector and adjacent to the vertex of a cone formed by lines tangent to perimeters of said reflector and mirror.

The object of the invention is to provide for the reflection of rays of light through a projector in such a manner as to eliminate the glare and diffuse the rays horizontally for the better illumination of the roadway. The accomplishment of this object is clearly described in the opinion of the Commissioner as follows:

In order to accomplish this there is provided a primary reflector, which is in the form of an elliptic paraboloid, that is to say, a cross-section of the reflector is substantially an ellipse the major axis of which is in a horizontal plane. The purpose of having the width of the opening of the reflector greater than its height is in order that the light may be diffused in a horizontal but not in a vertical plane. There is further provided a secondary reflector, placed in front of the source of light, of such size and so arranged that the light falling thereon will be reflected to the primary reflector and reflected outwardly from the latter.

In the opinions of the tribunals below certain references to existing patents are cited, which, it is held, anticipate fully appellant's application; and while, as suggested by the Commissioner, the references cited do not show the projector as described in the application, they do reveal the principles involved in the reflection of light to avoid the glare and improper diffusion. As said by the Commissioner in respect of the references relied upon—

both Kleinert and the British patent to Evans show a secondary reflector arranged directly in front of the source of light, whereby all the light is reflected. In the Kleinert device the primary reflector is the usual paraboloidal reflector and in the Evans patent the primary reflector is made with the portion directly opposite the secondary reflector spherical and the outer part of the reflector a paraboloid of revolution.

We have considered the record and the references cited, as well as the able opinions of the three tribunals of the Patent Office, and are of opinion that the rejection of the application should be sustained.

The decision of the Commissioner of Patents is affirmed.

Court of Appeals of the District of Columbia.

VICTOR STOVE COMPANY *v.* HALL-NEAL FURNACE COMPANY.

No. 2,007. Decided March 5, 1928.

TRADE-MARKS—RIGHT OF REGISTRATION—LACHES.

Where the V. Co., which had adopted and used a certain mark on stoves and ranges, did not for more than 20 years use that mark on furnaces and during that period the H. Co. had used the mark on furnaces and no confusion had been shown as to the authorship of the respective goods, *Held* that by its acquiescence in such use the V. Co. had lost its right to register the mark for furnaces.

APPEAL from the Commissioner of Patents. Affirmed.

Mr. L. B. Kemon for Victor Stove Co.

Mr. E. W. Bradford for Hall-Neal Furnace Co.

Before MARTIN, Chief Justice, VAN ORSDEL, Justice, and SMITH, Judge U. S. Court of Customs Appeals.

MARTIN, *C. J.*:

This is a trade-mark interference proceeding relating to the use of the word "Victor" as a trade-mark for furnaces.

On May 22, 1923, the Hall-Neal Furnace Company was granted registration of the word "Victor" as a trade-mark for coal, wood, gas and oil heating furnaces, and furnace parts. On March 1, 1924, the Victor Stove Company filed an application for the registration of the same word as a trade-mark for wood, coal and gas stoves and ranges and furnaces. Testimony was taken by both parties.

The Examiner of Interferences found on the evidence that the Victor Company had used the word as a trade-mark for stoves and ranges since the year 1887, but not for furnaces until the year 1923; and that the Hall-Neal Company had not used the word as a trade-mark for furnaces prior to 1895. The Examiner held that stoves and ranges were goods of the same descriptive properties as furnaces, and that the Victor Company, being senior in use of the mark, should prevail in the interference and was entitled to the registration of the mark for furnaces, as applied for by it.

Upon appeal the Commissioner of Patents found that the Hall-Neal Company had been in undisputed possession of the right to use the word "Victor" as its trade-mark for hot-air furnaces from about 1895 to 1923; that the Victor Company during that period did not use the word as a trade-mark for furnaces, and that for many years the two companies sold their respective goods in substantially the same territory, each using the word "Victor" as its trade-mark without a single instance of confusion in the mind of the public as to the authorship or ownership of the respective goods; and that under these circumstances the Victor Company would be barred by reason of laches from the use of the word as a trade-mark for furnaces. The Commissioner therefore reversed the decision of the Examiner; and the present appeal followed.

In our opinion the decision of the Commissioner is right. For many years the Victor Company practically acquiesced in the exclusive use of the mark by the Hall-Neal Company for furnaces, during which time the latter company built up a market, together with a good will, for its furnaces under the trade-mark "Victor." If the Victor Company now should be given the exclusive right to use the trade-mark for furnaces, it would in large part appropriate to itself the good will which to its knowledge and without its objection the Hall-Neal Company built up for its products. Such a result would be plainly inequitable. In *France Milling Co.* v. *Washburn-Crosby Co.*, 7 Fed. (2nd) 304, it is held—

Manufacturer of flour under Gold-Metal trade-mark, who for many years acquiesced in use of same mark by manufacturer of pancake and buckwheat flour, and sold latter raw flour for use in manufacture, *Held* to have lost by laches all right to enjoin such use of mark.

We agree accordingly with the conclusion of the Commissioner that,

In view of the above it is believed that the status quo of the parties as it existed for many years should not be disturbed, and that the Victor Stove Company should be denied the right to register the trade-mark "Victor" for furnaces.

The decision of the Commissioner of Patents is affirmed.

VICTOR STOVE COMPANY *v.* HALL-NEAL FURNACE COMPANY.

No. 2,008. Decided March 5, 1928.

MARTIN, *C. J.*:

This is an appeal from a decision denying an application filed by the Victor Stove Company, for the cancellation of the trade-mark registration of the word "Victor," issued May 22, 1923, to the Hall-Neal Furnace Company, for domestic heating furnaces.

The application for cancellation herein involved raises the same question as that decided by this court concurrently herewith in appeal No. 2,007, *Victor Stove Company* v. *Hall-Neal Furnace Company*, 374 O. G. 251. Consistently with the court's decision in that case the decision of the Commissioner of Patents herein appealed from is affirmed.

Patent Suits.

(C. C. A. Md.) The Gross design patent, No. 57,640, for design for automobile parking light, *Held* valid. *Id.*

TRADE-MARKS

OFFICIAL GAZETTE, SEPTEMBER 11, 1928.

[VOL. 374. No. 2.]

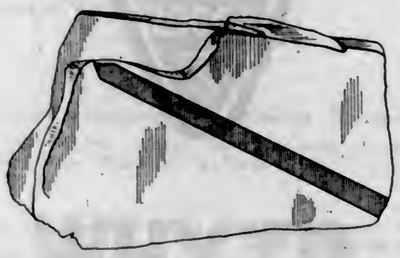
The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for " under the ten-year proviso " are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1.

Raw or Partly-Prepared Materials.



Ser. No. 259,600. SOCIETÀ ANONIMA CELLULOSA, Rome, Italy. Filed Dec. 31, 1927.

YULNA

For Vegetable Fibres for Making Felts, Fabrics, and Yarns.

Claims use since Nov. 8, 1927.

Ser. No. 260,209. BLACKWOOD COAL AND COKE COMPANY, Philadelphia, Pa. Filed Jan. 17, 1928.

The trade-mark consists of a red bar or stripe extending diagonally across a lump of coal. No claim is made to the lump of coal.

For Bituminous Coal.

Claims use since Dec. 20, 1927.

Ser. No. 264,714. CHARMETTE CO. INC., New York, N. Y. Filed Apr. 12, 1928.

CHARMOID

For Noninflammable Cellulose Material for Windshields, Optical Frames, Watch Crystals, Insulation Parts, and Novelties, and Unprocessed Noninflammable Cellulose Materials in the form of Sheets, Rods, Tubes, and Powder for Molding Purposes.

Claims use since Jan. 5, 1925.

Ser. No. 268,220. GREER STAPLE COTTON BREEDING FARMS, Iowa Park, Tex. Filed June 18, 1928.

Applicant disclaims the words "Length, Strength, Texture, Yields, Big Boll," apart from the mark shown.

For Baled Lint Cotton and Sacked Cottonseed.

Claims use since Jan. 1, 1927.

Ser. No. 268,512. J. E. RHOADS & SONS, Philadelphia, Pa. Filed June 22, 1928.

For Lace Leather in the Piece.

Claims use since June 11, 1904.

Ser. No. 268,521. THE TILDESLEY COAL COMPANY, Cincinnati, Ohio. Filed June 22, 1928.

Kongo

"Safe Because It's Good"

The words "Safe Because It's Good" are disclaimed apart from the mark as shown in the drawing.
For Coal.
Claims use since March, 1928.

Ser. No. 268,678. COLEMAN & COMPANY, INC., Philadelphia, Pa. Filed June 26, 1928.

Applicant disclaims the words "Anthracite, Less Ash, More Heat," also the representation of the lump of coal.
For Coal.
Claims use since June 16, 1928.

CLASS 2.

Receptacles.

Ser. No. 262,977. Dr. HEINR. TRAUN & SÖHNE, VORMALS HARBURGER GUMMI-KAMM-COMPAGNIE, Hamburg, Germany. Filed Mar. 10, 1928.

For Receptacles for Acids and the Like, Receptacles for Ink, All of Such Products Being Made of Hard India Rubber or of Synthetic or Other Artificial Resins Used as Substitutes for Hard India Rubber.
Claims use since about 1887.

Ser. No. 268,378. MCCLAIN BROTHERS, Canton, Ohio. Filed June 20, 1928.

Durastone

For Burial Vaults.
Claims use since Apr. 1, 1928.

CLASS 3.

Baggage, Animal Equipments, Portfolios, and Pocketbooks.

Ser. No. 242,512. STEIN BROS. MFG. CO., INC., Chicago, Ill. Filed Jan. 7, 1927.

No claim is made for the words "Leather Goods" apart from the mark as shown.
For Brief Cases, Wallets, Purses, Portfolios, Music Cases, Catalog Cases, Name Tags, Envelope Pockets, School Bags, and Salesmen's Cases for Containing and Carrying Silk Samples.
Claims use since Dec. 1, 1921.

Ser. No. 265,991. SHOECRAFT SHOP INC., New York, N. Y. Filed May 5, 1928.

SHOECRAFT

For Ladies' Hand Bags of Metal, Leather, Straw, or Textile Material or Combinations of the Same.
Claims use since 1927.

Ser. No. 268,291. ELIZABETH ALLEN MCDONALD, New York, N. Y. Filed June 19, 1928.

PETTY BAGGAGE BAG

No claim is made to the words "Baggage" and "Bag" apart from the mark shown in the drawing.

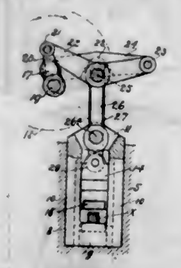
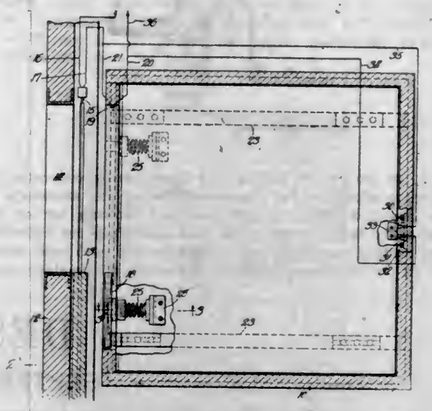
REISSUES



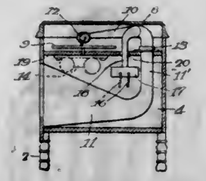
SEPTEMBER 11, 1928.

17,078. HEAT ENGINE. RANSOM W. DAVENPORT, Detroit, Mich., assignor to Chicago Pneumatic Tool Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 31, 1927. Serial No. 244,032. Original application filed Nov. 29, 1922, Serial No. 603,998. Divided and application filed Apr. 25, 1924, Serial No. 708,936. Original No. 1,619,195, dated March 1, 1927. 27 Claims. (Cl. 62—116.)



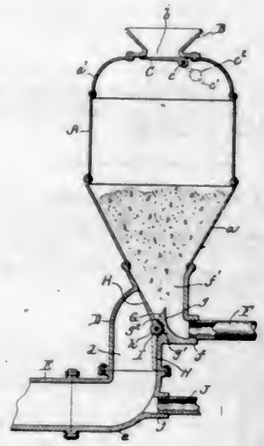
17. A refrigerator having insulated walls and an elongate refrigerating element vertically disposed therein, and means causing said element to absorb heat from said refrigerator at upwardly spaced points on said element at progressively higher temperatures.

17,079. BLOOM SHEARS. JOHANN HAHN, Cleveland, Ohio. Filed Sept. 2, 1926. Serial No. 133,287. Original No. 1,538,635, dated May 19, 1925, Serial No. 732,489, filed Aug. 16, 1924. 15 Claims. (Cl. 164—47.)



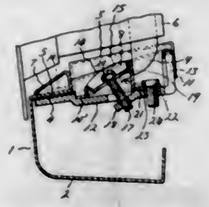
1. In a bloom shear, a shear housing, upper and lower knife carriers movable in the housing, a knife carried by each of said carriers, and interfitting parts on said carriers slidably engaging each other whereby one carrier may be slidably engaged on the other and each movable with respect to the other, said interfitting parts serving to hold the carriers against spreading and preventing strains being transmitted to the housing, and means for moving each carrier with respect to the other.

17,080. ELEVATOR PLATFORM. JOSEPH RICE, Chicago, Ill., assignor to Elevator Company of America, Chicago, Ill., a Corporation of Illinois. Filed June 25, 1928. Serial No. 288,212. Original No. 1,623,977, dated Apr. 12, 1927, Serial No. 122,367, filed July 14, 1926. 12 Claims. (Cl. 187—29.)



5. A car having a framework, a movable floor carried by said framework, car control mechanism responsive to the position of said floor, means for movably carrying said floor on said framework, said means including a pair of parallel inclined runways and balls interposed between said runways, and a recoil spring tending to move said framework upwardly upon said runway.

17,081. COMBINED RADIOPHONE AND PHONOGRAPH. ROBERT GORDON FRENCH, Oak Park, Ill., assignor to William O. Belt, Chicago, Ill. Filed Nov. 10, 1925. Serial No. 68,234. Original No. 1,514,897, dated Nov. 11, 1924, Serial No. 553,527, filed Apr. 17, 1922. 2 Claims. (Cl. 179—100.1.)

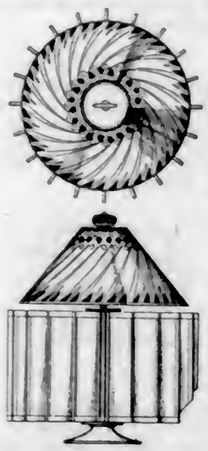


1. A device of the type described comprising a casing, a partition in said casing, a phonograph tone arm carried by said partition, said partition having a slot therein, a second tone arm in communication with said first named tone arm and projecting through said slot and a radiophone reproducing member carried by said second named tone arm.

17,082. ART OF MIXING CONCRETE AND TRANSPORTING THE SAME. KARL R. SCHUSTER, Hopatcong, N. J. Filed Dec. 23, 1926. Serial No. 156,747. Original No. 1,553,476, dated Sept. 15, 1925, Serial No. 88,770, filed Apr. 4, 1916. 24 Claims. (Cl. 83—73.)

1. In the art of mixing and transporting concrete, the process which consists in accumulating the materials to be mixed within a closed chamber; blowing air or gas upwardly into contact with said materials for agitating and mixing the same and simultaneously with said inflow of air or gas restraining the materials to preclude their exit from the chamber and restraining, also, the exit from said chamber of the inflowing air or gas; continuing the inflow of air or gas upwardly through the material until it attains a desired pressure upon the mixed mass; releasing the mixed mass from restraint and expelling the same from said chamber solely by the pressure of air or gas accumulated therein, and by a continuance of said inflow of gas and moving the mixed mass to a place of use by air or gas pressure applied to said mass.

17,083. ADJUSTABLE STRIKER PLATE. EVERETT E. LUNDBERG, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 13, 1928. Serial No. 254,069. Original No. 1,630,533, dated May 31, 1927, Serial No. 677, filed Jan. 5, 1925. 19 Claims. (Cl. 292—340.)

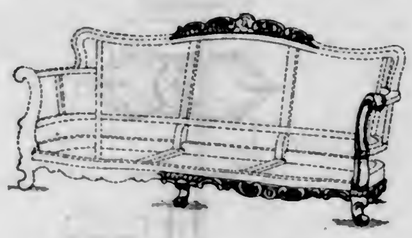


1. The combination with a door jamb having an opening therein, of a retainer plate bridging the opening, a sheet metal wedge-shaped striker plate adjustably mounted on the retainer plate, means carried by the retainer plate for adjusting the striker plate, and means also carried by the retainer plate for holding said striker plate in adjusted position.

DESIGNS

SEPTEMBER 11, 1928.

76,278. BRIDGE-LAMP DISPLAY FIXTURE. ALFRED G. ANDERSON, New York, N. Y. Filed June 26, 1928. Serial No. 27,292. Term of patent 3½ years.



The ornamental design for a bridge lamp display fixture, as shown.

The ornamental design for a salt and pepper shaker or similar article substantially as shown.

76,305. SALT AND PEPPER SHAKER OR SIMILAR ARTICLE. JAMES W. JENNINGS, Providence, R. I., assignor to Quaker Silver Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Mar. 29, 1928. Serial No. 26,066. Term of patent 7 years.

The ornamental design for a salt and pepper shaker or similar article substantially as shown.

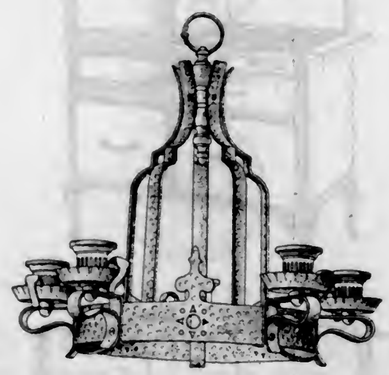
76,306. SALT AND PEPPER SHAKER OR SIMILAR ARTICLE. JAMES W. JENNINGS, Providence, R. I., assignor to Quaker Silver Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Mar. 29, 1928. Serial No. 26,067. Term of patent 7 years.

The ornamental design for a salt and pepper shaker or similar article substantially as shown.

76,307. SALT AND PEPPER SHAKER OR SIMILAR ARTICLE. JAMES W. JENNINGS, Providence, R. I., assignor to Quaker Silver Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Mar. 29, 1928. Serial No. 26,068. Term of patent 7 years.

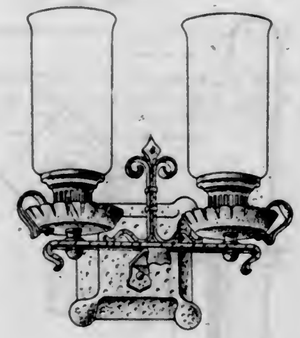
The ornamental design for a salt and pepper shaker or similar article substantially as shown.

76,308. SALT AND PEPPER SHAKER OR SIMILAR ARTICLE. JAMES W. JENNINGS, Providence, R. I., assignor to Quaker Silver Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Mar. 29, 1928. Serial No. 26,069. Term of patent 7 years.



The ornamental design for a salt and pepper shaker or similar article substantially as shown.

76,309. SALT AND PEPPER SHAKER OR SIMILAR ARTICLE. JAMES W. JENNINGS, Providence, R. I., assignor to Quaker Silver Company, Attleboro, Mass., a Corporation of Massachusetts. Filed Mar. 29, 1928. Serial No. 26,070. Term of patent 7 years.

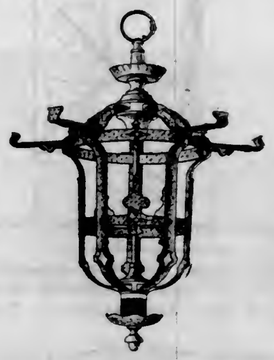


The ornamental design for a salt and pepper shaker or similar article substantially as shown.

76,310. CHANDELIER OR ARTICLE OF ANALOGOUS NATURE. ARTHUR R. KRAUSE, Woodhaven, N. Y., assignor to Max Schaffer Co., Inc., a Corporation of New York. Filed June 28, 1928. Serial No. 27,302. Term of patent 7 years.

The ornamental design for a chandelier or article of analogous nature substantially as shown.

76,311. WALL BRACKET OR ARTICLE OF ANALOGOUS NATURE. ARTHUR R. KRAUSE, Woodhaven, N. Y., assignor to Max Schaffer Co., Inc., a Corporation of New York. Filed June 28, 1928. Serial No. 27,303. Term of patent 7 years.



The ornamental design for a wall bracket or article of analogous nature substantially as shown.

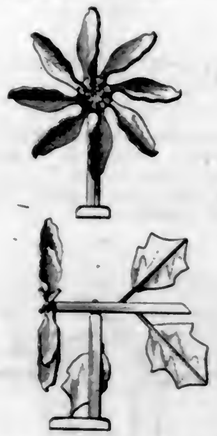
76,312. LANTERN OR ARTICLE OF ANALOGOUS NATURE. ARTHUR R. KRAUSE, Woodhaven, N. Y., assignor to Max Schaffer Co., Inc., a Corporation of New York. Filed June 28, 1928. Serial No. 27,304. Term of patent 7 years.

The ornamental design for a lantern or article of analogous nature substantially as shown.

76,313. CHANDELIER BODY OR ARTICLE OF ANALOGOUS NATURE. ARTHUR R. KRAUSE, Woodhaven, N. Y., assignor to Max Schaffer Co., Inc., a Corporation of New York. Filed June 28, 1928. Serial No. 27,305. Term of patent 7 years.

The ornamental design for a chandelier body or article of analogous nature substantially as shown and described.

76,314. COMBINED CANDLE CUP AND BOBÈCHE. ARTHUR R. KRAUSE, Woodhaven, N. Y., assignor to Max Schaffer Co., Inc., a Corporation of New York. Filed June 28, 1928. Serial No. 27,306. Term of patent 7 years.

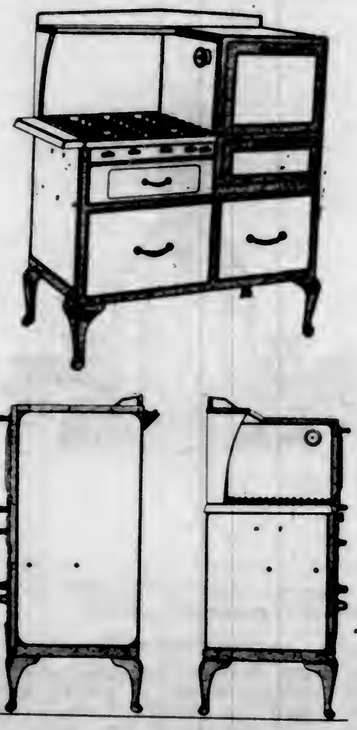


The ornamental design for a combined candle cup and bobèche substantially as shown.

76,315. CURTAIN HOLDBACK. LULU VERHAREN LAVELL, Minneapolis, Minn. Filed Mar. 23, 1928. Serial No. 25,962. Term of patent 3½ years.

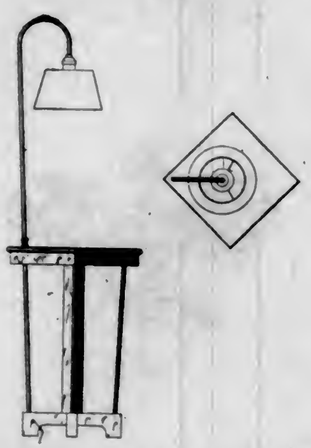
The ornamental design for a curtain holdback, as shown.

76,316. WEATHER VANE. EDWARD WESTERVELT LAWSON, West Palm Beach, Fla. Filed July 17, 1928. Serial No. 27,509. Term of patent 7 years.



The ornamental design for a weather vane as shown.

76,317. GAS RANGE. EUGENE R. METHUDY, St. Louis, Mo., assignor to Alvin D. Goldman, St. Louis, Mo. Filed Aug. 20, 1927. Serial No. 23,161. Term of patent 14 years.



The ornamental design for a gas range, substantially as shown.

76,318. GAS RANGE. CARL E. METHUDY, St. Louis, Mo., assignor to Methudy Enamel Range Co., East St. Louis, Ill., a Corporation of Illinois. Filed Feb. 3, 1928. Serial No. 25,156. Term of patent 14 years.

The ornamental design for a gas range, substantially as shown.

76,319. COMBINED TABLE AND LAMP. DAVID C. NOGGINS, New Haven, Conn. Filed Jan. 7, 1928. Serial No. 24,777. Term of patent 14 years.

The ornamental design for a combined table and lamp as shown.

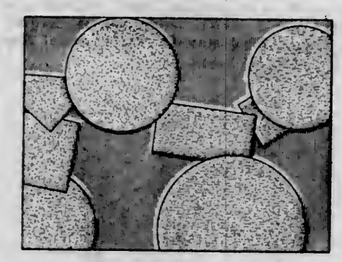
76,320. ASH TRAY. HARRY W. PARKER, Brooklyn, N. Y. Filed Oct. 22, 1927. Serial No. 23,852. Term of patent 14 years.

The ornamental design for an ash tray, as shown.

76,321. FLOWERPOT HOLDER. JOHN J. PAULL, Wellsburg, W. Va., assignor to Eagle Manufacturing Company, Wellsburg, W. Va. Filed Apr. 9, 1928. Serial No. 26,191. Term of patent 7 years.

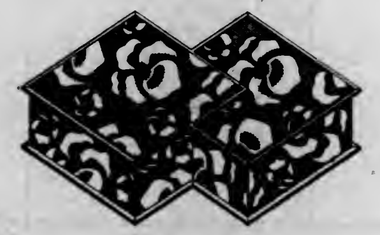
The ornamental design for a flowerpot holder, as shown.

76,322. LIGHTER. LEO POTTER, Malba, N. Y., assignor to Potter Products Corporation, New York, N. Y., a Corporation of New York. Filed June 30, 1927. Serial No. 22,621. Term of patent 3½ years.



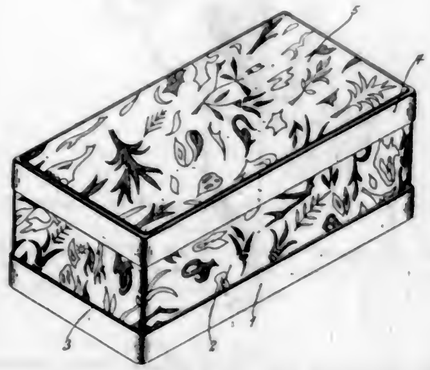
The ornamental design for a lighter as shown.

76,323. DECORATED TUBE. ALBERT J. ROWAN, Providence, R. I., assignor to Payton & Kelly Co., Providence, R. I., a Corporation of Rhode Island. Filed July 6, 1926. Serial No. 18,258. Term of patent 3½ years.



The ornamental design for a decorated tube, substantially as shown and described.

76,324. BLANK OF LEATHER. HENRY ROBERT SAMSTAG, New York, N. Y., assignor to Samstag & Hilder Bros., Inc., New York, N. Y., a Corporation of New York. Filed Dec. 15, 1925. Serial No. 15,761. Term of patent 3½ years.

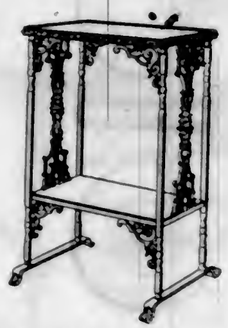


The ornamental design for a blank of leather as shown.

76,325. BOX. FRANK J. SCHLEICHER, St. Louis, Mo. Filed June 21, 1928. Serial No. 27,217. Term of patent 14 years.

The ornamental design for a box, substantially as shown.

76,326. BOX. FRANK J. SCHLEICHER, St. Louis, Mo. Filed June 27, 1928. Serial No. 27,295. Term of patent 14 years.

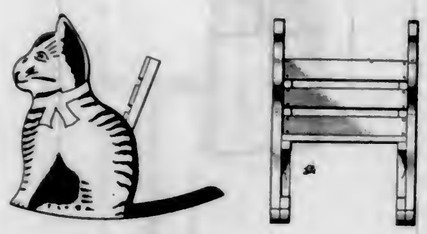


The ornamental design for a box, as shown and described.

76,327. SAVINGS BANK. CHARLES W. SCOTT, Minneapolis, Minn. Filed May 11, 1927. Serial No. 21,931. Term of patent 14 years.

The ornamental design for savings bank, as shown.

76,328. TABLE. FREDERICK SCHWARTZ, Brooklyn, N. Y., assignor to Robert Findlay Manufacturing Company, Inc., Brooklyn, N. Y., a Corporation of New York. Filed June 7, 1928. Serial No. 27,036. Term of patent 7 years.



The ornamental design for a table, as shown.

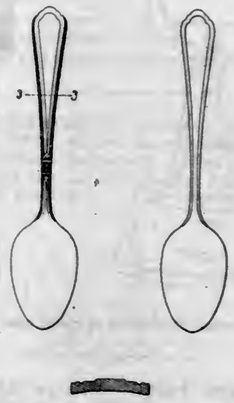
76,329. TEXTILE FABRIC. ARTHUR SOLOMON, New York, N. Y. Filed July 7, 1928. Serial No. 27,406. Term of patent 3½ years.

The ornamental design for textile fabric as shown.

76,330. CHAIR. ELLIOT N. SPEAR, Auburn, Me. Filed May 5, 1928. Serial No. 26,588. Term of patent 7 years.

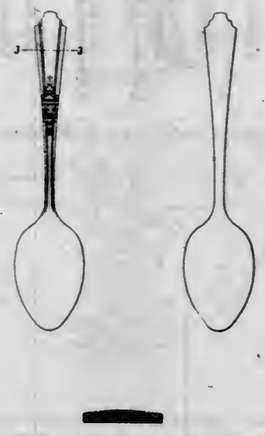
The ornamental design for a chair as shown.

76,331. LIGHT CASING. GEORGE H. TOWNSEND, Greenwich, Conn. Filed Nov. 18, 1926. Serial No. 19,765. Term of patent 3½ years.



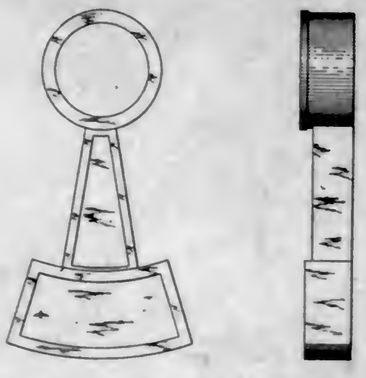
The ornamental design for a light casing substantially as shown.

76,332. STATUETTE. CORA M. VAN HOOZER, Iola, Kans. Filed Feb. 24, 1928. Serial No. 25,557. Term of patent 14 years.



The ornamental design for a statuette, as shown and described.

76,333. SPOON OR SIMILAR ARTICLE. WILLIAM S. WARREN, Meriden, Conn., assignor to R. Wallace & Sons Mfg. Co., Wallingford, Conn., a Corporation. Filed June 11, 1928. Serial No. 27,085. Term of patent 14 years.



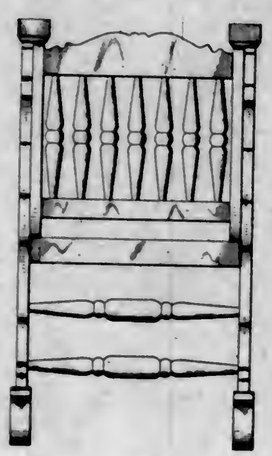
The ornamental design for a spoon or similar article as shown.

76,334. SPOON OR SIMILAR ARTICLE. WILLIAM S. WARREN, Meriden, Conn., assignor to R. Wallace & Sons Mfg. Co., Wallingford, Conn., a Corporation. Filed June 11, 1928. Serial No. 27,086. Term of patent 14 years.

The ornamental design for a spoon or similar article as shown.

76,335. CLOCK CASE. RICHARD H. WHITEHEAD, New Haven, Conn., assignor to The New Haven Clock Co., New Haven, Conn., a Corporation. Filed June 16, 1928. Serial No. 27,164. Term of patent 14 years.

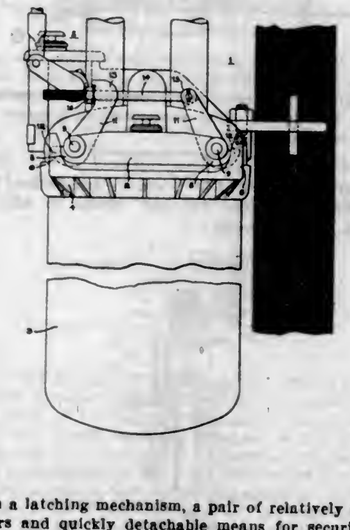
The ornamental design for a clock case as shown.



76,336. GRAND PIANO. WILLIAM ZAISER, Rockville Center, N. Y., assignor to The Aeolian Company, a Corporation of Connecticut. Filed Jan. 3, 1928. Serial No. 24,732. Term of patent 7 years.

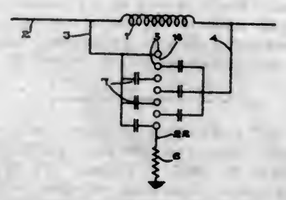
The ornamental design for a grand piano substantially as shown.

76,337. CHAIR OR SIMILAR ARTICLE OF FURNITURE. ADOLF A. SEE, Lake Charles, La. Filed Dec. 3, 1927. Serial No. 24,370. Term of patent 14 years.



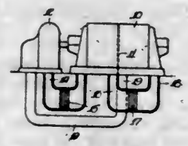
The ornamental design for a chair or similar article of furniture as shown.

PATENTS



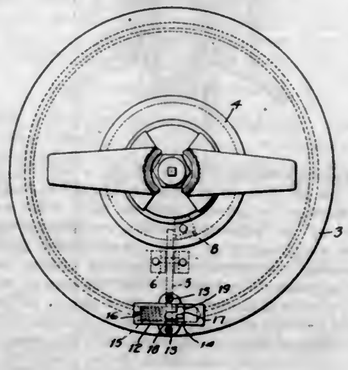
GRANTED SEPTEMBER 11, 1928.

1,683,589. CIRCUIT BREAKER. CHRISTIAN AALBORG, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 2, 1922. Serial No. 604,492. 7 Claims. (Cl. 220—55.)



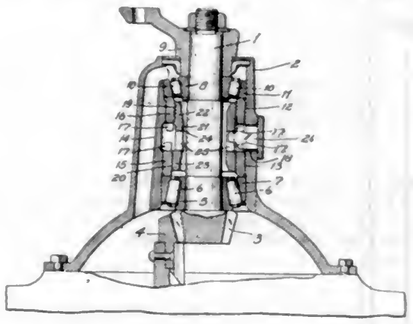
1. In a latching mechanism, a pair of relatively movable members and quickly detachable means for securing said members together comprising a pair of pivoted levers and means for simultaneously operating said levers, said means comprising a connecting member having a threaded portion and a nut in contact with the threaded portion of said connecting member and one of said levers.

1,683,590. IMPULSE LIGHTNING ARRESTER. ALFRED L. ATHERTON, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Aug. 22, 1922. Serial No. 583,514. 5 Claims. (Cl. 175—30.)



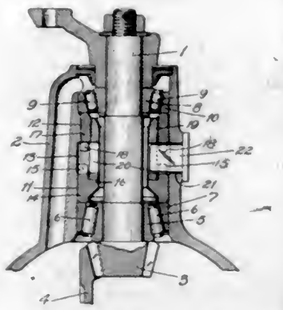
1. In a protective device, the combination with a choke coil, of a plurality of electrodes constituting serially connected gap devices, a connection between one terminal electrode and one end of the choke coil, a ground connection for the other terminal electrode, a connection including a series condenser between said terminal of the choke coil and another electrode of the series, and a connection including a series condenser between the other terminal of the choke coil and an intermediate electrode.

1,683,591. CLOSED-CIRCUIT COOLING FOR ELECTRICAL MACHINES. ADOLPH BAUMANN and WILLEM VAN RIJSWIJK, Baden, Switzerland. Filed Sept. 8, 1927, Serial No. 218,144, and in Germany Aug. 26, 1926. 5 Claims. (Cl. 172—36.)



1. In electrical apparatus, the combination with a dynamo-electric machine, of a casing therefor subdivided into compartments for guiding cooling fluid in contact with parts of the machine, a conduit connecting said compartments for conducting cooling fluid from one to another in series, an inter-cooler for cooling the fluid incident to its passage from one compartment to another, and means for circulating and recirculating cooling fluid through the series-connected compartments.

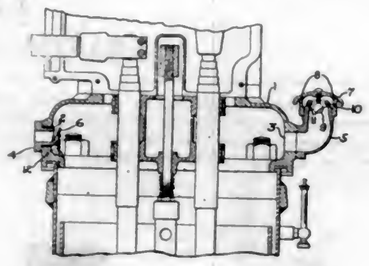
1,683,592. STATIC ELIMINATOR. ARTHUR L. BETTS, Cincinnati, Ohio, assignor to Augustine Davis, Jr., Covington, Ky. Filed Mar. 19, 1923. Serial No. 626,014. 5 Claims. (Cl. 175—264.)



2. In a static eliminator, a tank having a closure, and a lock for said closure, there being a hole into the interior of the tank for the insertion of an electrical grounding key to release the lock, a slidable spring-pressed closure for said hole having an opening normally out of register with the hole and enabling the said closure to be moved against the spring by means of the key, thereby at once grounding the tank.

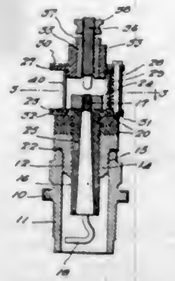
1,683,593. BEARING. WILLIAM J. CHIEVITZ, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Sept. 12, 1927. Serial No. 218,925. 4 Claims. (Cl. 308—207.)

1. The combination with a shaft having a pinion at one end thereof and a housing for said shaft, of roller bearings interposed between them and means for adjusting said bearings, said means comprising rings having exterior threads of equal pitch engaging the threaded inner surface of the housing and a locking sleeve with threads of different pitch engaging the threaded inner surfaces of said rings.



1,683,594. SHAFT BEARING. WILLIAM J. CHIEVITZ, Canton, Ohio, assignor to The Timken Roller Bearing Company, Canton, Ohio, a Corporation of Ohio. Filed Oct. 27, 1927. Serial No. 228,150. 4 Claims. (Cl. 308—207.)

1. The combination with a shaft, a housing therefor having two portions of its interior wall screwthreaded and roller bearings interposed between said shaft and said housing, of an adjusting device comprising exteriorly threaded rings engaging said screwthreaded portions of said housing respectively and abutting against the outer bearing members of said roller bearings, one of said rings being interiorly threaded and a sleeve having an exteriorly threaded portion threaded into said interiorly threaded ring and having a portion engaging the other ring.

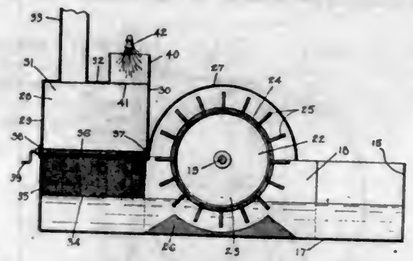


1,683,595. FLUID-PRESSURE TANK. WILLIAM A. COATES, Chorlton-cum-Hardy, England, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 4, 1923, Serial No. 643,223, and in Great Britain June 23, 1922. 7 Claims. (Cl. 220—44.)

1. In an electrical device, the combination with a tank, an insulating fluid in said tank, and an electrical device submerged in said fluid, of venting means for said tank comprising a plurality of vents at different positions and levels, one of said vents being open under all conditions

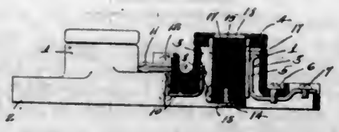
of pressure in said tank, and another of said vents being adapted for closing under predetermined pressure conditions in said tank.

1,683,596. SPARK PLUG. PAUL P. ALEXANDER, Worcester, Mass. Filed Oct. 14, 1920. Serial No. 416,888. 1 Claim. (Cl. 175—183.)



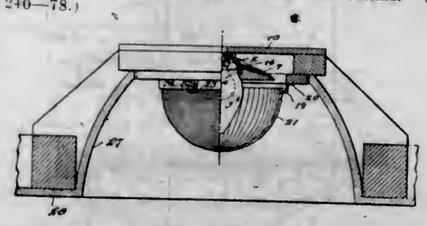
In a spark plug, including a stem for mounting a central electrode, upper and lower insulating disks, sleeves for spacing said disks apart, devices passing through said disks and sleeves for connecting the disks to form a chamber, a tubular member of transparent material mounted between said disks and between the sleeves, the tubular member being shorter than the sleeves, providing space for the admission of air to the tubular member, and the stem projecting into said member, an insulating body connected with the upper insulating disk, this disk constituting a flanged portion of the body and abutting the ends of the sleeves and extending across the end of the tubular member, a threaded sleeve carried by the insulating body, an upper electrode threaded into the sleeve and cooperating with the upper end of the stem for forming a supplementary spark gap, and clamping devices carried by the upper electrode.

1,683,597. PULP BEATER. LORENZO M. AVENSON, St. Paul, Minn. Filed June 25, 1926, Serial No. 118,520. Renewed Mar. 21, 1927. 7 Claims. (Cl. 92—24.)



1. A pulp beater comprising an open ovular tub for material to be treated, a mid-feather longitudinally of the tub forming an endless channel therein, a beater-roll positioned between said mid-feather and one of the walls of the tub, a cap over the beater-roll, a hood covering the channel at the receiving side of said roll, a curtain hung from said hood in position transversely of the channel and spaced from said beater-roll, means for winding in and paying out said curtain to keep the lower edge thereof

substantially at the level of the pulp in said channel, a feed conduit opening through the hood into the receiving chamber formed in said channel beneath said hood and

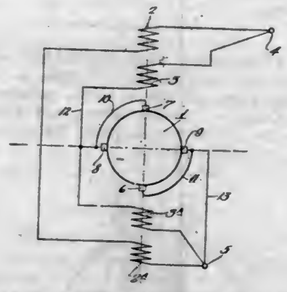


between said curtain and beater-roll, a vent pipe issuing from said hood, a screen traversing said pipe, and a spray nozzle directed against said screen.

1,683,598. SOCKET AND FUSE PLUG. HAROLD WILLIAM BENOIT, Watertown, N. Y. Filed Jan. 30, 1925. Serial No. 5,761. 2 Claims. (Cl. 200—129.)

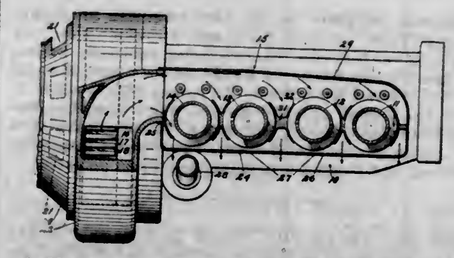
2. A socket comprising a block formed with a pair of arc shaped passages located diametrically opposite each other, a pair of terminals extending lengthwise of said passages, one of said terminals being arc shaped and terminating near the outer end of its passage and the other terminal being located in the inner end portion only of its companion passage, a fuse plug having a head overlying the outer end of the socket and terminals movable into the passages, the plug terminals being duplicates and arc shaped, a fuse located in the head and connecting the plug terminals, a leaf spring located in the passage containing the shorter socket terminal and being opposed to and normally spaced apart from the shorter socket terminal and arranged to be engaged by the plug terminal moving into said passage and pressed into engagement with the shorter socket terminal opposed thereto.

1,683,599. LUMINAIR. PERCY WILLIAM BERRY, Reading, England, assignor, by mesne assignments, to Holophane Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 30, 1924, Serial No. 710,150, and in Great Britain May 1, 1923. 2 Claims. (Cl. 240—78.)



1. A luminaire for cinematograph theatres comprising a light source, a prismatic bowl totally enclosing the source, a colored envelope surrounding the lamp within the bowl and an open mouthed screen surrounding the edge of the bowl the walls of the screen extending far enough below the edge of the bowl to cut off all direct rays from reaching the screen or the spectator.

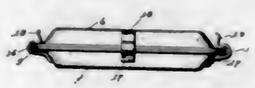
1,683,600. BUILDING CONSTRUCTION. ARCHIBALD BLACK, Garden City, N. Y. Filed June 29, 1923. Serial No. 648,514. 6 Claims. (Cl. 72—1.)



1. A building comprising a series of moulded portable units, means for securing the assembled units together to form the building, duct sections extending through the units in alignment with each other in the assembled building, couplings interposed between aligned sections of ducts for the fluid-tight connection thereof, and recesses for accommodating the said couplings.

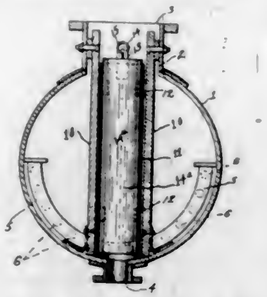
1,683,601. ALTERNATING-CURRENT COMMUTATOR MOTOR. DONALD M. BLISS, Chicago, Ill., assignor to Bodine Electric Company, Chicago, Ill., a Corporation of Illinois. Filed June 23, 1927. Serial No. 200,791. 5 Claims. (Cl. 172—276.)

1. In a two-pole commutator type alternating current motor, two circuits spanning the current supply terminals, each circuit including in series with each other a coil for each pole; two commutating means for respectively short-circuiting armature portions extending for ninety degrees rotationally in the same direction from the axis of the said poles, a connection from one of the commutating means to one of the supply terminals, and a connection from the other commutating means to the one of the said circuits intermediate of the coils of that circuit.



1,683,602. ENGINE-COOLING SYSTEM. CARL P. BROCKWAY, Toledo, Ohio, assignor to Industrial Research Corporation, Toledo, Ohio, a Corporation of Delaware. Filed Apr. 11, 1921. Serial No. 460,566. 7 Claims. (Cl. 123—171.)

1. Means for cooling an engine, having a plurality of cylinders provided with heat dissipating fins, including a fan driven by the engine, a housing for said fan, said housing being provided with openings permitting air to be drawn therein centrally of said fan, a receiving cham-

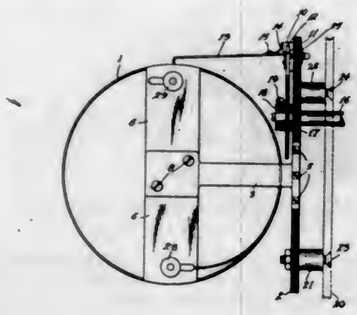


ber having a gradually increasing volume at a portion of the periphery of said fan to receive said air, and a casing surrounding said cylinders and forming a conduit for leading said air along one side of said plurality of cylinders and transversely of said cylinders, said casing being provided with outlet openings on the opposite side of said cylinders from said conduit and so arranged as to provide for a variation in the passage of air across said cylinders in order to equally cool the variably heated portions thereof.

1,683,603. PICNIC SERVICE KIT. EDITH B. CANFIELD, Holton, Kans. Filed Oct. 1, 1926. Serial No. 138,896. 4 Claims. (Cl. 206—4.)

4. A picnic service kit comprising a bottom tray adapted to hold eating utensils, an inverted top tray for covering the said utensils, said trays having relatively wide flat confronting flanges surrounding the rims thereof and a tongue and groove connection between and circumventing said flanges, whereby a dirt-proof joint is established between the trays.

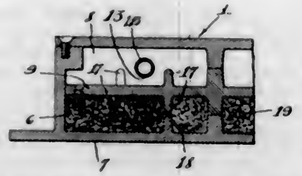
1,683,604. APPARATUS FOR HANDLING ASPHALT AND SIMILAR MATERIAL. WALTER H. CADY and CHESTER E. RAHR, Brookline, Mass., assignors to The Flintkote Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 4, 1922. Serial No. 579,658. 4 Claims. (Cl. 257—203.)



1. A tank having a filling opening through its upper portion and a discharge opening through its base beneath said filling opening, guides extending between said upper portion and base adjacent said openings and a tube slidable on said guides and defining a passage between said openings.

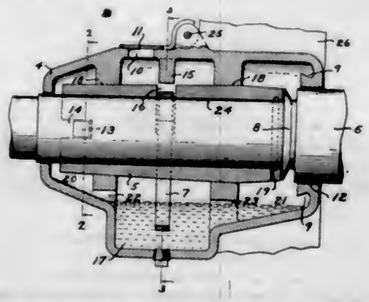
1,683,605. BUTTON BOARD AND PROCESS OF MANUFACTURE. ALBERT L. CLAPP, Danvers, Mass., assignor to Beckwith Manufacturing Company, Boston, Mass., a Corporation of Massachusetts. Filed Feb. 15, 1921. Serial No. 445,185. 8 Claims. (Cl. 92—21.)

1. The herein described process which comprises disintegrating and beating in water a cellulosic material, a mechanically comminuted resinous gum, and a suspension medium, and forming into shape the pulp so produced.



1,683,606. RADIOCOIL. HIRAM D. CURRIER, Chicago, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 8, 1923. Serial No. 661,551. 4 Claims. (Cl. 171—242.)

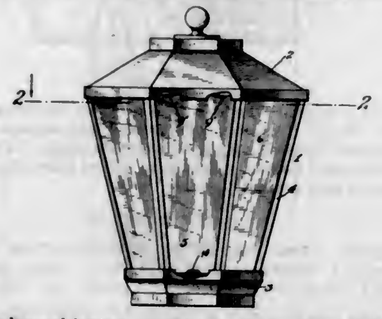
1. A tuning device of the character described including convolutions of wire cemented together to form a self-supporting coil, a supporting plate for said coil, arms attached to said plate and extending rearwardly therefrom, and coil supporting members attached to the free ends of said arms extending at right angles to the axis



of said coil, said coil supporting members having their free ends formed to conform to the inner peripheral surface of said coil and adapted to engage a small portion of only a few of the convolutions of the coil.

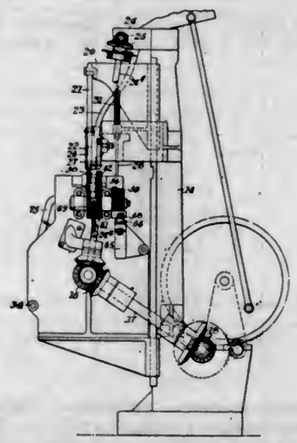
1,683,607. HEAT-DISTRIBUTING MEANS. ERNEST DAVIS, Syracuse, N. Y., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed July 3, 1926. Serial So. 120,362. 4 Claims. (Cl. 68—9.)

1. In an ironing element the combination of a body having an ironing face, heating means within the body and means for distributing the heat throughout the ironing face including a body of metal wool having greater heat conductivity than the metal of the body.



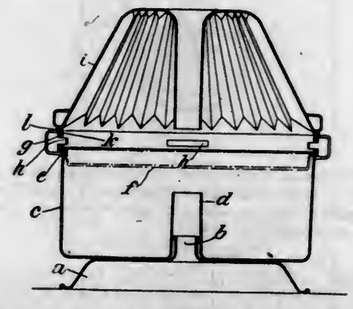
1,683,608. BEARING. CARL L. DAUN and PAUL E. KELLER, Milwaukee, Wis., assignors, by mesne assignments, to American Electric Motor Company, Milwaukee, Wis. Filed Dec. 11, 1925. Serial No. 74,666. 4 Claims. (Cl. 308—128.)

2. The combination of a housing having a fixed internal lug, a bearing member insertable lengthwise into said housing, a recess in said member, an endless lubricating



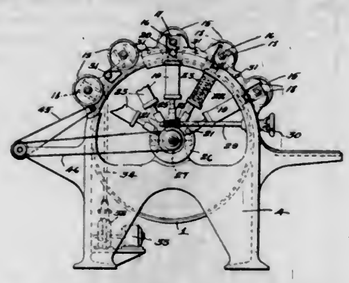
element receivable within said recess and advanced by the insertion of said member into confined position beneath said lug, and a shaft journaled in said member and supporting said element.

1,683,609. LUMINAIR. WILLIAM A. DOREY and WILLIAM A. INGLER, Newark, Ohio, assignors, by mesne assignments, to Holophane Company, Inc., New York, N. Y., a Corporation of New York. Filed Aug. 15, 1924. Serial No. 732,175. 1 Claim. (Cl. 240—11.)



A polygonal lantern comprising a frame, forming flat inclined sides, a glass plate adapted to lie in each pane frame, each plate comprising two pieces of glass of substantially identical size with all of their outer edges in contact and their side edges bevelled to permit the sides of neighboring plates to form a moisture-proof lantern, the opposite edges of the two pieces of glass being notched, said notches being extended a slight distance into the outer faces of the said pieces, the extensions of the notches being disposed in inwardly convergent relation to each other, and resilient clips having convergent legs straddling the plates and seated in the notches with the legs countersunk in the convergent portions of said notches to hold the plates in close contact with each other.

1,683,610. MACHINE FOR FORMING REENFORCEMENT SUPPORTS. THEODORE H. EICKHOFF, Cleveland Heights, Ohio, assignor to Pittsburgh Steel Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 19, 1927. Serial No. 192,595. 16 Claims. (Cl. 140—71.)



1. Apparatus comprising means for feeding nails and supporting the same, means for positioning a wire in position to be coiled about said nail, and means for coiling said wire about the nail.

1,683,611. BAKING AND ROASTING APPLIANCE. EUGEN HAGER, Oerlikon, near Zurich, Switzerland. Filed Feb. 14, 1927, Serial No. 167,945, and in Switzerland Feb. 25, 1926. 4 Claims. (Cl. 53—6.)

1. In a baking and roasting appliance the detachable combination of a casserole and a deep baking mould fitting one within another along their circumference when these receptacles face one another, both receptacles being adapted to be used alternatively for holding the substance to be cooked whilst the other at the same time serves to retain the heating gases in an adjustable measure, a canal for the heating gases formed of tubular projections of the two receptacles extending in either position of use of the appliance from bottom to top thereof but being interrupted at the height of the joint of the two receptacles, openings being provided in the joining parts of the receptacles adapted to be brought to register in the required extent and to be fully covered by the guiding part of the other receptacle.

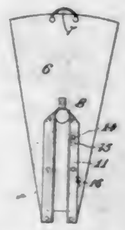
1,683,612. IRONING MACHINE. LOUIS S. HALLOWELL, Kansas City, Mo., assignor to The Prosperity Company Inc., Syracuse, N. Y., a Corporation of New York. Filed Feb. 20, 1926. Serial No. 89,784. 5 Claims. (Cl. 68—9.)

1. In an ironing machine the combination of a movable base member for carrying the work, a suction nozzle extending transversely of the working face of the base member, a suction pipe on which the nozzle is mounted having an inlet into the nozzle, said nozzle having a closure normally closing the inlet, and arranged to be moved to open the inlet by the shifting movement of the nozzle effected by the work passing under the nozzle.

1,683,613. ARTIFICIAL TOOTH. CLIFTON C. HALLOWELL, Drexel Hill, Pa., assignor to The S. S. White Dental Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 30, 1926. Serial No. 98,447. 9 Claims. (Cl. 32—9.)

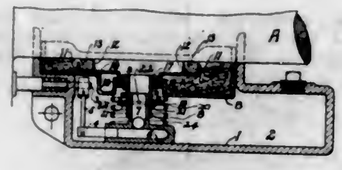
1. An artificial tooth comprising a tooth-body and a cusp structure arranged to support said tooth-body, each having opposed faces constructed and arranged to permit

the tooth-body to be rocked into operative position upon the cusp structure, while the root end of the tooth-body is rotatably engaged in the gum socket and the cusp structure is rigidly supported in spaced relation to said gum socket,



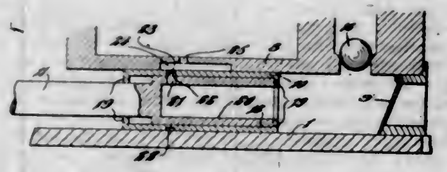
and each having means in their opposed surfaces complementary to guide said opposed surfaces in slidable relation into registry, and to interlock said tooth-body and cusp structure together.

1,683,614. ARTIFICIAL TOOTH. CLIFTON C. HALLOWELL, Drexel Hill, Pa., assignor to The S. S. White Dental Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 6, 1926. Serial No. 100,038. 8 Claims. (Cl. 32—9.)



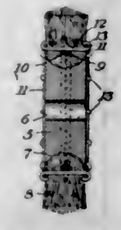
1. An artificial tooth comprising a tooth-body having a root extension, and a convexed occlusally disposed end face provided with a recess having a plane wall inclined in outwardly converging relation to said convexed occlusally disposed end face.

1,683,615. SHIP'S RAT GUARD. GUSTAV HANSEN, Victoria, British Columbia, Canada. Filed May 13, 1927, Serial No. 191,065, and in Canada Dec. 16, 1926. 1 Claim. (Cl. 114—221.)



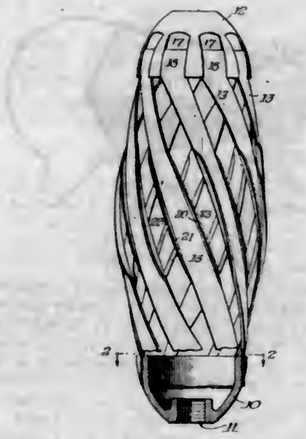
A ship's rat guard comprising, a flat plate of wedge shape having a slot extending from its periphery to a relatively midway position, two U-shaped plates each having a right angularly turned edge, the inner surface of the said U-shaped plates being coincident with the edges of the said slot and the surface adjacent the right angularly turned edge of each plate being adjacent and secured to the face of the said wedge shaped plate on each side thereof and so adapted to extend the surface bearing on a cable over which the said guard is straddled, a locking plate parallel to and pivoting on first said plate, said locking plate being adapted to close the entrance to the said slot, said locking plate having a semi-circular recess in its upper extremity corresponding with and opposite to a similar recess in the end of the said slot, said locking plate having a slot engaging and adjustable on the pivot above referred to, and locking means whereby the said plate may be secured from movement.

1,683,616. LUBRICATOR DISTRIBUTOR. JAMES J. HENNESSY, New York, N. Y. Filed Dec. 4, 1923. Serial No. 678,428. 7 Claims. (Cl. 308—88.)



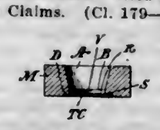
4. In a journal lubricator, a distributor including perimetric ridges of inverted V-shape, and intermediate lubricant pocket forming ridges of inverted V-shape, the apices of said pocket forming ridges being of less height than the apices of said perimetric ridges.

1,683,617. PUMP FOR LUBRICATORS OR THE LIKE. JAMES J. HENNESSY, New York, N. Y. Filed Oct. 17, 1923. Serial No. 668,996. 11 Claims. (Cl. 103—41.)



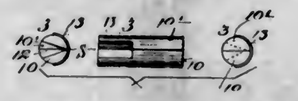
1. In a pump, a cylinder, intake and discharge valves in said cylinder, a bushing slidable in said cylinder, and a piston having a limited sliding movement in said bushing, said cylinder, bushing, and piston having ports arranged so as to be disaligned during a predetermined movement only of said piston to render the latter operative and to be aligned during any remaining movement of said piston to provide a by-pass for the escape of fluid in said cylinder.

1,683,618. BRUSH. ARTHUR L. HOFFMAN, Pittsburgh, Pa. Filed Sept. 2, 1925. Serial No. 54,040. 4 Claims. (Cl. 15—179.)



1. A brush comprising a hub member, bristles arranged about the hub member, a circumferentially extending binder around the hub member over the bristles for securing the bristles in place, a hoop at each side of the aforesaid structure, and traverse binders connecting the hoops and bearing against the first binder for confining said binder in place.

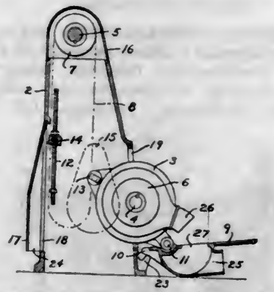
1,683,619. FLUE CLEANER. LEONARD W. JOHNSON, Batavia, Ill. Filed May 10, 1926. Serial No. 107,893. 2 Claims. (Cl. 15—104.19.)



1. A flue cleaner comprising in combination a pair of heads and a plurality of blades mounted in said heads, the said blades having their middle portions widened and turned outward to form cutting elements on said blades.

1,683,620. SLOTTING AND SLITTED LIGHT TRANSMITTER. JOHN KAUFMANN, New York, N. Y., assignor to De Forest Phonofilm Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 8, 1925. Serial No. 55,067. 15 Claims. (Cl. 179—100.1.)

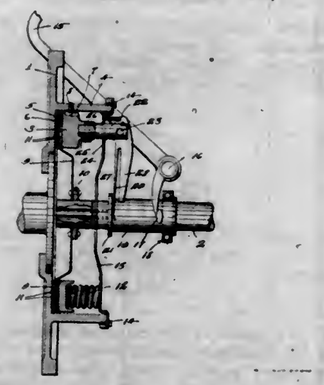
3. A light-transmitting element for a light-fluctuating sound-photograph apparatus, which comprises a member formed with a depression of comparatively large diameter extending nearly through it, an integral film almost closing the opposite face of said member in line with said depression, said film being perforated to form a light-slit; and a film-like transparent dust-protecting cover extending over said slit and fused to the face of said member around the slit therein.



1,683,621. FINE-SLIT CONSTRUCTION. JOHN KAUFMANN, New York, N. Y., assignor to De Forest Phonofilm Corporation, New York, N. Y., a Corporation of Delaware. Filed Nov. 27, 1926. Serial No. 151,042. 9 Claims. (Cl. 179—100.1.)

1. In a film gate the combination with the gate member of a slit forming member on said gate member comprising two semi-circular notched members united to form a fine slit.

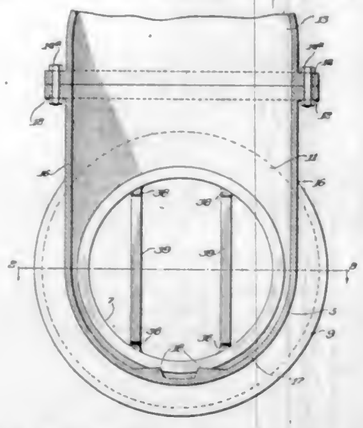
1,683,622. MOTOR SUPPORT. PAUL E. KELLER, Milwaukee, Wis., assignor, by mesne assignments, to American Electric Motor Company, Milwaukee, Wis. Filed Aug. 30, 1926. Serial No. 132,641. 4 Claims. (Cl. 308—11.)



1. In combination, a casing, a side closure plate horizontally pivotally associated with said casing close to the bottom thereof, a motor horizontally pivotally attached to said plate near to, but above the pivotal point of the plate, within said casing, whereby the motor weight is applied to the plate near its fulcrum, means for adjustably sustaining a portion of the weight of said motor on the opposite side from the horizontal pivot thereof, and a flexible belt for sustaining the remainder of the weight of the motor.

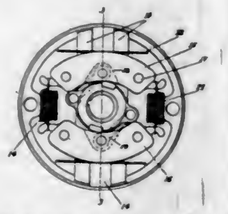
1,683,623. ABRASIVE PAPER OR CLOTH. RALPH B. MANLEY, Newark, N. J., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed Aug. 18, 1924. Serial No. 732,878. 3 Claims. (Cl. 51—279.)

1. A new article of manufacture comprising a backing coated with aluminous abrasive grains distributed substantially uniformly over the surface of the backing, all of the grains being substantially individually spaced with respect to the other grains, whereby the surface of the backing is substantially free from grain clusters so as to leave uncovered portions of the backing sufficient in size to prevent the permanent lodgment therein, of material which has been ground away.



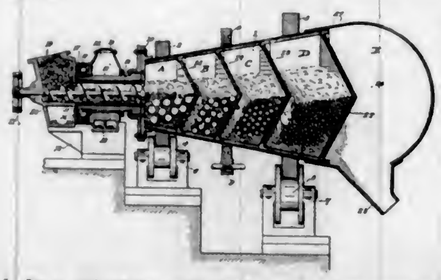
1,683,624. CLUTCH CONSTRUCTION. RALPH MURPHY, Syracuse, N. Y., assignor, by mesne assignments, to Franklin Development Corporation, Syracuse, N. Y., a Corporation of New York. Filed Sept. 4, 1924. Serial No. 735,826. 5 Claims. (Cl. 192—68.)

1. In a clutch, the combination of driving and driven elements, one including an axially shiftable member, spring means for thrusting said member into clutching position, and operating means for shifting said member out of clutching position, comprising a prime mover, and connections between the prime mover and the shiftable member, comprising a throw-out collar, a lever extending outwardly relatively to the throw-out collar and pressing at its inner end against the throw-out collar,



and being fulcrumed at its outer end, and a pull link connected at one end to the shiftable member, the lever being pivoted to the other end of the pull link, the lever having a resilient portion.

1,683,625. VALVE CONSTRUCTION. ELMER KENNEY NICKERSON, Springfield, Mass., assignor to The Chapman Valve Manufacturing Company, Indian Orchard, Mass., a Corporation of Massachusetts. Filed July 7, 1924. Serial No. 724,699. 2 Claims. (Cl. 251—51.)



1. In a valve, a casing having a passageway for fluid provided with a valve seat, a valve portion including a solid disk movable across said passageway for engagement with the valve seat, a plurality of spaced guide bars fixed to the casing and disposed symmetrically on either side of and substantially parallel with the median line along which the valve moves, and said valve portion having substantially continuous contact of the major portion thereof with said guide bars during movement to and from the seat, the guide bars having recesses adjacent to their extremities for affording outlets for foreign matter collecting on their faces.

1,683,626. AUTOMATIC GOVERNOR. EDWARD B. NOWOSIELSKI, Bloomfield, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed Nov. 5, 1925. Serial No. 67,120. 7 Claims. (Cl. 264—17.)

1. In a device of the character described, the combination of a multi-part driving member and a driven member, said driven member being housed within the driving member, studs on one of the parts of said driving member provided with means to bind the said parts together, a guideway extending across the inner face of one of the parts of said driving member, weights positioned over at least a portion of said guideway on both sides of the driven member; links connecting said weights to the driven member, resilient means connecting adjacent ends of said weights and means associated with said weights and operating in said guideway to cause said weights to move laterally with respect to the driven member.

1,683,627. PULVERIZING MACHINE. ALEXANDER M. READ, Columbus, Ohio. Filed Dec. 31, 1919, Serial No. 348,506. Renewed Feb. 28, 1924. 40 Claims. (Cl. 83—9.)

1. In a pulverizing mill, an approximately horizontal rotatable barrel containing a multiplicity of freely movable crushing bodies and having its lower side so inclined that the included material will travel thereon from one end to the other as the barrel revolves, feeding means to introduce material to be pulverized at one end of the barrel, and a transverse screen concave on the side towards the feeding means dividing the interior of the barrel.

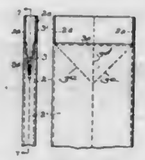
1,683,628. RECOVERY OF WASTE GASES IN THE PRODUCTION OF SULPHITE PULP. GEORGE A. RICHTER, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Mar. 19, 1925. Serial No. 16,679. 6 Claims. (Cl. 92—2.)

1. A process of recovering SO_2 from hot blow pit vapors and gases, which comprises conducting such vapors and gases through a confined mass of inert interstitial material in countercurrent flow to a cold acidulated water thereby condensing such vapors and cooling such gases, conducting the cooled gases through a mass of inert interstitial material in contact with water, to cause SO_2 to be absorbed thereby, and supplying such acidulated water to the first-mentioned mass of interstitial material for the condensation and cooling of blow-pit vapors and gases and liberation of the SO_2 contained in such acidulated water.

1,683,629. WELL TUBING. JOHN G. ROBINSON, Blackwell, Okla. Filed Aug. 9, 1926. Serial No. 128,032. 15 Claims. (Cl. 103—219.)

1. The combination with a well casing of tubing mounted therein, said tubing comprising a plurality of sections collectively forming a continuous conduit, and

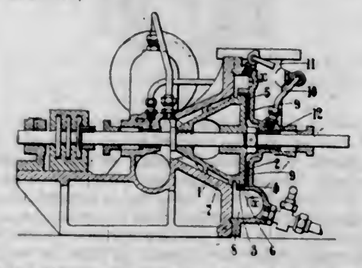
means on each of said sections for suspending said section from said casing independently of the other sections and means on each of said sections engaging said casing for holding the same against upward movement in said casing.



1,683,630. METHOD OF MAKING SMOOTH CASTINGS. SAMUEL T. G. SMITH, St. Louis, Mo. Filed May 24, 1926. Serial No. 111,374. 2 Claims. (Cl. 22—159.)

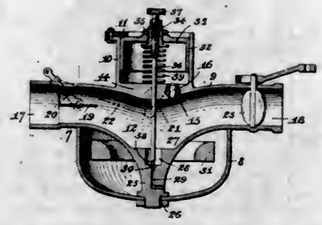
1. A facing composed of powdered barytes ($BaSO_4$) for the walls of molds and cores used as casting agencies.

1,683,631. EGG-PRESERVING COMPOUND. HENRY STANLEY, Galveston, Tex. Filed Feb. 12, 1927. Serial No. 167,866. 1 Claim. (Cl. 99—5.)



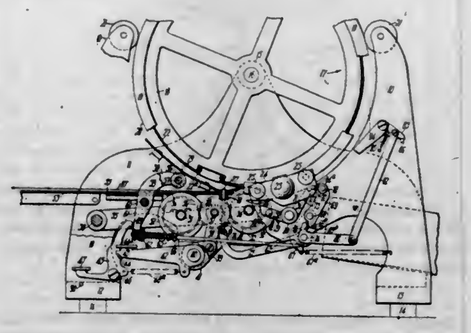
The herein described egg preserving compound comprising a mixture of wheat bran, sodium chloride, and mineral ochre, the mineral ochre being adapted to fill the pores of the egg shell to exclude air and serve as an insulator without bringing about heating of the eggs, and being also adapted to prevent the evaporation of water from the eggs, and to preserve the bran and to assure the bran retaining its preservative properties.

1,683,632. PAPER BAG. JOSEPH W. TAGGART, Watertown, N. Y., assignor to Taggart Brothers Company, Watertown, N. Y., a Corporation of New York. Filed Jan. 14, 1925. Serial No. 2,347. 2 Claims. (Cl. 150—9.)



1. In a bag, the combination of a prepared tubular blank having a flexible square cut end and lateral longitudinal tucks, corresponding margins of one of said tucks at one corner of said square end of the blank being slitted longitudinally to provide a valve flap comprising only the web of the tuck and which is folded inwardly and then downwardly between the walls of said tuck on the central line of fold of the tuck and on diagonal fold lines converging at a point lying within said central line of fold, the end portions of the blank for the full width of the blank at said end thereof above the inner end of the valve flap being folded inwardly upon one side of the body of the blank and secured thereto.

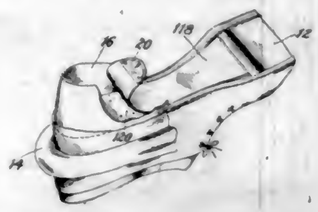
1,683,633. ROTARY PUMP. EDWARD BERRY TAIT, Colchester, England. Filed Feb. 15, 1927, Serial No. 168,423, and in Great Britain Feb. 20, 1926. 5 Claims. (Cl. 103—89.)



1. In a rotary pump of the screw or worm type, the combination with a cone-shaped chamber having a suction inlet at one end and a discharge outlet at the other end and a rotor comprising a cone-shaped worm adapted to rotate in said chamber, a balancing disc at the discharging end of the worm which operates to balance the thrust of the rotor substantially as set forth.

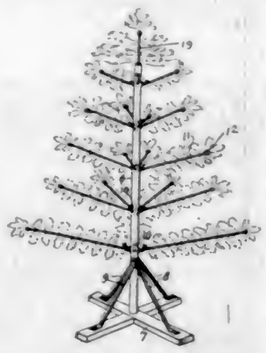
1,683,634. CARBURETOR. WILLIAM P. TAYLOR, Buffalo, N. Y. Filed June 10, 1922. Serial No. 567,376. 2 Claims. (Cl. 261—50.)

1. A carburetor having a carbureting chamber, an air inlet and a mixture outlet, a cylinder in communication with said carbureting chamber, a spring-retained piston in said cylinder adapted to be actuated under suction created within said carbureting chamber, a fuel valve actuated by said piston, a choke valve in said air inlet, and means operatively connected with said choke valve to close communication between said carbureting chamber and cylinder when closing said choke valve.



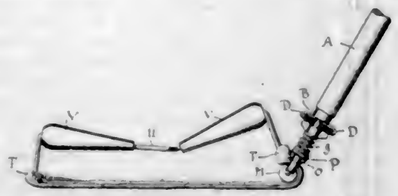
1,683,635. STENCILING MACHINE. LINDEN A. THATCHER, Belleville, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed May 18, 1926. Serial No. 109,833. 35 Claims. (Cl. 101—118.)

1. A stenciling machine having a sheet-feeding couple including a rotatable stencil-carrying cylinder and an impression-roller always in rolling frictional engagement with the cylinder to feed a work-sheet through a stenciling position, said machine also having, in combination, supplemental cam-closed work-sheet-feeding rolls driven by the impression-roller and operable to advance the work-sheet into the bite of said stencil-cylinder and impression-roller, said stencil-cylinder having timing means for controlling the driving of said supplemental rolls by means of said impression-roller.



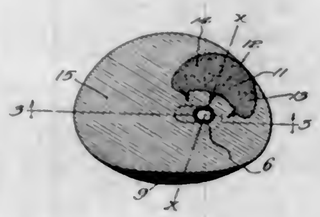
11. In a stenciling machine including a stenciling cylinder having a free rotary movement between a normal stop position and a stencil-preventing stop position, the combination of feeding means to advance a work-sheet to be stenciled, and mechanism controlled by the work-sheet and operatively connected to the stencil-preventing stop to release the cylinder for a full stenciling rotation.

1,683,636. MANUFACTURE OF SHOES. FRED E. TOOTHAKER, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 29, 1921. Serial No. 525,590. 22 Claims. (Cl. 36—76.)



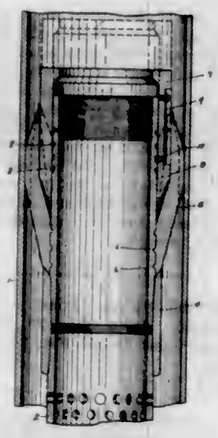
1. A turned shoe comprising, in combination, a sole, an upper, a lining, a molded counter between the upper and the lining, a shank piece split at its rear end to form two flaps and having the lower margin of the lining between the flaps, means to fasten one flap to the counter to form a bottom piece or tuck therefor, and means to fasten one or both flaps to the lining to hold it against displacement.

1,683,637. ARTIFICIAL TREE. EMMETT H. TRIMPE, Indianapolis, Ind., assignor to James A. Everitt, Indianapolis, Ind. Filed Aug. 26, 1927. Serial No. 215,723. 4 Claims. (Cl. 41—15.)



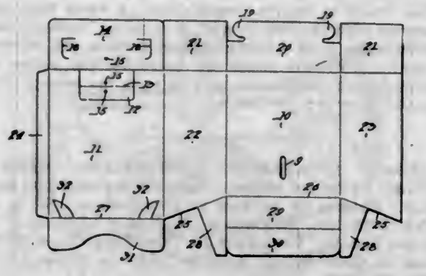
1. In an artificial tree, a staff having holes therethrough, in combination with wires bent double and twisted together and having ends threaded through the holes in the staff and knotted to prevent removal, and a dressing of foliage on the doubled and twisted wires.

1,683,638. COMBINED MOP AND WRINGER. WILLIAM TURNER, Louisville, Ky. Continuation of application Serial No. 90,176, filed Feb. 23, 1926. This application filed Sept. 13, 1926. Serial No. 135,259. 7 Claims. (Cl. 15—119.)



1. In a mop of the character described a frame for a looped mop cloth comprising a single piece of wire bent at the ends to form flat loops for securing the cloth, said ends being offset from the intermediate portion of the frame, the wire being bent at the center into an S-shaped spring, straight shanks between the S-shaped spring and the respective ends mounting handles, one of the shanks being bent upwardly and at an obtus angle to the S-shaped member.

1,683,639. GOLF CLUB. PEMBROKE A. VAILE, Chicago, Ill., assignor to B. L. MacGregor, Hollywood, Ill. Filed Sept. 24, 1927. Serial No. 221,633. 5 Claims. (Cl. 273—77.)



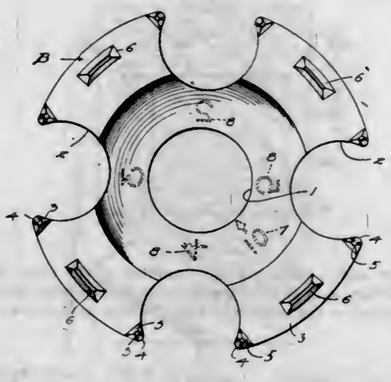
1. A golf club of the driver class comprising a head of conventional shape and a shaft, the shaft being connected to the head so that the axis of the shaft will extend across a point laterally of the intended point of impact on the face of the head, and a weight in said head disposed laterally of said shaft and in line transversely through said shaft with the point of impact on said face.

1,683,640. SEALING DEVICE. EDMUND F. WEISE, Houston, Tex., assignor to Howard F. Smith, Harris County, Tex. Filed Aug. 12, 1919, Serial No. 316,943. Renewed Sept. 7, 1923. 3 Claims. (Cl. 166—10.)

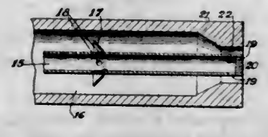
1. A sealing device including a tubular support, an annular abutment around the support whose upper end is outwardly flared, said support having an annular external groove above said abutment, an expansible sealing ring around said support whose lower end is tapered and fitted within the upper flared end of said abutment, an annular internal rib on said ring which fits into said groove, an annular wedge around the support adapted to wedge between the support and ring to expand the ring and whose lower end is inwardly tapered the upper end of said wedge extending above the support and being inwardly thickened.

1,683,641. TOILET-PAPER HOLDER. FRED A. WHITNEY, Leominster, Mass. Filed Jan. 3, 1927. Serial No. 158,529. 10 Claims. (Cl. 312—60.)

1. As an article of manufacture, a carton of sheet material having a front, a back and two ends, each of the ends having a slanting lower edge and provided with tabs folded along the line of the slanting lower edges and projecting inwardly toward each other in the same plane, and the front having a tab at the bottom folded horizontally across it and bent inwardly so that the upper part engages the bottoms of the two tabs on the ends, the lower part of the tab on the front being bent over into contact with the upper surfaces of said end tabs to form a bottom for supporting a package of toilet paper in the carton.



1,683,642. SIDE-WALL SAMPLER. SAMUEL H. WILLISTON, Maracaibo, Venezuela. Filed Mar. 30, 1925. Serial No. 19,547. 26 Claims. (Cl. 255—1.)

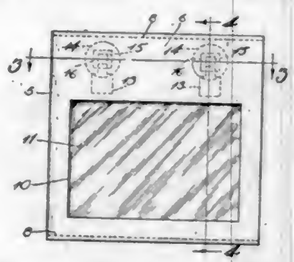


1. A side wall sampler comprising in combination a sinker member, a sample container carried thereby and a flexible cable for operating said device.

1,683,643. PLAYING PIECE. HAROLD S. WITTMAAK, Erie, Pa. Filed Sept. 13, 1927. Serial No. 219,287. 3 Claims. (Cl. 273—106.)

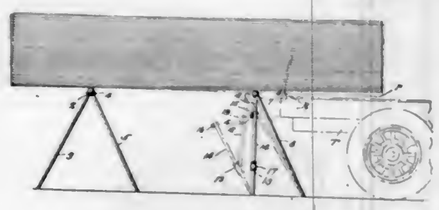
1. A playing piece of the character described comprising a disc-like body member, said member being substantially concavo convex with its convex face constituting its top surface, said member having a central opening and a plurality of recesses provided in the peripheral portion thereof equi-distantly spaced in a circumferential direction, adjacent recesses being spaced apart less than one hundred and eighty degrees, said recesses being parti-circular in form with the extremities of the walls thereof constituting inwardly disposed fingers, said fingers being reversely rounded and merging with the adjacent peripheral edges of the body member.

1,683,644. OIL-BURNING HEATER. OLIVER E. C. WOODS, Toronto, Ontario, Canada. Filed June 16, 1926, Serial No. 116,378. Renewed July 13, 1928. 3 Claims. (Cl. 158—76.)



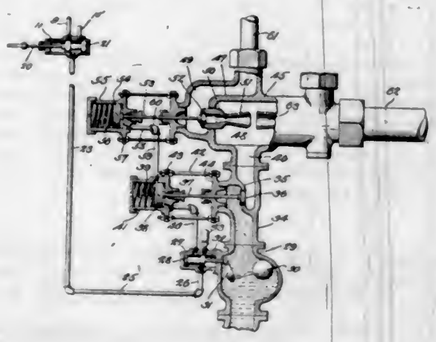
1. A mixing nozzle for an oil burning heater, comprising an outer air-conducting pipe and an inner fuel-conducting pipe arranged within said air-conducting pipe, said air-conducting pipe at its discharge end provided with a restricted, substantially cylindrical discharge orifice, and said fuel-conducting pipe terminating within said restricted orifice and having a radial outlet opening to discharge fuel into said restricted orifice in a plane substantially perpendicular to the flow of the concentrated blast of air through said restricted orifice, said fuel-conducting pipe having a plurality of lateral openings establishing communication between the interior of the fuel-conducting pipe and the unrestricted interior portion of the air-conducting pipe, and means about the fuel-conducting pipe adjacent the lateral openings therein for intercepting a portion of the current of air passing through the unrestricted interior of said air-conducting pipe and concentrating such intercepted air for injection through the last mentioned openings into said fuel-conducting pipe for mixing with the fuel therein and accelerating its flow therethrough in the direction of the radial outlet openings.

1,683,645. AUTOMOBILE LICENSE-CERTIFICATE HOLDER. ORVILLE E. ABBEY, Corning, Iowa. Filed July 20, 1927. Serial No. 207,298. 1 Claim. (Cl. 40—16.)



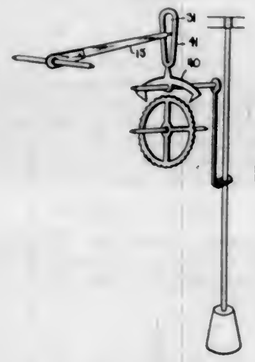
An automobile license certificate holder comprising a flat flexible envelope adapted to receive a license certificate and having a transparent sheet of material in the front thereof through which the certificate is visible, said envelope being open at one side and having a pair of spaced inverted key-hole slots in the upper portion of the

back wall thereof, a pair of vacuum cups detachably mounted in the slots of said envelope and providing suction means for detachably connecting the envelope to a



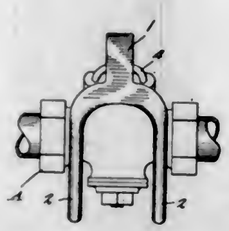
support, and a stiffening sheet applied to the inner face of said back wall and having key-hole slots formed therein conforming to and registered with the first named slots.

1,683,646. LOADER. DONALD S. BARRY, Cedar Rapids, Iowa. Filed Nov. 16, 1925. Serial No. 69,515. 6 Claims. (Cl. 214—38.)



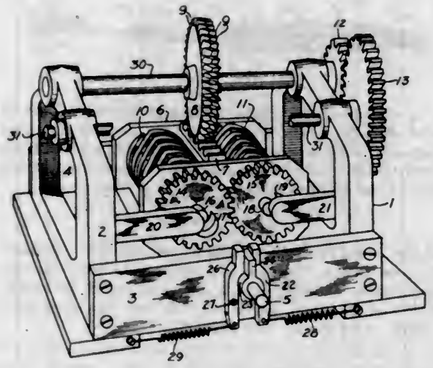
1. In loading apparatus a trestle including a load supporting cross bar, legs supporting the same, struts pivotally connected to the cross bar, legs hingedly connected between their ends to the struts, and cooperating means upon the struts and the hinged legs for holding said legs against movement relative to the struts.

1,683,647. AUTOMATIC INJECTOR. CHARLES WILLIAM BARTON, Portsmouth, Ohio. Filed July 7, 1926. Serial No. 121,033. 1 Claim. (Cl. 103—271.)



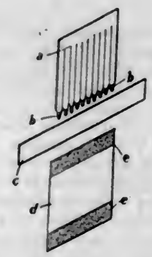
In combination with a steam boiler, an automatic injector including a body portion formed with a dividing wall dividing the body portion into front and rear compartments, a nozzle supported in the dividing wall, a valve within the rear compartment for normally closing the nozzle, a pipe establishing communication between the front compartment and boiler, a pipe for establishing communication between the rear compartment and boiler to deliver steam to the rear compartment, a water feed pipe connected with the body portion, a valve for normally preventing water from entering the body portion, and thermostatically controlled means for operating the valves to simultaneously admit steam and water to the body portion to inject water into the boiler.

1,683,648. ESCAPEMENT-CONTROLLING MECHANISM. CLIFFORD HOWELL BEASLEY, Birmingham, England, assignor of one-half to Parkinson and W. & B. Cowan Limited, Birmingham, England, a Corporation of Great Britain. Filed June 11, 1923, Serial No. 644,675, and in Great Britain June 20, 1922. 4 Claims. (Cl. 58—132.)



1. A device for governing the action of escapement mechanism having an oscillating element and comprising a blade spring, means for supporting the blade spring in cooperative relation with respect to the oscillating element, said oscillating element having a slot through which a portion of the spring extends.

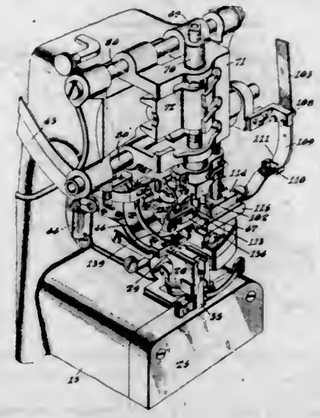
1,683,649. LOCK FOR SERVICE COCKS. MASSIE M. BELOTE, Valdosta, Ga. Filed Jan. 8, 1927. Serial No. 159,905. 2 Claims. (Cl. 70—122.)



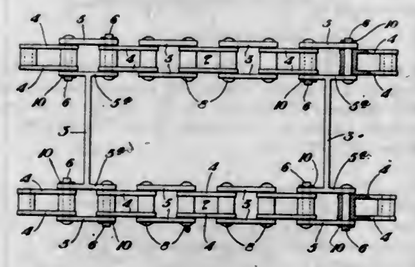
1. The combination with a housing adapted to receive the head of a valve to hold said head against rotation within the housing, of means extending from the housing for straddling the casing of the valve when said housing is in either of two positions at right angles to each other, thereby to hold the head of the valve engaged by the housing and prevent rotation thereof.

1,683,650. MECHANICAL MOVEMENT AND REGULATING DEVICE. GUSTAV A. BOETTCHER, Jamaica, N. Y., assignor to Multi-Needle Engineering Corporation, Jamaica, N. Y. Filed Mar. 20, 1926. Serial No. 96,353. 15 Claims. (Cl. 74—36.)

1. A regulating device comprising a frame, a pivot shaft mounted in the frame and a carriage secured upon said shaft within said frame, a pair of shafts mounted in said carriage and provided each with a gear in mesh with the other, a rotary toothed member also mounted on each of said pair of shafts, and a transverse shaft mounted upon said frame having a gear secured thereon adapted to mesh with either of said rotary toothed members in different positions of said carriage.



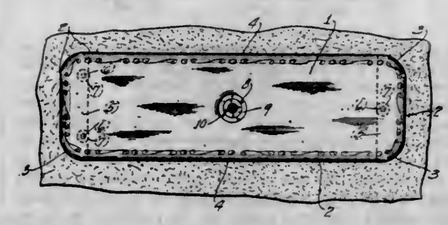
1,683,651. PROCESS FOR MANUFACTURING MATCH PACKAGES. FRITZ BOVARD, Bern, Switzerland. Filed Jan. 19, 1927. Serial No. 162,196. 2 Claims. (Cl. 144—51.)



1. A method of manufacturing match packages containing at least one sheet of single splints, consisting of partially cutting a sheet of material to form a sheet of splints connected at one edge thereof, applying to the free ends of splints a match composition, securing such sheet of splints at the free ends of said splints frictionally between a folded sheet of material provided with an ignition paste along free edges thereof, cutting said uncut edge of the sheets of splints by cuts continuing the first mentioned cuts through to the edge.

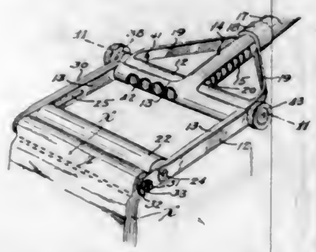
1,683,652. FASTENER-INSERTING MACHINE. MELLEN N. BRAY, Boston, Mass., assignor to Tubular Rivet & Stud Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 10, 1927. Serial No. 225,267. 33 Claims. (Cl. 218—17.11.)

1. A fastener-inserting machine comprising fastener-inserting mechanism, mechanism for feeding an article of work to space the fasteners inserted therein, means arranged to punch fastener-receiving holes in a strip of reinforcing material exclusively and at points out of register with said fastener-inserting mechanism, and means arranged to feed such strip to place the punched holes successively in register with an element of said fastener-inserting mechanism so that the fasteners inserted into said article will be inserted also through the holes punched as aforesaid.



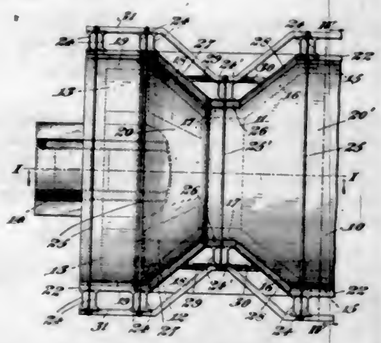
1,683,653. CONVEYER. WILLIAM MILTON BROWN, Johnstown, Pa. Filed Sept. 24, 1926. Serial No. 137,459. 2 Claims. (Cl. 198—168.)

1. In an endless conveyer member of the chain and scraper type, wherein therein there is provided a pair of endless chains connected at intervals by transverse scraper bars, special outside links for said chains, and rectangular scraper bars permanently secured to said special links at their transverse centers.



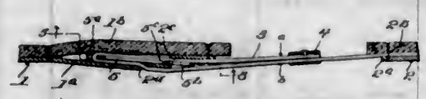
1,683,654. GRAVE COVER. WALTER BUEL, St. Louis, Mo. Filed Aug. 22, 1925. Serial No. 51,828. 1 Claim. (Cl. 27—30.)

A grave cover of the class described, comprising a metal cover of a size and shape to cover a grave, an annular depression in its transverse center and intermediate its ends,



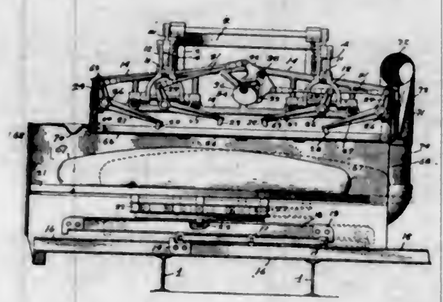
a circumferential flange projecting inwardly about the bottom of said depression leaving an opening in the bottom of said depression, means for supporting said cover in position so that it will not be moved out of place by the freezing and thawing of the earth.

1,683,655. COMBINED MOP HEAD AND WRINGER. OSCAR CARLSON, Minneapolis, Minn. Filed Jan. 23, 1928. Serial No. 248,696. 8 Claims. (Cl. 15—119.)



1. A combined mop holder and wringer having a head comprising upper and lower yoke-like members, the latter of which is slidably mounted within the former, the transverse portions of the yoke-like members being closely positioned to afford a hand grip, a mop-holding lower roll journaled to the prongs of said upper member, an upper roll journaled to the prongs of said upper member, said two rolls being movable into co-operating wringing relation by pressing the transverse portions of said members toward each other, and means for rotating the lower roll to wind a mop thereon or unwind the same therefrom.

1,683,656. REGENERATIVE OPEN-HEARTH FURNACE. STEWART J. CORT, Bethlehem, Pa., assignor to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Dec. 21, 1923. Serial No. 681,940. 1 Claim. (Cl. 263—46.)



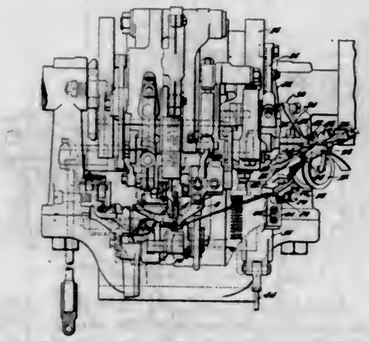
In an open hearth furnace, the combination of substantially parallel side walls, converging side walls at the ends of the substantially parallel walls, relatively short substantially parallel walls at the ends of the converging walls, diverging walls beyond the last named substantially parallel walls, substantially parallel walls beyond the diverging walls, skew back channels following the outline of and arranged at the top of said walls, buckstays resting against the parallel portions of said walls, and bracing means between the buck stays for the parallel walls between the converging and diverging walls and the converging and diverging skew back channels at the top of the converging and diverging walls, and a roof supported by the skew back channels.

1,683,657. ADJUSTABLE STRAP CONNECTION. FRANK DIETERLE, Philadelphia, Pa., assignor to A. J. Reach Company, Philadelphia, Pa. Filed Jan. 21, 1928. Serial No. 248,413. 5 Claims. (Cl. 2—2.)

1. In combination a unitary member having a pair of parallel slits, a strap having a looped portion threaded through said slits, and an independent locking plate lying between the plies of the loop and movable relative to the portion of the member lying between said slits.

1,683,658. MATTRESS-BEATING MACHINE. JOSEPH WILLIAM DROLL, Chicago, Ill., assignor to Droll Patents Corporation, Chicago, Ill., a Corporation of Delaware. Filed Aug. 17, 1926, Serial No. 129,799. Renewed July 9, 1928. 14 Claims. (Cl. 226—43.)

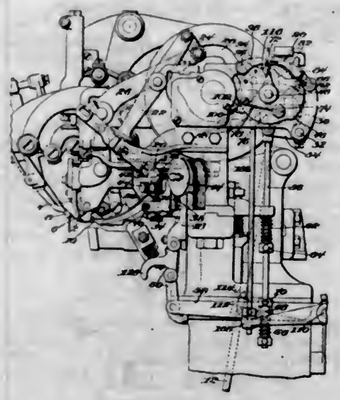
1. A mattress beating machine comprising a solid mattress support; a plurality of inner and outer beating elements pivotally mounted above the center and edges of said support respectively; and means for operating the inner beating elements slightly in advance of the outer beating elements to engage and beat a mattress upon said support and thereby beat the stuffing of said mattress from the center toward the edges thereof.



5. The combination with a mattress beating machine, of inner and outer beating elements arranged to engage and beat the central and outer portions of a mattress respectively; a mattress support; and resiliently mounted stripping elements arranged between the mattress and said beating elements to separate said mattress and said beating elements.

12. A mattress beating machine comprising a rigid horizontally disposed mattress support; a plurality of beating elements relatively to a mattress on said support; raising and lowering the beating elements to adjust said beating elements relatively to a mattress on said support; a housing enclosing said support and having an open end and a top portion secured above said beating elements and arranged to be raised and lowered therewith; means for actuating the beating elements to engage and beat a mattress on said support; and an inhalant element mounted adjacent the opening in said housing to inhale dust beaten from said mattress.

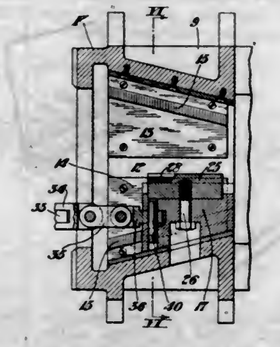
1,683,659. SEWING MACHINE. ANDREW EPPLER, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 25, 1920. Serial No. 412,705. 23 Claims. (Cl. 112—46.)



1. A welt shoe sewing machine having, in combination, stitch forming devices, a welt guide, and means in advance

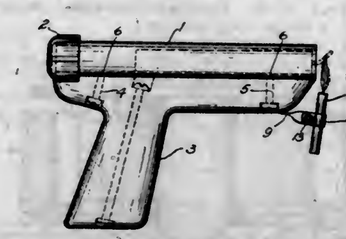
of the welt guide for slashing a welt comprising a reciprocating welt slashing knife and means operating independently of the welt guide for moving the welt into and

out of the path of the knife to cause a portion of the welt to be slashed and the remaining portion of the welt to remain unslashed during the sewing operation.



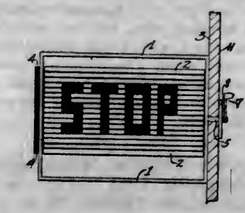
1,683,660. SEWING MACHINE. ANDREW EPPLER, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 21, 1922. Serial No. 608,321. 19 Claims. (Cl. 112—44.)

1. A machine for attaching welts having, in combination, welt attaching mechanism, welt treating mechanism for operating on the welt for a limited period during the operation of the welt attaching mechanism, means controlled by the starting of the machine for rendering the welt treating mechanism active, and means for varying the start of the welt treating period with relation to the start of the welt attaching.



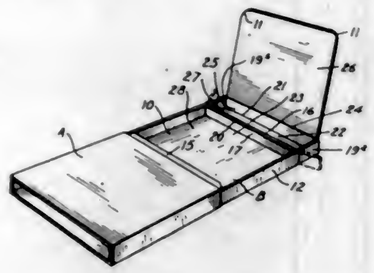
1,683,661. UPSETTING DEVICE. WILLIAM H. FELDING, Pittsburgh, Pa., assignor to National Tube Company, a Corporation of New Jersey. Filed Mar. 11, 1926. Serial No. 94,024. 2 Claims. (Cl. 78—17.)

1. In an apparatus for upsetting tubular articles, a housing having a window therein, a pair of wedge-plates secured on the bottom wall of said window, upstanding wedge-tongues on said plates, a pair of wedge-blocks mounted on said wedge-plates and provided with wedge-grooves to receive said wedge-tongues, a second pair of wedge-plates secured to said housing and overlying said wedge-blocks, said last named plates being provided with downwardly extending wedge-tongues adapted to be engaged in wedge-slots in said wedge-blocks, article engaging jaws secured to the inner faces of said wedge-blocks, and



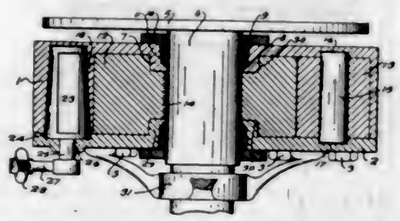
power means for reciprocating said wedge-blocks relative to said wedge-plates to move said article engaging jaws toward and away from each other so as to grip and release the articles to be upset.

1,683,662. TOY PISTOL. ROBERT LEE FORD, St. Louis, Mo. Filed Aug. 15, 1927. Serial No. 215,085. 1 Claim. (Cl. 42—54.)



A toy pistol of the class described, comprising a barrel made of sonorous metal, a bore of relatively large diameter in said barrel, open at the muzzle end and closed at the breech end, a stock attached to said bore by means of tap bolts passing through said stock and screw-threaded into said barrel, means for supporting a flame of fire beneath the muzzle of said barrel, said flame being so disposed that the point thereof will contact with the fuse of a fire cracker inserted in the muzzle of said barrel.

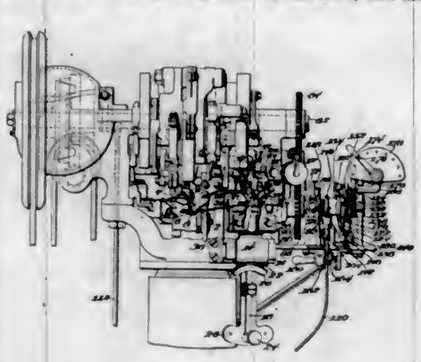
1,683,663. AUTOMOBILE SIGNAL. CLARENCE E. GOHEEN, South Bend, Ind. Filed Nov. 21, 1927. Serial No. 234,809. 5 Claims. (Cl. 116—51.)



1. An automobile signalling device comprising a frame, oppositely disposed sets of rollers carried by said frame marked to collectively form words at given positions, driving connections between all the rollers for rotating the same in unison, and lever means for operating the rollers.

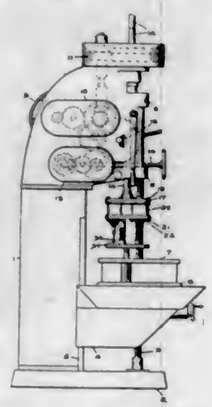
1,683,664. COMBINED CIGARETTE BOX AND MATCH CONTAINER. ALBERT ROLAND GRAHAM, Toronto, Ontario, Canada. Filed Dec. 27, 1926. Serial No. 157,348. 1 Claim. (Cl. 229—10.)

A container structure of the character described comprising a blank folded to provide bottom, side and end walls, said blank being doubled upon itself intermediate the end walls to form a two-ply-partition wall extending between the side walls in proximity to and parallel with one of said end walls, the portions of the side walls extending between said partition wall and the last mentioned end wall being partially severed from the bottom of the blank to serve as laterally movable flaps.



1,683,665. VEHICLE BRAKE. STANLEY EZEAKEL GRIFFITH, Olean, N. Y. Filed Apr. 19, 1926. Serial No. 103,122. 1 Claim. (Cl. 188—92.)

A fluid brake for automobiles comprising a sleeve revolubly mounted upon an axle housing, a circular plate formed upon the outer end of the sleeve and adapted to be secured to the running wheel so that the sleeve rotates therewith, a gear adapted to be secured upon the sleeve, a fluid tight casing of substantially cylindrical form inclosing the gear and mounted upon the sleeve, said sleeve being rotatable within the casing, means for preventing the egress of fluid between the casing and the sleeve, a member of spider formation secured about the axle housing and having the ends of its arms secured to the casing to hold it against rotation, an idler pinion journaled within the casing and meshing with the first-mentioned gear, a fluid conduit embodied within the casing through which the fluid circulates under the pumping influence of the rotative movement of the intermeshing gears, and a manually actuated valve in the fluid conduit for controlling the circulation of the fluid.

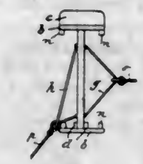


1,683,666. WELT-ATTACHING MECHANISM. JOHN B. HADAWAY, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 22, 1922. Serial No. 562,615. 18 Claims. (Cl. 112—44.)

1. A machine for attaching welts having, in combination, welt attaching mechanism, welt treating mechanism acting when thrown into operation to operate on the welt for a limited period during the operation of the welt attaching mechanism and then automatically stop, said welt treating mechanism being arranged to act on the welt at a distance from the attaching mechanism corresponding to the length of welt which will be attached before reaching a sharply curved marginal portion of the shoe, and means

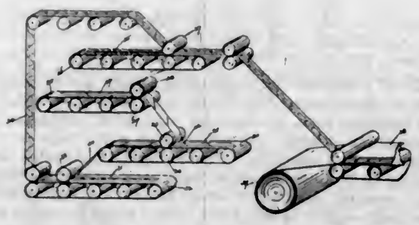
acting to render the welt treating mechanism active in starting the machine to treat the portion of the welt to be attached to said sharply curved marginal portion of the shoe.

1,683,667. MULTIPLE-TOOL DRILL. GEORGE E. HALLENBECK, Toledo, Ohio, assignor, by mesne assignments, to Baker Brothers, Inc., Toledo, Ohio, a Corporation of Ohio. Filed June 9, 1921. Serial No. 476,142. 5 Claims. (Cl. 77—24.)



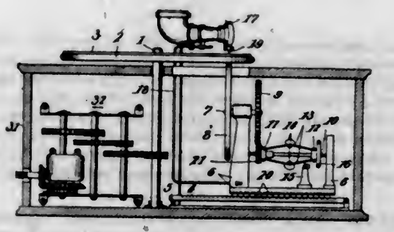
1. A multiple tool head comprising a driving spindle, gearing actuable from the spindle, a pair of tool holders axially aligned with said gearing, mounting means for tool carrying gearing, said means assembling said pair of holders as a unit for maintaining at all times the constant spacing therebetween, and a support for said mounting means on which the mounting means is shiftable for adjusting the pair of holders as a unit laterally of and relatively to the spindle while maintaining transmission connection from the spindle through the gearing to said holders.

1,683,668. VANE FOR FISHERY. CARL HANSEN, Esbjerg, and PAUL LETH, Copenhagen, Denmark; said Leth assignor to said Hansen. Filed Dec. 2, 1926, Serial No. 152,128, and in Denmark Dec. 3, 1925. 2 Claims. (Cl. 43—9.)



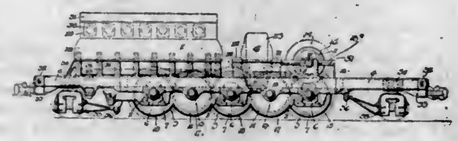
1. A device of the character described, comprising a vertical board, a steering plane secured to said board at right angles thereto along its upper edge, a steering plane

secured to said board at right angles thereto along its bottom edge, a rudder hingedly secured to the upper steering plane and adapted to be swung from a position at an



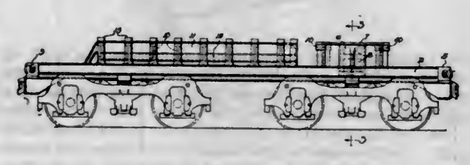
angle to the plane above the same to a position at an angle to said plane below the same, and means for maintaining said rudder in any of its adjusted positions.

1,683,669. METHOD OF MANUFACTURING TIRE TUBES. ALBERT ENNIS HENDERSON, Toronto, Ontario, Canada. Filed Sept. 30, 1921. Serial No. 504,403. 13 Claims. (Cl. 154—8.)



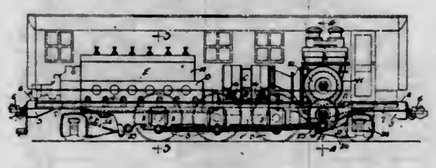
1. The method of producing a laminated rubber tube which consists in cutting a calendered rubber sheet on transverse lines to form strips of a width bearing a definite proportion to the circumference of the ultimate tube, placing said strips in series in end to end relation, parallel with the length of a second calendered sheet, rolling said second sheet transversely to incorporate said series of strips and finally vulcanizing.

1,683,670. PHONOGRAPH. ISAMU HOSOI, Tochigi-Ken, Japan, assignor of one-half to Kakutaro Takei, Tokyo, Japan. Filed Feb. 18, 1925, Serial No. 10,078, and in Japan Mar. 3, 1924. 1 Claim. (Cl. 188—180.)



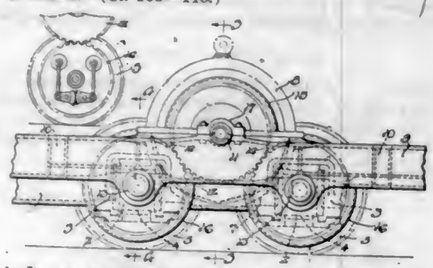
In a phonograph of the type specified, a tone arm, a rotatable turntable, means for driving said turntable, a friction disc, a governor, a carriage adapted to carry said friction disc and said governor, a track for said carriage comprising a horizontally disposed plate hinged at one end and being supported at the other end by means of a spring whereby the friction disc is pressed against the under side of the turntable and a link member connecting said tone arm and said carriage whereby the carriage is moved by the phonographic needle as the latter traverses the record disc thereby causing the friction disc to be moved across the under side of the turntable with and at a point immediately beneath the needle.

1,683,671. LOCOMOTIVE STRUCTURE. KARL S. HOWARD, St. Louis, Mo., assignor to Commonwealth Steel Company, Granite City, Ill., a Corporation of New Jersey. Filed Aug. 18, 1926. Serial No. 129,932. 22 Claims. (Cl. 105—35.)



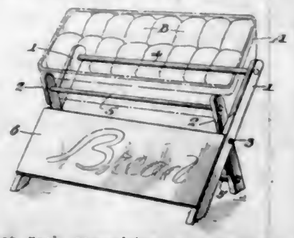
1. In a locomotive, a plurality of driving wheels on one side of the locomotive, driving gears for said wheels journaled independently of the same, idler gears in mesh with said driving gears, and a driving pinion in mesh with one of said gears.

1,683,672. LOCOMOTIVE STRUCTURE. KARL S. HOWARD, St. Louis, Mo., assignor to Commonwealth Steel Company, Granite City, Ill., a Corporation of New Jersey. Filed Aug. 18, 1926. Serial No. 129,933. 21 Claims. (Cl. 105—172.)



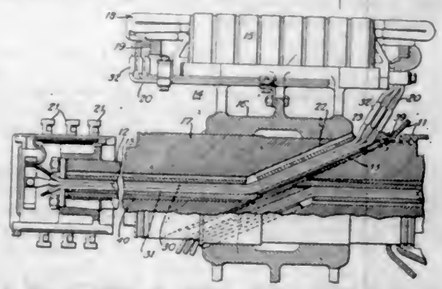
1. In a cab underframe for an electric locomotive, longitudinal sills and generator frame elements connecting said sills and formed integrally therewith.

1,683,673. LOCOMOTIVE STRUCTURE. KARL S. HOWARD, St. Louis, Mo., assignor to Commonwealth Steel Company, Granite City, Ill., a Corporation of New Jersey. Filed Aug. 18, 1926. Serial No. 129,934. 27 Claims. (Cl. 105—35.)



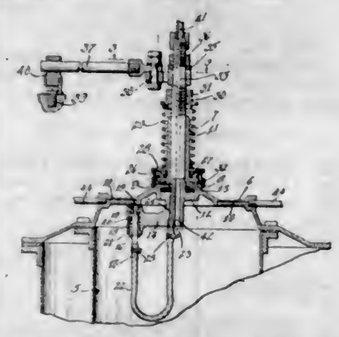
1. A one piece casting forming a locomotive bed and including parallel sills, and an engine crank case member extending between said sills and forming a longitudinal and transverse brace therefor below the tops of said sills.

1,683,674. LOCOMOTIVE STRUCTURE. KARL S. HOWARD, St. Louis, Mo., assignor to Commonwealth Steel Company, Granite City, Ill., a Corporation of New Jersey. Filed Aug. 18, 1926. Serial No. 129,935. 9 Claims. (Cl. 105—113.)



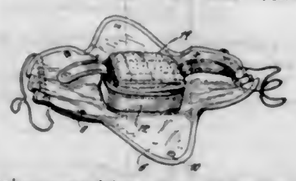
1. In an electric locomotive, a plurality of driving wheels, individual driving gears for said wheels, flexible elements operatively connecting said gears with their respective wheels, a common driving pinion for both of said gears, and a single member forming bearings for said gears and pinion.

1,683,675. BREAD-BASKET RACK. BARTLETT G. HOWE, Galesburg, Ill., assignor to Howe-Anderson Company, Galesburg, Ill., a Corporation. Filed Nov. 4, 1927. Serial No. 231,026. 3 Claims. (Cl. 211—85.)



1. A basket rack comprising at each side a pair of pieces pivotally connected intermediate their ends, the inner piece of each pair above the pivot being shorter than the other, a bar connecting the upper ends of the short pieces, a bar connecting the upper ends of the long pieces, and a board connecting the long pieces below the pivots and acting to limit the movement of the short pieces about the pivots in either direction, whereby a supporting basket will be displayed at substantially the angle of said board and its contents observed simultaneously with the board.

1,683,676. DYNAMO-ELECTRIC MACHINE. HERBERT G. JUNGK, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 15, 1924. Serial No. 755,840. 12 Claims. (Cl. 171—206.)

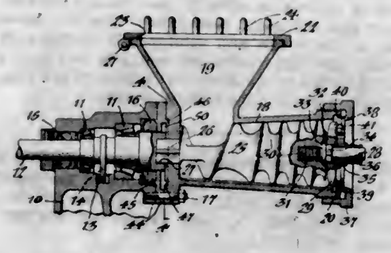


7. The combination with the rotor of an electrical machine having a straight duct for receiving an electrical conductor, of means extending substantially throughout the length of said duct in wedging engagement therewith for retaining said conductor in position within said duct, said means comprising a plurality of parts of segmental cross-section, the inner surfaces of said parts being recessed to receive said conductor, the outer surfaces of said parts being recessed to provide ventilating openings between said retaining means and the walls of said duct.

1,683,677. FILLING MECHANISM. JAMES KANTOR, OTTO W. FICK, and WILLIAM JAMES TRAXEL, Chicago, Ill., assignors to Liquid Carbonic Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 12, 1926. Serial No. 101,542. 4 Claims. (Cl. 226—98.)

1. In a machine for filling with liquid, bottles containing air under pressure, a filling mechanism comprising an air pressure tank, a cover for said tank having an air passageway therein communicating with each of the bottles and a centrally disposed opening, a valve stem having an air inlet and an air outlet and extending through said opening, said valve stem being held against rotation with respect to said cover, means communicating with said air outlet and disposed in said tank for communicating with the air passageways in said cover for cutting off the air pressure in said tank from the bottles and for allowing a portion of the air in the bottles to pass into the atmosphere, and means disposed adjacent said air outlet for varying the amount of air passing therefrom.

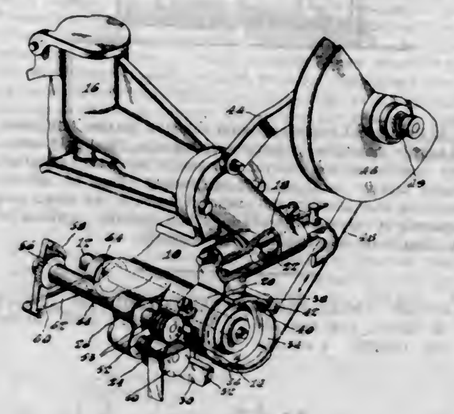
1,683,678. UTILITY BAG. WILLIE B. KITTERMAN and FLORENCE HOWLAND MILLS, New York, N. Y. Filed Feb. 1, 1927. Serial No. 165,197. 4 Claims. (Cl. 150—1.)



1. A container comprising a piece of material, pairs of oppositely disposed flaps formed thereon, a receptacle so positioned on the piece of material that the flaps may be drawn thereover to cover the same, draw strings in one pair of the oppositely disposed flaps for holding the same together, fasteners in the other pair of flaps for holding the same closed, and the draw strings providing an arrangement whereby the container may be suspended.

1,683,679. MEAT AND FOOD GRINDER. EUGENE W. KNOWLTON, Buffalo, N. Y., assignor to John E. Smith's Sons Co., Buffalo, N. Y., a Corporation of New York. Filed May 7, 1925. Serial No. 28,603. 7 Claims. (Cl. 146—182.)

1. A meat grinding machine, comprising a grinder-casing including a hopper, and prongs applied to the top of said hopper for facilitating the removal of the meat from the loading fork.



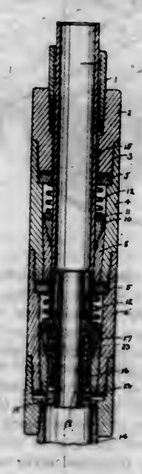
6. A meat grinding machine, comprising a grinder-casing, a perforated plate in the front end of said casing, a

feed-screw operating in the casing and having a threaded opening in its front end, a spindle having a threaded rear portion engaging said screw-opening and having its front portion extended through a central opening of said plate,

a knife mounted on said spindle on the inner side of said plate, and a spindle bushing separate from said plate fixed in its opening and having a hand grip for turning the spindle to remove the plate and the knife as a unit.

1,683,680. COATING MACHINE. FRED N. LA CHAPELLE, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 22, 1920, Serial No. 425,743. Renewed May 21, 1926. 31 Claims. (Cl. 12—80.)

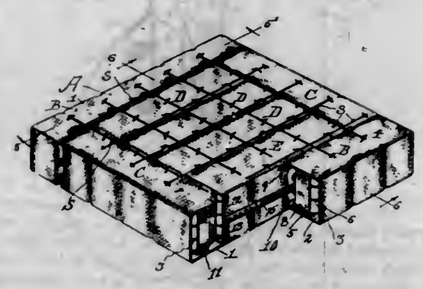
1. In a shoe coating machine, an applying member, and an imperforate shielding member situated between part of the applying member and the work so that one edge thereof defines the line of demarcation between coated and uncoated surfaces, said shielding member covering the remainder of the applying member and having a surface with which the covered portion of the applying surface of the applying member contacts.



1,683,681. MAKING CELLULOSE ETHERS AND ALKALI CELLULOSE. LEON LILIENFELD, Vienna, Austria. Filed June 16, 1923, Serial No. 645,911, and in Austria July 13, 1922. 15 Claims. (Cl. 260—10.)

1. The process of preparing low water content alkali cellulose, which process comprises treating an alkali cellulose obtained by evaporating water from an alkali cellulose containing more water than alkali, with solid caustic alkalies.

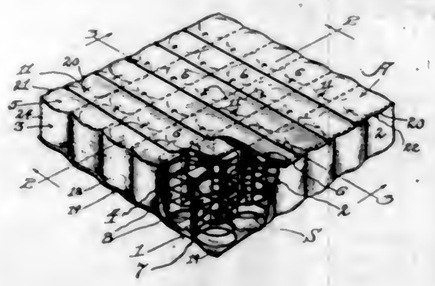
1,683,682. PREPARATION OF ALKALI CELLULOSE AND CELLULOSE ETHERS. LEON LILIENFELD, Vienna, Austria. Filed June 16, 1923, Serial No. 645,913, and in Austria July 13, 1922. Renewed Apr. 5, 1927. 20 Claims. (Cl. 260—152.)



1. In the process of preparing alkali celluloses of low water content by drying watery alkali celluloses, the step of drying below 18° C.

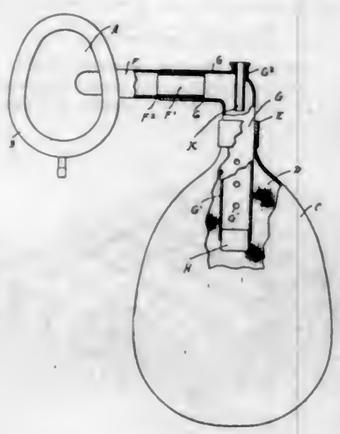
1,683,683. DETACHABLE PILOT FOR PUMP PLUNGERS. GERALD R. LIVERGOOD, Houston, Tex., assignor of one-fourth to W. L. Pearson, Harris County, Tex. Filed June 25, 1926, Serial No. 118,511. Renewed June 26, 1928. 9 Claims. (Cl. 103—179.)

1. In a device of the character described, a barrel, a cylindrical member movable therein, expansible packing means in said barrel bearing against said member, a pilot member on one end of said movable member, means holding said pilot member in resilient engagement with said movable member, said pilot holding means being adapted to be automatically disengaged, to retain said packing in position when said movable member is withdrawn therefrom.



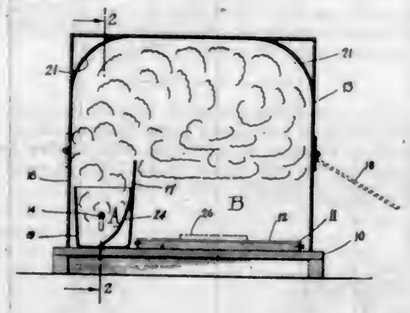
1,683,684. SPRING MAT FOR UPHOLSTERED ARTICLES. JAMES L. MACINERNEY, Grand Rapids, Mich. Filed Feb. 15, 1926. Serial No. 88,236. 5 Claims. (Cl. 5—353.)

1. The method of assembling a plurality of spring containing strips to form a mat unit, some of said strips having a continuous top, bottom and one side wall, and one open



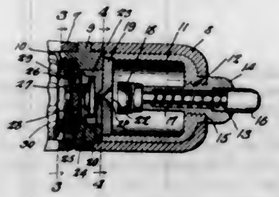
side, and one strip having a continuous top, bottom and two side walls, and end walls for some of said strips, which consists in grouping the several strips with the open side of one strip against the closed side of some strips and against the closed ends of other strips, whereby the various springs are surrounded only by one thickness of burlap.

1,683,685. SPRING MAT FOR UPHOLSTERED ARTICLES. JAMES L. MACINERNEY, Grand Rapids, Mich. Filed May 6, 1926. Serial No. 107,018. 3 Claims. (Cl. 5—353.)



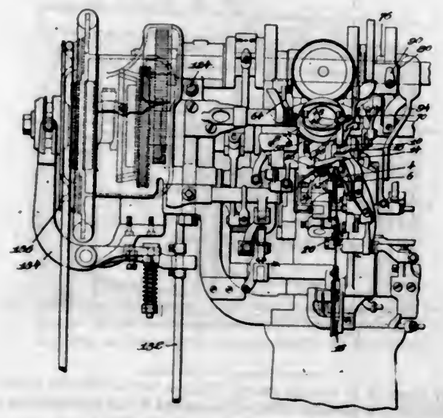
1. A device of the character described consisting of a coiled spring-contained cellular casing, said casing comprising a rectangularly shaped piece of fabric folded to form a bottom and two side walls, an inverted U-shaped fabric strip having its longitudinal margins connected to said bottom and extending from one folded side wall to the other, a plurality of inverted L-shaped pieces of fabric parallel to each other and to said U-shaped piece, one margin of the L-shaped pieces being connected to the bottom fabric, the free margin of one of said L-shaped pieces overlapping the U-shaped strip and the free margins of the other L-shaped pieces overlapping an adjacent L-shaped piece.

1,683,686. INHALING DEVICE. JOHN W. MCMILLAN, Muncie, Ind. Filed Nov. 20, 1926. Serial No. 149,580. 2 Claims. (Cl. 128—202.)



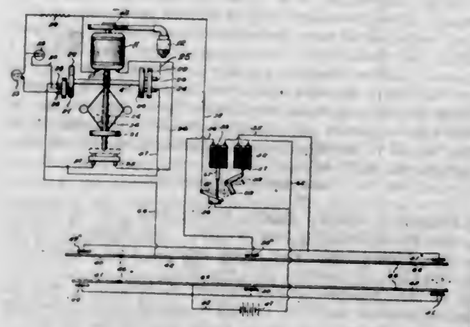
1. In an inhaling device, an inhaling chamber, a hollow foot piece extending from the same in a plane parallel with the open face of the chamber, a substantially L-shaped hollow arm, one end of which has a fitting and rotatably adjustable union with the foot piece and the opposite end having a plurality of openings in longitudinal series therethru, an air-tight bag into which the perforated end of said hollow arm is adjustably mounted to expose a variable area of air openings, whereby a greater or less amount of air may be added to the inhaling medium, and an inlet pipe extending downwardly thru the horizontal portion of the hollow arm substantially centrally of the vertically extending portion of said arm and to a point below the hollow of the horizontal portion of the arm, and above the lower end of the vertical portion.

1,683,687. ART OF DYEING. PIETER MIJER, New York, N. Y., assignor, by mesne assignments, to The Two-Tone Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 14, 1924. Serial No. 692,762. 45 Claims. (Cl. 8—5.)



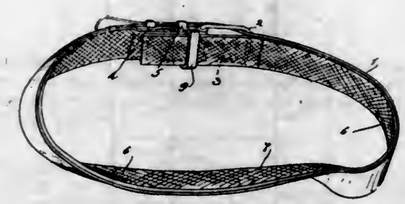
1. Process of applying liquid coloring matter uniformly to textile materials, comprising atomizing the liquid coloring matter under control, accumulating said atomized liquid matter to form a homogeneous cloud of minute particles and locating the material beneath the cloud and exposing it thereto whereby only non-spotting particles of the liquid are deposited on such material.

1,683,688. CIGAR AND CIGARETTE LIGHTER. HORACE R. MILAN, New York, N. Y. Filed Jan. 13, 1927. Serial No. 160,953. 4 Claims. (Cl. 67—19.)



1. A cigar lighter including an open ended body portion, a liquid container supported within the body portion, a heating element supported in the open ended body portion and including a coil of heating wire, a disk of black platinum sponge supported within the coil of heating wire, a porous member for supporting the coil and disk of black platinum sponge, and means for forcing a quantity of liquid onto the porous member to mingle with air entering the body portion to set up a catalytic action whereby the wire is caused to glow.

1,683,689. WAX-THREAD-SEWING MACHINE. ALFRED R. MORRILL, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 5, 1917. Serial No. 205,610. 27 Claims. (Cl. 112—252.)

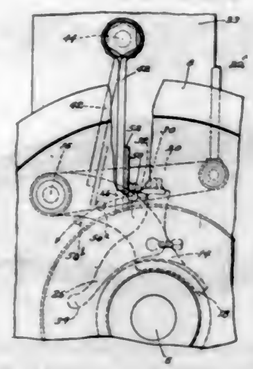


25. An outsole shoe sewing machine having, in combination, shoe supporting and guiding devices comprising a work support and a presser foot arranged to receive between them the projecting edge of the sole of a lasted shoe, sewing mechanism constructed and arranged to sew the outseam of the shoe, a thread severing device mounted in the work support and arranged to sever the thread close to the work substantially in the plane of the work engaging surface of the work support, and means for actuating said device to sever the thread at the completion of the sewing while the shoe is in position between the work support and presser foot.

1,683,690. CROSSING SIGNAL. JOHN A. MORRISON, Seattle, Wash., assignor to Safety Signal Company, a Corporation of Washington. Original application filed Dec. 4, 1926, Serial No. 152,622. Divided and this application filed July 23, 1927. Serial No. 207,948. 2 Claims. (Cl. 246—125.)

1. In combination with an electrically operated signal for railway crossings, a right-of-way including a section in which the rails are insulated from the remainder of the right-of-way and from one another, a normally closed switch, a source of E. M. F., a circuit including said rails, the switch, the source of E. M. F. and the signal, a train controlled latch for maintaining the switch in open position and controlled by a train to release the switch prior to entering and after leaving said section and train operated means controlled by the train while in said section for moving the switch to a position where it is engaged by said latch.

1,683,691. BELT. WILLIAM REDFORD MULOCK, Winnipeg, Manitoba, Canada. Filed May 17, 1926. Serial No. 109,762. 1 Claim. (Cl. 241—8.)



The combination with a belt strap provided with buckling means, of a flexible rubber strip cemented to the inner face of the belt strap and of the full width thereof and having the inner face provided with a plurality of integrally formed wedge shaped gripping projections, the projections being arranged in intersecting diagonal rows crossing the face of the strip.

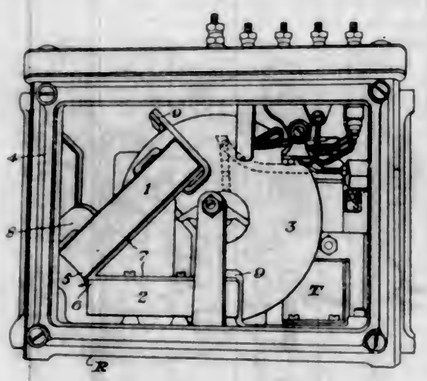
1,683,692. DEPTH CHARGE, BOMB, PROJECTILE, AND OTHER EXPLOSIVE BODIES. AMOS OGDEN, Barrow-in-Furness, England, assignor to Vickers Limited, Westminster, England, a British Company. Filed Apr. 5, 1926, Serial No. 99,695, and in Great Britain Apr. 9, 1925. 3 Claims. (Cl. 102—3.)

1. A submarine explosive body wherein the firing gear comprises in combination two movable units which are normally out of contact with one another, means whereby, as said body sinks, both said units are moved towards each other into firing relationship at a predetermined depth of immersion, means for causing said units to explode the mine automatically as they reach said firing relationship, and safety means, located at a point between said relatively movable units, for preventing them from accidentally assuming firing relationship under the influence of inertia or momentum.

1,683,693. SAFETY DEVICE. PATRICK JOSEPH O'SULLIVAN, Woodside, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed July 25, 1923. Serial No. 653,784. 15 Claims. (Cl. 192—114.)

1. In a mechanism of the class described, a shaft, a pulley on the shaft, a clutch for operatively connecting the pulley to the shaft, means for locking the clutch in inoperative condition, and positively operated means controlled by a part of the machine which is in motion when the power is on, for moving the locking means to and maintaining it in inoperative position.

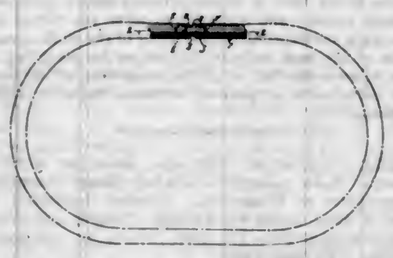
1,683,694. METHOD OF MANUFACTURING SULPHURIC ACID. WALTER A. PATRICK and ERNEST B. MILLER, Baltimore, Md., assignors to The Silica Gel Corporation, Baltimore, Md., a Corporation of Maryland. Filed May 24, 1924. Serial No. 715,728. 6 Claims. (Cl. 23—175.)



1. In the manufacture of sulphuric acid by the contact process, the step of contacting sulphur dioxid and a gas that will supply oxygen with an active mass consisting of a hard porous gel having associated therewith a substance capable of catalyzing sulphur dioxid to sulphur trioxid, said gel having pores of such size that it will adsorb water vapor to such an extent as to contain at least 21% of its own weight of water when in equilibrium with water vapor at 30° C. and a partial pressure of 22mm. of mercury.

1,683,695. METHOD OF PREPARING TUNGSTEN OXIDE GEL. WALTER A. PATRICK and EARLE H. BARCLAY, Baltimore, Md., assignors to The Silica Gel Corporation, Baltimore, Md., a Corporation of Maryland. Filed Mar. 29, 1927. Serial No. 179,387. 3 Claims. (Cl. 23—140.)

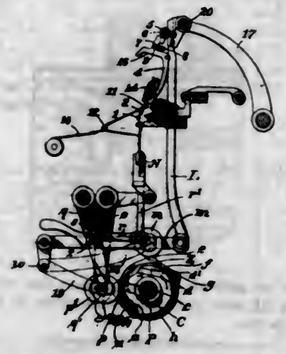
1. The process of preparing a tungsten oxide gel which comprises adding acid to a solution of a tungstate with stirring, in such proportions that the final acidity after reaction will be about $\frac{1}{10}$ to $\frac{1}{5}$ normal, the addition of acid being stopped on the appearance of a precipitate until such precipitate redissolves on stirring whereupon more of the acid may be added, allowing the resulting sol to set to a hydrogel, and washing and partially dehydrating it.



1,683,696. ALTERNATING-CURRENT RELAY. LESLIE H. PETER, London, England, assignor, by mesne assignments, to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Feb. 18, 1928, Serial No. 255,478, and in Great Britain Feb. 15, 1927. 4 Claims. (Cl. 175—338.)

1. A relay comprising two distinct magnetizable cores each terminating in opposed pole-faces to form an air gap, a first winding associated with both said cores and operating when supplied with current to create fluxes in both said cores, a second winding associated with said pole faces

and adapted to receive energy from a source outside of the relay, and a movable element mounted to be oppositely affected by the fluxes traversing said air gaps.



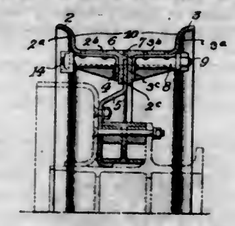
1,683,697. SPIRALLY-WOUND METALLIC BELT. DAVID P. RANKIN, Kearney, Nebr. Filed May 14, 1926. Serial No. 109,121. 1 Claim. (Cl. 74—66.)

A spirally wound metallic belt having a series of convolutions of uniform size and of hollow formation, a filler plug disposed between the adjacent ends of the uniformly sized convolutions of the belt, said filler plug having a cut-out portion presenting a flat horizontal base and two flat vertically disposed shoulders, the ends of the convolutions of the belt being bent inwardly to conform to the flat base aforesaid and engaging the flat sides defined by the recess to thereby prevent separation of the adjacent ends of the belt.

1,683,698. WELT MECHANISM FOR FULL-FASHIONED-KNITTING MACHINES. WOLFGANG D. RICHTER, Philadelphia, Pa. Filed June 21, 1927. Serial No. 200,433. 18 Claims. (Cl. 66—96.)

17. The hereindescribed method of turning a welt on full fashioned knitting machines consisting in attaching welt bar hooks to the initial loops, moving the needles to carry said loops below the knock over bits, after the prescribed number of courses have been knit, placing all the welt bars for all sections or heads of the machine in their prescribed relation to the needles, holding the loops on the welt hooked members at one level by sinkers and above the knock over bits, moving all the welt bars and all the sets of needles simultaneously and similarly to pass the needle beards through the said loops and withdraw the hooked members from said loops, then moving the needles to carry fabric loops from below the knock over bits to a

position above said knock over bits and adjacent the loops just taken on by said needles, and then proceeding with the knitting of the fabric, substantially as described.



1,683,699. APPARATUS AND METHOD FOR PRODUCING KNITTED FABRICS. HARRY RUBENSTEIN, Brooklyn, N. Y. Filed June 18, 1925. Serial No. 36,914. 2 Claims. (Cl. 66—9.)

1. The method of producing a knitted fabric consisting in utilizing different sets of needles having a certain fixed relation and knitting a plurality of threads with the different sets in alternation whereby alternate threads will be linked together at points in staggered relation to the points of knitting of the other threads, and omitting the knitting action on one of the threads whereby it will be simply laid in with the adjacent thread for producing a distinctive pattern in the fabric.

1,683,700. METAL WHEEL FOR ELASTIC TIRES. CHARLES SCHENCK and LEWIS FINE, Bethlehem, Pa., assignors to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed June 17, 1920. Serial No. 389,757. 3 Claims. (Cl. 152—21.)

3. In a metal wheel, the combination of a web portion, a fixed annular rim portion having base and outwardly and inwardly-extending flange parts, means for securing the inwardly-extending flange part laterally of the web portion, the base part of said fixed annular rim portion having an annular flange or shoulder for peripherally engaging the web portion in order to relieve the securing means of vertical shearing stresses, a detachable rim portion complementary to the fixed rim portion and having base and outwardly and inwardly-extending flange parts, said inwardly-extending flange part adapted to engage the side of the web portion opposed to the side engaged by the first inwardly-extending flange part and to engage the outer edge of said shoulder or flange carried by the fixed rim portion, the base part of the detachable rim portion having an annular shoulder or flange adapted to lap the annular shoulder or flange of the fixed rim portion, the outwardly-extending flange parts of the rim portions forming a tire-receiving channel, means secured to the inner faces of the base parts of said rim portions to provide bolt-receiving openings and said means secured to the base part of the detachable rim portion providing openings extending substantially to the outer edge of the latter base part, bolts extending through said openings with threaded ends

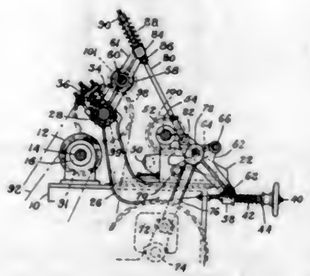
protruding from the openings in the detachable rim portion, and nuts engaging the threaded ends of said bolts outwardly of the outer edge of the base part of the detachable rim portion.

1,683,701. ARTIFICIAL RESIN AND MAKING THE SAME. FRITZ SEEBACH, Gotha, Germany, assignor to Bakelite Gesellschaft mit beschränkter Haftung, Berlin-Charlottenburg, Germany. Filed Mar. 21, 1927, Serial No. 177,207, and in Germany Mar. 29, 1926. 6 Claims. (Cl. 260—4.)

1. A condensation product of phenols formaldehyde and aromatic amines, fusible and soluble in organic solvents, containing about 77–78% of carbon, 5–6% of hydrogen, 4% of nitrogen, of the molecular weight of about 870–880.

1,683,702. PROCESS FOR PURIFYING PHENOL FORMALDEHYDE RESINS. FRITZ SEEBACH, Erkner, near Berlin, Germany, assignor to Bakelite Gesellschaft mit beschränkter Haftung, Berlin, Germany. Filed Feb. 6, 1926, Serial No. 86,638, and in Germany Feb. 17, 1925. 3 Claims. (Cl. 260—4.)

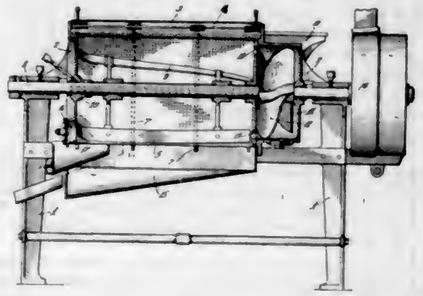
1. The process of purifying soluble phenolaldehyde resins which consists in producing a colloidal solution of the said resins with alkalies in a quantity insufficient for transforming the said resins into their alkali metal salts, but sufficient for neutralizing the free phenols and avoiding the hydrolysis of the phenol alkali salts formed and precipitating the resins by means of water.



1,683,703. PROCESS OF SEPARATING THISTLE BUDS FROM PEAS. OGDEN S. SELLS, Hoopeston, Ill., assignor to Sprague-Sells Corporation, Hoopeston, Ill. Filed Sept. 8, 1924. Serial No. 736,641. 2 Claims. (Cl. 209—173.)

1. The process of separating mixed masses of shelled peas and thistle buds having the characteristic of being non-buoyant at normal temperatures, the thistle buds having the added characteristic of acquired buoyancy through contact with an increase in temperature, consisting in submerging mixed masses of peas and thistle buds in a water bath heated to approximately 115° to 150° F., whereby the occluded air in the folded petals of the thistle buds is expanded thus giving buoyancy to said thistle buds and permitting them to separate and float away from the mass, then removing the floating thistle buds before they again sink through a drop in temperature of the liquid bath.

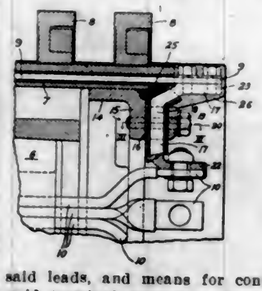
1,683,704. LEATHER-WORKING MACHINE. GUSTAV ADOLF SCHETTLER, Bramley, Leeds, England, assignor to The Turner Tanning Machinery Company, Portland, Me., a Corporation of Maine. Filed Feb. 9, 1925, Serial No. 7,977, and in Great Britain Feb. 14, 1924. 33 Claims. (Cl. 149—16.)



1. A machine for operating upon sheet material comprising a working instrumentality and an organization of work-engaging rolls, which instrumentality and organiza-

tion are yieldable relatively one to the other during operation of the machine to compensate for variations in thickness of the sheet material being worked by said instrumentality, one of said rolls being arranged to coact with said intsrumentality to form a working couple, and a plurality of said rolls being arranged to coact with one of said

rolls on a plurality of separate lines to grip the sheet material and feed it past said instrumentality, one of the work-engaging rolls remaining stationary with respect to the working instrumentality while others of the rolls move away therefrom to work-receiving position to permit sheet material to be introduced into the machine.

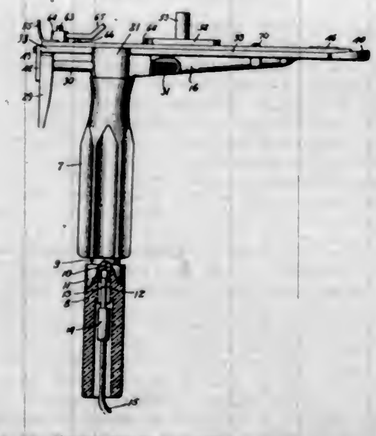


1,683,705. VEGETABLE-PULPING MACHINE. JOHN SCHMIDT, Hoopeston, Ill., assignor to Sprague-Sells Corporation, Hoopeston, Ill. Filed May 27, 1926. Serial No. 112,026. 15 Claims. (Cl. 146—174.)

6. A machine for treating vegetable materials comprising treating means including an enclosed chamber, a circular screen member in said chamber consisting of a plurality of sections, one of which is fixed against movement, members for receiving treated material located under said fixed screen member, said receiving members having adjustment means relative to each other.

1,683,706. HOLLOW-SHAFT COLLECTOR-LEAD SUPPORT. THOMAS S. SCOTT, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 30, 1926. Serial No. 105,762. 4 Claims. (Cl. 171—252.)

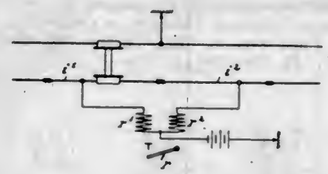
2. The combination with a hollow shaft, of relatively flexible electric conductor leads therein, a current-collecting device mounted on said hollow shaft adjacent to the end thereof, said current-collecting device mounting comprising an end face, a plurality of separate, relatively rigid, radially extending, terminal connectors, insulatingly clamped, at intermediate points between their ends, to said end face, means for joining the inner ends of said terminal



connectors to said leads, and means for connecting the outer ends of said terminal connectors to said current-collecting device.

1,683,707. CLOTH BOARD AND SIMILAR ARTICLE. HARRY BRIDGMAN SMITH, Brooklyn, N. Y., assignor to Lightship Cloth Board Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 18, 1923. Serial No. 669,392. Renewed July 25, 1928. 2 Claims. (Cl. 206—50.)

1. Cloth board or the like, composed of superimposed webs connected by lines of adhesive spaced apart from each other a distance corresponding substantially to the width of the individual lines, the lines so arranged with respect to the webs that the tendency of the webs to buckle when rolled or folded on any line substantially parallel to the axis on which the board is rolled will be restrained by connecting lines of adhesive between the webs crossing said probable line of buckle at a number of points between the side edges of the board.



1,683,708. ELECTROSURGICAL INSTRUMENT. FREDERICK H. WAPPLER, Flushing, GEORGE H. HULTMAN, Queens Village, and CHARLES FAYER, Flushing, N. Y., assignors to Wappler Electric Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed Sept. 11, 1925. Serial No. 55,655. 11 Claims. (Cl. 174—89.)

1. In an electro-surgical instrument the combination of a head provided with an opening, a guide fork mounted upon said head and partially bounding said opening, a loop

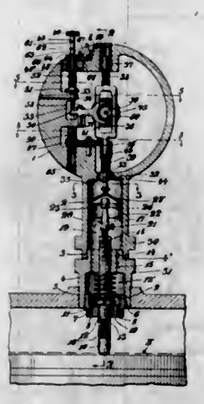


plate slidably mounted upon said head and carrying a loop extending across said opening, said loop plate being adjustable relatively to said head so as to adjust said loop relatively to said opening in order to grasp an organ or the like, a slide electrode carried by said head and movable relatively thereto, said slide electrode being provided with an operating surface disposed adjacent said opening for the purpose of severing said organ or some anatomical part holding the same, and means for electrically energizing said slide electrode.

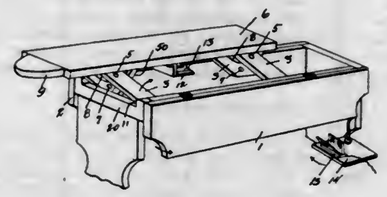
1,683,709. SAFETY CONTRIVANCE ON PERMANENT RAILWAY TRACKS. KARL ERNST WENZEL, Hamborn, Germany, assignor to Rangiertechnische Gesellschaft m. b. H., Hamborn, Germany, a Corporation of Germany. Filed Jan. 6, 1928, Serial No. 244,972, and in Germany Mar. 21, 1927. 1 Claim. (Cl. 246—58.)

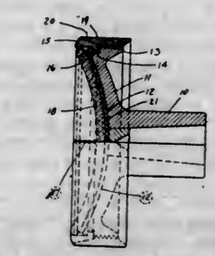
In combination, a relay comprising a winding and an armature, two series resistances connected in parallel to said relay, and a two-part insulated rail section of a permanent railway track, the two parts of the insulated rail section being connected each to one of said series resistances and adpted to be simultaneously short-circuited for an attraction of the relay armature by each two succeeding train wheel axles running over the same, one of said resistances when current-fed holding the attracted relay armature in said latter position upon the short-circuiting of one part only of said insulated rail section.

1,683,710. ENGINE-TESTING GAUGE. GEORGE ZITZMANN, New York, N. Y., assignor to Automatic Motor Control Corporation. Filed June 3, 1921. Serial No. 474,671. 22 Claims. (Cl. 73—151.)



1. In an engine tester, a housing adapted to be temporarily secured in open communication with a cylinder of an engine, a movable indicator therein, a plurality of independent members within the housing for actuating the indicator, compression actuated means for actuating one of said members, piston actuated means for actuating the other of said members, optional means to couple either of said members with the indicator.

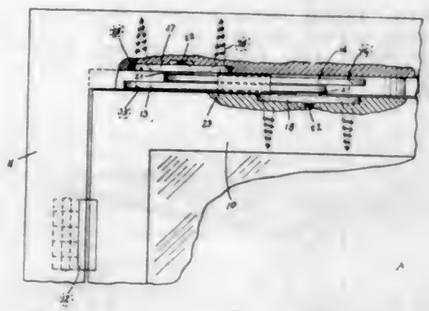
14. In an engine tester adapted for temporary securement to an engine cylinder in an offset position relative to the piston therein, an actuating rod within the tester, a contacting member adapted to be associated with said actuated rod and comprising a plurality of links adapted to freely pass through an offset aperture in the cylinder and to extend to a point in the cylinder above the engine piston, and means for rigidly locking said links in extended position.



18. An engine testing instrument comprising a member adapted for attachment in an opening of an engine cylinder, indicating means carried by the member, and operating means cooperating with the indicating means, said operating means comprising pressure actuated means and piston operated means.

1,683,711. TABLE. RAY F. BURWELL, Alexandria, Ind., assignor of forty-nine one-hundredths to Fingo Theanders, Marion, Ind. Filed May 16, 1925, Serial No. 30,719. Renewed June 25, 1928. 1 Claim. (Cl. 45—17.)

The combination of a table frame having a recess in one end bar thereof, a top on the frame comprising a middle and two side leaves, said middle leaf normally forming part of the table top and capable of being raised to form an ironing board, two pairs of links, pivoted to the side bars of the frame and to the under side of the middle leaf adjacent opposite ends of the latter, and adapted to support the middle leaf in raised position, the middle leaf having a folding extension hinged to one end thereof and foldable under said end to position in said recess and between said end and the frame.



1,683,712. HOLDER FOR OPTICAL LENSES. CHARLES C. CLARK, Indianapolis, Ind., assignor to Continental Optical Corporation, New York, N. Y., a Corporation. Filed Apr. 29, 1927. Serial No. 187,455. 2 Claims. (Cl. 51—217.)

1. A holder for optical lenses comprising an annular body adapted to receive an annular lens, said body being provided with an annular groove extending about the

periphery thereof, a clamping ring positioned about the periphery of said body in position to engage and clamp the peripheral edge of said lens and having a flange extending into said groove for retaining said clamping ring on said body, and a collar rotatably mounted on said body in position to engage said clamping ring and contract it into clamping engagement when moved in one direction and releasing it from clamping engagement when moved in the opposite direction.

1,683,713. DOORCHECK. FLOYD K. EASTMAN, Kokomo, Ind., assignor to Concealed Door Check Company, Kokomo, Ind., a Corporation. Filed Apr. 22, 1927. Serial No. 185,809. 7 Claims. (Cl. 16—85.)

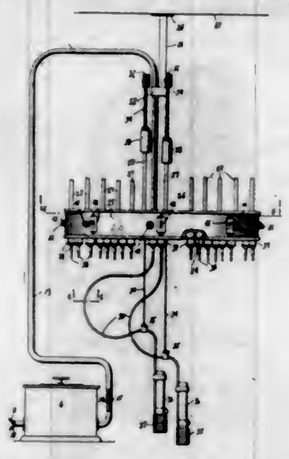
1. A door check comprising a pair of links having longitudinal slots therein, means for pivotally anchoring each of said links at one end thereof, and a slide member slidably supported by both of said links intermediate their ends for maintaining said links in alignment while permitting them to slide relative to each other.

1,683,714. PROCESS FOR THE PRODUCTION OF IRON CASTINGS WITH A LOW-CARBON CONTENT. KARL EMMEL and HANS WALBERT, Mulheim-Ruhr, Germany; said Walbert assignor to said Emmel. Filed Aug. 11, 1925, Serial No. 49,629, and in Germany Dec. 9, 1924. 2 Claims. (Cl. 75—44.)

1. A process for the production of iron castings having a low carbon content, consisting in feeding into and melting in a cupola furnace using solid fuel a charge whereof the iron portion consists of at least 50% of iron low in carbon (wrought-iron or steel) the remainder of the iron contents contained in the charge consisting of iron rich in carbon (that is, pig-iron of high total carbon and silicon content) to which total iron are added admixtures as are usually employed in the production of grey cast-iron and a quantity of coke amounting to between 9 and 13% of the total charge, and submitting the charge to a blast pressure of between 400 and 800 mms. water gauge pressure, such pressure being varied according to whether the total carbon content in the resultant product is to be nearer 2% or 3%.

1,683,715. PRESSURE DEVICE FOR FRICTION GEARS, BRAKES, COUPLINGS, AND THE LIKE. RICHARD ERBAN, Vienna, Austria. Filed Aug. 25, 1924, Serial No. 734,115, and in Austria Sept. 1, 1923. 11 Claims. (Cl. 64—89.)

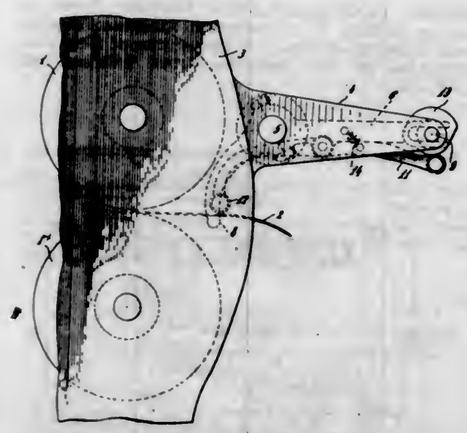
1. In a pressure device of the kind described, spaced disks facing one another, one of said disks being turnable relatively to the other disk, separate hard metal pressure plates inserted in said disks, and each having inclined surfaces, the inclined surfaces of the pressure plates of one disk facing the inclined surfaces of the pressure plates of



the opposite disk, and rolling elements arranged between the disks and each engaging the inclined surfaces of a pair of the oppositely disposed pressure plates.

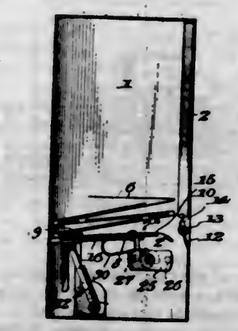
1,683,716. ANTENNA FOR RADIOTELEGRAPHY. LLOYD ESPENSCHIED, Queens, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Sept. 3, 1921. Serial No. 498,186. 11 Claims. (Cl. 250—33.)

1. A transmission line sectionalized as to high frequency currents by interposed inductances and respective detecting means to co-operate with each section to utilize it as a radio antenna.



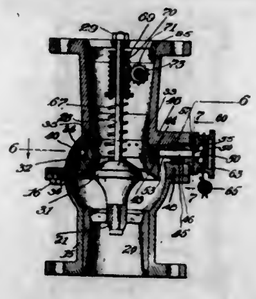
1,683,717. ELECTRICALLY-OPERATED HAIR-CURLING MACHINE. CHARLES FAYEN, Flushing, N. Y., assignor to Wappler Electric Company, Inc., a Corporation of New York. Filed Nov. 23, 1926. Serial No. 150,184. 4 Claims. (Cl. 219—24.)

1. In a device of the character described the combination of a center post, means for suspending said center post, a base plate carried by said center post and having the proximate form of a disc, an annular wall carried by a base plate and therewith forming a box like member, a pair of



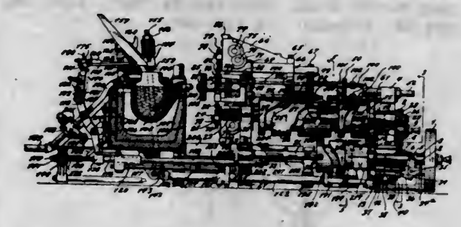
distributing discs supported upon said center posts and insulated from each other, said distributing discs being housed within said box like member, and means for energizing said distributing discs.

1,683,718. PAPER-FEEDING MEANS FOR PRINTING PRESSES. WILLIAM GROENHEIMER, Baldwin, N. Y. Filed Feb. 25, 1927. Serial No. 170,821. 2 Claims. (Cl. 101—232.)



1. In feeding devices for printing presses, a support, a lever pivotally mounted on said support and carrying a roll for engagement with one marginal surface of a sheet, a rock lever provided with a roll for engagement with the opposite face of the sheet, a spring acting upon the levers to move said rolls toward each other and a cam periodically acting upon said levers to separate the rolls, one of the rolls being held at an angle to the marginal line of the sheet.

1,683,719. MACHINE FOR DISPENSING PAPER TOWELS. EDWARD HARRALSON, Washington, D. C. Filed Feb. 2, 1927. Serial No. 165,292. 7 Claims. (Cl. 312—51.)

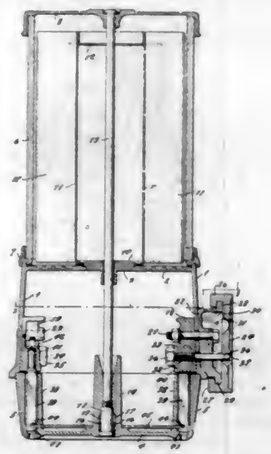


6. In a dispensing machine of the ejector type provided with a container adapted for holding a packet of articles, a horizontal member for supporting the packet in elevated position above the ejector at that side of the packet from which an article may be dispensed from the bottom part of the packet, thereby providing a free space below the packet through which the lowermost article of the packet may be shifted when being dispensed, and dispensing means operating in said free space.

1,683,720. GOVERNOR FOR INTERNAL-COMBUSTION ENGINES. DAVID L. A. LARSONNEUR, Chicago, Ill. Filed Dec. 24, 1925. Serial No. 77,655. 4 Claims. (Cl. 137—152.)

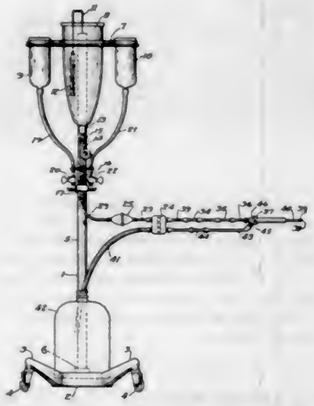
1. A governor of the kind described comprising a casing having a passage therethrough, a valve seat formed in said casing, a valve engageable with said seat to close said passage, said casing having an annular passage therein extending from a point anterior of the valve seat to a point posterior thereof, an annulus rotatably mounted on the casing for controlling the passage of fluid through said annular passage, and means for actuating said annulus.

1,683,721. DIE-CASTING MACHINE. LOUIS H. MORIN, New York, N. Y., assignor to Doehler Die-Casting Co., a Corporation of New York. Filed Aug. 14, 1924. Serial No. 731,947. 50 Claims. (Cl. 22—69.)



1. A die casting machine having, in combination, a slide to carry thereon one section of a die, a cam follower on the slide, a slide to carry thereon another section of the die, a cam follower on the latter slide, a rotary operating cam engaging with the cam follower on one of the slides, a rotary operating cam engaging with the cam follower on the other slide, and means for concomitantly rotating said cams in timed relation.

1,683,722. VENDING MACHINE. LOUIS H. MORIN, New York, N. Y., assignor to Doehler Die-Casting Co., a Corporation of New York. Filed Feb. 15, 1927. Serial No. 168,300. 19 Claims. (Cl. 312—35.)

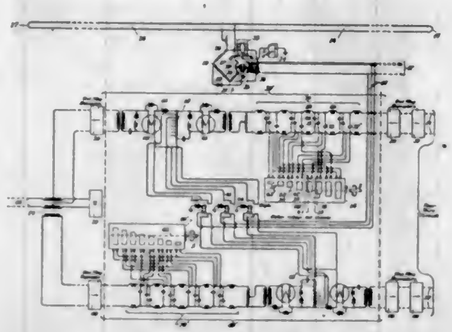


1. In a vending machine construction, the combination of a lower casing part having an enclosing side wall closed at its upper end, an openable closure for the lower end of said casing part forming a coin receptacle, a lock to prevent the unauthorized opening of said closure, a wall bracket forming a support for the casing, a bracket-engaging member fixedly carried by the side wall of said casing part to have detachable engagement with the wall bracket, manually releasable means unreleasable prior to the opening of said closure and engageable with the wall bracket to prevent the unauthorized disengagement of said member therefrom, a magazine casing part closed at its top removably supported upon and closed at its bottom

by the closed upper end of the said lower casing part, and means including a lock for separably securing the magazine casing part upon the lower casing part to provide for

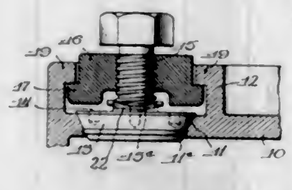
the replenishing of the magazine while the coin-receiving closure for the lower casing part remains in locked condition.

1,683,723. COLONIC MOBILE UNIT. ROBERT WILLIAM MYERS, Seattle, Wash., assignor to Vattenborg Systems Inc., Seattle, Wash. Filed Oct. 24, 1927. Serial No. 228,188. 4 Claims. (Cl. 128—227.)



4. In an irrigating unit of the class described, a plurality of containers, suitable connections from the said containers to a common tube, means for regulating the flow in the said connections, a valve member attached to the common tube, said valve member being adaptable to permit fluids to pass therethrough in both directions at the same time and also to permit the fluid in one part thereof to pass out with the fluid in the other part thereof, a colon tube connected to the opposite end of the passage to which the said common tube is attached, an applicator on the said colon tube, another tube connecting the base of the said applicator to one part of the said valve member, the other part of the said valve member having a tube leading therefrom, and a discharge container into which the said latter tube passes.

1,683,724. FLOTATION OF ORES. ADOLPHE H. NEY, New York, N. Y. Filed Dec. 27, 1926. Serial No. 157,407. 2 Claims. (Cl. 209—166.)

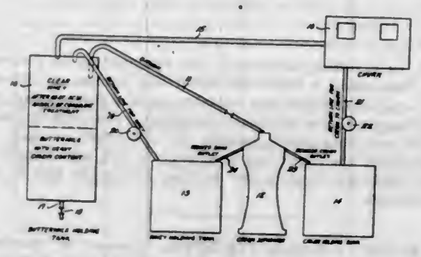


1. The method of concentrating orea by froth flotation which comprises subjecting the mineral in form of an alkaline pulp to a froth flotation operation in the presence of the products of reaction of an excess of disulfurdichloride upon aromatic amino compounds having at least one orthoposition to the amino group free or unsubstituted.

1,683,725. PHASE-REGULATING SYSTEM. HARRY NYQUIST, Millburn, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Mar. 26, 1926. Serial No. 97,795. 7 Claims. (Cl 178—44.)

5. In combination, a cable, a circuit and a pilot wire therein, an artificial network comprising shunt capacity connected to said circuit, and means operated by resistance changes in said pilot wire and controlling said shunt capacity to compensate for corresponding capacity changes in the circuit.

1,683,726. BOILER PLUG. ELWOOD K. PIERCE, Springfield, Ohio, assignor to The Cast Steel Devices Company, Lima, Ohio, a Corporation of Ohio. Filed Dec. 30, 1926. Serial No. 157,931. 2 Claims. (Cl. 220—57.)

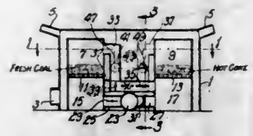


1. In a device of the character set forth an annular casing provided with a pair of oppositely disposed locking flanges and intermediate slot openings all of substantially equal circumferential length, a closure member, a locking piece, a screw threaded through said locking member for engaging said closure member, said locking piece having a pair of oppositely disposed lugs adapted to be inserted in said slot openings and rotatable into interlocking position beneath said locking flanges, and a stop formed integrally with said casing at one side of one of said slot openings limiting rotation of said locking member at substantially a quarter turn from its unlocked position, one of said locking lugs being cut away at a lower corner thereof to accommodate said stop.

1,683,727. LIQUID VALVE. WILLIAM H. ROSE, Jersey City, N. J. Filed Sept. 23, 1927. Serial No. 221,838 8 Claims. (Cl. 221—94.)

1. A resilient valve body having a longitudinal recess therein and a resiliently normally closed aperture through the side of the valve wall into said recess so positioned that a transverse movement of the valve portion below the aperture will open said aperture.

1,683,728. SEPARATION OF BUTTERFAT FROM BUTTERMILK AND BUTTERMILK WHEY. ARTHUR L. RUSHTON, Omaha, Nebr., assignor of one-half to Munson H. Lane, Washington, D. C. Filed Feb. 16, 1927. Serial No. 168,669. 1 Claim. (Cl. 99—13.)



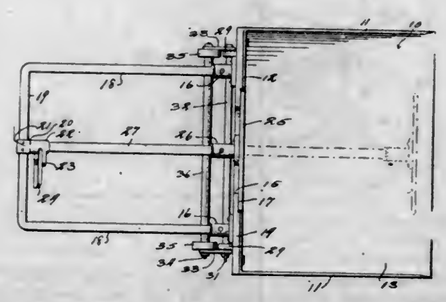
A process of separating butterfat from sour cream buttermilk by the use of a centrifugal separator, which consists in first chemically treating the buttermilk with a suitable reagent to materially reduce the clogging tendency of the casein in the buttermilk, then subjecting the treated buttermilk to centrifugal action in a cream separator for a period substantially longer than in ordinary cream separation.

1,683,729. PROCESS FOR RECOVERING BUTTER FROM BUTTERMILK. ARTHUR L. RUSHTON, Omaha, Nebr., assignor of one-half to Munson H. Lane, Washington, D. C. Filed Sept. 29, 1927. Serial No. 222,945. 4 Claims. (Cl. 99—13.)

4. A process for treating sour cream buttermilk or buttermilk whey to recover a portion of the butter fat thereof, which consists in effecting a primary separation to separate the recoverable from the non-recoverable fat portions, the primary separation consisting in passing the buttermilk or buttermilk whey through a centrifugal separator at approximately the same rate used for separating the cream from whole milk, recovering the fluid emerging from the cream outlet of the separator, then effecting a secondary separation by passing such recovered fluid through a cream separator at a substantially less rate than that employed in treating whole milk, recovering "buttermilk cream" from the cream outlet, then churning said buttermilk cream to obtain butter.

1,683,730. FURNACE. SILAS BENT RUSSELL, St. Louis, Mo. Filed May 27, 1927. Serial No. 194,694. 2 Claims. (Cl. 110—27.)

1. A furnace comprising a plurality of fire pots and means for inducing a draft through said pots alternately in series and in parallel, automatic means for changing said draft from series operation to parallel operation comprising a plurality of dampers normally subject to forces for changing their setting, control means for temporarily resisting said forces, means operable at a predetermined temperature for releasing said control means so that it does

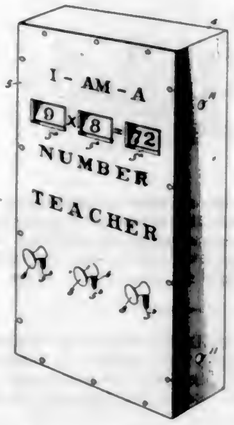


not resist said forces, whereby said forces actuate said dampers to change the damper setting to provide parallel operation, and manual means for resetting the dampers to provide series operation and for simultaneously re-applying said forces and said resisting control means.

1,683,731. METHOD OF TREATING SULPHUR. JAMES W. SCHWAB, Gulf, Tex., assignor to Texas Gulf Sulphur Company, Bay City, Tex., a Corporation of Texas. Filed Dec. 27, 1926. Serial No. 157,423. 10 Claims. (Cl. 23—229.)

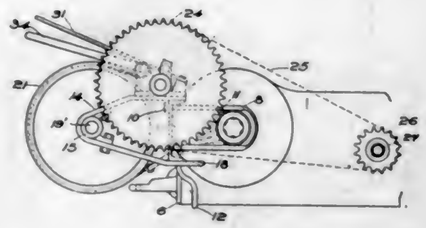
1. The method of improving the color of abnormally colored sulphur which comprises treating the sulphur in a molten condition with finely divided activated carbon, and separating the molten sulphur from the activated carbon, and thereby obtaining sulphur of a color substantially approximating the characteristic normal yellow color.

1,683,732. SNOW AND STREET CLEANING SHOVEL. CHARLES H. SELIN, Brooklyn, N. Y. Filed Nov. 26, 1927. Serial No. 235,936. 7 Claims. (Cl. 37—130.)



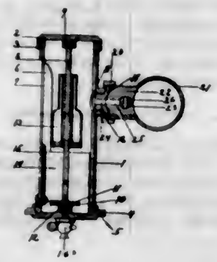
2. A shovel including a scoop portion having a back, the back being cut out at the middle, a pusher plate forming part of the rear wall of the scoop portion, a handle extending upward and rearward from the shovel, and a handle for said pusher.

1,683,733. EDUCATIONAL DEVICE. FRANK JUDSON SEWALL, Columbiana, Ohio. Filed Mar. 1, 1928. Serial No. 258,420. 3 Claims. (Cl. 35—2.)



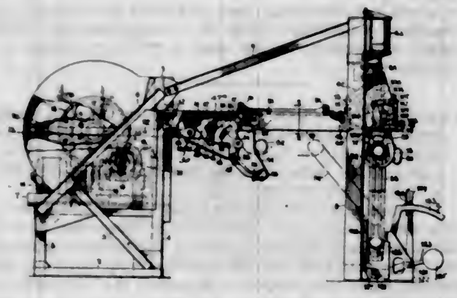
1. A teaching device comprising a container having a side formed with window-openings and bearing indicia including mathematical symbols between said openings; idling rollers in opposite ends of the container; an endless travelling-member supported on said rollers and embodying a plurality of slats hinged together and bearing indicia visible through said openings as they are moved opposite thereto; and slides movably disposed between said openings and said travelling-member, having openings near their upper ends

registerable with the aforesaid openings in the container side when in raised position and flanges at their lower ends providing pawl-like portions engageable with parts of the



traveling member during sliding movement in one direction for advancing said member a predetermined extent over said rollers.

1,683,734. AUTOMOTIVE HOISTING ENGINE. CHARLES H. SHEARLEY, Franklin, Pa. Filed Mar. 16, 1923, Serial No. 625,439. Renewed Nov. 4, 1925. 11 Claims. (Cl. 254—166.)

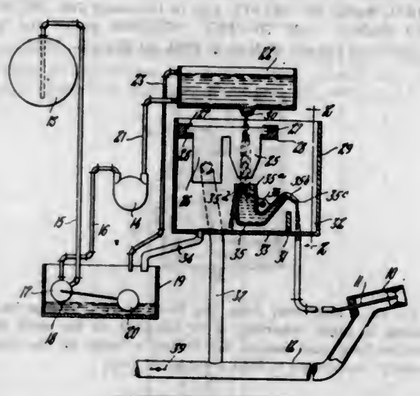


1. In an automotive hoisting engine which includes a hoisting drum, driving gearing for said drum arranged to be rendered operative or inoperative at will, also a brake arranged to be rendered operative when said driving gear is inoperative, a transporting means for said drum consisting of an automotive organization having a main frame which includes axle housings and a power takeoff for the purpose of operating extraneous machinery; the combination with the foregoing of a mounting structure for said drum, gearing and brake comprising in combination, a carrying member for the bearing supports of said hoisting drum consisting of a unitary element positioned to the rear of said frame, disposed in parallel relation to said axle housings and supported vertically by contact with a portion of said frame and having engagement with vertically-disposed faces thereof whereby a movement of said element transversely to said frame, also a vertical tilting movement of said element are prevented, U-bolts passing around the respective axle housings and having threaded ends passing through the adjacent end of said carrying member, nuts cooperating with said threaded ends and bearing upon the rear faces of said member whereby the same is secured in said contact and engagement with said frame, means preventing the flexure of said carrying member by the stress exerted thereon by said nuts, drum supports carried by said carrying member, and bearings for the respective shafts of said drum and said gearing carried by said drum supports.

1,683,735. HYDROMETER CHAMBER. GEORGE A. SMITH, Baltimore, Md. Filed July 2, 1923. Serial No. 649,090. 3 Claims. (Cl. 265—46.)

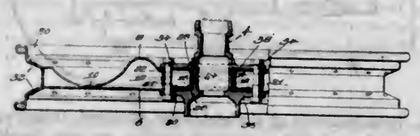
1. In a testing implement, the combination of a chamber comprising a removable cover and bottom, a hydrometer movable within the chamber, means for guiding the hydrometer in the chamber comprising a centrally disposed guide rod detachably secured to said cover, a shelf or support at the lower end of said guide rod, and means on the removable bottom for holding the guide rod at its lower end.

1,683,736. AIR-BAG STRIPPER. ROBERT W. SNYDER, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 28, 1925. Serial No. 33,454. 40 Claims. (Cl. 18—2.)



1. A machine operable in cycles comprising supporting means for a tire casing having a flexible core therein and a mechanism actuated by the machine during each cycle of operation to engage and to remove bodily the core from the tire casing.

1,683,737. AIR-GOVERNED DESTINATION CONTROL FOR LIQUIDS. CECIL W. STANCLIFFE, Stamford, Conn., assignor to Valveless Oil Burner Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 26, 1925. Serial No. 52,712. 7 Claims. (Cl. 137—78.)

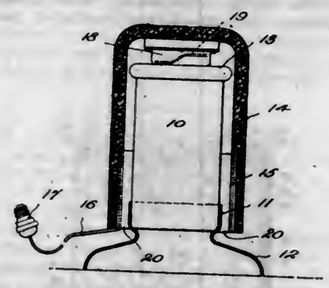


1. The combination with liquid conducting means providing separated paths and a partition between said

paths, of a container for liquid at a higher elevation than said partition and having an outlet, a switch device intermediate said outlet and said partition and being mov-

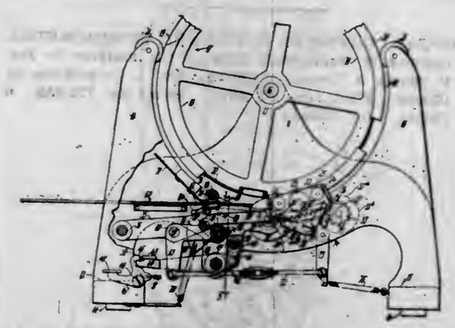
able to guide liquid from the outlet to either of said paths, and means for applying the force of air pressure to said switch device for shifting it from one position to another.

1,683,738. DISK WHEEL AND METHOD OF MAKING THE SAME. ARTHUR M. STANLEY, Lynn, Mass., assignor to Stanley Steel Welded Wheel Corporation, Boston, Mass., a Corporation of Delaware. Filed Oct. 3, 1925. Serial No. 60,266. 7 Claims. (Cl. 301—63.)



1. An automobile wheel comprising two disks secured together between the periphery and the center, an annular bracing member secured to one of the disks to maintain the disks in spaced relationship at the center, and securing means at the center of the disks.

1,683,739. DIRECTIVE ANTENNA ARRAY. JOHN STONE STONE, San Diego, Calif., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Nov. 2, 1921. Serial No. 512,271. 31 Claims. (Cl. 250—11.)

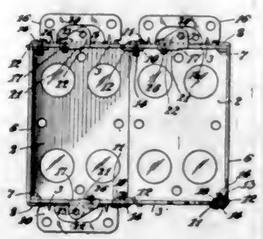


3. In radio signaling, a plurality of primary vertical oscillators each constituting an antenna, said oscillators being arranged vertically above one another, and means to excite said oscillators in determinate amplitude and phase relation with one another.

1,683,740. ELECTRICAL HEATER. WALTER K. TAVENDER, Haworth, N. J., assignor to Idale Hadley. Filed Jan. 18, 1927. Serial No. 161,735. 3 Claims. (Cl. 219—43.)

1. Means for safely heating a liquid comprising a container for the liquid, a cover thereon, a heater having a casing fitting loosely over said container and having electrical heating coils, and a thermostatic governor within said casing in circuit with said coils adapted to rest upon the cover of the container to support the heater.

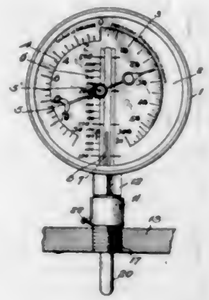
1,683,741. STENCILING MACHINE. LINDEN A. THATCHER, Belleville, N. J., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 5, 1927. Serial No. 172,975. 48 Claims. (Cl. 101—118.)



1. In a stenciling machine, the combination with a rotatable stencil-carrying cylinder having a platen-roller always in rolling engagement therewith to establish a stencil-feeding position for a work-sheet, of sheet-feeding mechanism normally disconnected from the cylinder but connectible with the cylinder, during the initial rotation thereof, to rotate in a stenciling direction and feed the work-sheet to the stencil-feeding position of the cylinder.

25. In a stenciling machine including a stenciling cylinder having a free rotary movement between a normal stop-position and a stenciling stop-position, the combination of supplemental feeding mechanism operative to advance a work-sheet to the stenciling position, and mechanism carried by the sheet-feeding mechanism and operatively controlled by the feeding of the work-sheet to vibrate a stencil-preventing stop and release the cylinder for a full stenciling rotation.

1,683,742. OUTLET-BOX CONSTRUCTION. GEORGE C. THOMAS, Jr., Elizabeth, N. J., assignor to The Thomas & Betts Co., Elizabeth, N. J., a Corporation of New Jersey. Filed Apr. 4, 1924. Serial No. 704,101. 7 Claims. (Cl. 247—16.)

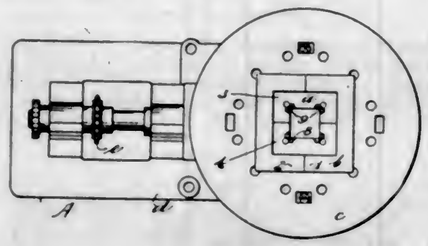


1. In outlet box construction, in combination, a plurality of similar body sections having side wall portions pro-

vided adjacent each side edge with similar claw-receiving perforations, similar end plates having claws at one side edge and having claw-receiving perforations at the opposite side edge, said claws fitting the adjacent perforations in a body section, similar clips having claws at each end fitting selectively the adjacent perforations of two abut-

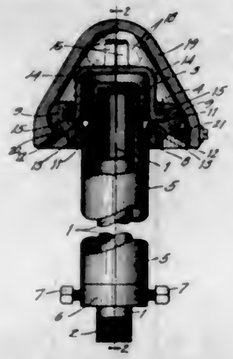
ting body section ends or the adjacent perforations of one body section and an abutting end plate, whereby two body sections or a body section and an end plate may be secured together, and means preventing the claws of an end plate from leaving the apertures in the body section when the end plate is secured to a body section by means of a clip.

1,683,743. COMBINED GAUGE AND THERMOMETER. ORVILLE W. THOMPSON, Chicago, Ill., assignor to Jas. P. Marsh & Company, Chicago, Ill., a Corporation of Illinois. Filed June 26, 1924. Serial No. 722,555. 6 Claims. (Cl. 73—52.)



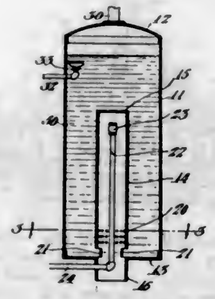
1. In a device of the class described, the combination of a temperature thermometer and gauge combined in a single instrument case having a threaded extended fitting enclosing the thermometer bulb, and an attachment for securing both to a boiler through a single threaded opening, the gauge being in communication through the attachment with the interior of the boiler, said attachment being constructed to permit the insertion of the encased bulb of the temperature thermometer in direct contact with the contents of the boiler simultaneously with the operative attachment of the threaded gauge fitting thereto without disassociation of the thermometer from the gauge construction, and means for preventing the escape of the contents of the boiler upon the removal of the gauge from the attachment.

1,683,744. UNIVERSAL LOCK. FRIEDRICH CARL VOM BAUCK, Dusseldorf, Germany, assignor, by mesne assignments, to the Firm Stanley Works Gesellschaft mit beschränkter Haftung, Velbert, Germany. Filed Sept. 1, 1921, Serial No. 497,811, and in Germany Jan. 28, 1910. 10 Claims. (Cl. 70—16.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)



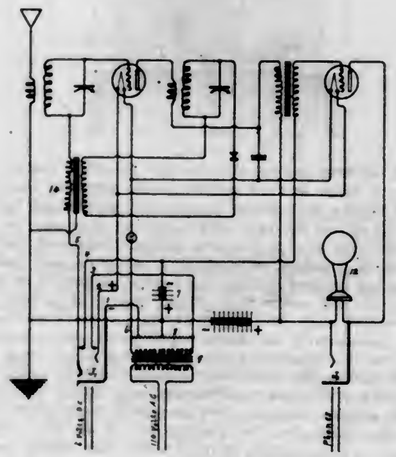
10. In a universal lock, the combination with a casing having a plate whereby it is adapted to be used as a mortise lock, and means for fitting a ledge to the casing thereby converting it into a rabbeted lock.

1,683,745. OIL-WELL APPARATUS. GEORGE D. WATSON, Torrance, Calif. Filed Jan. 11, 1926. Serial No. 80,662. 2 Claims. (Cl. 308—3.)



1. Improvements of the character disclosed, including a bushing formed with a squared opening, an inset received within said squared opening and at a corner portion thereof, and means for maintaining said inset to said bushing, comprising a lug member carried by the inset and bent over one end of the bushing.

1,683,746. PIPE SEAL. ARTHUR SHELDON WELDY, Canton, Ohio. Filed Sept. 3, 1926. Serial No. 133,454. 15 Claims. (Cl. 220—86.)

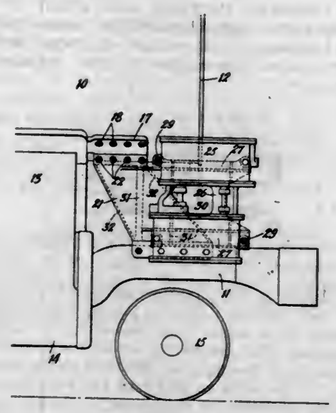


1. A device of the character described comprising a flanged pipe, a second pipe within and independent of said flanged pipe, a sealing cap on said inner pipe, a covering means coacting with said flanged pipe for preventing access to said cap, and means for locking said covering means in engagement with the flanged pipe.

1,683,747. EXHAUST-GAS WATER HEATER. LAWRENCE N. WHEELER, Monrovia, Calif. Filed Aug. 30, 1921. Serial No. 496,823. 5 Claims. (Cl. 261—121.)

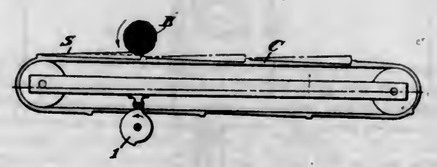
1. In an engine having a water tank; a casing, closed at its upper end, extending upwardly into said tank adapted to be entirely surrounded by the water in said tank and forming a gas chamber; said casing having water outlet openings therein near the bottom of the tank and having also gas outlet perforations above said water outlet openings; a water inlet connection at the lower end of said casing, in free communication with a water jacket on said engine; an exhaust gas inlet pipe extending from said engine to said gas chamber; and a check valve in said pipe; the upper end of said tank having a gas outlet and a water outlet at different levels.

1,683,748. RADIO EQUIPMENT. ALFRED ERNEST WHITE, Pasadena, Calif. Filed Jan. 28, 1926. Serial No. 84,520. 1 Claim. (Cl. 250—27.)



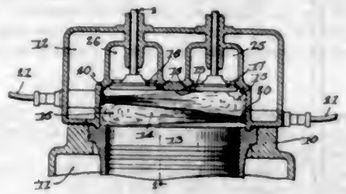
In a radio receiving circuit comprising one or more vacuum tubes having filaments adapted to be energized from either an alternating or a direct current source and grid electrodes, means for applying alternating current to said filaments comprising a transformer the secondary of which is shunted by a potentiometer, means for connecting said grid electrodes to a point on said potentiometer, a multi-contact jack connected between the filaments and the transformer, a plug adapted to be inserted in said jack connected to a direct current source for opening the circuit between the filaments and the transformer and for connecting the grid electrodes to the negative pole of the direct current source when the plug is inserted in the jack.

1,683,749. ALLOY. SEWELL E. WINSLOW, Bridgeport, Conn., assignor, by mesne assignments, to Consolidated Ashcroft Hancock Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 4, 1924. Serial No. 696,825. 7 Claims. (Cl. 75—1.)



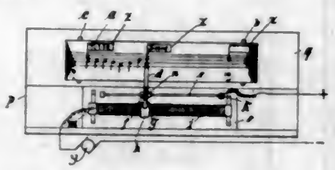
1. An alloy or composition of metals, composed substantially of nickel, copper and tin, the nickel and copper in approximately the atomic proportions of ten to four and tin in an atomic proportion not greater than one.

1,683,750. LOCOMOTIVE. WILLIAM E. WOODARD, Forest Hills, N. Y. Filed Mar. 14, 1927. Serial No. 175,387. 9 Claims. (Cl. 105—44.)



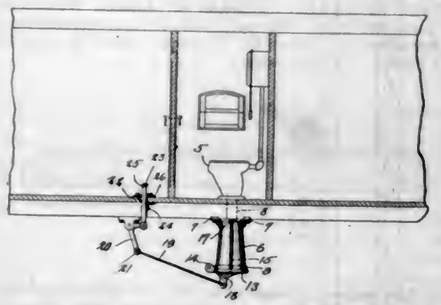
1. In a locomotive having a frame and a smokebox, a combined auxiliary appliance support and bracing member between the smokebox and front extension of the frame.

1,683,751. METHOD OF MAKING IMITATION HAND-RIFT SHINGLES. CHARLES M. ABBOTT, Watertown, Mass., assignor to Samuel Cabot, Inc., a Corporation of Massachusetts. Filed Oct. 11, 1926. Serial No. 140,775. 7 Claims. (Cl. 144—309.)



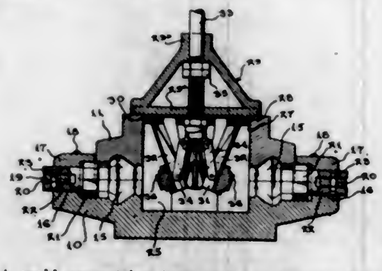
1. The method of making an imitation hand rift shingle consisting in quarter-sawing the shingle blank from the wood of a conifer and in removing a portion of the softer layers of the wood while leaving exposed the harder intermediate layers in relief.

1,683,752. OIL ENGINE. OTTO A. BANNER, Milwaukee, Wis., assignor to The Falk Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Feb. 16, 1925. Serial No. 9,711. 7 Claims. (Cl. 123—22.)



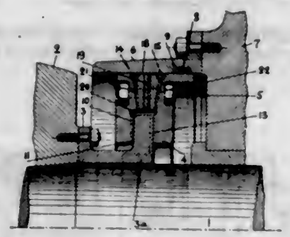
1. In an oil engine an engine cylinder having an elongated transversely extending compression chamber therein shaped to provide relatively wide air pockets at the opposite ends thereof, and a plurality of fuel injection nozzles at the opposite end of said chamber, each nozzle being so disposed as to project a fuel spray thru said chamber into one of said pockets at the far end thereof.

1,683,753. APPARATUS FOR OBTAINING SYNCHRONISM BETWEEN PICTURE AND MUSIC IN CINEMATOGRAPHIC PERFORMANCES. ADOLF BEENEKEN, Berlin, Germany. Filed June 3, 1924, Serial No. 717,637, and in Germany Mar. 8, 1923. 6 Claims. (Cl. 88—16.2.)



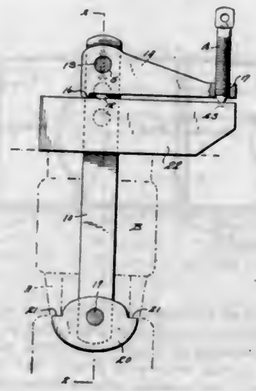
1. In apparatus for obtaining synchronism between the pictures and music in animated picture performances, the combination of a music tape travelling in synchronism with a picture film and having musical notation running longitudinally of the tape, an indicator finger mounted in proximity to the notes on said tape and for adjustment in the reading direction of said notes, a driving motor for said picture film, and means for controlling the speed of said motor controlled by the adjustment of said finger.

1,683,754. AUXILIARY CONTAINER FOR TOILETS. WILLIAM M. BELL, Portsmouth, Ohio. Filed Jan. 30, 1928. Serial No. 250,585. 1 Claim. (Cl. 4—8.)



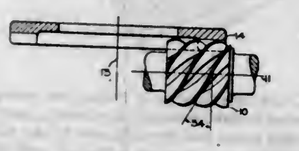
In a device of the character described a body portion, brackets for securing the body portion to a supporting structure under the discharge pipe of a toilet, said brackets adapted to support the upper end of the body portion in spaced relation with the supporting structure, a closure for closing one end of the body portion, and means for moving the closure to its open position.

1,683,755. GLASS MOLD. FRANK M. BIGELOW, Jeannette, Pa. Filed July 25, 1927. Serial No. 208,298. 8 Claims. (Cl. 49—35.)



3. A mold comprising base and cap sections jointly in which a plurality of glass reciving cavities are formed of the shape of articles to be cast, the mold having a glass receptacle in communication with said cavities and opening through the cap section, a filler plunger insertable through the cap section for ejecting the glas into said cavities, and a finishing plunger for insertion into the receptacle after the withdrawal of the filler plunger, the former having a plurality of feet corresponding in number to the number of cavities and said feet being movable toward and away from the openings of communication between the cavities and the receptacle.

1,683,756. STUFFING BOX FOR PROPELLER SHAFTS. HANS HENRIK BLACHE, Hellerup, near Copenhagen, Denmark. Filed May 18, 1926, Serial No. 109,938, and in Denmark June 10, 1925. 3 Claims. (Cl. 286—7.)

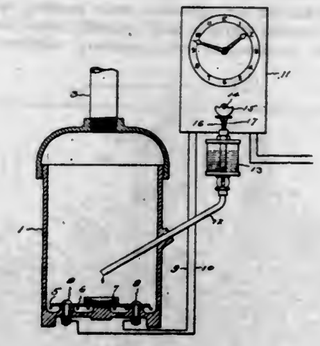


1. A stuffing box constructed for propeller shafts including a flange in fixed relation to the propeller shaft, a casing having an annular groove into which said flange rotatably fits, a hollow member adapted to be secured to the stern of a ship, said casing fitting within said hollow member as a piston, interengaging means on said casing and hollow member limiting the relative movement of said casing to said member to slight movement axially of the propeller shaft so that said casing may move with said flange responsively to length variation of said propeller shaft due to temperature changes, spring piston rings inlaid in the circumference of the casing near its ends, for maintaining a sealed joint betwen said casing and said hollow member, said spring piston rings being lubricated from the bottom of the annular groove of the casing, through interconnecting drilled holes, said casing being pressed continuously into sealing contact with the rear face of said flange under fluid pressure of the water in which the stern of the ship is immersed, and said casing and the rear face of said flange being formed peripherally of said casing with annular coacting, plane, continuous sealing surfaces, constituting a water-tight joint.

1,683,757. VALVE-SEAT PULLER. WALTER BRAUER, Seminole, Okla. Filed Nov. 1, 1927. Serial No. 230,363. 9 Claims. (Cl. 29—88.2.)

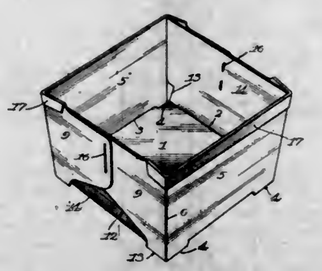
1. A valve seat puller comprising a cross bar adapted to be disposed across the mouth of a valve chamber, links disposed on each side of the cross bar, a lever to which the upper ends of the links are attached, a valve seat engaging member pivotally mounted upon the lower ends of the links and carried thereby, and means disposed at the end of the lever remote from the links engageable with one end of the cross bar to force the opposite end of the lever downward in fulcruming engagement with the cross bar to thereby lift upward on the links.

1,683,758. GEAR. ALLAN H. CANDEE and ERNEST WILDHABER, Rochester, N. Y., assignors to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed July 1, 1925. Serial No. 40,791. 14 Claims. (Cl. 74—41.)



1. A pair of gears consisting of a cylindrical worm and a crown gear, provided with curved teeth which extend to the outer periphery of said gear, said gear having teeth of opposite hand as compared to the thread of the worm, the spiral angle of said gear teeth being less than the spiral angle of the worm thread.

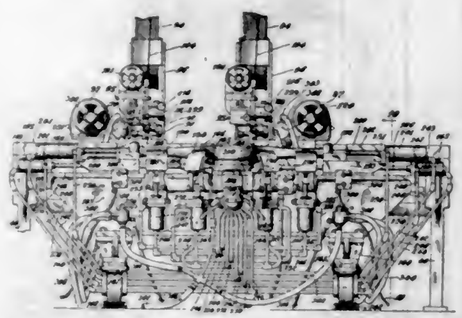
1,683,759. FABRIC AND METHOD OF TREATING SAME. CLARENCE M. CARSON, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Nov. 20, 1926. Serial No. 149,796. 1 Claim. (Cl. 91—68.)



A method of treating fabrics for breather bags which comprises applying to the fabric a gas-tight coating of proteinous material containing a softening agent, partially drying the coating, stretching the fabric upon a frame, applying a tanning solution thereto and completing the process of drying.

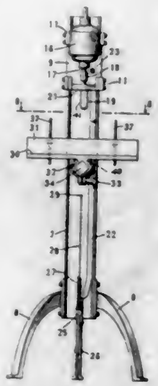
1,683,760. ADVERTISING APPARATUS. GEORGE H. CONNERS, Hartford, Conn. Filed Dec. 13, 1927. Serial No. 239,674. 5 Claims. (Cl. 40—126.)

1. An apparatus for use in connection with advertising signs which comprises a chamber having an outlet adapted to open through the sign, electrically heated means in said chamber, an oil receptacle with its discharge leading into the chamber above said electrically heated means, and a time switch, said time switch having means which coincidently controls an electric circuit that includes the electrically heated means within the chamber and the discharge from the oil receptacle.



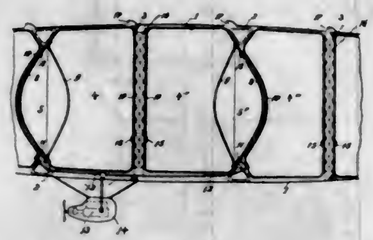
1,683,761. BERRY BASKET OR BOX. EDWARD CRAIG, St. Joseph, Mich., assignor to Saranac Automatic Machine Corporation, Benton Harbor, Mich., a Corporation of Delaware. Filed Jan. 4, 1926. Serial No. 79,104. 4 Claims. (Cl. 229—32.)

1. A receptacle for fruit or other commodities, comprising the one-piece unbroken bottom wall and the side walls of sheet material, formed from a single foldable blank providing when folded a foot for each corner of the single thickness bottom of the receptacle, each foot formed half by material cut away from the bottom and half by material cut away from a side wall, each foot comprising an edge at one side of the receptacle and an edge at the adjacent side of the receptacle, the two edges being joined to each other at an angle, whereby each foot extends a distance at each side of each corner of the receptacle.



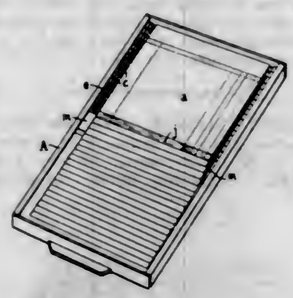
1,683,762. WORK HOLDER FOR WELDING. WALTER H. D'ARDENNE, Lawndale, J. OLIN LANDIS, Fox Chase, and LEWIS H. CHRISTENSEN, Philadelphia, Pa., assignors to Heintz Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 12, 1925. Serial No. 55,934. 11 Claims. (Cl. 219—17.)

2. In a jig for an unwelded axle housing having a bowed-out central portion and opposite arms and comprising two longitudinal complementary sections, and a



bearing tube in each housing arm, plungers engageable within the inner and outer ends of said bearing tubes, when said housing is on the jig, whereby said tubes are placed and held in accurate alignment.

1,683,763. DRILL OR MORTISING MACHINE. RAYMOND E. DE WALT, Leola, Pa. Filed Sept. 17, 1925. Serial No. 56,823. 10 Claims. (Cl. 144—78.)

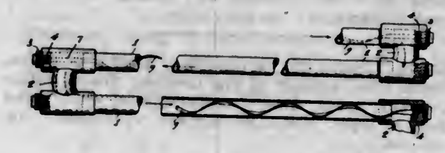


1. In a machine of the character disclosed, a frame comprising an upright I-beam structure, a carriage vertically slidable over the front flanges of said I-beam and having guide rollers riding over the rearward flanges of the I-beam, a drill head on said carriage, a stud projecting forwardly from the web of the I-beam beneath said drill head, a work table variously adjustable on said supporting stud and connections for operating the drill head carriage.

1,683,764. GAS-INFLATED AIRSHIP. WILHELM E. DÖRR, Uberlingen, Germany, assignor to Luftschiffbau Zeppelin Gesellschaft mit beschränkter Haftung, Friedrichshafen, Germany. Filed July 1, 1927, Serial No. 202,852, and in Germany July 15, 1926. 3 Claims. (Cl. 244—3.)

2. A gas cell of substantially cylindrical shape, adapted to be inserted into the hull of a rigid airship, one end wall of said cell composed of a relatively great amount of normally slack material and being double, the space between said double end walls when inflated forming a gas space of lentil-like shape.

1,683,765. HORIZONTAL-CARD SYSTEM. VÁCLAV DUSPIVA, Prague, Czechoslovakia. Filed Aug. 3, 1925, Serial No. 47,924, and in Austria and Germany Aug. 3, 1925. 6 Claims. (Cl. 129—16.)

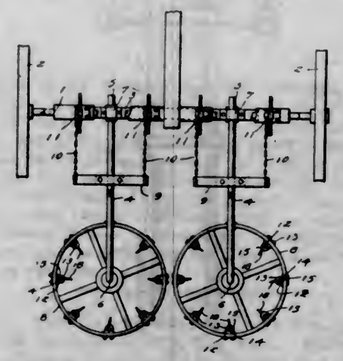


1. In a card index system, a frame, two series of interengaging spacer-blocks removably mounted in said frame, said blocks having bores and two adjacent blocks having corresponding convex and concave adjacent end faces, and a series of card-supporting members each rotatably mounted in the bores of two said spacer blocks, substantially as described.

2. In a card index system, a frame, a series of card-supporting members removably mounted in said frame, a series of cards detachably secured to said card-supporting members, each card-supporting member being provided with two forks for clamping a card, said forks comprising two prongs and a stem, and said cards having cut-out lateral notches to enable the cards to be slipped between the prongs and held by one of them on each fork against removal from the rod, substantially as described.

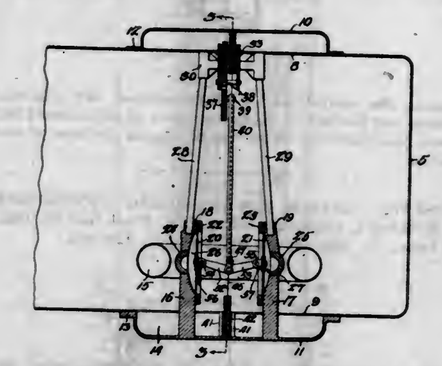
4. In a card index system; a frame; a series of card-supporting members removably mounted in said frame; a series of cards secured to said card-supporting members; and a series of protectors for said cards, each protector having two parallel members and sockets formed at the ends of one of the parallel members by inwardly and downwardly turned flaps, each card having at its corresponding ends lateral tongues engaging said sockets, substantially as described.

1,683,766. APPARATUS FOR CRACKING OIL. GUSTAV EGLOFF, Chicago, Ill., and WILLIAM R. HOWARD, Washington, D. C., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Mar. 23, 1921, Serial No. 454,880. Renewed July 3, 1926. 2 Claims. (Cl. 196—110.)



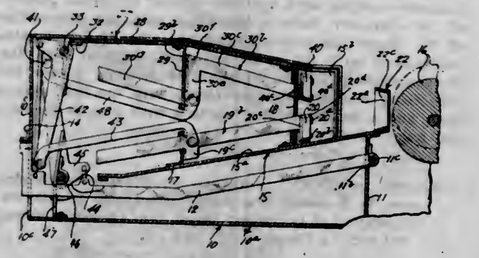
2. In an apparatus for cracking oil, the combination with a tubular conduit, through which the oil is adapted to be passed and wherein it is subjected to heat, of a thrust bearing adjacent the discharge end of the conduit, and an agitator member extending longitudinally of said conduit, having one end thereof engaging said thrust bearing and so constructed that oil, passing through the conduit, will cause a rotary movement of said agitator member and prevent deposition of carbon in said conduit.

1,683,767. PROCESS OF TREATING OILS. GUSTAV EGLOFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Mar. 24, 1924, Serial No. 701,585. Renewed Feb. 20, 1928. 2 Claims. (Cl. 233—14.)



1. A process for treating residual hydrocarbon oil containing coke-like particles formed during a cracking reaction in suspension, to separate from the oil such coke-like particles as will not normally precipitate from the oil when maintained in a quiescent state, consisting in subjecting residual hydrocarbon oil withdrawn from a concurrent cracking operation to centrifugal action, causing the suspension to be broken and the coke-forming particles to be precipitated, in reducing the viscosity of the residual hydrocarbon oil before treatment by mixing with the same a hydrocarbon of lower boiling point, and in maintaining the temperature of the residual hydrocarbon oil undergoing treatment below 200° F.

1,683,768. COTTON CHOPPER. JOHN H. ETHERIDGE, Taft, Tex., assignor of one-half to Leland A. Cage, Taft, Tex. Filed Sept. 29, 1927. Serial No. 222,877. 4 Claims. (Cl. 97—17.)

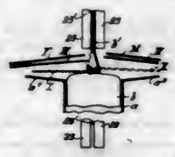


2. A cotton chopper attachment comprising a spacing bar adapted to be connected with a movable frame, beams pivoted upon the bar for rocking movement longitudinally thereof, said beams being spaced from each other, wheels journaled upon the beams and disposed in substantially horizontal planes below the spacing bar, teeth carried by the wheels and means mounted upon the frame for rocking beams.

1,683,769. OPERATING MEANS FOR LIQUID-LEVEL INDICATORS. THOMAS M. EYNON, Philadelphia, Pa. Filed Mar. 19, 1921. Serial No. 453,840. 10 Claims. (Cl. 73—82.)

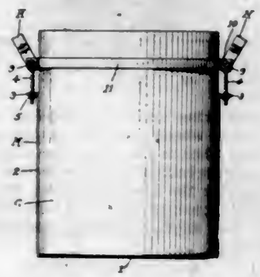
1. In an indicating device for gasoline tanks, a tank, two pairs of guide wheels, one of each pair mounted in the bottom and the other in the top of the tank, supports for the wheels, separate belts about the wheels of the two pairs, a float surrounding the belts, connection from the float to each of the belts, gearing connected with the upper wheel of each pair and depth-indicating mechanism operating from said gearing.

1,683,770. TYPEWRITER CONSTRUCTION. FRITZ RUDOLPH FRIEDRICH, New York, N. Y. Filed Apr. 24, 1924. Serial No. 708,609. 7 Claims. (Cl. 197—25.)



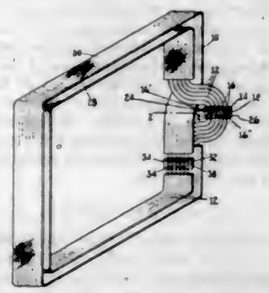
1. In typewriter construction, in combination, a plurality of type bars, means for supporting movably said type bars in two vertically displaced banks and adapted to permit movement of each type bar to a common printing point, the path of movement of the type bars of the upper bank being inclined to the path of movement of the type bars of the lower bank, and a type head at the end of each type bar, each type head on a type bar of one bank having a tapered inclined portion facing toward the type head of a type bar in the other bank, thereby to facilitate by-passing of one type head by the other.

1,683,771. CLOSING BAG. PAUL GANGLER, Esslingen, Germany, assignor to the Firm: Fr. Hesser Maschinenfabrik-Aktiengesellschaft, Stuttgart-Cannstatt, Germany. Filed Oct. 6, 1923, Serial No. 666,986, and in Germany Oct. 12, 1922. 1 Claim. (Cl. 93—6.)



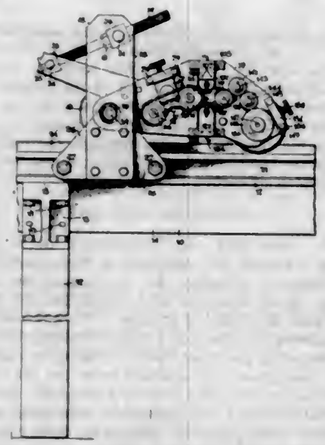
The method of closing packages which consist of an inner bag, contents and a carton, comprising flattening the empty end of the inner bag which projects from the carton

by spreading said end, folding it zigzag fashion by creasing it from opposite sides at superposed levels, beginning from the level of said contents and continuing upwardly,



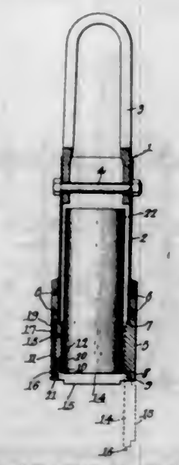
forcing the central portion of the creased end into said carton and folding the lateral portions of said creased end down upon said central portion by closing the flaps of said carton.

1,683,772. DEVICE FOR HANDLING CONTAINERS. WILLIAM L. GIBSON, Camden, N. J. Filed June 30, 1927. Serial No. 202,639. 2 Claims. (Cl. 220—85.)



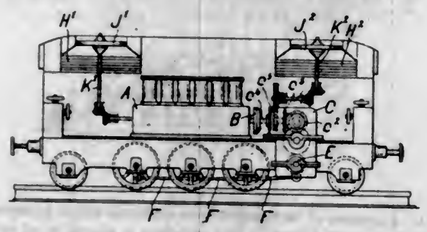
1. A device for handling containers comprising a member adapted to straddle a container from below, clamp members coacting with opposite sides of the upper portion of the container, bolts co-operating with the extremities of the clamp members to bring the same into requisite engagement with the container, bolts engaged with the free extremities of the first named member, means for connecting said second named bolts with the first named bolts, and a handle member engaged with each of the second named bolts.

1,683,773. ANTENNA. ALFRED N. GOLDSMITH, Mount Vernon, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Jan. 11, 1923. Serial No. 611,942. 4 Claims. (Cl. 250—33.)



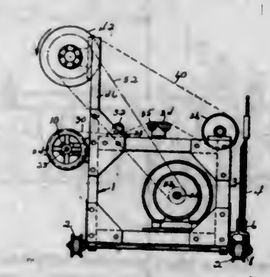
4. In a device of the class described, a strip of flexible material, wires arranged in substantially parallel relation along the strip, a molding arranged around one of the walls of a room for supporting the strip within the room, a terminal block mounted on an adjacent wall of the room and comprising contacts with which the ends of the wires may be connected, connections between the contacts of the terminal block arranged to join the wires into a continuous coil, an input wire leading to one of the contacts of the terminal block, and an output wire leading from another of such contacts.

1,683,774. PRINTING MACHINE. JORGEN I. HAASE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 3, 1926. Serial No. 126,819. 8 Claims. (Cl. 101—35.)



1. A printing machine comprising a support, a carriage movably mounted thereon, a frame pivotally connected to the carriage, a complete printing unit carried by the frame, and means for supporting the unit in adjusted operative positions.

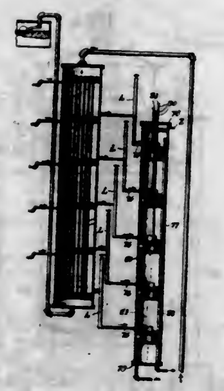
1,683,775. TOOL. RALPH IRWIN HENDERSON, Charleston, W. Va. Filed Jan. 3, 1928. Serial No. 244,235. 2 Claims. (Cl. 86—21.)



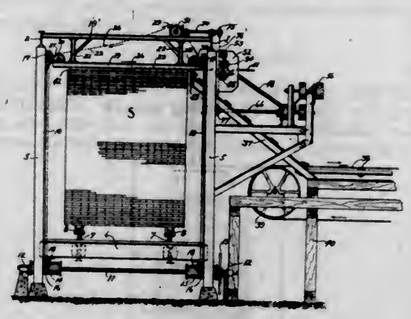
1. In a device of the class described, a receptacle, a pivoted retainer extended across the receptacle, a latch mounted movably on the receptacle, interengaging parts on the latch and on the retainer, the retainer being upwardly movable to disengage said interengaging parts when the retainer rests on an object, and spring means for moving the latch to hold said interengaging parts clear of each other, after they have been disengaged as aforesaid.

1,683,776. POWER-DRIVEN VEHICLE. HEINRICH HEERMANN, Essen, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed July 13, 1927. Serial No. 205,522, and in Germany July 14, 1926. 6 Claims. (Cl. 105—62.)

1. In a power-driven wheeled vehicle, an artificially cooled driving engine, a disengageable coupling between said engine and the driven axles of the vehicle, means for re-cooling the cooling agent used, said means comprising a plurality of fans, part of which is adapted to be driven from said engine and part to be driven from said axles of the vehicle.



1,683,777. FABRIC HANDLING. DANIEL E. HENNESSY, Akron, Ohio, assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Apr. 22, 1925. Serial No. 25,166. 1 Claim. Cl. 242—55.)

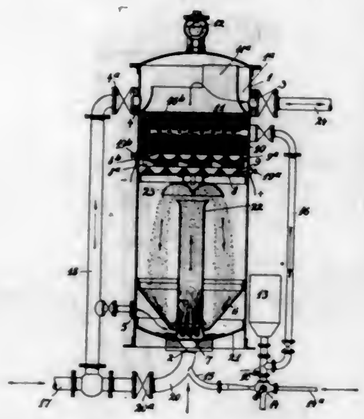


A device of the character described comprising a liner supply drum, a liner receiving drum, means for driving the latter and means, including tension applying means associated with the supply drum and a freely rotatable roll positioned in the path of travel of the liner, to form the span of the liner between said roll and the receiving drum into a substantially uniformly tensioned taut fabric receiving table having sufficient rigidity to support the fabric received thereon in the absence of other supporting means, the table so formed having a freely accessible edge defined by said roll.

1,683,778. DISTILLATE DISTRIBUTOR FOR HYDROCARBON DISTILLATION SYSTEMS. FRANCIS M. HESS, Chicago, Ill. Original application filed Apr. 29, 1922, Serial No. 557,421. Divided and this application filed Nov. 22, 1926. Serial No. 149,915. 8 Claims. (Cl. 137—78.)

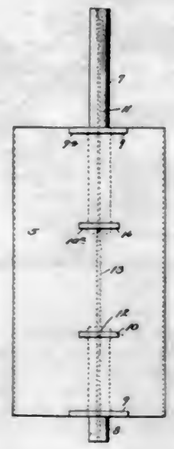
1. A distributor for routing fractional distillates, comprising a circularly grouped series of vertical discharge pipes each provided with a plurality of vertically spaced lateral branches, corresponding branches of the several pipes being located in the same horizontal planes, funnels rotatably mounted above and coaxially with the several horizontal groups of branches, respectively, and each having a discharge nozzle adapted to be brought into register, by a turning movement of said funnel, with any branch of its associated group, a corresponding series of delivery pipes for the material to be distributed having their discharge ends overhanging said funnels, and independent means for rotating the respective funnels.

1,683,779. UNLOADING MACHINE. FREDERICK W. HORSTKOTTE, Portland, Oreg. Filed Feb. 10, 1926. Serial No. 87,262. 6 Claims. (Cl. 214—8.5.)



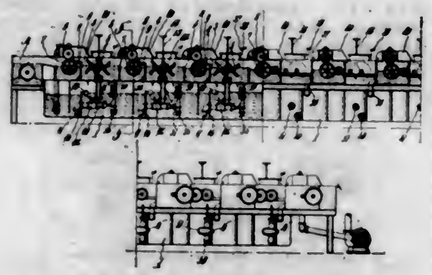
2. In an unstacker the combination with a vertically movable platform for supporting a stack and discharging means adapted to bodily move a top layer of the stack and spacing sticks above said layer, means for preventing movement of spacing sticks below the top layer, and means for removing the spacing sticks above said layer.

1,683,780. METHOD OF AND APPARATUS FOR PURIFYING WATER. CHRISTIAN HÜLSMEYER, Dusseldorf, Germany. Filed Sept. 19, 1923, Serial No. 663,637, and in Germany July 31, 1922. 5 Claims. (Cl. 210—9.)



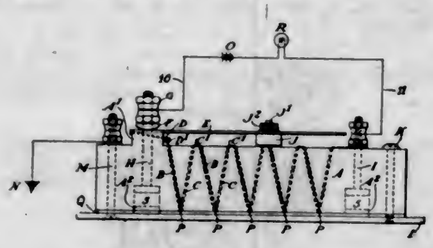
1. A device of the class described comprising a vertically extending chamber, a deoxidizing material in the lower part of said chamber, means for introducing water into the lower part of said chamber in such a way as to

cause the deoxidizing material to circulate with the water in the lower part of said chamber, a filter in said chamber above the zone of circulation, and an outlet for the water



above said filter, whereby the deoxidizing material accumulating in said filter will fall by gravity into the zone of circulation.

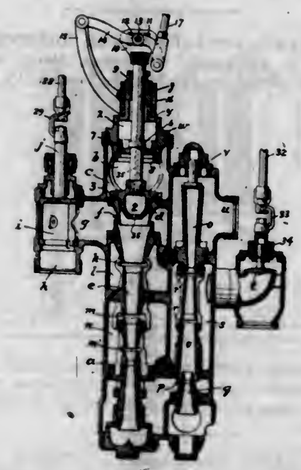
1,683,781. PLATE-STEEL WICKET GATE FOR TURBINES. GEORGE A. JESSOP, York, Pa., assignor to S. Morgan Smith Company, York, Pa., a Corporation. Filed Sept. 25, 1926. Serial No. 137,796. 11 Claims. (Cl. 253—122.)



1. A plate steel wicket gate comprising opposite properly shaped guiding members, pivot means spaced between said members, and means extending outwardly from the pivot means and through the said guiding members and terminating coincident with the outer surfaces of the latter for holding the pivot means in place.

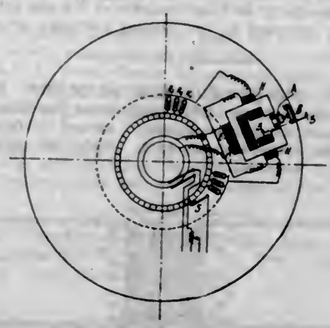
1,683,782. METHOD AND APPARATUS FOR WASHING PULP. CHARLES A. JOHNSON, La Tuque, Quebec, Canada, assignor to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Apr. 10, 1924. Serial No. 705,546. 16 Claims. (Cl. 141—12.)

1. A process of washing fibrous material which comprises simultaneously agitating and washing a plurality of separated batches of said material in a plurality of separate baths, maintaining a supply pool for each bath, straining out the liquor from the fibrous material in each bath and passing the strained material to a succeeding bath, and passing liquor so strained out from such material to the pool for a preceding bath in the direction of travel of the fibrous material.



1,683,783. COMBINED LIGHTNING ARRESTER AND RESISTANCE UNIT. CHARLES J. KELLOWAY, Wilmington, N. C. Filed Jan. 22, 1923. Serial No. 614,201. 6 Claims. (Cl. 175—30.)

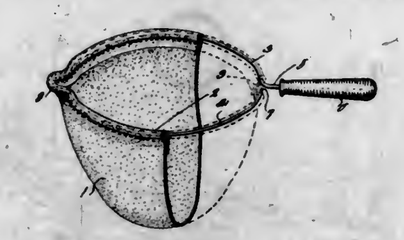
1. In combination, a block provided with two terminals for connection with an electrical circuit, a conductor of resistance material supported by said block and having its ends connected with said terminals, adjustable means for shunting out any desired portion of said conductor, a member of relatively high resistance in contact with a plurality of points along said conductor, and means for connecting said member with ground.



1,683,784. INJECTOR. STRICKLAND L. KNEASS and IRENEE P. PEDRICK, Philadelphia, Pa., assignors to William Sellers & Company, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 5, 1925. Serial No. 35,151. 6 Claims. (Cl. 103—265.)

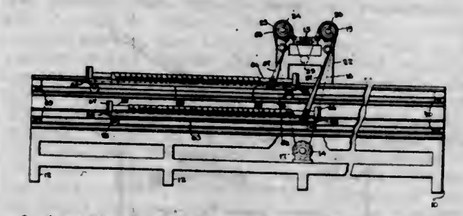
1. In an injector, in combination, a primary set of tubes adapted for low pressure steam, a set of forcing tubes adapted for high pressure steam, a valve controlling the admission of feed water to the primary set of tubes, a low pressure steam chamber, a steam nozzle of large area affording a passage for steam from said steam chamber to the primary tubes, a valve adapted to seat on the upper end of said nozzle, said valve having a lower conoidal extension adapted to extend into said nozzle and adapted to proportionately regulate the area of discharge of said nozzle, a stem on said valve, a superimposed concentric

cylinder in communication with said steam chamber and with atmosphere and a piston in said cylinder in slidable engagement with said stem.



1,683,785. VOLTAGE REGULATOR. RICHARD KUMMENICH, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Aug. 18, 1925, Serial No. 51,058, and in Germany Oct. 11, 1924. 6 Claims. (Cl. 200—80.)

1. A regulator comprising a rotating disk, a relatively stationary contact element, a relatively movable contact element carried by said disk and magnetic means for controlling the movement of said movable contact member, and means for varying the effect of said magnetic means.

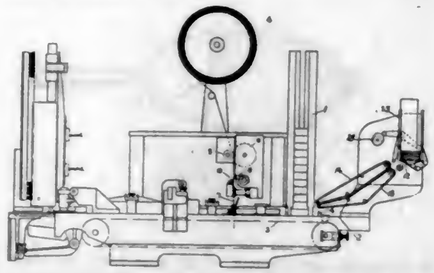


1,683,786. COFFEE-MAKING DEVICE. CHARLES T. LONG, Eureka, Calif. Filed Dec. 30, 1927. Serial No. 243,673. 1 Claim. (Cl. 53—3.)

As a new article of manufacture, a coffee making device consisting of a split ring having its ends relatively spaced, a bag provided at its upper edge with a split loop through which the ring extends, the ends of the ring extending beyond the ends of the loop, a shank connected to one end of the ring and extending radially outward from the ring, and a hump projecting radially outward from the ring diametrically opposite the split ends thereof, the hump being formed by offsetting a portion of the ring and being arranged in the loop and distorting the same to prevent

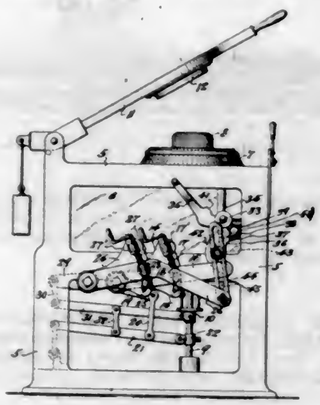
the accidental detachment of the bag from the ring, the shank and hump constituting supporting elements and the shank also constituting a lifting element.

1,683,787. MACHINE FOR UNWRAPPING TUBES. ELOY F. MAAS, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 16, 1926. Serial No. 95,044. 6 Claims. (Cl. 242—7.)



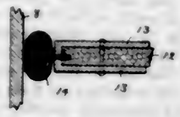
1. A machine for unwrapping tubes comprising means for movably supporting a wrapped tube and a rotatable winding reel for simultaneously and continuously moving and unwrapping the tube.

1,683,788. CONTAINER SUCH AS BARREL, DRUM, OR THE LIKE. ALFONS MAUSER, Cologne-Marienburg, Germany. Filed Oct. 24, 1924, Serial No. 745,540, and in Germany Sept. 23, 1924. 8 Claims. (Cl. 220—71.)



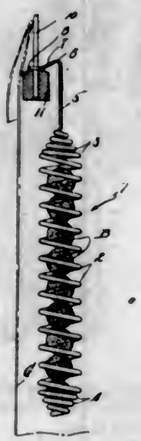
1. A sheet metal barrel, drum, or like container having between its ends, a circumferential loop formed integrally with the side walls of said container, and extending transversely of the main portion of the side wall of the container, a reinforcing ring having a portion thereof extending transversely of the side walls of the container in contacting engagement with the side walls of said loop whereby said ring is secured to the container, and said ring having another portion thereof projecting outwardly beyond the side walls of said container to form a supporting surface upon which said container is adapted to be rolled, said loop being formed from a sufficient length of the sheet metal material to constitute a spring-like structure, capable of yielding elastically to absorb the shocks or blows to which said ring is subjected.

1,683,789. WRAPPING MACHINERY. WALTER EVERETT MOLINS, Deptford, London, England. Filed Dec. 29, 1927, Serial No. 243,436, and in Great Britain Dec. 24, 1926. 4 Claims. (Cl. 93—2.)



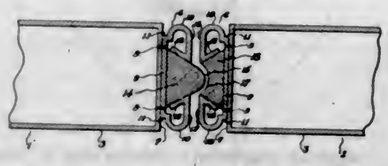
1. In a device of the class described, the combination with a magazine for articles, of a wrapping mechanism, and a movable element for conveying a card beneath said magazine, and moving the card and a superimposed article through said wrapping mechanism.

1,683,790. FUR-HAT-BLOCKING MACHINE. RUDOLPH G. MULLER, Irvington, N. J. Filed Nov. 17, 1927. Serial No. 233,825. 7 Claims. (Cl. 223—31.)



1. In a hat-blocking machine having hat-block elevating mechanism including an elevator lever and a hat-block expanding mechanism including an expanding lever, a single manipulating means for actuating both said levers, comprising a pivoted bell-crank lever, a connecting link between said bell-crank lever and elevator lever, a draw-link connected with said expanding lever, and means providing a sliding pivotal connection between said draw-link and said bell-crank lever.

1,683,791. SHOW CASE. WALTER MUNCH, Superior, Wis., assignor to Syphonix Refrigerator Company, a Corporation of Delaware. Filed Apr. 5, 1927. Serial No. 181,061. 1 Claim. (Cl. 312—140.)

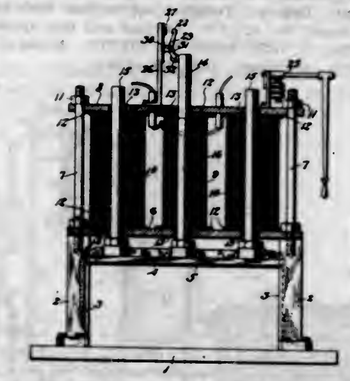


A division wall for a refrigerated show case comprising two upright spaced members attached at one side thereof to a vertical wall of the show case, insulating material intermediate of said members, the free ends of the spaced members overlapping the free end of the insulating material, and a resilient member held intermediate of the overlapped edges of the spaced members.

1,683,792. CONTAINER FOR DISINFECTANTS. ROBERT E. NAUMBURG, Winchester, Mass. Filed May 26, 1926. Serial No. 111,780. 2 Claims. (Cl. 299—24.)

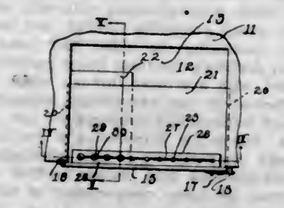
2. A container for moth balls or the like consisting of an open helical coil formed from a single length of resilient wire, portions of the wire being so disposed as to constitute a permanent closure at each end of the coil for the space within the container, access to said space for the purpose of inserting the contents therein being obtainable by temporarily separating any pair of adjacent spires abnormally such deformation of the coil being automatically corrected by the natural resiliency of the wire.

1,683,793. BUMPER FOR SLIDING DOORS. JOHN OSCAR NYMAN, Canton, Ohio, assignor to The United Metal Products Company, Canton, Ohio, a Corporation of Ohio. Filed July 2, 1927. Serial No. 203,117. 4 Claims. (Cl. 16—86.)



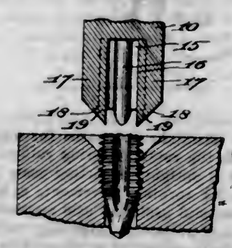
1. In combination with a pair of bi-parting doors, a channel strip on the meeting edge of each door, and a rubber bumper located in each channel strip, each channel strip having a back portion attached to the door, curved side edge portions and straight front portions, terminating in inturned angular flanges.

1,683,794. ELECTRIC HAMMER. WILLIAM CLARENCE O'BRIEN, Canton, Ohio, assignor to Central Alloy Steel Corporation, New York, N. Y., a Corporation of New York. Filed July 27, 1922. Serial No. 577,860. 1 Claim. (Cl. 172—126.)



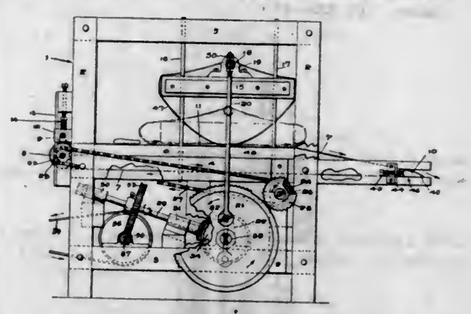
An electrically operated hammer including a reciprocating magnetic head, a solenoid for assisting in effecting

the working stroke of the head, a pair of solenoids wired in parallel for lifting the head and holding the same in the raised position, magnetic cores carried by the



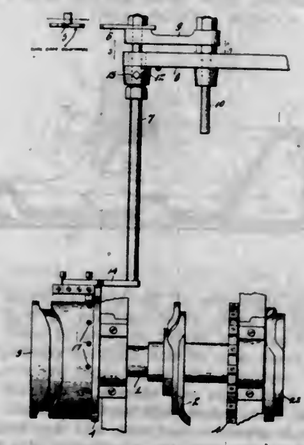
head and extending through the lifting solenoids, and means for automatically reducing the current to the lifting solenoids as the head reaches its upper position.

1,683,795. SORTING AND BINDING DESK. EMIL K. OHM, Athens, Ohio; Robert J. Studer administrator of Emil K. Ohm, deceased. Filed Dec. 21, 1925. Serial No. 76,611. 3 Claims. (Cl. 11—1.)



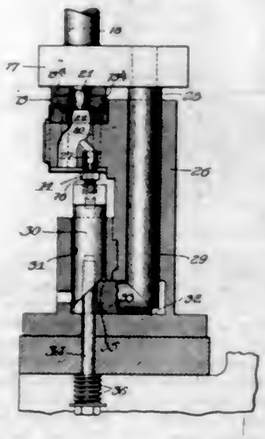
1. In a binding machine for paper or other sheets, a receiver having a bottom and side walls, the said bottom having a slot formed therein adjacent its front edge, the said side walls having grooves formed therein and extending along a portion thereof to an abutment, and a pressure plate having a slot therein adjacent one edge thereof, the said plate arranged to be received by the said grooves and to engage the said abutment so that its slot will register with that in the bottom of the receiver.

1,683,796. BROKEN-TAP EXTRACTOR. DAVID PEARCE, Los Angeles, Calif. Filed Oct. 14, 1926. Serial No. 141,454. 3 Claims. (Cl. 81—53.)



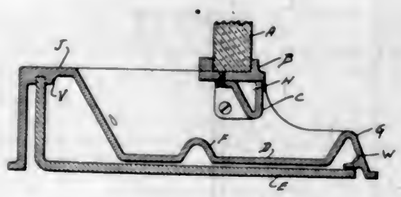
1. A broken tap extractor comprising a short cylindrical body provided at one end with an axially arranged recess on the inner surface of which recess are formed longitudinally arranged tap groove engaging ribs, the outer ends of which terminate in tapered teeth that project from the end of the cylindrical body.

1,683,797. APPARATUS FOR FORMING AND THEREAFTER RELEASING TORTILLA. ARMANDO J. PEREYRA, San Francisco, Calif. Filed July 3, 1925. Serial No. 41,417. 2 Claims. (Cl. 107—15.)



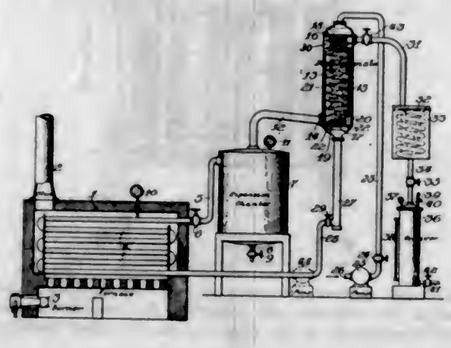
1. A machine for forming tortilla from a prepared dough, having an intermittently moving endless conveyor-belt adapted to deliver a measured portion of dough for the formation of a tortilla to a predetermined position of temporary rest, a reciprocable stamping member co-operatively associated with said conveyor-belt and bearing a loosely mounted stripping-belt adapted for two-way movement when in contact with said measured portion of dough as carried by the conveyor-belt, means for exerting pressure upon said delivered dough while in a position of rest through the action of said stamping member to cause to be formed between the said belts the tortilla, and means whereby the parting movements of said belts cause the dough-contacting side of said stripping-belt, through the reverse action of its upper side relative to that of its under side and the direction of movement of the conveyor-belt, to gradually peel the entire dough-contacting underside of said stripping-belt from the formed tortilla as it is being carried along forwardly by the said conveyor-belt.

1,683,798. PATTERN MECHANISM FOR KNITTING MACHINES. NAPOLEON J. PERRY, Nashville, Tenn., assignor to May Hosiery Mills, Nashville, Tenn., a Corporation of Tennessee. Filed Sept. 13, 1920, Serial No. 409,981. Renewed Feb. 3, 1928. 9 Claims. (Cl. 66—24.)



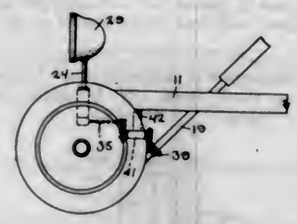
3. In a pattern mechanism, a slidable rod, a cam to raise and lower the rod, a guide member, an eccentric bearing rotatably adjustable relatively to the rod, and engaging an opening in the guide member.

1,683,799. ATTACHMENT FOR PUNCH PRESSES. GEORGE H. PICKHARD, Detroit, Mich., assignor to McCord Radiator & Mfg. Co., Detroit, Mich., a Corporation of Maine. Filed Mar. 7, 1925. Serial No. 13,779. 7 Claims. (Cl. 153—21.)



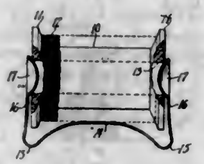
1. The combination with a punch press, of an attachment therefor having a projection with upper and lower dies thereon and shaped to support a radiator top tank after being drawn from sheet metal, upper and lower punches on opposite sides of said projection and operating on the interposed tank walls to provide a plurality of openings and a depression in one wall and a single opening in the other wall, and means controlled by the movement by the press of the upper punch into and out of engagement with the upper die for effecting the simultaneous movement of the lower punch into and out of engagement with the lower die for operating simultaneously on both walls.

1,683,800. BANK-PROTECTING DEVICE. JOSEPH PLATT, Detroit, Mich. Filed Jan. 29, 1926. Serial No. 84,686. 4 Claims. (Cl. 20—1.01.)



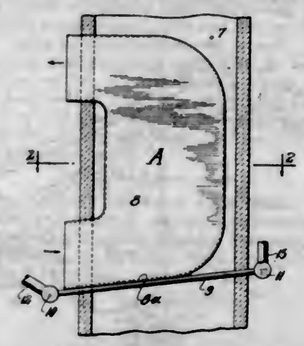
1. In an apparatus of the kind described, the combination of a bullet proof partition, a tray extending under said partition having an elevated outer and inner edge, the lower edge of said partition crossing said tray below, or approximately in, a plane extending between the upper portions of said edges at a distance from said outer and inner edges sufficient to permit the usual articles to be placed in said tray, said tray being made of a material that permits the penetration of a bullet, and a bullet proof shield located under said tray so as to catch and retain any bullet that may penetrate said tray, said tray being so located as to prevent a bullet from glancing from said shield.

1,683,801. APPARATUS FOR TREATING OIL. ROBERT T. POLLOCK, New York, N. Y., assignor to The Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Original application filed Dec. 2, 1920, Serial No. 427,873. Divided and this application filed Mar. 7, 1923, Serial No. 623,312. Renewed Mar. 15, 1928. 3 Claims. (Cl. 196—139.)



3. In an apparatus for cracking hydrocarbon oil, the combination of a dephlegmator comprising a vertical, cylindrical shell, partition members located in said shell near each end thereof forming upper and lower compartments and an intermediate compartment, a vapor inlet and a vapor outlet communicating with said intermediate compartment, means extending through said intermediate compartment connecting the upper and lower compartments of said dephlegmator, said lower partition member being provided with apertures through which the reflux condensate formed in the intermediate compartment can pass from said intermediate compartment into said lower compartment, means for introducing a cooling medium into the upper compartment of said dephlegmator, and means for withdrawing said cooling medium and reflux condensate from the lower compartment of said dephlegmator.

1,683,802. DIRIGIBLE HEADLIGHT. LEWIS G. RATH, Pine Lawn, Mo. Filed June 24, 1926. Serial No. 118,280. 1 Claim. (Cl. 240—62.)

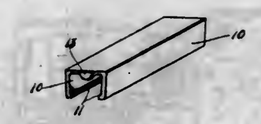


In a dirigible headlight apparatus for automobiles, the combination with the rotary steering column of the automobile, of a pair of upright supporting posts mounted upon the automobile for turning movement, a headlight supported by each of said posts, an arm secured to the lower end of each of said posts and extending rearwardly therefrom, a bar pivotally connected at its ends to the rear ends of said arms and extending between the same, the bar being provided upon its under side with a series of rack teeth, a shaft journaled horizontally upon the frame of the automobile in rear of said bar, a pinion fixed upon the forward end of the shaft and meshing with the rack teeth upon the under side of the bar and constituting means for supporting the bar against downward displacement, a beveled pinion fixed upon the rear end of the shaft, and a bevel gear fixed upon the steering column and meshing with the underside of the periphery of the bevel gear.

1,683,803. THREAD HOLDER AND CUTTER. WILLIAM L. RATHJEN, Portland, Oreg. Filed July 12, 1927. Serial No. 205,114. 3 Claims. (Cl. 242—135.)

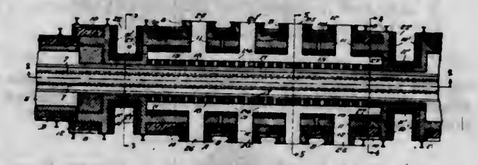
1. A thread holder and cutter consisting of a U-shaped spring metal clip having trunnions formed in its ends adapted to engage the hole ends of a spool; and having a cutting edge on the side of the middle portion of said clip, the flat side of said middle portion bearing against the thread on the spool upon which the device is mounted.

1,683,804. AIR PREHEATER. CARL S. REED, Yonkers, N. Y., assignor to International Combustion Engineering Corporation, New York, N. Y., a Corporation of Delaware. Filed Dec. 3, 1925. Serial No. 72,889. 2 Claims. (Cl. 122—4.)



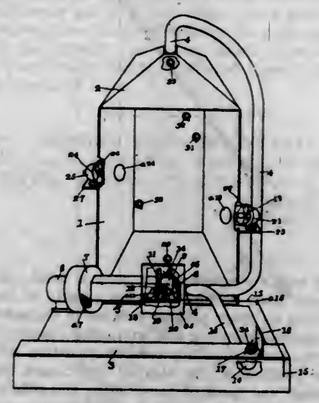
1. In combination, a waste gas conduit, a plurality of air conduits extending in said gas conduit comprising a plurality of hollow plates spaced to provide gas passage therebetween, a manifold at each of two opposite sides of said gas conduit and outside thereof, a plurality of pipes connecting said conduits and located immediately in advance of the leading edges of said hollow plates, a cooling medium inlet to one of said manifolds and a cooling medium outlet from the other manifold.

1,683,805. AIRPLANE. BRUNO REICHELT, Nutley, N. J. Filed Oct. 22, 1927. Serial No. 227,939. 6 Claims. (Cl. 244—2.)



1. An aircraft having a parachute chamber at the bottom thereof, and a flotation member at the lower edge of said chamber and surrounding same, said chamber being vented.

1,683,806. SHOE FOR TRANSMISSION-CLUTCH-DRUM LUGS. JOHN W. RICHARDS, Jr., Essexville, Mich. Filed Mar. 20, 1926. Serial No. 96,185. 4 Claims. (Cl. 192—69.)

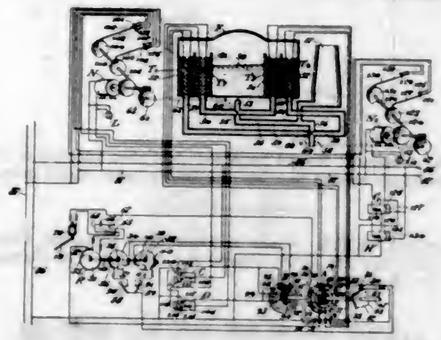


1. A channel shaped hardened steel shoe adapted to be detachably secured to a lug of a transmission clutch drum.

1,683,807. KILN. HARRY M. ROBERTSON, Cleveland, Ohio. Filed Jan. 28, 1928. Serial No. 250,294. 10 Claims. (Cl. 25—142.)

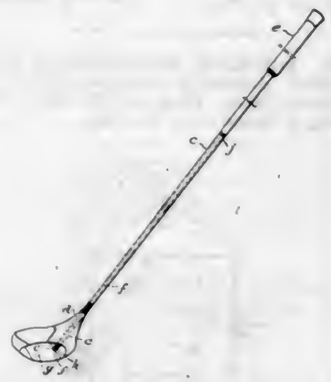
1. In a tunnel kiln, a longitudinally extending combustion chamber, a fuel port, a settling chamber connecting said fuel port with the combustion chamber, and a clean-out port at one end of said settling chamber.

1,683,808. AUTOMATIC MOVING-TARGET SHOOTING GALLERY. ARDELLO M. ROWE and CLAUDE O. ROWE, Bellingham, Wash. Filed Sept. 20, 1927. Serial No. 220,649. 6 Claims. (Cl. 124—16.)



1. In a shooting gallery the combination of an open-front chamber and means to cause a circulation of buoyant targets from below in said chamber upward through the same and then downward to the said lower part of said chamber to again pass upward therein.

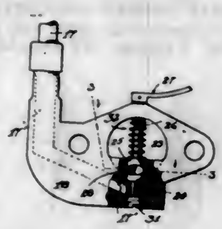
1,683,809. CONTROL SYSTEM. WILLIAM R. SCHOFIELD, Jr., Philadelphia, Pa., assignor to Leeds & Northrup Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 10, 1924. Serial No. 712,199. 39 Claims. (Cl. 236—70.)



1. The method of controlling a regenerative furnace having regenerative chambers and valve mechanism for trans-

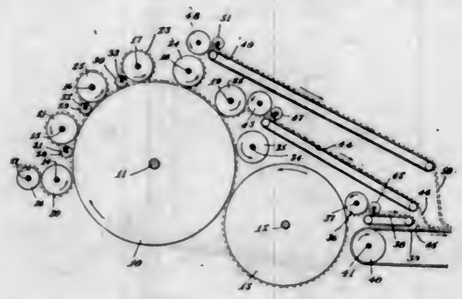
ferring the flow of combustion materials, which comprises intermittently effecting a control whose magnitude varies with the temperature in one of said chambers, and actuat-

ing said valve mechanism in response to said control upon attainment of predetermined temperature in said one of said chambers.



1,683,810. GOLF CLUB. DAVID SPITTAL, Chambly Basin, Quebec, Canada. Filed Aug. 17, 1927, Serial No. 213,663, and in Canada Aug. 11, 1927. 1 Claim. (Cl. 273—80.)

In a golf club the combination with a head; of a full length hickory shaft having a handle or grip at its upper end and having its lower portion reduced in diameter forming a surrounding shoulder and extending continuously to the sole of the head; a hollow steel shaft fitting tightly on the reduced portion of the hickory shaft, and being extended through the head of the club to the sole thereof; means uniting the lower ends of the steel shaft and hickory shaft within it to the head of the club at the sole thereof and means uniting the upper end of the steel shaft to the hickory shaft with the upper end of the steel shaft in bearing relation with the surrounding shoulder on the hickory shaft.



1,683,811. WATER CIRCULATOR AND AIR MOISTENER FOR INTERNAL-COMBUSTION ENGINES. ARCHIBALD THOMSON, Peoria, Ill., assignor to Frank A. Hall, Peoria, Ill. Filed Aug. 2, 1926. Serial No. 126,668. 5 Claims. (Cl. 123—25.)

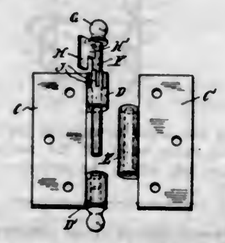
1. The combination with the carburetor of an internal combustion engine, its throttle-arm, and an intake manifold, of a member interposed between said carburetor and manifold including an opening therethrough connecting the interior of the carburetor and manifold, and also including a bore and an outlet therefrom leading into the manifold, there being a passage in said member communicating with the said bore for the induction of water vapors, said passage being spaced from the said outlet of said bore, a ro-

tatable tubular valve seated in the bore, the cavity of said valve communicating with the said passage, said valve having a port in its wall adapted to register with the outlet, and an arm to operate the valve, said arm having connection with the throttle arm whereby in the movement of the latter the throttle and said valve are simultaneously operated.

1,683,812. METHOD OF AND APPARATUS FOR MANUFACTURING TEXTILE FLEECE. PATRICK H. WALSH, Newton, Mass., assignor to Caro Cloth Corporation, Carolina, R. I., a Corporation of Delaware. Filed Sept. 11, 1926. Serial No. 134,785. 1 Claim. (Cl. 19—106.)

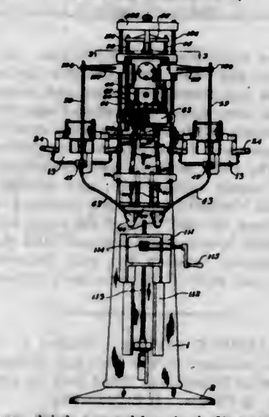
The combination, with a base fabric and means for moving the same at a predetermined speed, of a carding machine having a doffer, means associated therewith for removing therefrom a web of fleece formed of material passing through the carding machine, an endless conveyor associated therewith and receiving the web of fleece therefrom and delivering the same onto the base fabric at the same speed as said fabric, of a plurality of supplemental web forming elements arranged in advance of the doffer, and endless conveyors associated with said supplemental web forming means for delivering said supplemental webs to the moving base fabric and at the same speed as the speed of said fabric and to a position over and onto the first said web, whereby the plurality of webs of fleeces are delivered to the moving base fabric in superimposed relation to each other and at the same speed of travel as the speed of travel as the base fabric.

1,683,813. VALVE MEANS. DWIGHT E. AUSTIN, Los Angeles, Calif., assignor to The Pickwick Corporation, Los Angeles, Calif., a Corporation of California. Filed Dec. 16, 1924. Serial No. 756,323. 10 Claims. (Cl. 251—13.)



10. In a means of the class described, a pair of oppositely disposed interchangeable coupling members secured

with their corresponding ends adjacent each other forming a continuous passage therethrough, each coupling member having a side opening, and valve means mounted in said



passage with its pivotal axis between the adjacent ends of the coupling members, for controlling the flow of fluid through said passage and said side openings.

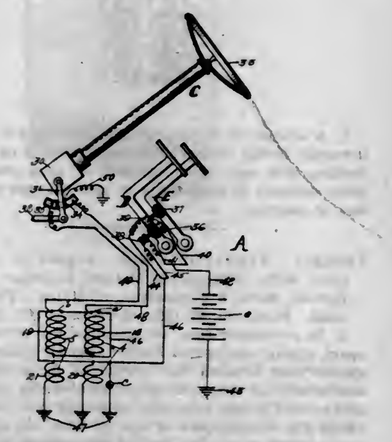
1,683,814. HINGE. LESLIE W. BLOCK, Webster Groves, Mo. Filed Dec. 11, 1925. Serial No. 74,834. 3 Claims. (Cl. 16—144.)

1. A loose-pin hinge having a plurality of leaves joined together at a knuckle, a tubular section of said knuckle having a notch cut therein, said pin having a projecting part adapted to enter said notch and project therethrough into the space between said leaves whereby said pin is maintained in predetermined relation to the leaf to which said tubular section is attached, and a stop member extending downwardly from said projecting part between the leaves of said hinge whereby the opening movement of said hinge will be stopped when the free leaf thereof engages said stop member.

1,683,815. SCREW-DRIVING MACHINE. GEA C. BROWN and GREGORY F. MCNULTY, Massillon, Ohio, assignors to The Reynolds Machine Company, Massillon, Ohio, a Corporation of Ohio. Filed Nov. 2, 1925. Serial No. 66,223. 6 Claims. (Cl. 144—82.)

1. A screw driving machine including a magazine for containing screws, a plurality of escapement means associated with the magazine, a chuck communicating with each escapement means, a screw driving bit rotatably and slidably located in each chuck, means for simultaneously operating said escapement means, to admit screws to the chucks, and lowering the driving bits through the chucks, and means for compensating for variation in the lengths of time to drive the several screws.

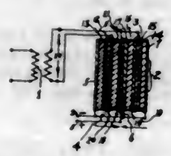
1,683,816. MOP. PETER BROWN, Chicago, Ill., assignor to O-Cedar Corp'n, a Corporation of Illinois. Filed July 29, 1926. Serial No. 125,624. 3 Claims. (Cl. 15—229.)



1. In a mop head, a frame comprising a single substantially flat strip, the ends of said strip being brought into juxtaposed relationship with each other, a handle socket having a bifurcated portion integral therewith, the furcations of said portion embracing the ends of said strip to maintain said ends in said relationship, and a pivot pin passing through said furcations and said ends.

1,683,817. MOP HEAD. PETER BROWN, Chicago, Ill., assignor to O-Cedar Corp'n, a Corporation of Illinois. Filed Mar. 21, 1927. Serial No. 176,947. 1 Claim. (Cl. 15—229.)

A mop head comprising a metal strip having ends bent at right angles thereto, said strip being bent into a triangle with said ends abutting each other, teeth struck out from said strip forming slots for defining the position of the vertices of the triangle and a mop fabric adapted to be engaged by said teeth and to be secured to said strip by being hooked over said teeth.



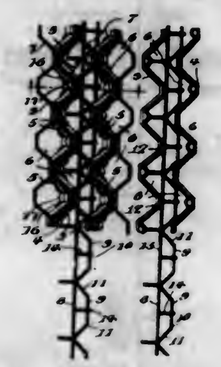
1,683,818. VEHICLE SIGNALING MEANS. JOSEPH P. CARTER, Los Angeles, Calif. Filed Oct. 27, 1921. Serial No. 510,704. 1 Claim. (Cl. 177—337.)

A vehicle provided with the usual steering mechanism and pedal controlled members, in combination with a signaling member provided with signaling means for indi-

cating a turning movement of said vehicle, means connected with a source of electrical energy whereby said signaling member is energized upon depression of one of said pedal controlled members, means connected with said steering mechanism to expose to view the signaling means of the signaling member to indicate a turning movement of the vehicle upon movement of the steering mechanism, and means for maintaining said signal in exposed position until release of the depressed pedal controlled member.

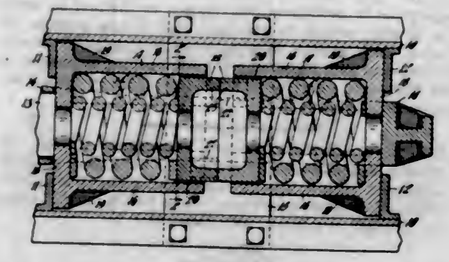
1,683,819. ORIENTED ELECTRICAL CONTACTOR. PHILIP E. EDELMAN, Chicago, Ill. Filed Dec. 15, 1927. Serial No. 240,215. 8 Claims. (Cl. 62—89.)

1. A rectifying device consisting of a pair of oriented electrical contactors comprising an electropositive metallic electrode having a crystallized metallic surface alloyed thereon, and an eletronegative metallic electrode having a chemically combined electronegative compound of a non-metallic electronegative element coated thereon, the contact junction being located between said crystallized metallic surface and said non-metallic coated element.



1,683,820. VENTILATOR. EDWARD H. ELLISON, Jamestown, N. Y., assignor to Ellison Bronze Company, Inc., Falconer, N. Y., a Corporation of New York. Filed Aug. 24, 1926. Serial No. 131,184. 4 Claims. (Cl. 98—88.)

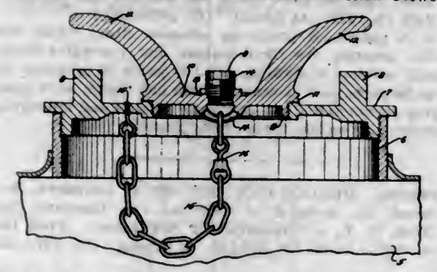
1. A ventilator comprising a sash having a continuous, inwardly facing channel therein, two sets of louvers extending into and rigidly secured in said channel and a plate mounted to reciprocate in said channel between said sets of louvers.



1,683,821. RADIATOR CORE. JOSEPH D. HARRIS, Detroit, Mich., assignor to McCord Radiator & Mfg. Co., Detroit, Mich., a Corporation of Maine. Filed June 27, 1925. Serial No. 40,110. 6 Claims. (Cl. 257—125.)

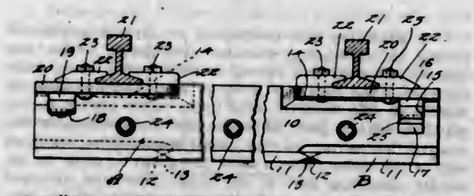
4. In a radiator core, the combination with two spaced apart zigzag corrugated water passage plates, of a flat spacer plate between the corrugated plates and having a multiplicity of truss-like projections struck out from one side of said spacer plate and extending into the spaces between the corrugations of one of said corrugated plates, said projections having their basic dimensions lengthwise of the spacer plate greater than the width of the entrances of said spaces so that the projections extend only part way into said spaces and contact with the inclined portions thereof for holding the flat body of the spacer plate on the side opposite said projections against the crowns of the

corrugations of the other corrugated plate and with the portions at the outer ends of the projections bridging across the spaces into which the projections extend.



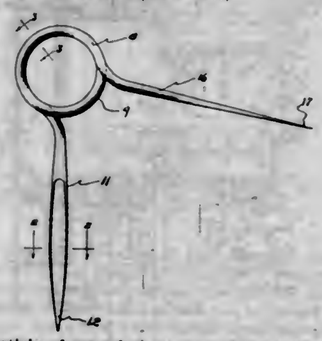
1,683,822. SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Feb. 28, 1927. Serial No. 171,417. 6 Claims. (Cl. 213—48.)

1. In a spring shock absorbing mechanism, the combination with front and rear main follower casings having outer end walls functioning as front and rear main followers and open inner ends; of front and rear intermediate followers telescoped within and completely encircled by said casings, said rear and front intermediate followers being movable with the front main follower casing and the rear main follower casing respectively; and tandem arranged spring resistance elements, one of the members of which is interposed between the end wall of the front follower casing and the front intermediate follower, and the other of which is interposed between the rear intermediate follower and the end wall of the rear main follower casing.



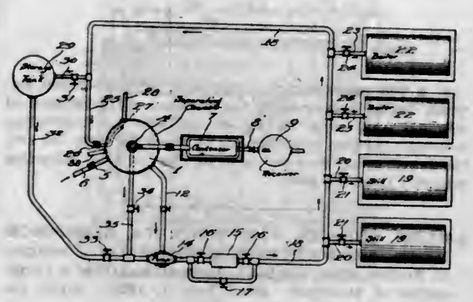
1,683,823. MANHOLE COVER. JULIUS P. HEIL, Milwaukee, Wis., assignor to The Heil Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 19, 1924. Serial No. 757,028. 2 Claims. (Cl. 220—39.)

1. The combination with a metal tank for holding a volatile inflammable fluid and having a threaded opening, of a two-part closure therefor, comprising a metal cap part threaded into said opening and forming an electrical connection with the tank and having a central threaded opening, a cover part threaded into the cap part opening and having outwardly projecting arms for moving said cover part, the removal of the cap part permitting access to the interior of the tank, and a flexible contact member normally within the tank and connected to the two parts of the closure to form an electrical connection between



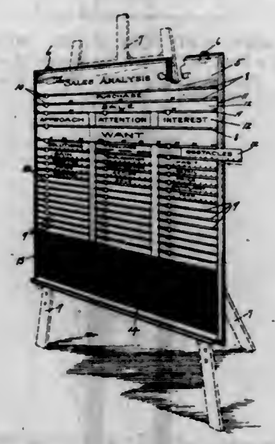
the two closure parts and to prevent the separation of said parts but permitting the separation of the two-part closure from the tank.

1,683,824. RAILWAY TIE. NIKOLAI HILL, Mellen, Wis. Filed Mar. 24, 1928. Serial No. 264,365. 1 Claim. (Cl. 238—38.)



A railway tie divided vertically and longitudinally into identically shaped and constructed sections, each of the sections comprising a web portion, a base portion, and a chair seat portion, one end of the web portion extending beyond one end of the base portion and being reduced in height, said extending portion of the web having a transverse recess in the upper edge thereof, the other end of the upper edge of said web portion having a transverse recess registering with the first recess when the sections are secured together, a shelf beneath each of the first-named recesses, one end of the chair resting over a recess, and a cushion member disposed transversely in said recesses and resting on the said shelf members, said cushion members being disposed in supporting relation to corresponding ends of said chairs.

1,683,825. BELT-LACING TOOL. GEORGE HONEY, Canuck, Saskatchewan, Canada. Filed Jan. 8, 1926. Serial No. 79,975. 2 Claims. (Cl. 7—17.)

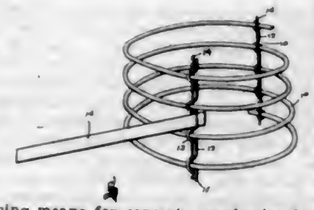


2. An article of manufacture, comprising a single piece of wire having the main body coiled upon itself into a circular form and the ends projecting diametrically outwardly therefrom at substantially right angles to each other, each of said ends being tapered toward its end.

1,683,826. PROCESS FOR TREATING RESIDUAL OILS. LYMAN C. HUFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed May 26, 1924. Serial No. 715,827. 7 Claims. (Cl. 196—76.)

1. An improved method for utilizing the liquid residue from a hydrocarbon oil cracking process, which comprises withdrawing the residual oil from a pressure cracking still, while at a temperature in excess of 400° F., lowering the pressure on the liquid residue, introducing the same to an enlarged zone, taking off vapors from said enlarged zone which have been evolved from the residual oil therein, in maintaining a body of the heated residual oil in said enlarged zone, continuously circulating the hot residual oil through a closed ring, including said enlarged zone, and supplying regulated quantities of the hot residual oil from said closed ring to selected furnaces positioned adjacent the ring, to constitute the fuel consumed therein.

1,683,827. ANALYSIS CHART. HAROLD E. INGRAM, Burlingame, Calif. Filed Aug. 3, 1926. Serial No. 126,837. 7 Claims. (Cl. 35—12.)



1. A device of the character referred to for graphically indicating the kind and degree of mental action and reaction during a conversation, said device having thereon as a part thereof words expressive of various actions, conditions and mental attitudes, and separate movable means associated with each word and operable for selectively indicating said words for the purposes referred to.

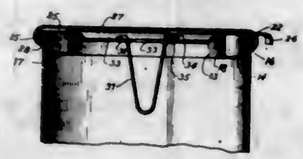
1,683,828. RECORDING PEN. GEORGE B. IRELAND, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Original application filed July 22, 1926, Serial No. 124,220. Divided and this application filed Mar. 16, 1927. Serial No. 175,842. 8 Claims. (Cl. 120—43.)

1. A pen consisting of a thin piece of composition material having substantially the physical characteristics of celluloid, said piece having on one side an indentation defining a pointed protuberance on the other side, the protuberance being provided with a fine incision extending inwardly from the point.

1,683,829. SPACER FOR CONCRETE REENFORCEMENT. THOMAS H. KANE, Youngstown, Ohio, assignor to Truscon Steel Company, Youngstown, Ohio, a Corporation of Michigan. Filed June 1, 1925. Serial No. 33,966. 5 Claims. (Cl. 72—76.)

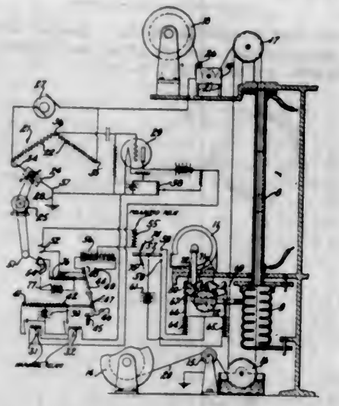
5. Spacing means for concrete reenforcing hooping consisting of a member adapted to be arranged longitudinally of the hooping and provided with substantially equispaced means for attachment to the several flights of said hooping, said member being capable of elongation or shortening whereby to increase or diminish the distance between the attaching means, and means for fixing the length and distances between the attaching means when said spacer is applied to said hooping.

1,683,830. MOTION-PICTURE FILM. MICHEL KRASLAVSKY, New York, N. Y., now, by change of name, Mitchell Krass. Filed Aug. 31, 1925. Serial No. 53,458. 2 Claims. (Cl. 88—19.5.)



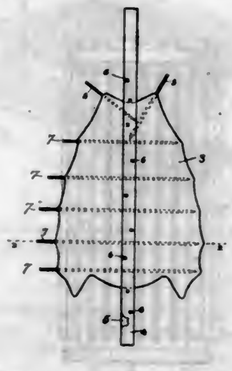
1. A motion picture film comprising a plastic film body, and relatively narrow and thin strips of woven silk fabric embedded in the longitudinal edge portions of the film body and being wholly enclosed by said film body, the body material entering into the meshes of the silk fabric.

1,683,831. CELLULOSE ETHER AND PROCESS OF MAKING SAME. LEON LILIENFELD, Vienna, Austria. Filed June 16, 1923, Serial No. 645,910, and in Austria July 13, 1922. 44 Claims. (Cl. 260—152.)



1. A process of preparing cellulose ethers which comprises treating low-alkali-content and low-water-content alkali cellulose containing per 100 parts of cellulose, not over 50 parts each of caustic alkali and water, with etherifying agents and allowing caustic alkalies and etherifying agents to act on the intermediate formed.

1,683,832. DREDGE CAN. STANLEY H. LINDGREN, Maywood, Ill., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Dec. 4, 1922. Serial No. 604,756. 8 Claims. (Cl. 221—62.)

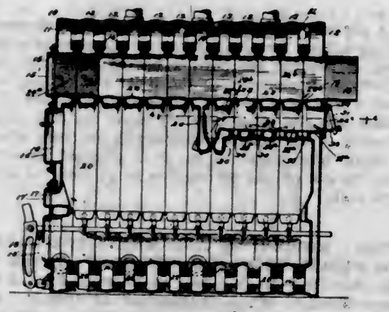


1. A sifter top can, comprising a body, an undercover having an upstanding shoulder arrangeable within and against said body and having an edge turned down about the end of the body into a seam, a channel arranged inwardly of said shoulder, said under cover having an upstanding central part, an outer cap of substantially flat construction having its edge curled about the turned-down edge of the under cover, a slide interposed between the upwardly extending part of the under cover and arranged through the outer cap, said outer cap and slide having openings adapted to be brought into and out of registration, and a spring for normally pressing the slide to move said openings out of registration, the channel and upstanding portion of the under cover holding the slide in desired contact with the under face of the outer cap.

1,683,833. METHOD OF AND APPARATUS FOR DETERMINING THE ENERGY LOSSES IN DIELECTRIC MATERIALS. EGIDIO EDWARD MANESCHI, La Grange, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 30, 1926. Serial No. 138,803. 11 Claims. (Cl. 34—48.)

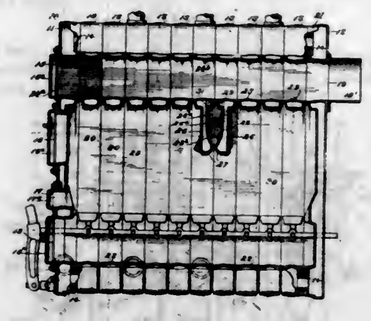
1. A method of controlling the hardness of baked insulating material, which consists in determining the dielectric losses in the material when subjected to an alternating electrostatic field, and regulating the amount of baking of the material in accordance therewith.

1,683,834. SPITS USED IN PREPARING SALMON FOR BARBECUE. SANFORD B. MAYHEW, Marietta Township, Whatcom County, Wash. Filed Aug. 9, 1927. Serial No. 211,724. 1 Claim. (Cl. 53—5.)



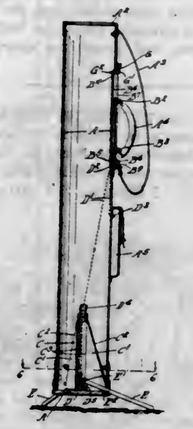
A device of the character described consisting of a pair of sticks suited to be disposed longitudinally on oposite sides of an opened fish and extend at both ends thereof beyond said fish, fastening means to draw and hold said sticks in clamping relation when said fish is therebetween, and skewers suited to be thrust laterally and diagonally through said opened body of said fish and into said body between said clamping sticks.

1,683,835. RESINOUS COMPOSITION OF MATTER AND PROCESS OF MAKING SAME. AUGUSTUS E. MAZE, Orange, N. J. Filed Sept. 14, 1926. Serial No. 135,487. 1 Claim. (Cl. 260—3.)



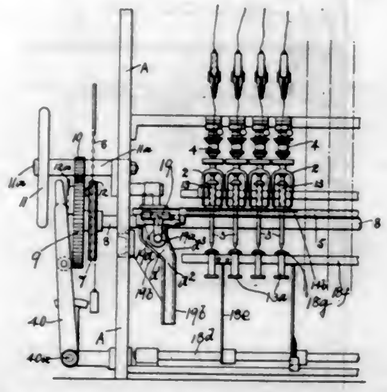
The resinous body formed by the interaction of one molecule of diacetone alcohol and three molecules of formaldehyde in the presence of an alkali.

1,683,836. BOILER. ANDRÉ M. MERTZANOFF, New York, N. Y., assignor to American Radiator Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 5, 1925. Serial No. 60,098. 14 Claims. (Cl. 122—225.)



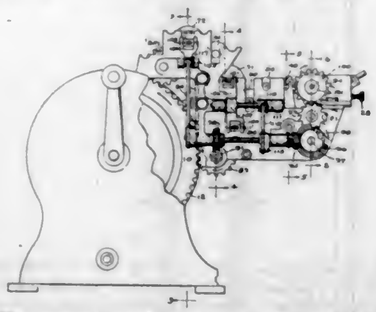
1. In a heating apparatus of the character described, means for supplying secondary air thereto comprising a water-backed duct arranged across the apparatus above and adjacent to the rear of the fuel bed and composed of separate, spaced, depending water-backed members communicating at their ends and upper intermediate portions with the water spaces of the boiler; said duct having its lower opposing wall portions tapering inwardly towards each other to form therebetween a relatively narrow, longitudinal discharge opening, substantially as specified.

1,683,837. BOILER. ANDRÉ M. MERTZANOFF, New York, N. Y., assignor to American Radiator Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 5, 1925. Serial No. 60,099. 7 Claims. (Cl. 122—225.)



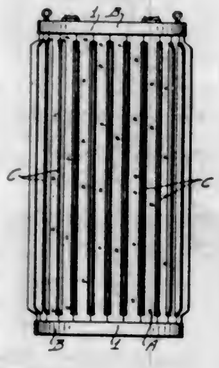
1. A boiler of the character described comprising front, back, and intermediate sections communicatively connected, certain of said intermediate sections each having a depending water containing member communicating with the water spaces of the boiler and arranged parallel in spaced relation to form therebetween a transverse duct having a constricted discharge opening at its base, and horizontal partitions dividing the end portions of said duct to form upper passages open at the outer ends thereof for conducting air to a point intermediate the ends of said duct and discharging the same into the lower portions thereof, substantially as specified.

1,683,838. GOLF BAG. FRANK H. MOONEY, Chicago, Ill. Filed May 2, 1927. Serial No. 188,185. 9 Claims. (Cl. 150—1.5.)



1. The combination with a golf bag and carrying means therefor, of a ground engaging support at the lower end thereof, said support including a vertically movable member and a guide therefor, and a plurality of legs pivoted to said vertical member, the bag being apertured to permit the projection of said legs, a flexible element secured to said vertical member, and a connection between said flexible element and the carrying means, whereby the support is automatically moved to inoperative position when the carrying means is in use.

1,683,839. DOFFING APPARATUS FOR SPINNING, DOUBLING, TWISTING, AND LIKE MACHINES. SAMUEL MOORHOUSE, Leeds, England, assignor to Fairbairn-Lawson Combe Barbour Limited, Leeds, England. Filed June 29, 1927, Serial No. 202,334, and in Great Britain July 6, 1926. 7 Claims. (Cl. 118—18.)



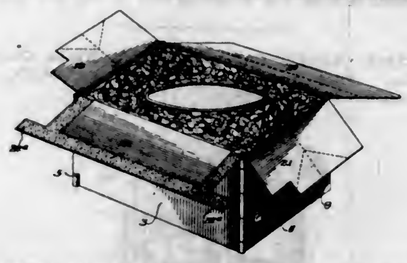
1. In doffing apparatus for spinning and like machines, bobbins arranged to take over the spindles of said machines, said spindles, a lifter plate for raising and lowering the bobbins upon the spindles, an oscillating shaft for transmitting motion to said lifter plate, connections from said shaft to said lifter plate, cam mechanism for automatically operating the lifter plate during the process of building, coupling means for connecting hand operated devices to said shaft, said hand operated devices, bifurcated members for laying hold of the bobbins when supported by the lifter plate, a rail supporting said bifurcated members, a shaft and connections therefrom to support and operate said rail, lever devices for connecting said shaft to cam mechanism, a cam device for operating said levers to cause the bifurcated members to lay hold of the bobbins and to recede with said bobbins, cam mechanism for removing coils of yarn from off the spindles when the bobbins have been discharged therefrom, and means for operating said cam devices.

1,683,840. INKING ATTACHMENT FOR PRINTING MACHINES. LAWRENCE H. MORSE, Cleveland, Ohio, assignor to The American Multigraph Company, Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 5, 1926. Serial No. 146,338. 7 Claims. (Cl. 101—351.)

1. The combination with a rotary printing drum, of several form rolls adapted to coact therewith and a corresponding number of distributor rolls coacting with said form rolls respectively, a fountain roll, mechanism for transferring ink therefrom jointly to two of said distributor rolls, and means for transferring ink from one of said distributor rolls to another of said distributor rolls.

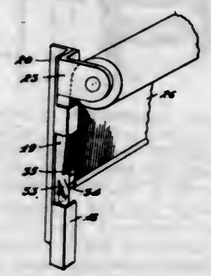
1,683,841. RIBBED OR CORRUGATED SHEET-METAL MEMBER. JAMES J. MULLEN and FRANCIS M. STAMBAUGH, St. Louis, Mo.; said Stambaugh assignor to said Mullen. Filed Jan. 7, 1927. Serial No. 159,587. 4 Claims. (Cl. 220—72.)

1. A sheet metal member having a side wall provided with laterally projecting ribs, or hollow corrugations, formed by folded or bent portions of the plate from which said receptacle is constructed, end closures for said corrugations formed by integral portions of said plate, and a rim located beyond one end of said corrugations and formed by abutting end sections of said plate that merge into the portions of the side wall located between said corrugations.



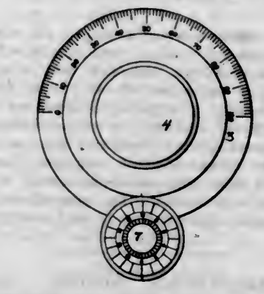
1,683,842. METHOD OF FORMING RIBBED OR CORRUGATED SHEET-METAL MEMBERS. JAMES J. MULLEN and FRANCIS M. STAMBAUGH, St. Louis, Mo.; said Stambaugh assignor to said Mullen. Filed Jan. 7, 1927. Serial No. 159,588. 11 Claims. (Cl. 113—116.)

1. A method of forming a ribbed or corrugated member, characterized by forming a notch in one edge of a plate, folding or bending the portion of the plate that is in longitudinal alignment with the inner end of said notch in such a way as to form a corrugation or hollow rib on the plate and also simultaneously cause the side edges of said notch to move into substantially abutting relationship while being retained in their original plane, and closing the end of said corrugation by an integral portion of said plate.



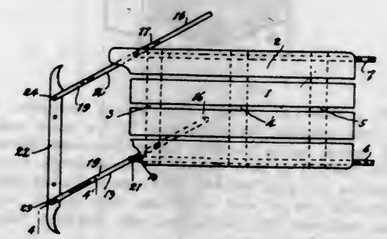
1,683,843. METHOD OF AND MEANS FOR PACKAGING MERCHANDISE FOR SHIPMENT. DANIEL NELSON, Oak Park, Ill., assignor to Marshall Field & Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 6, 1925. Serial No. 20,926. 2 Claims. (Cl. 206—46.)

1. A shipping package comprising an envelope of flexible material, which offers substantially no resistance to forces imparted transversely thereto, an article of merchandise within the same, and molded packing material supporting and positioning the article within the envelope; said packing material consisting of a moldable mass of resilient sub-divided material molded in situ to conform to the space between the walls of the envelope and the enclosed article and to provide a package having a predetermined regular outer surface and standing under initial compression, and the envelope having continuous closed walls, maintaining the form and compression in



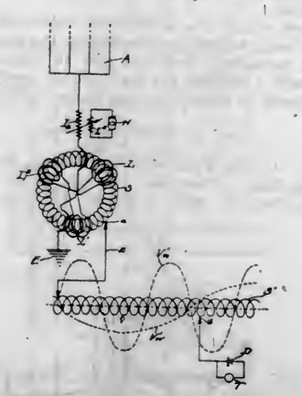
the molded packing material and standing under tension induced by the expansive force of the molded packing material.

1,683,844. WINDOW SHADE. FRANK A. NEVEU, Los Angeles, Calif. Filed Feb. 11, 1926. Serial No. 87,536. 1 Claim. (Cl. 156—26.)



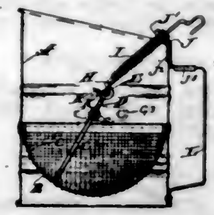
As a new article of manufacture, a combined guide and controlling element for curtains consisting of a strip of sheet metal having a portion of its width bent into a substantially U-shaped channel in cross-section and having a series of aligned inwardly extending tongues struck up from one of the side walls of said channel, said tongues being inclined toward the same end of said strip, there being a clear space between the ends of said tongues and the opposite side of said strip.

1,683,845. VERNIER DIAL FOR RADIO ADJUSTMENTS. ADOLPH PETELER, Freeport, N. Y., assignor to Thomas Howe, White Plains, N. Y. Filed June 12, 1922. Serial No. 567,857. 6 Claims. (Cl. 74—7.)



1. The combination with a main indicator of a vernier attachment comprising in combination a housing, a shaft rotatably mounted therein, a vernier indicator secured to said shaft upon the exterior of said housing, a lever within the housing pivoted upon said shaft, a driving wheel pivoted in said lever and engaging with said shaft to drive the same, said driving wheel being adapted to be moved into and out of driving relation with the main indicator by turning said lever upon its pivot, a spring tending to force said driving wheel against said main indicator and means for holding said driving wheel out of engagement with said main indicator against the bias of said spring.

1,683,846. SLEIGH. WILLIAM J. ROBERTSON, Winnipeg, Manitoba, Canada. Filed Jan. 5, 1926. Serial No. 79,383. 4 Claims. (Cl. 280—21.)

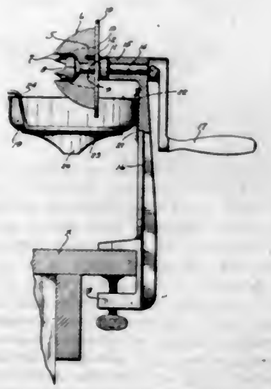


1. A sleigh comprising a seat, a pair of similar, parallel, rear runners permanently secured to the seat and provided with forward extension arms, a pair of similar steering runners, each steering runner being pivotally connected to the forward ends of the extension arms and having a rearwardly extending runner extension normally underlying the extension arms and a steering bar pivotally connecting the forward ends of the steering runners and causing them to turn in parallelism.

1,683,847. ELECTROMAGNETIC WAVE RECEIVING SYSTEM. OSCAR C. ROOS, Rockland, Me. Filed Oct. 6, 1921. Serial No. 505,785. 18 Claims. (Cl. 250—20.)

1. An electromagnetic-wave receiving system comprising in combination means for converting abrupt or impulsive electrical forces into persistent periodic vibrations of predetermined frequency, said means having its most pronounced natural rate of vibration different from that of the waves the energy of which is to be received, an oscillation detector, a slow-speed circuit having its electromagnetic constants continuously and uniformly distributed and being constructed and arranged to permit the development therein of standing waves without appreciable attenuation, said slow-speed circuit having one of its natural rates of vibration equal to one of the natural rates of vibration of said means, means electrically associating said slow-speed circuit with said means and means electrically associating said detector with said slow-speed circuit.

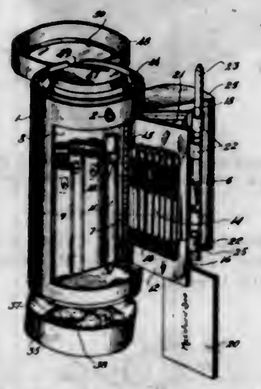
1,683,848. SIFTER. JOHN SHARP, Cleveland, Ohio. Filed Jan. 25, 1927. Serial No. 163,321. 9 Claims. (Cl. 209—282.)



1. In a sifter, the combination with a container, having a semi-spherical sieve adjacent to its lower end, of spring beater arms movable backwards and forwards over the surface of said sieve, a common crank connecting member for said beaters, said member being pivoted diametrically across said container, and means located in the container for oscillating said cranked member and attached spring beaters.

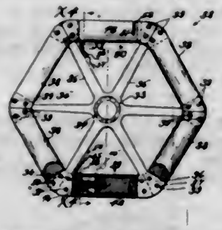
1,683,849. PROCESS OF IMPREGNATING FABRIC WITH SUBSTANTIALLY PERMANENT FRAGRANCE AND THE PRODUCT. HARRY MORTIMER SPECHT, Pelham, N. Y. Filed Sept. 1, 1925. Serial No. 53,957. 6 Claims. (Cl. 91—68.)

1. The process of impregnating a fabric with a substantially permanent fragrant odor comprising coating the back of said fabric with a solution of a compound of suitable fragrant gums, drying said solution and further impregnating the face of said fabric with a combined solution of volatile and substantially permanent fragrant odorant adapted to blend with the fragrance of said back coating.



6. A new article of manufacture consisting of a pile fabric having a flexible gum coating on the back of a substantially permanent fragrance and an impregnation of the pile with a volatile and substantially permanent fragrance adapted to blend with that of the back coating.

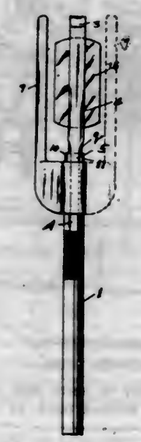
1,683,850. JUICE EXTRACTOR. CARL J. ULRICH, Minneapolis, Minn. Filed Mar. 5, 1925. Serial No. 13,360. Renewed July 16, 1927. 1 Claim. (Cl. 146—3.)



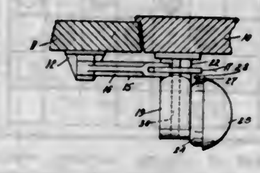
A conical reamer for extracting juices from citrous fruit and having an axial trunnion seat extending completely therethrough, said reamer having at its base a separate face plate provided with a trunnion extending into said trunnion seat, said reamer being held against rotation in respect to the face plate.

1,683,851. VANITY CASE. WALTER T. WELLS, Canton, Ohio. Filed Nov. 4, 1925. Serial No. 66,874. 4 Claims. (Cl. 206—38.)

3. A vanity case comprising a cylindric body having a semi-cylindric cut-out portion intermediate its ends, a semi-cylindric cigarette compartment accessible through said cut-out, a semi-cylindric door hinged to the body at said cut-out portion, a coin compartment hinged to one end of the cylindric body and a removable tray in the coin compartment forming a false bottom in the coin compartment.



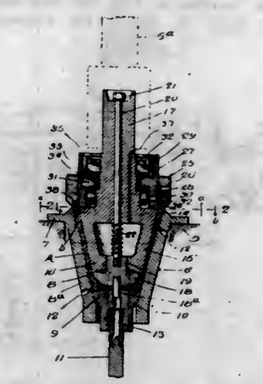
1,683,852. SIGNAL SWITCH FOR VEHICLES. SIMON PETER WIEGNER, CLAUDE W. DAVIDSON, and HENRY R. GORDON, Los Angeles, Calif. Filed Aug. 23, 1924. Serial No. 733,808. 2 Claims. (Cl. 200—59.)



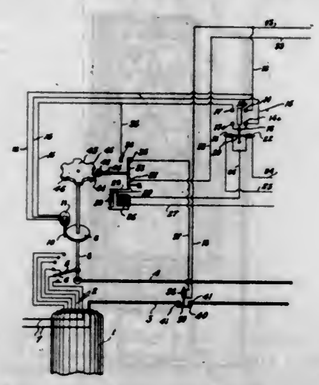
1. A vehicle steering wheel having a rim comprising a plurality of segments, one of said segments formed in two parts, one restricted segmental part being received within a bore in the other of said parts and forming therewith a cavity; a cylindrical insulated hand grip mounted on said rim segments; a contact element on said restricted segment part; a contact ring on said hand grip adapted to engage the first mentioned contact upon rotation of said hand grip and means carried by the bored segmental part and adapted for engagement with the hand grip to limit the rotation of the said grip.

1,683,853. RAZOR-BLADE HOLDER. WILLIAM J. WHITE, San Francisco, Calif., assignor of one-half to William H. Gilbert and one-half to Veryl G. Foft, San Francisco, Calif. Filed Feb. 17, 1926. Serial No. 88,724. 3 Claims. (Cl. 51—218.)

1. A razor blade holder comprising a tubular handle, a bar extending therefrom at one end, said bar being bent over at its end to form a clamp, a flat spring held in said clamp and adapted to curve outwardly from said bar in its free position, a slot in said handle to receive said spring, a sleeve on said handle, a slot in said sleeve, a guard bar on said sleeve and oppositely placed notches adapted to receive said spring on the inside of said sleeve at right angles to said guard bar.



1,683,854. COMBINED DOOR FASTENER AND ALARM. ARNOLD ZUKOR, New York, N. Y. Filed June 13, 1927. Serial No. 198,449. 2 Claims. (Cl. 116—14.)

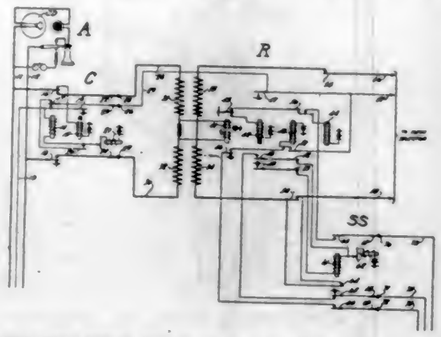


1. The combination with a door frame and a door hinged thereto, of a latch bolt pivoted to said door adjacent its free vertical edge, said latch bolt being composed of two pivotally connected sections, and a bracket fixed to said door frame having a longitudinal slot terminating adjacent the inner face of said door frame in a ledge on which the two sections of said latch bolt are adapted to rest, the outer one of said latch sections being adapted to enter said slot when the door is partially opened, said bracket being furthermore provided with a longitudinal recess into which the outer end of the inner section of said latch bolt is adapted to enter when the outer section of said latch bolt is disengaged from said ledge, the outer end of said recess forming a stop against which the outer end of the inner latch bolt section is adapted to abut, thereby preventing further opening of the door.

1,683,855. POTTERY-FORMING DIE. JOHN ANDRONOWICZ, Chicago, Ill., assignor of one-half to Bruno Bikin, Chicago, Ill. Filed Feb. 16, 1926. Serial No. 88,552. 4 Claims. (Cl. 25—26.)

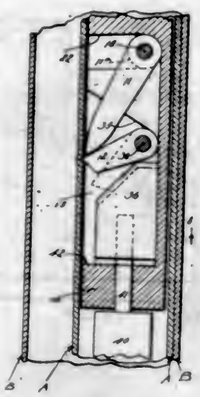
1. The combination with a reciprocatory and rotative male pottery forming die and its stem, and a female pottery forming die cooperating therewith in the formation of pottery ware, of an edge trimming knife having an annular cutting edge arranged to cooperate with said female die in trimming the edge portion of the article formed by the dies, and a sleeve rotatively mounted on the stem of said male die, said knife being adjustably secured on said sleeve.

1,683,856. AUTOMATIC CONTROL DEVICE. THADDEUS F. BAILY, Alliance, Ohio. Filed Aug. 20, 1926. Serial No. 130,522. 8 Claims. (Cl. 10—22.)



1. In combination with a transformer, a high tension circuit leading to the transformer and means for varying the voltage from the transformer, a control device for operating said voltage varying means and means in said control device to break the high tension circuit before the voltage varying means is operated.

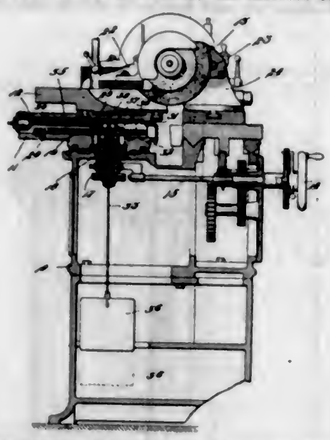
1,683,857. AUTOMATIC TELEPHONE SYSTEM. JOHN I. BELLAMY, Brookfield, and JOHN E. GARDNER, Chicago, Ill., assignors, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Aug. 25, 1923, Serial No. 659,304. Renewed June 20, 1927. 20 Claims. (Cl. 179—18.)



1. In a telephone system, a trunk, means for extending a calling line to said trunk, a call director, means for automatically connecting said director to said trunk responsive to said extension of the calling line, means in

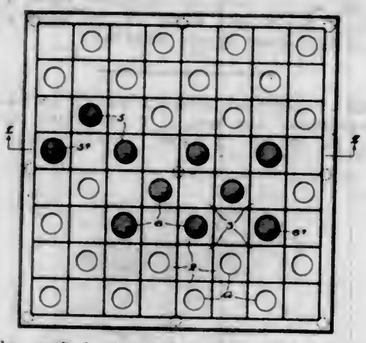
said director for registering the digits in the desired number as they are called, means for translating certain of said digits into a set of code digits, sending means in said director for retransmitting series of impulses over said trunk in accordance with the code digits and the untranslated digits to extend the connection to the

called line, means for starting said sending means upon the registration of the last digit to be translated, and means for disconnecting the director and for restoring it to common use responsive to said sending means catching up with said registering means at any point in the sending operation.



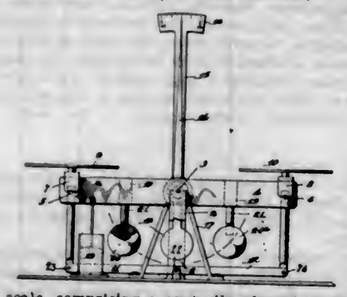
1,683,858. CASING PERFORATOR. MILLARD SUMTER BLACK, Huntington Park, Calif. Filed Jan. 9, 1925. Serial No. 1,441. 13 Claims. (Cl. 81—193.)

1. A device of the character described including a body, two individually mounted cutters carried by the body, and means whereby one cutter is operated by the other.



1,683,859. GRINDING MACHINE. FRANCIS P. BROWN, Providence, R. I., assignor to Brown & Sharpe Manufacturing Company, Providence, R. I., a Corporation of Rhode Island. Filed Mar. 23, 1927. Serial No. 177,653. 7 Claims. (Cl. 51—165.)

7. In a grinding machine, a work support, a hollow shaft, a bed plate swingelly mounted about said shaft as an axis, a wheel stand slide having a grinding wheel mounted thereon, a rack carried by said slide, a pinion gear on said hollow shaft engaging said rack, means for rotating said hollow shaft to adjust said grinding wheel towards and from said work support and radially of said axis, a nut carried by said slide and mounted for movement in a rectilinear path across the axis of said hollow shaft, a flexible chain connected to said nut and extending through said hollow shaft, a weight on said chain, means for moving said nut to points at opposite sides of the axis of said shaft whereby the effective tension of



said weight may tend to move said grinding wheel relative to the surface worked upon as desired.

1,683,860. GAME. THOMAS E. CAHILL, Ardmore, Pa. Filed Nov. 26, 1927. Serial No. 235,885. 2 Claims. (Cl. 273—113.)

1. The method of playing checkers, which consists in first rolling sets of players into layer-space regions, without regard to regularity of arrangement, and then playing with said players according to the well-known rules governing checkers, using disc or lozenge players upon a board having an unbroken surface.

1,683,861. COUNTER SCALE. HUGH M. CAMERON, New York, N. Y., assignor to Elder & Robinson, a Copartnership, Chicago, Ill., consisting of Earl B. Elder, R. E. Robinson, and A. W. Robinson. Filed May 6, 1924. Serial No. 711,313. 8 Claims. (Cl. 265—54.)

1. A scale, comprising a centrally pivoted beam, a pair of pans carried by the beam and above the horizontal plane

of the pivot, one of said pans being on each side of the vertical plane of the pivotal point, a pair of weights rigidly carried by the beam one on each side of the vertical plane of the pivot and below the horizontal plane of the pivotal point.

1,683,862. RUBBER COMPOSITION. CHARLES H. CAMPBELL, Pittsburgh, Pa., assignor to American Glue Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 22, 1926. Serial No. 143,517. 2 Claims. (Cl. 106—23.)

1. A rubber composition comprising rubber having compounded with it soluble and diffusible cleavage products obtained by the hydrolytic decomposition of collagen, and which cleavage products are substantially short of aminoacids.

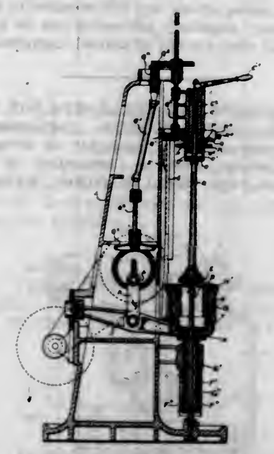
1,683,863. RUBBER COMPOSITION. CHARLES H. CAMPBELL, Pittsburgh, Pa., assignor to American Glue Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 22, 1926. Serial No. 143,518. 2 Claims. (Cl. 106—23.)

1. A rubber composition comprising rubber having compounded with it soluble and diffusible cleavage products obtained by the hydrolytic decomposition of keratin, and which cleavage products are substantially short of aminoacids.

1,683,864. RUBBER COMPOSITION AND PROCESS RELATING THERETO. CHARLES H. CAMPBELL, Pittsburgh, Pa., assignor to American Glue Company, Boston, Mass., a Corporation of Massachusetts. Filed Oct. 22, 1926. Serial No. 143,519. 3 Claims. (Cl. 106—23.)

1. A rubber composition comprising rubber having compounded with it glue and soluble and diffusible cleavage products obtained by the hydrolytic decomposition of keratin, and which cleavage products are sustantially short of amino-acids.

1,683,865. TOY BOW. FREDERIC W. CHAMBERLAIN, Three Oaks, Mich., and ERNEST B. CHAMBERLAIN, New York, N. Y., assignors to The Warren Featherbone Co., Three Oaks, Mich., a Corporation of Michigan. Filed Dec. 3, 1927. Serial No. 237,372. 3 Claims. (Cl. 124—7.)

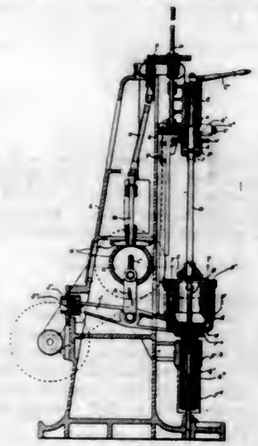


1. A bow constructed of two stout feather quills joined together at their larger ends.

1,683,866. TOOTH SCRUBBER. JERMAIN CHANDLER, Toledo, Ohio. Filed Feb. 23, 1926. Serial No. 90,001. 2 Claims. (Cl. 15—188.)

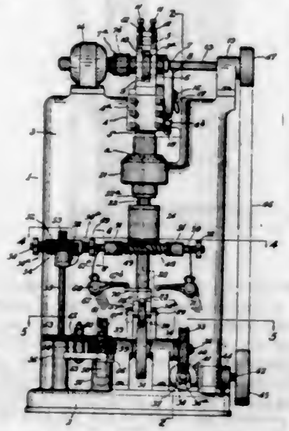
1. A tooth scrubber comprising a base, and a plurality of flexible prongs rising therefrom, each prong having a cylindrical body portion terminating at its free end in an edge, said prongs each having concave seats one on each side of said edge merging into said cylindrical portion.

1,683,867. METHOD OF TRUING GEARS. ALEXANDER W. COPLAND, Birmingham, Mich., and MAXWELL I. MATHEWSON, Providence, R. I., assignors to Detroit Trust Company, Detroit, Mich., a Corporation of Michigan. Continuation of application Serial No. 551,141, filed Apr. 10, 1922, and in Great Britain Sept. 14, 1926. This application filed Feb. 4, 1927. Serial No. 165,867. 16 Claims. (Cl. 51—278.)



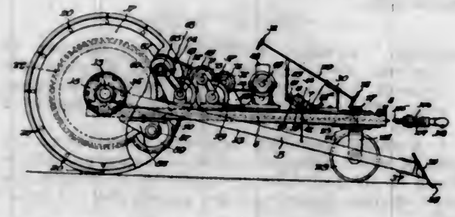
1. The method of grinding gears comprising registering the gear to be ground and a lap having a parallel tooth contour, axially reciprocating the one with respect to the other into and out of mutual engagement, maintaining substantially throughout the mutual overlapping relation of the two substantially uniform torque pressure per unit area of mutual engagement, and progressively changing the registration between the teeth of the lap and those of the gear.

1,683,868. MACHINE FOR TRUING GEARS. ALEXANDER W. COPLAND, Birmingham, Mich., and MAXWELL I. MATHEWSON, Providence, R. I., assignors to Detroit Trust Company, Detroit, Mich., a Corporation of Michigan. Continuation of application Serial No. 551,142, filed Apr. 10, 1922, and in Great Britain Sept. 14, 1926. This application filed Feb. 4, 1927. Serial No. 165,868. 13 Claims. (Cl. 51—52.)



1. In a machine for lapping gears and the like, the combination of a lap having a plurality of circumferentially spaced teeth with contours parallel to those of the member to be ground; holders for supporting the lap and the member to be ground in axial alignment; means for axially

reciprocating the one in relation to the other with the teeth of the lap in abrasive contact with teeth of the member to be ground; and means for progressively chang-



ing the registration of the lap and member to be ground by intermittently angularly advancing one in relation to the other while they are out of mutual engagement.

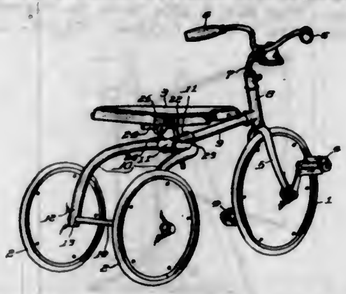
1,683,869. PROCESS AND APPARATUS FOR LAPPING GEARS AND OTHER OBJECTS. ALEXANDER W. COPLAND, Birmingham, Mich., assignor to Detroit Trust Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 26, 1926. Serial No. 90,949. 9 Claims. (Cl. 52—278.)

1. The method of lapping bodies having a circular series of regularly spaced teeth or projections with their intertooth spaces closed by surfaces transverse to the axis of said circular series, which method comprises forming a lap with surfaces complementary to the teeth surfaces to be lapped; supporting the toothed body and lap coaxially with their mutually complementary surfaces in abutting relation; causing a rapid vibratory axial movement of the body and lap relative to each other while maintaining the said abutting relationship between the complementary surfaces; meanwhile setting up a mutual torsional pressure between the teeth of the body and lap; and intermittently disengaging the teeth of the body and lap by relative axial movement and progressively indexing one angularly relative to the other about their common axis.

1,683,870. TRACTION APPARATUS. WILL ESPY CURTIS, Evanston, Ill. Filed June 19, 1922. Serial No. 569,479. 3 Claims. (Cl. 254—166.)

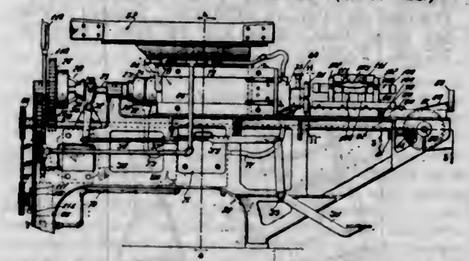
1. In a device of the character described, in combination, a chassis, supporting traction wheels for said chassis, a source of power on said chassis, an axle for said wheels, a revoluble shaft for driving said wheels, a hoisting drum concentric with said axle, a revoluble shaft for driving said drum, a gear train for driving said first mentioned revoluble shaft, a companion gear train for driving the other of said revoluble shafts, a counter-shaft, driven by the source of power and common to said other shafts, and clutch members mounted upon said counter-shaft for alternately or simultaneously engaging said gear trains for driving said shafts.

1,683,871. WATCH-JEWEL-SETTING POLISHER. HARRY CURTIS, Kemmerer, Wyo. Filed Mar. 25, 1927. Serial No. 178,342. 3 Claims. (Cl. 15—97.)



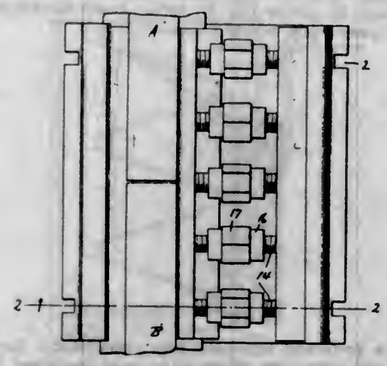
1. In a polisher of the class described, a stem, a handle on one end of the stem, a sleeve secured on the other end of the stem, a tapered pin formed on the outer end of the sleeve, an additional sleeve, the inner end of the bore thereof being tapered for frictionally receiving the tapered pin, and a polishing member carried by the outer end of the last mentioned sleeve.

1,683,872. CHILD'S VEHICLE. NATHAN H. DAVIS, Philadelphia, Pa., assignor to Keystone Lantern Company, a Corporation of New Jersey. Filed Apr. 30, 1925. Serial No. 27,042. 2 Claims. (Cl. 208—113.)



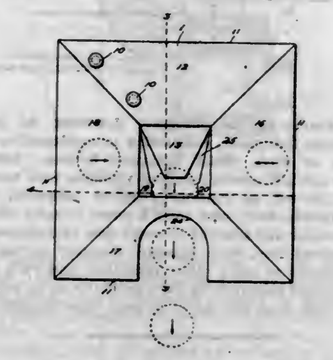
1. A child's vehicle of the character described, comprising a front wheel mounted for steering and provided with pedals, a tubular reach, a separate, tubular rear fork, rear wheels carried by the rear fork, a coupling connecting the rear fork and the reach and located substantially midway between the front and rear wheels, and a seat adjustably mounted in said coupling and supported thereby between said front and rear wheels, the sides of the rear fork being inclined rearwardly and downwardly between the coupling

and the axis of the rear wheels, and the reach and rear fork being of a length to support the rear wheels in rearwardly spaced relation to the front wheel to provide an un-



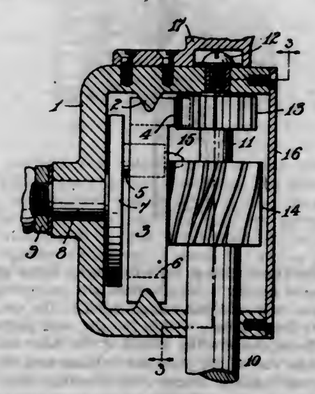
obstructed leg space therebetween to permit the vehicle to be propelled from the seat either by the pedals or by running the feet over the ground as in paddling.

1,683,873. BUTTER-PRINT MACHINE. CHARLES DOERING and HENRY H. DOERING, Chicago, Ill. Filed Jan. 28, 1924. Serial No. 688,937. 7 Claims. (Cl. 33—14.)



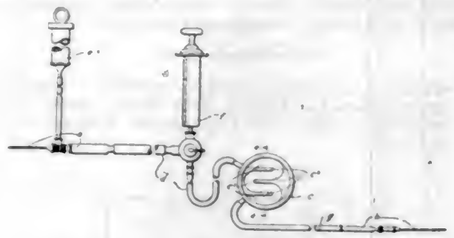
1. In a butter working and print machine, movable means for receiving the moulded butter, a counterbalanced frame disposed transversely of the path of the butter and pivotally secured at one side so as to swing vertically upward, cutting wires removably secured to said frame, and means pivoted to swing vertically in the same direction as said frame, said means being provided with grooves adapted to receive the cutting wires when the frame is swung upwardly and to strip the butter from said wires.

1,683,874. RAIL JOINT. RAY NORMAN DOODY, Caribou, Me. Filed Nov. 17, 1927. Serial No. 233,944. 2 Claims. (Cl. 238—263.)



1. In a rail joint securing structure, a base plate, upstanding flanges at the opposed longitudinal edges of said plate, a clamp plate adapted to be disposed between the rail and one flange of the base plate, a clamp plate at the opposite side of the rail, a movable elongated bar adapted to engage the inner side of the opposed longitudinal flange, and expansion means interposed between the second mentioned clamp plate and the elongated bar, whereby the clamp plate will be caused to tightly engage the opposed side of the rail ends, when the same is actuated.

1,683,875. GOLF-PRACTICING DEVICE. CHARLES HUGH DUFFY and EUGENE HUGH DUFFY, Miami, Fla. Filed Oct. 17, 1927. Serial No. 226,678. 8 Claims. (Cl. 273—36.)

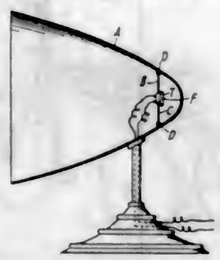


7. As an article of manufacture of the character described, a pyramidal structure of sheet material shaped to form a "cup" at the top of the pyramidal structure, one of the faces of the pyramidal structure being provided with an opening, and means within the said "cup" to deliver a ball from said "cup" through the said opening in the said face of the pyramidal structure.

1,683,876. VALVE GRINDER AND MECHANICAL MOVEMENT. WILLIAM E. DUTHIE, Indianapolis, Ind. Filed Oct. 22, 1926. Serial No. 143,366. 4 Claims. (Cl. 74—14.)

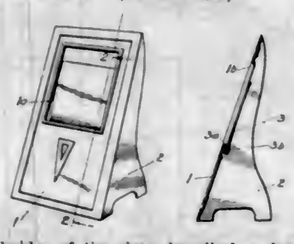
1. In a device of the character described, the combination with a shaft having a pinion thereon, of a reciprocating rack meshing with said pinion, a crank member for reciprocating said rack, a helical gear mounted on said shaft and an extension on said crank member engaging said helical gear during a portion of the movement of said crank member for rotating the shaft independently of the rack and gear connection.

1,683,877. MEANS FOR TREATING BLOOD-STREAM INFECTIONS. LESTER A. EDBLOM and EMMET K. KNOTT, Portland, Oreg. Filed Mar. 3, 1927. Serial No. 172,358. 11 Claims. (Cl. 174—177.)



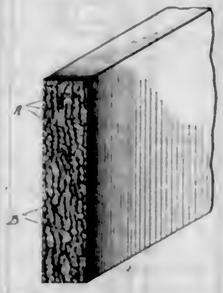
1. Apparatus of the character described for treating blood stream infections, comprising in combination with a generator of ultra violet radiation between 1800—4000 A. U., an airtight conduit having veni-puncture needles at the ends thereof, an exposure chamber connected in said conduit, intermediate such ends, a pump element connected to said conduit and adapted to cause flow therethrough at a predetermined rate, such exposure chamber having a portion permeable to ultra violet radiation, and such portion being arranged relatively to such generator as to permit the rays directed from the latter to pass therethrough.

1,683,878. HAMMER HANDLE. WILLIAM EDWARDS, ALTAVILLE, Calif. Filed Apr. 9, 1926. Serial No. 100,962. 1 Claim. (Cl. 306—33.)



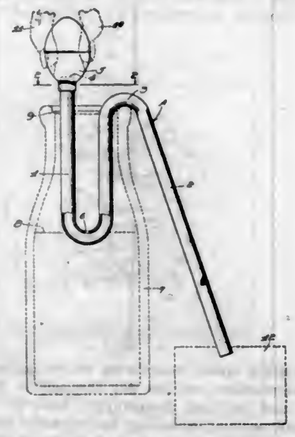
The combination with a head having a flared eye, of a wooden handle having a longitudinal slit extending thereinto from one end, said end being seated in the eye, a reinforcing plate fitted snugly within the slit, said plate having roughened faces, cooperating means at the inner end of the slit and in one end of the plate for holding said end of the plate anchored against displacement within the slit, an adhesive on the roughened faces of the plate and the walls of the slit, there being spaced longitudinal slits in that end of the plate seated in the eye, said slits being disposed adjacent the respective edges of the plate, and wedges seated within the respective slits extending transversely of the plate and handle for holding one end portion of the handle and plate expanded into engagement with the flared walls of the eye, said plate constituting means for reinforcing that portion of the handle outside of the eye and adjacent the head.

1,683,879. LOUD SPEAKER. WOLFGANG FELIX EWALD, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Nov. 6, 1924, Serial No. 748,007, and in Germany Nov. 8, 1923. 6 Claims. (Cl. 181—27.)



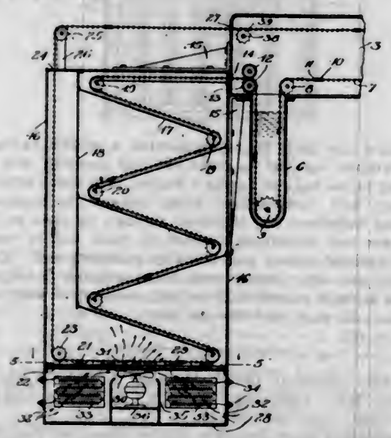
1. A loud speaking telephone receiver comprising a reflector structure having an interior surface in the form of a paraboloid, a sound producing device positioned substantially at a focus thereof, and inter-connecting supporting means therebetween comprising an inelastic material.

1,683,880. HOLDER FOR PHOTOGRAPHS, CARDS, PLATES, OR SIMILAR ARTICLES. HERMAN P. FEST, San Diego, Calif. Filed Apr. 19, 1924. Serial No. 707,669. 2 Claims. (Cl. 40—154.)



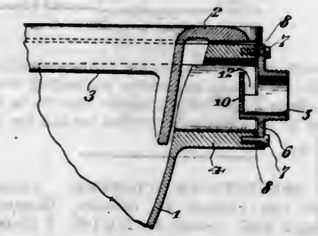
1. In a holder of the class described, a frame member provided with an opening therein, the portion of said frame member stamped out to form said opening being bent backwardly and downwardly and thence upwardly in spaced relation from said frame member below the lower edge of said opening and entending over a portion of said opening, the space between said downwardly bent portion and the one end of said upwardly bent portion forming a pocket below the lower edge of the opening of the frame member.

1,683,881. EXPANSION JOINT. ALBERT C. FISCHER, Chicago, Ill. Filed Aug. 21, 1926. Serial No. 130,681. 14 Claims. (Cl. 94—18.)



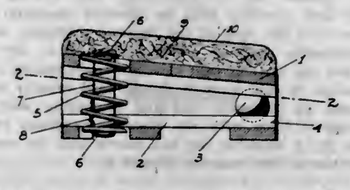
12. A preformed expansion joint comprising a loosely felted mat comprising substantially short fibres and substantially tough, tenuous rough surfaced fibres interlaced throughout the mat, said mat being permeated with a preponderance of bituminous material.

1,683,882. CREAM SEPARATOR. JOHN ALEXANDER FRISK, Chicago, Ill. Filed May 6, 1927. Serial No. 189,345. 1 Claim. (Cl. 137—20.)



A device of the type described comprising a body portion formed of a single piece of hollow tubing and having a U-shaped portion and a substantially parallel outlet portion, said U-shaped portion having side portions connected by an arcuate-shaped lower portion, said arcuate-shaped lower portion having an opening through the top wall thereof, said outlet portion being joined to one of said side portions by an arcuate-shaped connecting portion, and a bulb disposed upon the end of the other side portion, said U-shaped portion being adapted to be disposed in a receptacle containing a liquid, said opening allowing a portion of the liquid in said receptacle to pass therethrough into said U-shaped portion, said bulb being adapted to force a portion of the liquid in said U-shaped portion into said outlet portion, the movement of the liquid in said outlet portion drawing the liquid in the receptacle above the opening, through the opening, through one side portion of said U-shaped portion, and through said outlet portion.

1,683,883. PHOTOGRAPHIC-PRINT-DRYING APPARATUS. JOHN S. GREENE, Rochester, N. Y., assignor to Photostat Corporation, a Corporation of New York. Filed May 12, 1923. Serial No. 638,644. 5 Claims. (Cl. 34—12.)

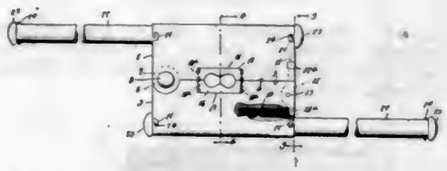


5. In a photographic print drier, the combination with a drying chamber having a plurality of slides therein arranged adjacent each other in staggered relation, of endless conveying means cooperating successively with each of said slides and engaging the print at a definite point for conveying the print progressively along first one slide then the other in reverse directions.

1,683,884. FLUSH-CONTROL MEANS FOR WATER-CLOSET HOPPERS. WILLIAM U. GRIFFITHS, Philadelphia, Pa. Filed May 17, 1927. Serial No. 191,948. 3 Claims. (Cl. 4—69.)

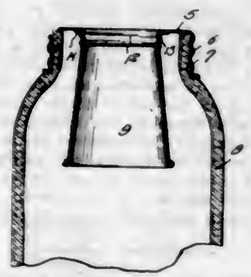
1. A water closet hopper provided at its upper rear side with a rearwardly extending tubular projection, the said projection having mounted thereon a nozzle which projects partly thereinto, which nozzle comprises a tubular section having a laterally and outwardly extending flange located about the middle of its length, means for securing the said flange to the outer end of the said tubular projection, and the inner end of the said tubular section of the nozzle terminating in a wall which extends at right angles to the axis of the said section, and the said section being provided with a transversely extending slot at its upper side in adjoining relation to the said wall.

1,683,885. RESILIENT AUTOMOBILE SEAT. CHARLES H. GUNN, San Francisco, Calif. Filed Apr. 14, 1926. Serial No. 101,897. 3 Claims. (Cl. 155—50.)



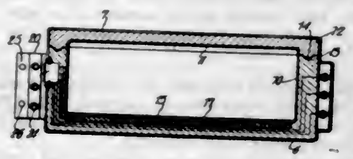
1. A resilient seat including upper and lower frames spaced apart, hinge means connecting the frames at the back, a compression spring between the frames at the front, horizontal bars narrower than the springs secured to the frames and against which the ends of the spring abut, a flexible strap passing inside the spring and around the bars, and take-up means between the ends of the strap.

1,683,886. MANUFACTURE OF STEEL. ROBERT ABBOTT HADFIELD, Westminster, England. Filed Nov. 20, 1922, Serial No. 602,293, and in Great Britain June 19, 1922. 16 Claims. (Cl. 75—22.5.)



1. The method of producing flawless steel low in sulphur and phosphorus, said method consisting in heating molten refined base metal of the character herein referred to, in a basic electric furnace in the presence of deoxidant material and of basic slag forming material comprising lime, and subsequently subjecting the treated metal to the action of a deoxidizing and refining slag to reduce the percentage of sulphur and phosphorus in the metal to the desired low limits.

1,683,887. WIRE-SPLICING-SLEEVE WRENCH. FOREST D. HARR, Boulder, and JOHN FALLON, Fort Collins, Colo.; said Harr assignor to Guy O. Ritcheson, Pendleton, Oreg. Filed Feb. 18, 1926. Serial No. 89,131. 4 Claims. (Cl. 140—118.)

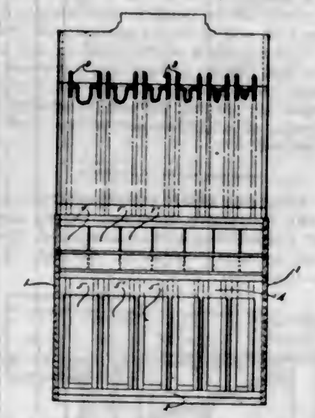


1. A wrench of the character set forth, comprising jaws, handle bars, and means adjustably connecting the handle bars to the jaws to permit the handle bars to be extended in the same or in opposite directions beyond the jaws.

1,683,888. RECEPTACLE CLOSURE. CHARLES D. HARRISON and PARREN D. LINDSEY, Hominy, Okla. Filed Aug. 2, 1927. Serial No. 210,145. 5 Claims. (Cl. 215—81.)

1. A device of the character described comprising a metallic closure cap for preserving jars having a flat top wall and provided with an annular marginal flange to secure it on the neck of the jar, and a tubular metallic fruit depressing member rigidly attached to the under side of the top wall of said closure cap in spaced concentric relation to said annular flange, said tubular member being open at its lower end and projecting well below said flange to form with the closure cap, when removed from the jar, a drinking cup and saucer unit for reception of a portion of the contents of said jar.

1,683,889. FOOD CONTAINER AND HEATER. WILLIAM G. HAYNE, Brooklyn, N. Y. Filed June 13, 1927. Serial No. 198,537. 6 Claims. (Cl. 219—35.)

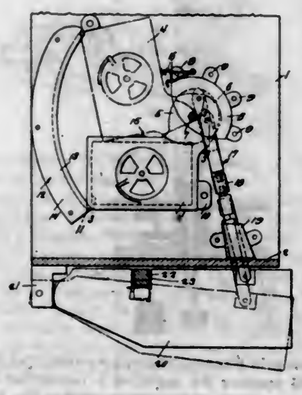


5. A plurality of containers adapted to be used in the delivery of food, each comprising an outer member, an inner member and a plurality of electric heating elements of different resistances disposed between said members and plug and socket connections between each of the containers whereby their heating elements can be connected in circuit.

1,683,890. TROLLING SPOON. HERBERT WILLIAM HEITMILLER, Seattle, Wash. Filed Mar. 2, 1927. Serial No. 172,056. 6 Claims. (Cl. 43—42.)

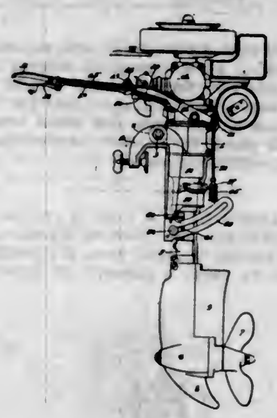
1. A trolling spoon comprising an elongated body having an intermediate section flat throughout the width of the body and inclined downwardly towards its forward end, a rear section extending horizontally from said intermediate section and bent to form upwardly diverging side portions, and a front section extending from said intermediate section at an upward incline and bent longitudinally to form downwardly diverging side portions.

1,683,891. CABINET. FREDERICK G. HODELL, Cleveland, Ohio, assignor to The Chain Products Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 12, 1927. Serial No. 174,832. 4 Claims. (Cl. 312—172.)



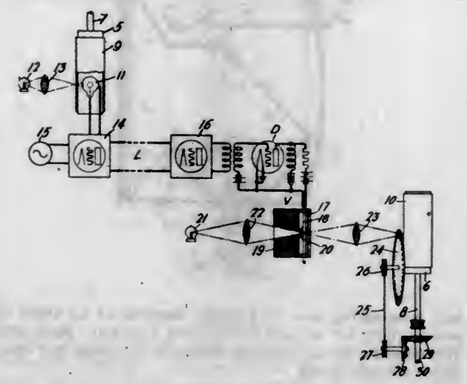
1. In a tire chain display apparatus, a cabinet having a compartment open at its front end and provided with an opening in the top and having a display rack above said top opening, said compartment being adapted to receive a shipping container slid thereinto through its open end as a drawer and containing a batch of chain laid in superposed parallel layers and laterally confining said layers as laid, and said display rack being adapted to support an end of chain extending from said container in said compartment through said top opening.

1,683,892. FIRING DOOR. ROBERT T. HORTON, Greenwood, Ind. Filed Feb. 18, 1927. Serial No. 169,302. 1 Claim. (Cl. 110—178.)



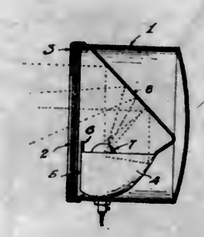
A swinging door structure of the character described, designed to overlie a wall opening, comprising a door body, a relatively large ear projecting upwardly from one upper

corner of said door and having an aperture formed therethrough on a line lying inwardly of and parallel with the adjacent end edge of the door, a pivot element extending through said aperture to support the door, a pull arm arranged at an inclination with respect to the said end edge



of the door and having one end pivotally connected to said ear in a plane above the pivot and on a line with the adjacent end edge of the door, and a foot operated lever, connected with the other end of said pull arm for the foot control of the door.

1,683,893. OUTBOARD MOTOR. FINN T. IRGENS, Jackson, Mich., assignor to Lockwood Ash Motor Co., Jackson, Mich., a Corporation of Michigan. Filed Dec. 14, 1925. Serial No. 75,278. 17 Claims. (Cl. 115—18.)

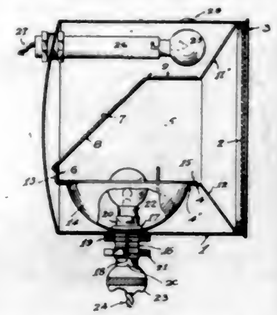


1. In an outboard motor for a boat wherein an engine is adapted to drive a propeller by a drive shaft co-extensive of a crank shaft of the engine, and wherein a drive shaft casing is supported from a boat bracket and adapted to swing rearwardly to avoid an obstacle:—a differential mechanism for constantly meshing gears in said casing, a clutch mechanism operatively arranged relative to said differential mechanism to afford normal forward boat drive for the propeller, and means adapted to simultaneously change the differential and clutch mechanism for backward boat drive for the propeller and fix said casing against a rearward swing relative to said boat bracket.

1,683,894. REPRODUCING PICTURES TRANSMITTED ELECTRICALLY. HERBERT E. IVES, Montclair, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 22, 1924. Serial No. 733,464. 7 Claims. (Cl. 178—7.)

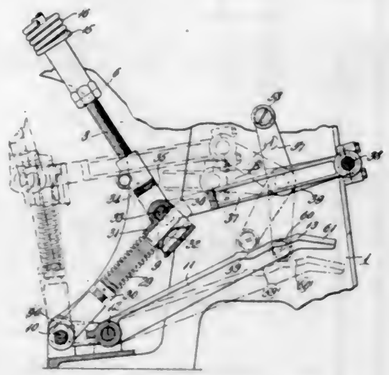
1. In a system for the transmission of pictures by electricity, means to produce picture currents, means for exposing varying portions of elemental areas of a record blank in accordance with said picture currents, and means comprising an interrupting device to stagger said elemental areas.

1,683,895. AUTOMOBILE LAMP. GEORGE F. JACOB, Evanston, Ill. Filed Mar. 17, 1927. Serial No. 176,134. 1 Claim. (Cl. 240—41.)



As an article of manufacture, a reflector unit formed from a single piece of metal comprising a portion of a segment of a hollow spherical body part of which is a straight wall paralleling its axis forming one of the reflecting portions of said body, and having an opening in its wall at said axis, said segment including an integral flat reflector portion extending from that edge thereof directly opposite the said straight wall and overhanging said opening, the said flat reflector portion and the said straight wall lying at opposite sides of the body.

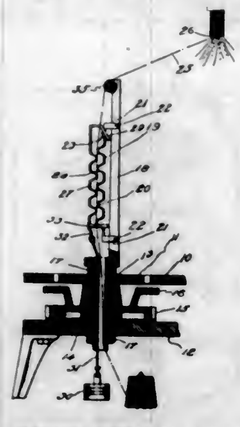
1,683,896. HEAD LAMP FOR MOTOR VEHICLES. GEORGE F. JACOB, Evanston, Ill. Filed July 22, 1927. Serial No. 207,724. 2 Claims. (Cl. 240—41.)



1. The combination with a casing for the head lamp of a motor car, and a flanged primary reflector and its lamp secured at the bottom of said casing arranged to direct light rays upwardly toward the top of said casing, of a secondary reflector structure of box-like form insertable in the casing including a bottom portion having an opening to receive the said primary reflector, the flange of the latter bearing upon said bottom at said opening securing said secondary reflector in place, parts of the bottom at dia-

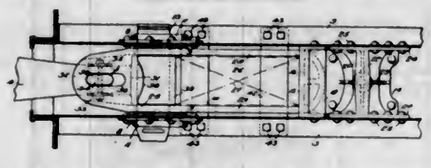
metrically opposite sides of the opening adapted to rest upon the casing in lines paralleling the longitudinal line of said casing, thence extending away from said bottom forming opposite side portions for said secondary reflector

and terminating each in a flange disposed at an angle of substantially 45° to said bottom, and a reflector plate slidable beneath the flanges and facing at an angle the open front of said casing.



1,683,897. PRESSING MACHINE. GEORGE W. JOHNSON, Norwood, Ohio, assignor to The American Laundry Machinery Company, Norwood, Ohio, a Corporation of Ohio. Filed Oct. 9, 1925. Serial No. 61,502. 14 Claims. (Cl. 68—9.)

1. A pressing machine, comprising a work support, a swinging head lever carrying a cooperating pressing head, upper and lower toggle members connected to said head lever, operating means connected to the knuckle of said toggle members for straightening the same to close the press, operating means connected to the lower toggle member for elevating the same to apply power pressure, and means whereby an obstruction to the normal straightening movement of said toggle members prevents effective transmission through said toggle members of the lifting effect applied to the lower toggle member.

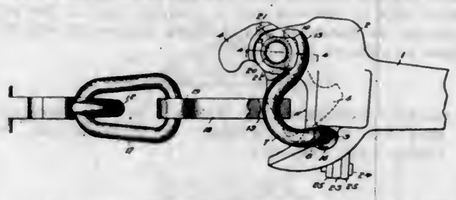


1,683,898. TENSIONING DEVICE FOR BRAIDING MACHINES. WILLIAM C. JOHNSON, Providence, R. I. Filed July 17, 1925. Serial No. 44,230. 8 Claims. (Cl. 96—3.)

1. In a braiding machine having a raceway plate with an opening therein for the passage of a warp thread, fixed warp guide post adjacent said opening and extending upward above said plate a substantial distance, a warp thread tensioning device operatively mounted on said post comprising a pair of members extending along the length of the thread to engage the same, and a weight

located below said plate and having a connection extending through said opening for applying a tensioning action to said members to more or less firmly engage the thread.

1,683,899. DRAFT RIGGING. BYERS W. KADEL, Baltimore, Md., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed May 24, 1924. Serial No. 715,645. 7 Claims. (Cl. 213—69.)

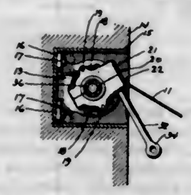


1. In a draft rigging for railway cars, the combination with cener sills, of a yoke interposed between the same, the arms of said yoke being arranged parallel with the planes of the webs of said sills, and means for connecting the forward ends of said arms, said means comprising a pair of slotted plates having their adjacent faces rearwardly and outwardly inclined.

1,683,900. SAFETY DEVICE FOR BLASTING OR EXPLOSIVE CARTRIDGES. EDMUND KAROLLUS, Vienna, Austria. Filed July 26, 1927, Serial No. 208,598, and in Austria Feb. 24, 1925. 6 Claims. (Cl. 102—11.)

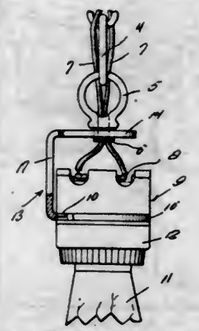
1. An attachment for blasting or explosive cartridges comprising a substantially solid plug and members mounted thereon for extracting the plug from the borehole, the said members being formed to engage with the end of an extracting tool.

1,683,901. CAR-COUPLING MECHANISM. WILLIAM KELSO, Pittsburgh, Pa., assignor to The McConway & Torley Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 13, 1925. Serial No. 62,263. 10 Claims. (Cl. 213—112.)



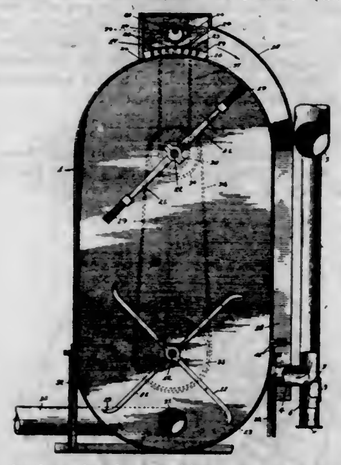
1. Car coupling mechanism comprising a coupler head, a knuckle rotatably mounted on said head, and a lock for said knuckle, in combination with means adapted to connect said coupler when the knuckle of the latter is in open position to a coupling device of a different type, said means including a member pivotally mounted on said head in spaced relation to the longitudinal axis of the latter so as to rotate on a substantially vertical axis, and means movably connected to said pivoted member for connecting the latter to the said coupling device of different type, said coupler head being provided with means for limiting forward rotation of said pivoted member.

1,683,902. POPPET-VALVE SELF-CORRECTING MEANS. HARRY R. KIESSIG, San Diego, Calif. Filed Dec. 14, 1926. Serial No. 154,702. 8 Claims. (Cl. 123—188.)



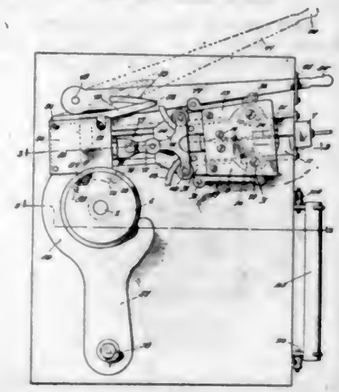
1. In combination with a poppet valve having a stem and a spring surrounding said stem, a member mounted upon said stem and having a depression in its face, said member receiving the end thrust of said spring; and means seated within and held in position by said depression for separably retaining said member upon said stem, said means having non-rotative engagement with the valve stem and with said member.

1,683,903. ADJUSTABLE AWNING FIXTURE. SIGMUND KIRSCHBERG, San Francisco, Calif. Filed Feb. 9, 1927. Serial No. 166,934. 4 Claims. (Cl. 156—44.)



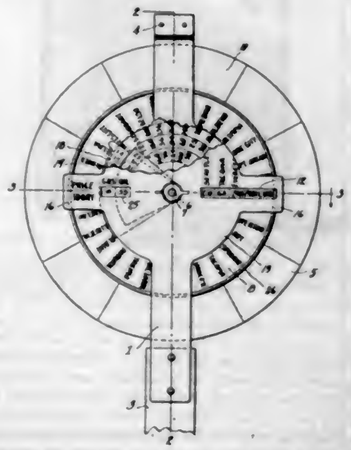
1. A device of the character described, comprising a bracket formed with a bolting portion and a plate extending at right angles thereto, a gear case pivotally mounted upon said plate independently of other means and adapted to swing in a plane parallel thereto, an awning roll extending into said gear case out of contact with said bracket, a worm gear mounted upon the roll within the case and adapted to drive the same, a worm pinion within the case and meshing with the worm gear, a shaft carrying the pinion journaled in and extending from the case, and means for adjustably setting the gear case with relation to the bracket to dispose the pinion shaft in a desired position.

1,683,904. SUSPENSION-CHAIN COUPLING. PHILLIP J. KNOBLOCK, Passaic, N. J. Filed Aug. 19, 1927. Serial No. 214,701. 1 Claim. (Cl. 240—78.)



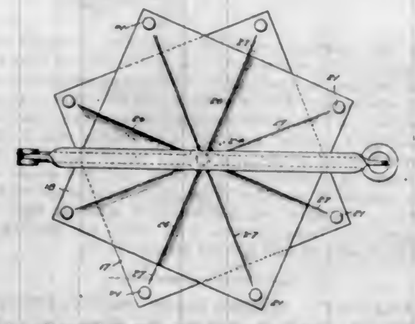
In a structure of the class described, in combination, a suspension chain, a ring carried by the chain, said ring being provided with a screw threaded neck, an electric fixture including a socket composed of separable sections, a coupling including an arm having a screw threaded hole threadedly receiving said neck, and also having a part interposed and clamped between the sections of said socket, said last named part being in the form of an annulus provided with a notch, and one of the sections of said socket being provided with a nib receivable in said notch.

1,683,905. FEATHER-CLEANING MACHINE. ROBERT W. KROBITZSCH, San Francisco, Calif., assignor to Sunset Feather Company, San Francisco, Calif. Filed June 16, 1926. Serial No. 116,410. 14 Claims. (Cl. 34—44.)



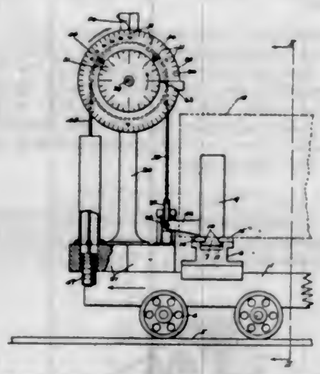
1. A feather cleaning machine comprising a chamber; a beating element mounted within the lower portion of the chamber; means for introducing feathers to be cleaned into the chamber; suction means connected to an opening formed in the top of the chamber to carry away dust and dirt separated from the feathers; a screen covering said opening; means mounted within the upper portion of the chamber for cleaning the inner side of screen to prevent the lodging of feathers therein; means mounted adjacent the outer side of the screen and operating simultaneously with the inner cleaning means for displacing feathers not removed by said inner cleaning means; and means for withdrawing the feathers from the machine.

1,683,906. WIRE-DRAWING MECHANISM. PATRICK J. MAHONEY, Sharon, Pa. Filed Aug. 27, 1925. Serial No. 52,886. 10 Claims. (Cl. 205—16.)



1. Wire drawing mechanism, embodying a head mounted for reciprocation, coacting gripping members carried by the said head, a member supported upon the head to move therewith and adapted to receive a movement independently thereof, means upon the head operable with relation to the gripping members to effect mutual coaction thereof to grip the wire, angle levers upon the said member, operative connection between the angle levers and the actuating means upon the head, the said levers having arcuate fingers, a draw head supported for movement with relation to the last mentioned member, and rollers upon the draw head for coaction with the said fingers to actuate the angle levers and thereby actuate the actuating means for the gripping members to effect mutual coaction thereof to grip the wire, when the draw head is moved in one direction, movement of the draw head in the opposite direction serving to render the actuating means inactive, coaction of the said rollers with the said fingers of the angle levers serving to connect the draw head with the last mentioned member to effect reciprocation of the first mentioned head when the draw head is reciprocated.

1,683,907. INDICATING DEVICE. JOHN E. MANN, Snohomish, Wash. Filed Dec. 27, 1926. Serial No. 157,183. 1 Claim. (Cl. 40—70.)

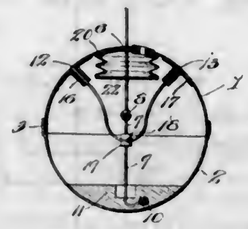


The combination with a supporting post, of an indicating device comprising spaced standards fixed at their lower ends to opposite sides of the post and joined together at their upper ends, a pivot bolt extended between the standards and disks rotatable on the pin between the standards; said standards having circularly enlarged portions concentric with respect to the pin which are provided with radially directed slots through which matter on the disks may be observed and a clamping nut on the pin whereby the standards may be drawn together to hold the disks at adjusted positions.

1,683,908. THERMOSTAT. PERRY S. MARTIN, Harrisonburg, Va. Filed Nov. 2, 1923. Serial No. 672,444. 8 Claims. (Cl. 297—12.)

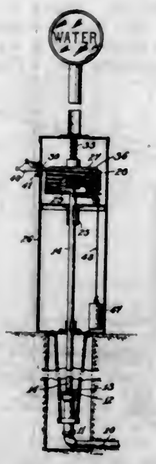
1. An all-metal thermostat comprising three broad rectangular plates secured together at their corners the central plate having a lower co-efficient of expansion than the outside plates, the diagonals of the rectangles crossing each other at the center substantially at a right angle.

1,683,909. SAWYER'S INDICATOR FOR SAWMILL LOG CARRIAGES. FERN C. MAVIS and GUY B. SAMPAIR, Tacoma, Wash. Filed Aug. 19, 1926. Serial No. 130,334. 13 Claims. (Cl. 33—147.)



1. A sawyer's indicator for saw mill log carriages, having in combination a dial plate, a pointer carried in operative propinquity to the dial plate, a movable bed plate knee mounted on the carriage and means operatively connecting the knee to said dial for registering movement of the knee from a predetermined point.

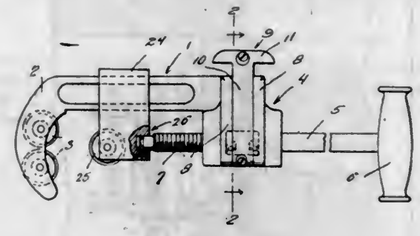
1,683,910. COMBINED SOUNDING FIGURE TOY AND RETURN BALL. WILLIAM S. MINNIX, Washington, D. C. Filed Feb. 18, 1927. Serial No. 169,244. 4 Claims. (Cl. 46—40.)



1. A toy of the return ball type including a hollow head having apertures therein, an elastic cord passed through an opening in the ball and having one end anchored within

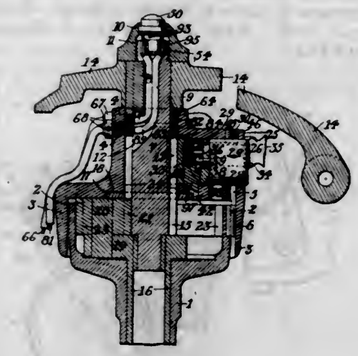
the head, an invisible element within the head having feature simulating ends mounted for movement through said apertures, and means connecting said element to the

cord whereby the ends of the element are projected through the apertures to visible exterior position as the cord is stretched.



1,683,911. WATER SUPPLY FOR AUTOMOBILE RADIATORS. JOSEPH F. MORRIS, West Lafayette, Ind. Filed Mar. 25, 1926. Serial No. 97,214. 5 Claims. (Cl. 299—79.)

1. A liquid dispensing apparatus comprising a supply pipe, a flexible delivery pipe, a drum upon which said flexible pipe is wound, a rotating connection between the supply pipe and delivery pipe to permit rotation of the drum, means dependent upon drum rotation for controlling liquid delivery to the flexible delivery pipe, means for draining said supply pipe controlled by the rotation of said drum and means dependent upon drum rotation for controlling the reverse outflow from the flexible delivery pipe said means comprising a normally closed delivery nozzle and means for automatically opening said delivery nozzle when the drainage means is in active position.

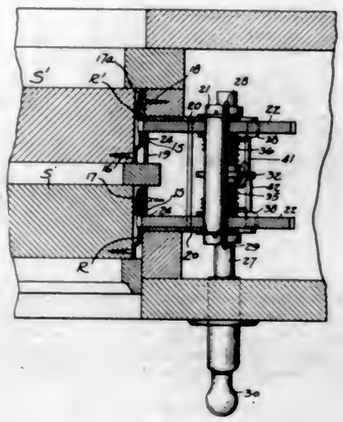


1,683,912. PIPE CUTTER. CHARLIE CARY NEBLETT, Norfolk, Va. Filed Feb. 19, 1927. Serial No. 169,489. 4 Claims. (Cl. 81192.)

1. In a tool of the class described, a shank having a jaw at one end provided with cutting means and having a head at its opposite end, said head being formed with a passage disposed in parallelism with said shank, a handle passing through said passage, a slide mounted on said shank, a cutter carried by said slide and cooperative with the first named cutting means, said handle being swivelly connected with said slide, a frame slidably

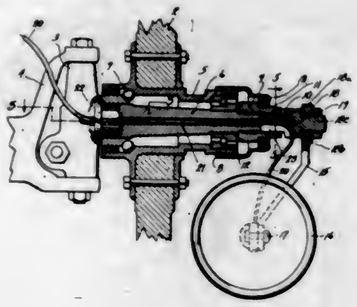
mounted upon said head, a pair of complemental relatively movable grips associated with the head and passage and engageable with said shank, and an operating connection between the frame and the grips, whereby to release the grips to facilitate adjustment of said slides.

1,683,913. VEHICLE LOCK AND SIGNALING DEVICE. ARTHUR E. PAIGE, Philadelphia, Pa. Original application filed Jan. 26, 1924, Serial No. 688,819. Divided and this application filed Dec. 29, 1924. Serial No. 758,712. 6 Claims. (Cl. 200—59.)



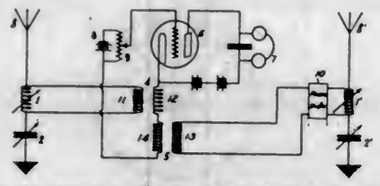
1. A vehicle steering wheel shaft for steering mechanism of the planetary gear type; having a screw thread at one end, sun gear teeth, terminating adjacent the other end and extending toward said screw thread; and having a spline key slot extending radially to the axis of said shaft and from the screw threaded end thereof and terminating between two of said gear teeth; constructed and arranged to form a seat for an electric conductor, held in position by said spline key; an electric conductor extending in said slot; and a spline key in said slot securing said conductor in position.

1,683,914. WINDOW-OPERATING MECHANISM. FRED JOHN PFIFFER, Los Angeles, Calif. Filed June 21, 1926. Serial No. 117,442. 14 Claims. (Cl. 268—132.)



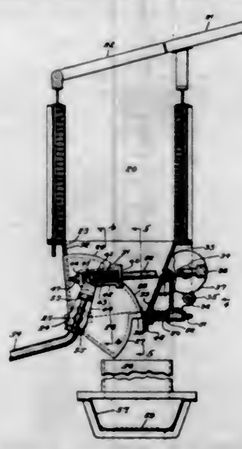
1. A window operating mechanism comprising two gear and rack means for elevating and lowering the two sliding sashes of a window, manually operable means com-

mon to both of said means for actuating either means independently of the other, and locking means for each of the gear and rack means normally acting to lock both



of said means and singly releasable by the manually operable means to permit actuation of the respective gear and rack means.

1,683,915. SPOTLIGHT-MOUNTING DEVICE. JOSEPH E. PRINCE and JAMES E. SCHOOLEY, Seattle, Wash. Filed Aug. 9, 1926. Serial No. 128,194. 2 Claims. (Cl. 240—8.12.)

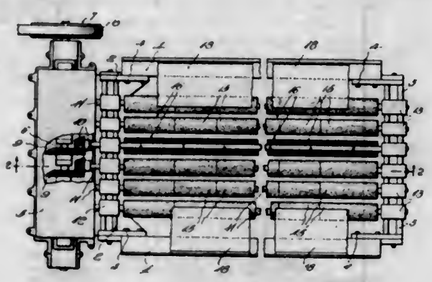


2. In a vehicle of the character described, a steering wheel spindle, a wheel revolnble on the spindle provided with a hub cap having an opening therein alined with the spindle, a nut threaded onto the outer end of the spindle for retaining the wheel and provided with a tubular extension projecting through the hub cap opening, a shank threaded into the said extension against the end of the spindle to serve as a lock for the nut; said shank having a wrench head integral therewith intermediate its ends whereby it may be threaded and tightened in the extension and having a threaded outer end, a lamp mounting bracket mounted on said outer end, a nut threaded onto said end to clamp the bracket in place against the wrench head and a spot light mounted by the bracket; said spindle being provided with a longitudinal channel and said shank having a laterally opening slot communicating therewith through which a circuit wire may be extended to the lamp.

1,683,916. INTERFERENCE-REDUCING MEANS FOR RADIO RECEIVING APPARATUS. RICHARD HOWLAND RANGER, Brooklyn, N. Y., assignor to Radio Corporation of America, a Corporation of Delaware. Filed Dec. 18, 1922. Serial No. 607,476. 10 Claims. (Cl. 250—20.)

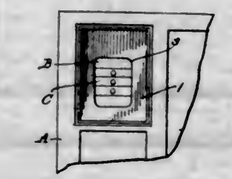
1. In the reception of radio signals with a plurality of aerials, a common thermionic oscillation-responsive element having a control electrode and means for impressing upon said control electrode oscillations received on said aerials, the method of decreasing interference which consists in maintaining upon such control electrode a bias potential of such magnitude as to maintain said oscillation-responsive device normally inoperative by an amount slightly less than the sum of signal potentials impressed thereon from each of said aerials when such potentials are all substantially in phase.

1,683,917. APPARATUS FOR HANDLING ASHES AND OTHER MATERIALS. PETER H. RAUN, Frederick, Md., assignor to The Frederick Engineering Company, Frederick, Md., a Corporation of Maryland. Filed Jan. 10, 1923. Serial No. 611,769. 4 Claims. (Cl. 83—53.)



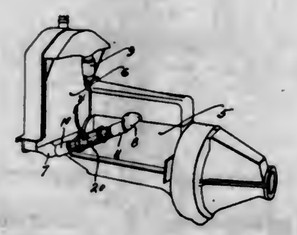
1. In a crusher mechanism, the combination with a frame, of a crusher pivotally mounted therein on an axis off center from the center line of said frame, the operative portion of said crusher comprising a plurality of alternately positioned concentric and eccentric curved surfaces, a plate pivotally mounted in said frame and a spring for yieldably supported said plate at a predetermined distance from said crusher in cooperative relation to each of said curved surfaces.

1,683,918. SEPARATING OR CLASSIFYING MACHINE. WILLIAM A. RIDDELL, Frederick, Md., assignor to The Frederick Iron & Steel Company, Frederick, Md., a Corporation of Maryland. Filed Feb. 11, 1926. Serial No. 87,656. 5 Claims. (Cl. 209—107.)



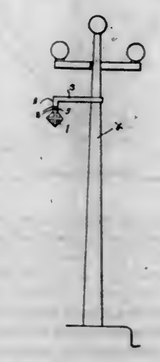
1. A separating or classifying machine comprising in combination a frame, a plurality of rotatable shaft members journaled in said frame and extending longitudinally

therein in spaced relationship, sleeve members having irregularly shaped surfaces and a plurality of wear-resisting tubular members having a plurality of independent



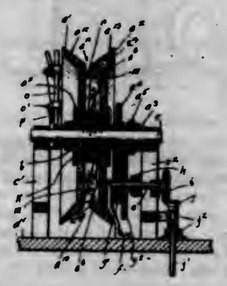
aligned sections positioned over said sleeve members for directly engaging the material which is deposited upon the classifying machine.

1,683,919. SHIELD FOR REFRIGERATING UNITS. RUDOLPH A. RIEK, Rhinelander, Wis. Filed Mar. 28, 1927. Serial No. 179,052. 5 Claims. (Cl. 62—89.)



1. A shield for refrigerating units in refrigerator casings including a one-piece sheet of porcelained metal bent to provide an intermediate or shield portion and wings at the sides of said portion, there being an opening in the intermediate or shield portion for the passage of the ice tray of a refrigerating unit.

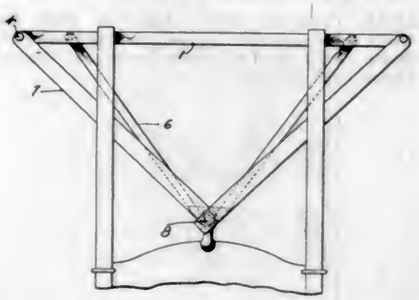
1,683,920. WATER HEATER FOR INTERNAL-COMBUSTION ENGINES. JENS E. ROHNE, Minneapolis, Minn., assignor to Even J. Rohne, Minneapolis, Minn. Filed June 21, 1926. Serial No. 117,376. 1 Claim. (Cl. 219—38.)



An electrical heater of the kind described comprising a coupling tube, a cylindrical heating element constructed as an entirety and telescoped onto the intermediate portion of said tube, a relatively short outer cylindrical tube surrounding said cylindrical heating element, and reducing collars telescoped with the ends of said outer tube and having reduced portions closely engaging the inner and relatively long tube, said heating element having contact pins projecting through said outer tube, the said parts being assembled as a self-contained unit adapted to be applied substantially as described.

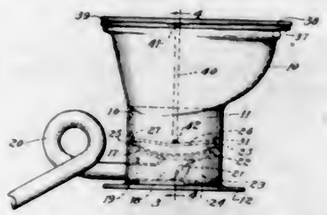
1,683,921. STREET SIGN. JAMES G. ROSS, Seattle, Wash., assignor of forty per cent to Elsie Guyer, Seattle, Wash. Filed July 27, 1927. Serial No. 208,839. 2 Claims. (Cl. 40—145.)

1. In a device of the character described, a support including a depending arm, a sign plate having a neck bent intermediate its length to provide an offset upper portion having a shoulder at its lower end, and a tongue struck from said arm and passed through an opening in the offset upper portion of said neck to releasably retain the neck and arm in overlapped relation to each other with the lower end of the arm bearing against said shoulder.



1,683,922. HAULING-IN DEVICE. CARL RUSK, Astoria, Oreg. Filed May 4, 1925. Serial No. 27,803. 3 Claims. (Cl. 64—40.)

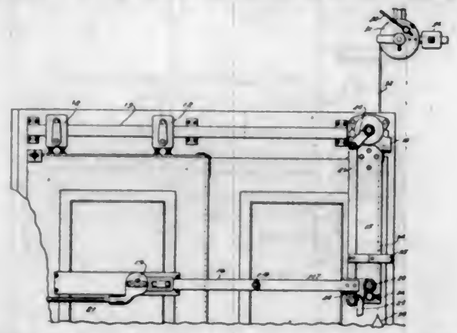
1. In an apparatus of the character described, a shaft, a driven cable-drum rotatably mounted on said shaft, said drum consisting of two sides respectively provided with cable retaining flanges spaced to provide a cable receiving circumferential slot between them, said sides formed to provide an interior central chamber between them, a series of radially disposed clamping levers completely housed within said drum, a cam fast on said shaft within said central chamber with which cam said clamping levers are operatively connected, the interior faces of said sides being provided with means for supporting the cable portion entering said slot in position for being clamped by



said clamping levers, and a lever fast on said shaft exterior of the drum, whereby partially to rotate said cam and thus set the action of the clamping levers relatively to a selected circumferential portion of the drum.

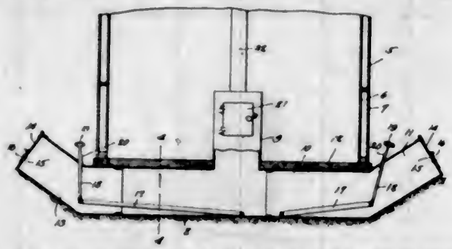
1,683,923. RADIUS ROD FOR MOTOR VEHICLES. LELAND M. H. SCHUMAN, Savannah, Ga. Filed May 7, 1925. Serial No. 28,766. 1 Claim. (Cl. 267—66.)

In a motor vehicle having a front axle formed with a yoke at either end adapted to receive a wheel assembly and provided with a pair of standard radius rods secured to the lower side of the axle and inwardly from the extremities thereof; a pair of divergent auxiliary radius rods respectively extending from a point in common with the standard radius rods to the extremities of the axle and to the upper side of the spindle yoke thereof, said rods being secured to the extremities of the axle by means of a spindle bolt adapted to receive and support the wheel assembly.



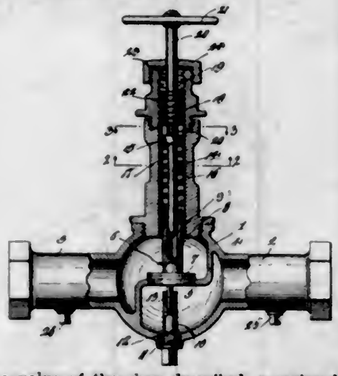
1,683,924. BOAT WATER-CLOSET. CARL SCHWARZ, Rostock, Germany, and HUGO SCHWARZ, Chicago, Ill. Filed Jan. 9, 1928, Serial No. 245,375, and in Germany Apr. 20, 1927. 16 Claims. (Cl. 4—90.)

1. A toilet embodying a bowl, a valved outlet therefor, a plunger, there being an opening through the plunger, a closure for the opening, means for reciprocating the plunger, and interengaging means on the plunger and said closure and operating automatically at predetermined times in the cycle of operation of the plunger for locking the said closure with respect to the plunger for movement with the plunger and to close the said opening therein and for releasing the closure to permit the latter to swing with respect to said plunger to uncover the opening in the plunger.



1,683,925. ELEVATOR-CONTROL APPARATUS. HAROLD W. SHONNARD, Upper Montclair, N. J., assignor to Elevator Supplies Company, Inc., Hoboken, N. J., a Corporation of New Jersey. Original application filed Feb. 9, 1926, Serial No. 86,986. Divided and this application filed Oct. 19, 1927. Serial No. 227,173. 2 Claims. (Cl. 187—31.)

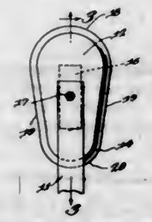
1. In an elevator system, an electric switch adapted to control the operation of the car, a wheel, adjustable means connecting said wheel and switch, a weighted cable on said wheel having one end fastened thereto, means at the various floors of the elevator shaft adapted to operate the wheel and switch through said cable, and automatic means



for moving the wheel and switch into safety position comprising a counterweight removably and adjustably mounted on said wheel.

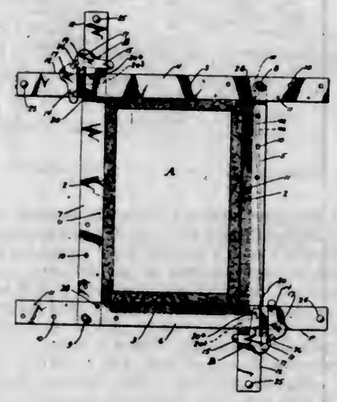
1,683,926. CHICKEN BROODER. AGNES SJOSTROM, Cherokee, Iowa. Filed Jan. 31, 1928. Serial No. 250,801. 5 Claims. (Cl. 126—58.)

1. A brooder including a housing, a tubular heater under the housing and under the floor of the housing, inclined end portions forming a part of the heater, the inclined end portions having exposed outer extremities, closures for normally closing the outer extremities, grates in the heater on which the fuel is supported, and a chimney communicating with the heater for carrying fumes from the heater.



1,683,927. VALVE. JAMES O. SMITH, Kiefer, Okla., assignor of one-half to Lincoln E. Harshbarger, Kiefer, Okla. Filed Aug. 15, 1927. Serial No. 213,110. 3 Claims. (Cl. 251—145.)

2. In a valve of the class described, a casing having a valve seat therein, a valve coacting with the seat and having a hollow stem, the bore of the stem being closed at a

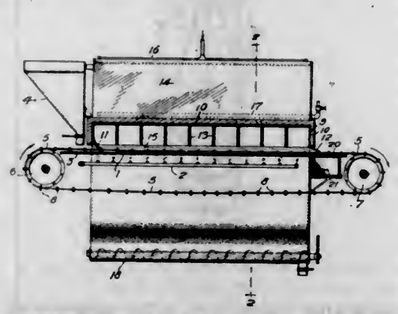


point above the head of the valve, an adjusting stem engaging at one end within the bore of the valve stem, means for adjusting the said adjusting stem longitudinally with respect to the axis of the valve stem and operable to effect engagement of the said end of the adjusting stem with the inner end of the bore of the valve stem to hold the valve positively to its seat, and a spring coacting with the adjusting stem and with the valve stem for yieldably holding the valve to its sent.

1,683,928. EAR GUARD. CORNELIUS M. SMYTH, Chicago, Ill. Filed Feb. 6, 1926, Serial No. 86,617. Renewed Feb. 8, 1928. 3 Claims. (Cl. 132—45.)

1. An ear protector of the class described including a connecting band bent to provide opposite arms normally disposed toward each other, and ear guards connected to the outer ends of the arms and including side walls formed of resilient material.

1,683,929. COLUMN CLAMP. EDWARD LEE SOULÉ, Berkeley, Calif. Filed Feb. 14, 1927. Serial No. 167,927. 7 Claims. (Cl. 144—291.)

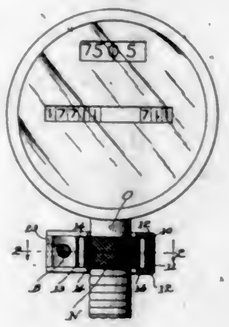


1. A clamp of the character described comprising a pair of bars, a pivotal connection at one end, and each bar being perforated adjacent the pivotal end and said perforations being so positioned that the bars will assume a position at right angles with relation to each other when the perforations register and means insertable through the perforated bars and normally maintaining the bars at right angles with relation to each other.

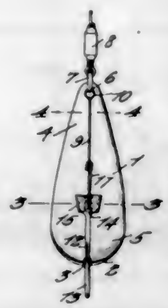
1,683,930. AIR-LIFT PUMP. HORACE M. STAGGS, Dallas, Tex. Filed June 30, 1927. Serial No. 202,555. 3 Claims. (Cl. 103—234.)

1. An air lift comprising a well casing, a regulator valve disposed in the casing, tubing connected to opposite sides of the valve, a packer disposed below the valve, an air delivery pipe extending downwardly from the valve in the tubing, a passage extending from the outer surface of the valve to the pipe, a closure member in said passage, means for operating said closure member, and means permitting the passage of fluid fom one tubing section to the other.

1,683,931. SUBLIMING APPARATUS. HERBERT G. STONE, Bristol, Tenn. Filed June 2, 1922. Serial No. 565,448. 8 Claims. (Cl. 23—264.)



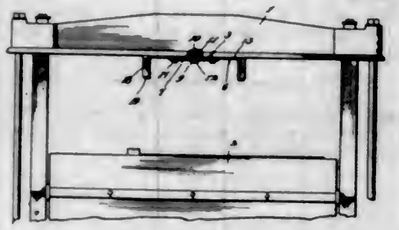
1. In a subliming apparatus, a plate-like heating member having a low lateral dam thereon, conveying and distributing means passing longitudinally thereover, regulable heating means therefor, a vapor chamber above the heating member and a condensation chamber in free lateral communication with the vapor chamber above the dam.



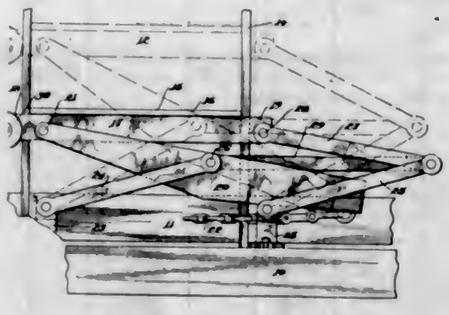
1,683,932. COMBINED LOCKING DEVICE AND SEAL. ARTHUR D. SUMMERS, Los Angeles, Calif., assignor to Speedometer Lock-Seal Company, Los Angeles, Calif. Filed Aug. 31, 1927. Serial No. 216,713. 8 Claims. (Cl. 70—122.)

1. A device of the character described comprising means adapted to be applied to a coupling nut of a speedometer shaft housing and having means by which the first means

is adapted to be supported against displacement on the nut in enclosing relation to the latter, means by which the first means is adapted to be locked on the nut, and means adapted to be interposed between the first means and the nut by which constriction and rotation of the first means will be rendered ineffective to rotate the nut, whereby unscrewing of the nut will be positively prevented.



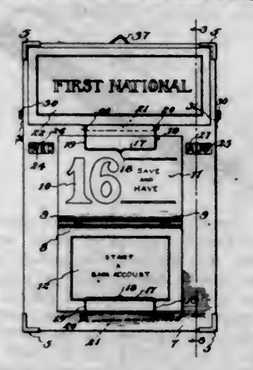
1,683,933. ARTIFICIAL BAIT. TADATAKA TESHIMA, Portland, Oreg. Filed June 1, 1927. Serial No. 195,846. 1 Claim. (Cl. 43—45.)



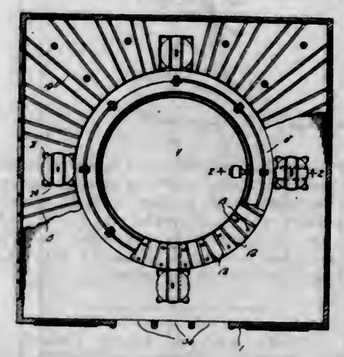
In combination with a spoon, a line connection at one end thereof, a notch formed at the opposite end thereof, a hook-receiving pocket secured to the under surface of the spoon, comprising a metal clip having its free ends bent inwardly toward each other and the edges thereof inclined to form a tapered inlet opening for the hook and a bevelled depression formed in a flange secured within the metal clip, said depression being in line with the tapered opening of the clip, said pocket being adapted to receive one end of the hook through the tapered opening in the clip and held in the depression by the inwardly bent ends of the latter with the shank of the hook disposed in said notch, and a connector between the hook and line connection, said connector having a length exceeding the distance between the line connection and hook when the latter is in the pocket and terminally formed to provide a loop with which the hook may be removably engaged.

1,683,934. CUTTING DIE. WILLIAM D. TIMMONS, Coshocton, Ohio. Filed Apr. 23, 1926. Serial No. 104,174. 3 Claims. (Cl. 164—24.)

1. A cutting die comprising a supporting plate, means for supporting the plate for rotative reversal, and blades having heads adjustably mounted upon the said plate, the lower edges of the blades constituting cutting edges and being oppositely curved.



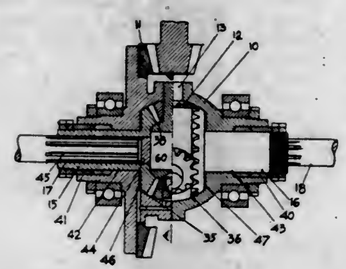
1,683,935. FOLLOWER-OPERATING MECHANISM FOR HAY PRESSES. LANCE J. TOFFELMIER, San Leandro, and CHARLES MILLER, Oakland, Calif., assignors to Junior Monarch Hay Press Company, San Leandro, Calif., a Corporation of California. Filed May 18, 1926. Serial No. 109,832. 2 Claims. (Cl. 100—3.)



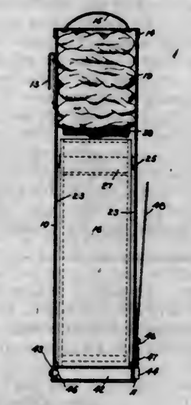
1. In a hay press having a vertically disposed chamber, a follower guided therein for vertical reciprocation, a pair of downwardly inclined parallel arms connected at their upper ends to opposite ends of the follower, a pair of parallel inclined links inclined oppositely to said arms and connected at their lower ends to the frame of the press and connected at their upper ends to said arms, a connection between said links whereby they will operate in unison, and an extension on one of said arms which may be oscillated to vertically reciprocate the follower through the medium of said arms and links, and means for adjusting the connection between the lower end of one of said links and the frame of the press to permit leveling of the follower.

1,683,936. CALENDAR. ALBERT E. WELSH, Lewiston, Idaho. Filed Sept. 29, 1927. Serial No. 222,817. 2 Claims. (Cl. 40—116.)

1. A calendar comprising a frame including strips defining a vertically extending channel having side walls and upper and lower end walls, a facing sheet carried by said frame and having an opening communicating with said channel, a roller extending transversely in said channel and having a stem journaled in the side walls and projecting from one side of the frame, a turning head carried by said stem, a pawl carried by said frame and engaging said head to yieldably resist turning of said roller, a ribbon wound upon said roller and having characters thereon displayed through the opening in said facing, a weight for the free end of said ribbon, and a guide for said ribbon extending behind the same in the channel in crossed relation to said opening.



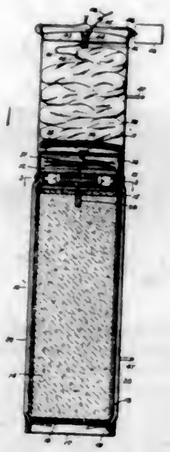
1,683,937. METHOD AND CONSTRUCTION FOR STORING MOTOR VEHICLES. EDWIN H. WHITE, New York, N. Y. Filed Mar. 18, 1927. Serial No. 176,306. 2 Claims. (Cl. 214—16.1.)



1. In a vehicle handling and storing structure, in combination, a building including a floor having a rigid central section of disk-like configuration, a rigid marginal section surrounding and disposed in a plane with said central section, said marginal section being spaced from the central section to provide an annular opening between the edges of said sections, said marginal section being provided with individual pairs of radial grooves forming vehicle runways, said runways being circumferentially spaced apart, a turn table mounted for rotation in said annular opening and disposed in a plane with said rigid floor sections and provided with circumferential grooves for reception of the vehicle wheels, an elevator including a travelling frame provided with an annular track having a depression formed therein, and a rotatably mounted platform disposed above said track and having rollers on its bottom movable on the track and receivable in said depression, said platform being provided in its top with grooves adapted to aline with the grooves in said turn table said depression being placed so that the grooves on the platform can be alined with those on the turn table.

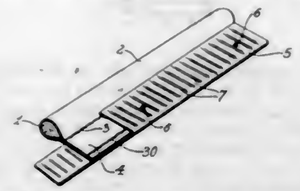
1,683,938. DIFFERENTIAL MECHANISM. ERNEST WILDHABER and JOSEPH GSTYR, Rochester, N. Y. Filed Apr. 9, 1925. Serial No. 21,809. 4 Claims. (Cl. 74—100.)

1. A differential mechanism for self driven vehicles, comprising a driving member and two coaxial driven members, means to transmit motion from the driving member to said driven members, said means comprising planetary gears disposed to turn on their axes in exact proportion to the relative turning motion between said two driven members, means to effect fluid pressure through the mesh of said gears, and additional means operated by said fluid pressure to brake said relative motion.



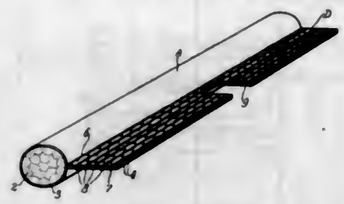
1,683,939. AEROPLANE FLARE OR SIGNAL. SAMUEL WILEY, Metuchen, N. J. Filed June 30, 1924. Serial No. 723,371. 7 Claims. (Cl. 102—24.)

1. A flare embodying a light case, an illuminant carried by the case, an apertured block within the case above the illuminant, a plug inserted in the block and spaced from the sides thereof to form a chamber, said plug formed with recesses and a communicating central passage, friction primers carried by the plug, means for firing the primers, means interposed between the illuminant and the block to protect the upper surface of the illuminant from the flame of the primers, and means for relaying the flame to the lower surface of the illuminant.



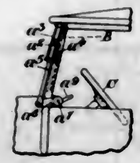
4. A releasing mechanism for flares, embodying a container, a flare within the container, a closure for the release end of the container, a spring band encircling the container and supported thereby, means carried by the band and extending through the container and the closure to hold the closure in position, means for maintaining the spring band in holding position, and means for removing the aforesaid means to enable the band to move to releasing position.

1,683,940. ILLUMINATING AERO BOMB OR FLARE. SAMUEL WILEY, Metuchen, N. J. Filed July 17, 1924. Serial No. 726,537. 10 Claims. (Cl. 102—24.1.)



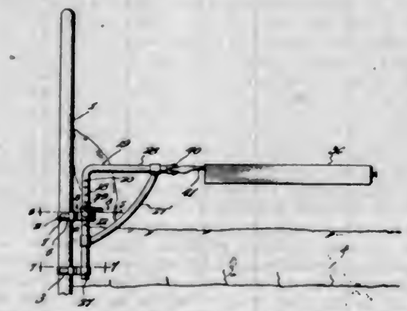
1. A flare embodying a light case, a parachute container, a partition block, means for securing the case and the container to the partition block, an illuminating composition carried in the light case, a parachute carried in the container, a folded cable for attaching the parachute to the block, a tubular member mounted transversely in the block, said tubular member formed with a centrally disposed apertured dividing wall, strikers having collars and overlapping ends reciprocably mounted in the tubular member, springs confined between the collars and dividing wall, plugs closing the ends of the tubular member, primers disposed in the plugs, quick-matches positioned on the outside of the light case and introduced into the case above and below the illuminating composition, a wire insertable through the overlapping ends of the strikers to hold the strikers against the tension of their springs, said wire being secured to the folded cable and adapted to be withdrawn from the strikers when the cable is drawn taut, a closure for the container, a frangible cord connecting the closure and the parachute and adapted to withdraw the parachute when the closure is removed, and a fusible seal for closing the light case.

1,683,941. GASKET. EDWARD J. WIRFS, St. Louis, Mo., assignor to E. J. Wirfs Organization, Incorporated, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 12, 1925. Serial No. 62,176. 4 Claims. (Cl. 20—69.)



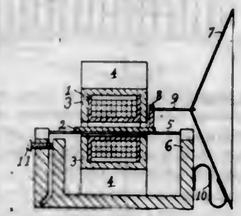
1. A gasket comprising, a roll of soft fibrous material, an envelope of flexible waterproof fabric enclosing said roll and having its free edges extended to provide a tacking lap, an inside line of stitches passing through the fabric plies along said roll and adapted to confine the same in order to provide a tight but yielding packing, and a flexible metal strip united with and extending along over said tacking lap and said line of stitches adapted to reinforce the same, said strip extending transversely of the lap on the underside, to the confining line of stitches so as to permit free movement of said roll when the gasket is in place.

1,683,942. GASKET. EDWARD J. WIRFS, Jr., Glendale, Mo., assignor to E. J. Wirfs Organization, Incorporated, St. Louis, Mo., a Corporation of Missouri. Filed Nov. 8, 1926. Serial No. 147,077. 4 Claims. (Cl. 20—69.)



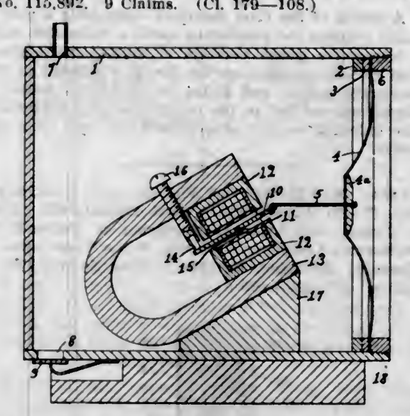
1. A gasket comprising, a roll of soft fibrous material, an envelope of flexible waterproof fabric enclosing said roll and having its free edges extended to provide a tacking lap, an inside line of stitches passing through the fabric plies along said roll and adapted to confine the same in order to provide a tight but yielding packing, a line of stitches passing through the fabric plies along the outer edge of the tacking lap in order to close the same, and means extending continuously along and securing the fabric plies closely together between the lines of stitches therethrough adapted to transversely and longitudinally reinforce the tacking lap and hold the same against buckling.

1,683,943. WIPING DEVICE FOR WIND SCREENS, WINDOWS, AND THE LIKE. JOHN WILLIAM ALLEN, Burnley, England. Filed Aug. 31, 1927, Serial No. 216,734, and in Great Britain Sept. 6, 1926. 1 Claim. (Cl. 15—251.)



A wiper for windows comprising a wiper member extending across a window, means for guiding said member along the surface of the window, a shaft mounted for rotation parallel with said member, a plurality of arms secured to the shaft, and links connecting said arms and member, said arms working in planes at right angles to the plane of movement of the wiper.

1,683,944. TRAY. JOHN L. BALCH, Potlatch, Idaho. Filed Mar. 23, 1927. Serial No. 177,737. 2 Claims. (Cl. 45—82.)

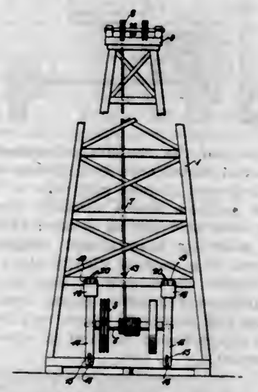


1. A device of the class described, comprising a pair of clamps for attachment to a post, and provided, respectively, with a bearing and collar, a tray supporting bracket including a vertical arm having recesses therein, said arm being rotatably engaged in the bearing and collar, a sleeve slidably adjustable on the arm, and having a web carried thereby, handles pivotally carried by the web and having projections adapted to extend through the sleeve for engaging selective recesses, said sleeve being adapted to rest upon said bearing, as and for the purpose set forth.

1,683,945. TELEPHONE RECEIVER. NATHANIEL BALDWIN, East Mill Creek, Utah. Filed Oct. 31, 1925. Serial No. 66,037. 7 Claims. (Cl. 179—119.)

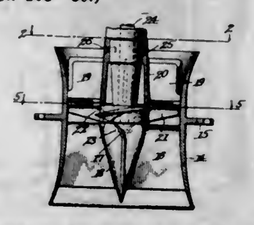
5. An acoustic instrument comprising a non-helical ferrous armature, an acoustic element, means operatively connecting said armature with said acoustic element, and tension members supporting said armature and constituting a virtual fulcrum for said armature.

1,683,946. LOUD SPEAKER. NATHANIEL BALDWIN, East Mill Creek, Utah. Filed June 14, 1926. Serial No. 115,892. 9 Claims. (Cl. 179—108.)



9. A loud speaker comprising a sound producing element, an electrically operated armature, and a link flexibly connected to said armature to transmit the vibration of said armature to said sound producing element, said link being disposed to said armature at an obtuse angle.

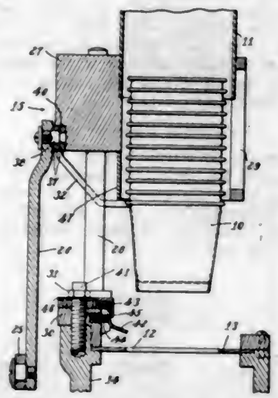
1,683,947. BRUSH FOR CLEANING ARTIFICIAL DENTURES. MARTIN J. BARCHFELD, Pittsburgh, Pa. Filed Apr. 25, 1928. Serial No. 272,800. 1 Claim. (Cl. 15—206.)



A brush for cleaning artificial dentures comprising a handle, a pair of parallel brush members consisting of bristle holders, each secured at one end to the handle and at the opposite end to the other of the bristle holders, and bristles extending radially in all directions from the bristle holders, said bristle holders being each bent at right angles at points intermediate of their ends to form straight intermediate longitudinal portions and inner and outer arms, the inner arms off-setting the handle from the straight intermediate longitudinal portions, the bristles at the inner sides of the intermediate longitudinal portions and the inner and outer arms being normally in contact, the portion of the brush members connecting the outer terminal arms being of a length less than the width of the space between the teeth at opposite sides of a plate to permit the end of the brush to move freely between the teeth and the flanges of the plate for cleaning the latter.

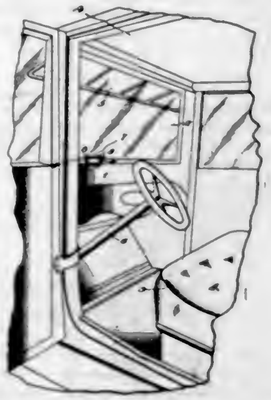
1,683,948. SHOCK ABSORBER FOR DRILLING RIGS. JOSEPH BECKER, Shelby, Mont., assignor, by direct and mesne assignments, of twenty-five per cent to John Nisbet and twenty-five per cent to Harry C. Woodward, Shelby, Mont. Filed Apr. 28, 1927. Serial No. 187,252. 8 Claims. (Cl. 255—7.)

1. An improved drilling rig comprising in combination a derrick, a drilling cable, a bull wheel shaft upon which the cable is adapted to be coiled, means for alternately tightening and slacking the drilling cable and means comprising independent yieldable bearings for the bull wheel shaft for absorbing shocks imparted thereto incident to the slacking of the drilling cable.



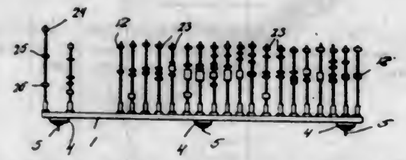
1,683,949. BRINE CIRCULATOR. JOHN G. BERGDOLL, York, Pa., assignor, by mesne assignments, to York Ice Machinery Corporation, York, Pa., a Corporation of Delaware. Filed May 20, 1927. Serial No. 193,025. 6 Claims. (Cl. 103—89.)

1. In a circulator, the combination of a housing comprising in one piece a flow directing and diffusing tube having curved diffusing vanes adjacent one end thereof, said vanes merging adjacent the longitudinal axis of the tube into a stream line hub; a plurality of guide vanes removably mounted in the other end of said tube and having a central shaft sustaining hub, there being an interval between the diffusing vanes and the guide vanes;



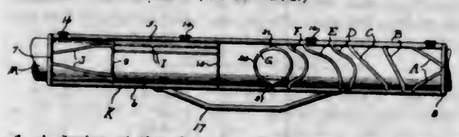
a propeller mounted in said interval and having a central hub which with the other two hubs completes a stream line body; and a rotatable shaft on which said propeller is mounted.

1,683,950. CUP DISPENSER. FRED L. BORCHERT, Rockford, Ill. Filed Oct. 22, 1926. Serial No. 143,340. 18 Claims. (Cl. 312—44.)



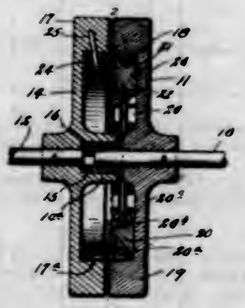
1. In a device of the character described, means to contain a stack of nested cups in a column, a support to receive cups dispensed thereto, said cups to be dispensed one at a time, gripping means normally supporting said column by its lowermost cup in elevated relation to said support, and means to operate said gripping means to lower the column to a position slightly above the support and to then release the column so that the same drops onto the support, said gripping means being thereupon operated by the last mentioned means to grip the column by the second to the lowest cup and to raise the column from said support.

1,683,951. TRAFFIC-SIGNAL OBSERVER. WILLARD C. BUTTRON, Albany, N. Y. Filed Apr. 27, 1927. Serial No. 186,999. 2 Claims. (Cl. 88—1.)



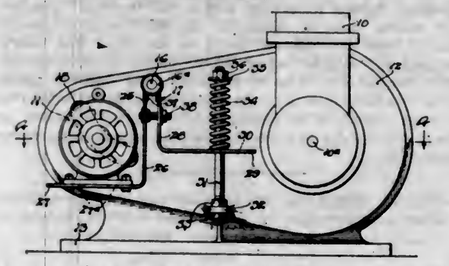
1. A traffic signal viewing device comprising an elongated prism, caps fitted tightly upon the ends of said prism, and mounting arms rigid with said caps extending downwardly therefrom and having their lower end portions curved forwardly and adapted to be firmly secured to the instrument board of a vehicle in front of the driver's seat of the vehicle whereby the prism will be supported in a horizontal position slightly above the lower edge of the windshield of the vehicle and a reflection of a traffic signal in advance of and above the vehicle may be viewed in the prism by the driver of the vehicle.

1,683,952. PHANTOGRAPH. WILSON K. CADMAN, Eureka, Kans. Filed May 17, 1926. Serial No. 109,659. 5 Claims. (Cl. 35—16.)



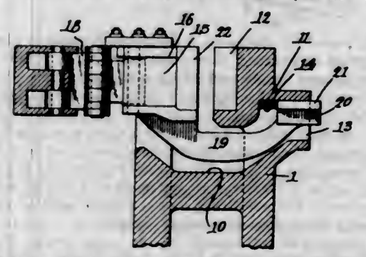
1. A device for illustrating geological data, consisting of means for suspending objects representing the data in space in a predetermined relation with a predetermined plane in accordance with a predetermined scale for each of three dimensions to form a model thereof.

1,683,953. MULTIPLE TEMPLATE. THOMAS B. CARR, Midwest, Wyo. Filed Apr. 22, 1927. Serial No. 185,847. 10 Claims. (Cl. 33—174.)



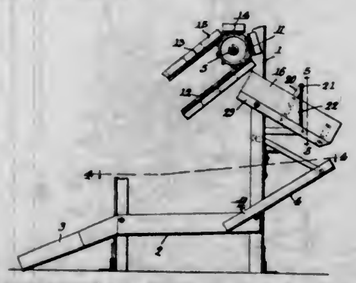
1. A device of the class described comprising a pair of template sections for positioning about a cylindrical body, and cooperative gauge members of unlike configurations carried by each template section for the producing of cuts for accurate end to end fitting of cylindrical bodies or producing an end cut to the cylindrical body conforming to the external surface of a cylindrical body of a like diameter.

1,683,954. MULTIPLE FLYWHEEL AND CENTRIFUGAL CLUTCHING MECHANISM THEREFOR. JOHN O. CARREY, St. Louis, Mo., assignor to Carrey-Morse Engineering Company, St. Louis, Mo., a Corporation of Missouri. Filed Oct. 30, 1924. Serial No. 746,776. 9 Claims. (Cl. 192—105.)



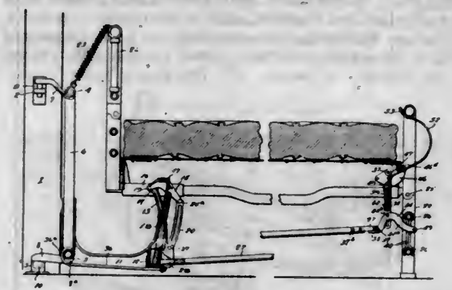
1. A fly wheel comprising in combination a fly wheel driving member provided with an inwardly presented concentrically disposed face, a driven fly wheel member, a friction band carried by said driven member and disposed in correlation with the concentrically arranged face of said driving fly wheel member, and centrifugally operable means carried by said driving fly wheel member and adapted to bear against said friction band and force it into operative engagement with the face of said driving member.

1,683,955. BELT DRIVE FOR REFRIGERATING MACHINES. JOHN O. CARREY, St. Louis, Mo., assignor to Carrey-Morse Engineering Company, St. Louis, Mo., a Corporation of Missouri. Filed Apr. 3, 1926. Serial No. 99,502. 4 Claims. (Cl. 74—43.)



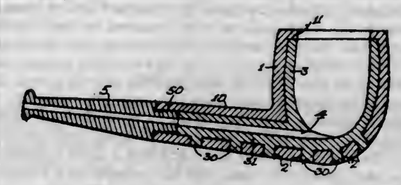
1. In a domestic refrigerating apparatus, the combination of a driven shaft, a pulley fixed on said shaft, a motor including a shaft, a pulley fixed on the latter and provided on its periphery with a series of spaced radial projections, a belt operating over said pulley and provided in its length with a series of apertures for receiving the radial projections of said motor pulley and a housing for enclosing pulleys and said belt, said housing being provided in one of its walls with openings for receiving said shafts.

1,683,956. GRIPPING SLIDE FOR FORGING MACHINES. WILLIAM L. CLOUSE, Tiffin, Ohio, assignor to The National Machinery Co., Tiffin, Ohio. Filed June 8, 1926. Serial No. 114,509. 4 Claims. (Cl. 10—22.)



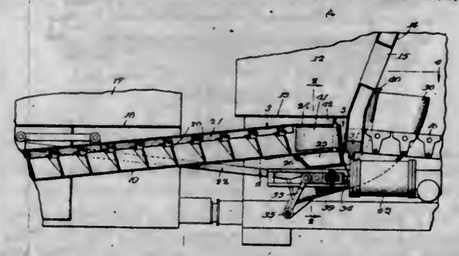
1. In a machine of the class described the combination with a bed, a heading slide, and a gripping die, of a gripping slide, an extension upon the slide projecting under the gripping die, and a bearing carried by the extension, said bearing being above the level of the extension.

1,683,957. DELIVERING MECHANISM FOR BOLT-TRIMMING MACHINES. WILLIAM L. CLOUSE, Tiffin, Ohio, assignor to The National Machinery Co., Tiffin, Ohio. Filed Nov. 13, 1926. Serial No. 148,289. 3 Claims. (Cl. 209—97.)



1. A separator for bolt trimming machines including an inclined longitudinally slotted trough, and a row of inert scrap retarding members within the trough and having free lower ends for free swinging movement from pressure therengainst by moving bolts.

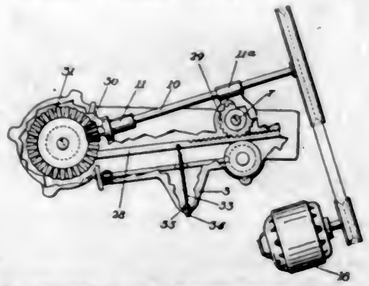
1,683,958. FOLDING BED. FRED CONHAIM and LOUIS SWENINGSON, Cleveland, Ohio, assignors, by direct and mesne assignments, to Conhaim Patents Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 14, 1922. Serial No. 552,649. 18 Claims. (Cl. 5—320.)



1. The combination, with a bed and means supporting the same for movement about a horizontal axis, the swinging end of the bed being provided with a pivoted lower section, of a thrust member pivoted at one end adjacent to such axis and pivotally connected at its opposite end to such lower section, a mattress-clamping arm pivotally supported intermediate of its ends from the swinging end portion of said bed, a lever connected directly to said thrust member and having a portion adapted to engage said mattress-clamping arm, and a fulcrum for said lever movably supported by the swinging end of said bed.

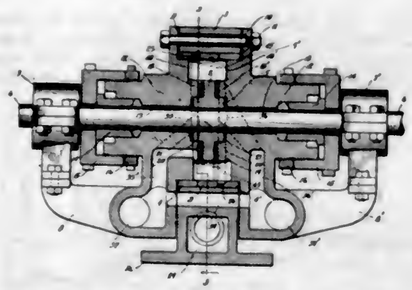
1,683,959. PIPE. JOHN T. COYNE, Tacoma, Wash. Filed Mar. 16, 1927. Serial No. 175,701. 1 Claim. (Cl. 131—12.)

A pipe comprising an integral enclosing shell consisting of bowl and stem sections and provided with an inwardly extending flange about the bowl mouth and holes extending through the bottom of bowl and stem, and a lining of material molded in place within said bowl and filling the holes in the bottom thereof.



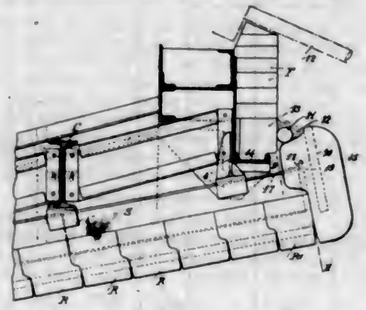
1,683,960. LOCOMOTIVE STOKER. DAVID F. CRAWFORD, Pittsburgh, Pa., assignor to Locomotive Stoker Company, a Corporation of Pennsylvania. Filed Aug. 9, 1926. Serial No. 127,983. 6 Claims. (Cl. 110—101.)

5. In a locomotive stoker, in combination, a hopper adapted to be located centrally below the cab deck, means for delivering fuel to the hopper, a pair of chutes leading laterally and downwardly from the hopper, a grate, a tubular conduit receiving from each chute and extending



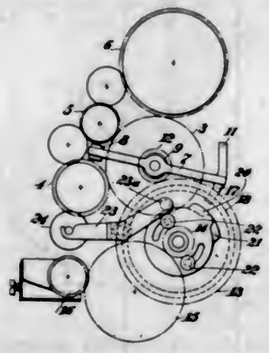
upwardly through the grate to a point above the normal level of the fire-bed thereon, means for forcing the fuel through each tubular conduit, and means for scattering the fuel as it issues from each conduit.

1,683,961. COMBINED DRIVING MECHANISM FOR WASHING MACHINES AND WRINGERS. HARRY J. CRINER, Burlington, Iowa, assignor to L. V. Kokes and E. L. Vogeltanz, Ord, Nebr. Filed Dec. 27, 1926. Serial No. 157,291. 4 Claims. (Cl. 74—14.)



1. A combined driving mechanism for a washer and wringer comprising a tub, a housing, a drive shaft mounted thereon having one end extending into the housing and fitted with a pinion, a bevel gear mounted within the housing in mesh with the pinion, a crank pin united to the bevel gear, a vertical drive shaft mounted in the housing and extending into the tub of the washer, a spur gear mounted within the housing upon the lower end of the vertical drive shaft, a rackbar having one end pivotally mounted upon the crank pin and its opposite end mounted adjacent the spur gear, a tension spring having one end connected to the rackbar and its opposite end secured to the housing and adapted to normally hold the rackbar out of engagement with the spur gear, a cam mounted in the housing adjacent the toothed end of the rackbar and having a curved face adapted to force the rackbar into engagement with the spur gear when in one position and to permit the rackbar to be drawn away from the spur gear when in its opposite position, a manually operable shift lever extending upwardly through the housing, a rocking lever pivoted within the housing having upon one end a bead adapted to engage and operate the cam, and its opposite end united to the lower end of the manually operable shift lever.

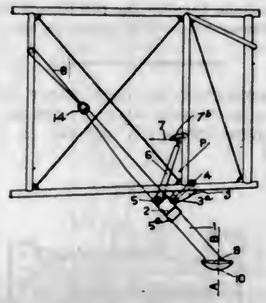
1,683,962. PUMP. WILLIAM F. CROWN, Aberdeen, Wash., assignor of one-fourth to Victor E. Hansen, Hoquiam, Wash., and one-eighth to Harry H. Wilt, Cosmopolis, Wash. Filed Feb. 23, 1927. Serial No. 170,351. 2 Claims. (Cl. 103—139.)



1. A pump of the character described comprising a cylindrical casing, a rotor disc revolubly fitted therein, cover plates fitted over the ends of the casing and having hub portions extended inwardly into close contact with the rotor and providing annular chambers at opposite sides of the rotor disc, said casing having a circumferentially extending outlet from each chamber, said outlets being located at diametrically opposite points, each of said cover plates being provided with an inlet that opens into the chamber at that side circumferentially of the hub portion of the plate, said inlets being located diametrically opposite the outlets of their respective chambers, said cover plates having cam surfaces formed to extend within the annular chambers and which, through extent of the inlet ports, gradually recede from the opposite faces of the rotor and which, through the angular extent of the outlet ports, gradually draw toward the faces of the rotor, and impeller plates slidably mounted in the rotor with their ends extended into annular chambers at opposite sides thereof to serve as pump pistons for the drawing in and expelling of water therefrom.

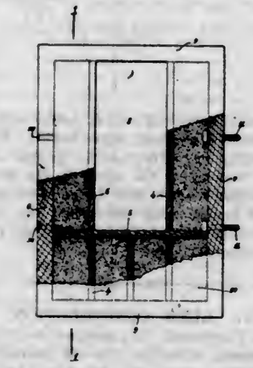
1,683,963. FURNACE ARCH. CAMILLE DUQUENNE, Paris, France. Filed Apr. 14, 1924, Serial No. 706,543, and in France Apr. 27, 1923. 4 Claims. (Cl. 110—99.)

2. In a roof for furnaces, a metal framework, a plurality of supports suspended therefrom, successive aligned sections of flanged beams carried by said supports, a plurality of refractory blocks suspended from said beams, and pivoted end blocks loosely suspended from the ends of said beams, whereby said end blocks may pivot upon their point of suspension in accordance with expansion and contraction of the beams and adjacent blocks, said end blocks bearing at one face upon the last refractory block of the roof with the joint between the end block and the fixed wall of the furnace being formed by cylindrical sections of refractory material adapted to roll loosely in the angle of the joint between said wall and block.



1,683,964. LINE-BY-LINE TYPEWRITING MACHINE. ARNOLD AUGUST EGLI, Klein Guemmenen, Switzerland, assignor, by mesne assignments, to Chocolat Tobler Holding Co. Aktiengesellschaft, Schaffhausen, Switzerland. Filed Oct. 18, 1924, Serial No. 744,381, and in Germany Oct. 25, 1923. 17 Claims. (Cl. 101—361.)

1. In a printing machine of the character described, an ink trough, an ink distributing device, a constant drive for keeping the said distributing device in continuous motion,

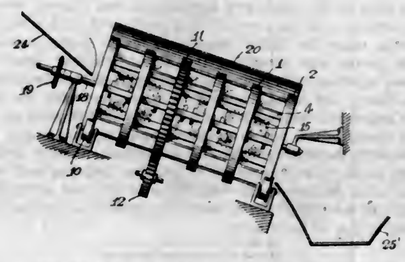


a vibrating ink supplying device supplying ink from the said trough to the said distributing device, a printing device, adapted to be thrown on by the operator for each printing operation for printing a line, and to be thrown off automatically after each printing operation of a line, and intermittent driving means for putting the said vibrating device in motion for a uniform period of time, only for each said irregularly occurring printing operation for the purpose of supplying for each printing operation an equal quantity of ink from the ink trough to the distributing device.

1,683,965. TAIL SHAFT FOR AIRCRAFT. ANTHONY HERMAN GERARD FOKKER, Amsterdam, Netherlands, assignor to Atlantic Aircraft Corporation, Hasbrouck Heights, N. J., a Corporation of New Jersey. Filed May 5, 1925, Serial No. 28,078, and in the Netherlands May 5, 1924. 12 Claims. (Cl. 244—2.)

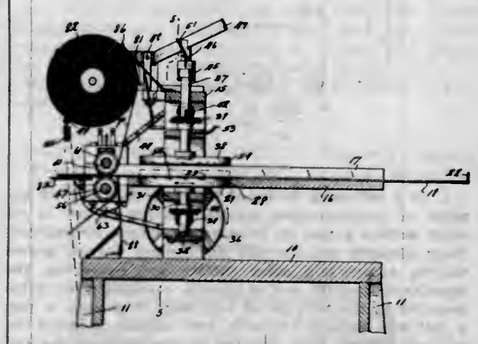
1. A tail-skid for aircraft cardanically suspended from the fuselage in an axially inclined position, means for connecting one end of said skid to said fuselage to yield in every direction, cam surfaces at the lower end of said skid and means for rotating said skid on its longitudinal axis to function one or the other of said surfaces to effect a lateral movement of the fuselage.

1,683,966. PORTABLE BUILDING. FRIGYES FÖRSTER, Budapest, Hungary. Filed Apr. 23, 1925, Serial No. 25,202, and in Hungary May 22, 1924. 2 Claims. (Cl. 20—2.)



1. A wall unit for portable houses of the knock down type comprising a wooden box frame, metal sheathing completely enclosing said frame, insulating material in the interstices between the members of said frame, and means socketed in the marginal frame members for detachably connecting said unit to adjacent units.

1,683,967. METHOD OF INCREASING THE EFFICIENCY OF ZEOLITES IN THE TREATMENT OF WATER. WOLCOTT C. FOSTER, Rutherford, N. J., and ARTHUR S. GARRETT, Drexel Hill, Pa. Filed Jan. 17, 1924. Serial No. 686,934. 5 Claims. (Cl. 210—24.)

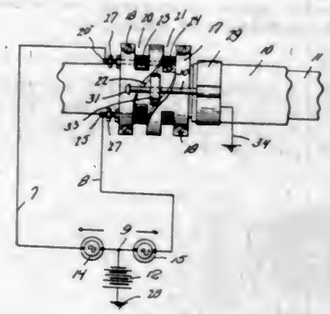


1. In water softening, the process of treating raw waters having low initial alkalinity which consists in treating the raw water with a salt which is alkaline in solution until a predetermined standard of alkalinity is reached and is subsequently filtering it through zeolite while the water still has increased alkalinity.

1,683,968. MACHINE FOR REMOVING SCALES FROM FISH. ERNEST A. GALLISON, Watertown, Mass., assignor to Bay State Fishing Company, Boston, Mass., a Corporation of Maine. Filed Feb. 19, 1927. Serial No. 169,625. 9 Claims. (Cl. 17—5.)

1. A fish scaling machine comprising a rotatable skeletonized drum, a series of internal ribs about the periphery of said skeleton drum, said ribs being spaced from each other at a distance of the order of a transverse dimension of a fish of the character to be scaled, a central brush element arranged substantially concentrically in relation to said ribs, and means for providing relative rotation between the drum and brush element.

1,683,969. MACHINE FOR PASTING BATTERY GRIDS. EDWARD A. GARLOCK, Baltimore, Md. Filed Mar. 4, 1926, Serial No. 92,286. Renewed July 17, 1928. 27 Claims. (Cl. 226—39.)

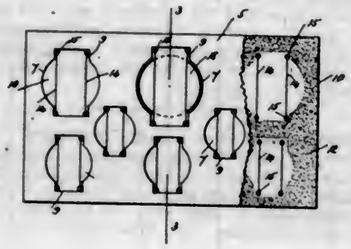


1. A battery grid pasting machine including two opposed imperforate disks, the confronting faces of the disks being provided with grooves opening upon the circumferential face of the disk, means for rotating the disks in opposite directions, and means for feeding a battery grid between said disks.

16. A machine for pasting battery grids including upper and lower disks having their confronting faces grooved, means for simultaneously rotating said disks in opposite directions, manually operable means for shifting one of said disks toward the other disk while rotating, a table

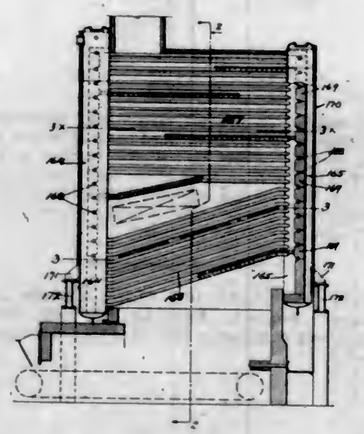
within which the fixed disk is mounted, a platen cut out to receive the battery plate and reciprocable over the face of the table to carry the battery plate into position between said disks and out of such position, manually controlled power actuated means for shifting the platen to carry the grid into position between said disks and then return the platen to its initial position, means for gripping the battery grid when in position between the disks and ejecting said grid comprising opposed rollers of yielding material, means for feeding two sheets of paper between said rollers and on each side of said grid comprising two paper rolls, the sheets of paper thereon being guided into position between said rolls.

22. A battery grid pasting machine comprising a table, a lower distributor mounted on the table with its upper face flush therewith, an upper distributor, power operated means for rotating said distributors in opposite directions, manually controlled means for shifting the upper distributor toward the lower distributor, a platen movable over the face of the table and having one end thereof recessed to receive a major portion of a grid, said grid being supported upon the table, upper and lower racks carried by said platen and extending in advance thereof, upper and lower ejecting rolls mounted in advance of the distributors, the lower roll being disposed in alignment with the table, the upper roll having a shaft and movable toward or from the lower roll, a pinion mounted upon the shaft and movable with the shaft into or out of engagement with either of said racks, power operated means for rotating said ejecting rolls, and manually controlled means for shifting the shaft of the upper roll to carry the pinion into engagement with either of said racks.



1,683,970. DIRECTION-INDICATING SWITCH MECHANISM. JOHN GEYER and JOSEPH SWITZER, Michigan City, Ind. Filed Jan. 11, 1927. Serial No. 160,480. 3 Claims. (Cl. 200—59.)

1. In a switching device of the class described, an annulus of non-conducting material having formed in its outer surface a pair of transversely spaced circumferentially disposed grooves and an inclined branch groove angling across said outer surface and connecting the opposite ends of the pair of grooves, conducting the strips mounted in the bottoms of said pair of grooves, a pin, a follower element rotatable and slidably mounted on said pin and extending into the grooves, said annulus and said pin adapted to be mounted on members one of which is rotatable with respect to the other whereby the follower element will engage either of the strips of conducting material for closing the circuits.

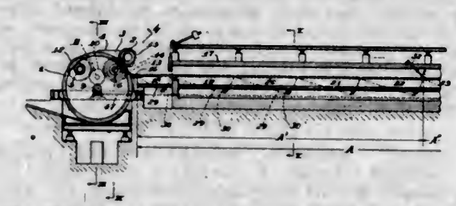


1,683,971. COIN CARD. GUST HARMOUTH, Yale, Okla. Filed June 6, 1927. Serial No. 196,755. 1 Claim. (Cl. 229—92.9.)

A coin card, comprising a relatively stiff card having substantially circular openings provided with offset recesses having parallel sides, and a relatively thin back sheet secured to one side of the card and provided with parallel slots arranged in pairs, each pair of slots being

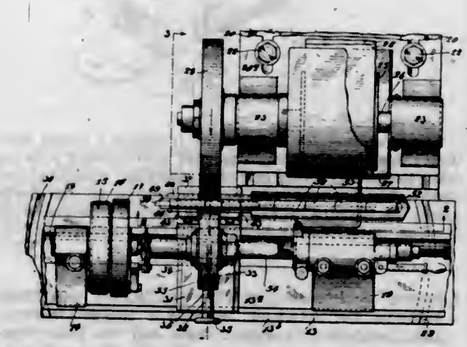
arranged to extend between the recesses of the opening to which it pertains at a right angle to the sides of the recesses.

1,683,972. STEEPLED RADIANT-HEAT STEAM BOILER. CHARLES GILBERT HAWLEY, Chicago, Ill. Filed Mar. 12, 1924. Serial No. 698,728. 5 Claims. (Cl. 122—235.)



1. The herein described steam boiler unit, comprising a pair of vertical steam and water headers, in combination with a plurality of verti-planular groups of steam and water tubes connecting the upper parts of said headers and perpendicular thereto, and, fewer verti-planular groups of water and steam tubes connecting the lower parts of said headers and inclined in relation to the same and the first mentioned tubes.

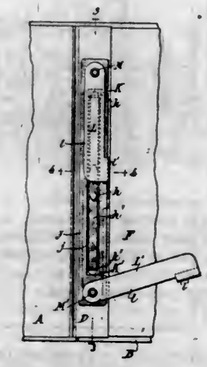
1,683,973. LEER CONSTRUCTION. HERMAN S. HEICHERT, Pittsburgh, Pa., assignor to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed July 29, 1926. Serial No. 125,670. 18 Claims. (Cl. 49—3.)



1. The combination with apparatus for intermittently rolling sheets of glass, of a roller leer comprising a high speed section which receives the sheets from the rolling apparatus, and a slow speed section following the high speed section, means for driving the rolls of the slow

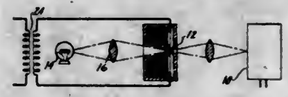
speed section at a relatively low rate of peripheral speed, means for driving the rolls of the high speed section either at a rate of speed corresponding to that of the rolls in

the slow speed section, or at a much higher rate of speed, and means for shifting said rolls of the high speed section from one of said speeds to the other.



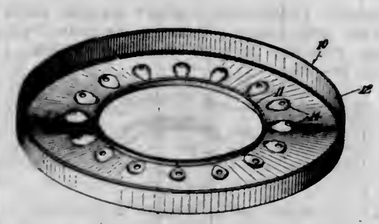
1,683,974. GRINDING APPARATUS. LEWIS R. HEIM, Danbury, Conn., assignor, by mesne assignments, to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 8, 1921. Serial No. 443,390. 21 Claims. (Cl. 51—103.)

1. In apparatus of the general nature of that herein described, in combination, a grinding wheel adapted to be rotated at a relatively high speed, means for rotatably supporting and driving said grinding wheel, means adapted normally to detachably support a cylindrical work piece for rotation about a predetermined axis and to rotate said work piece relatively slowly while said grinding wheel performs a grinding operation thereon, a regulating wheel detachably supported in said work supporting and rotating means and rotated by the latter relatively slowly and in a direction to present an operative surface adjacent that of the grinding wheel traveling in a direction opposite from the direction of travel of the operative surface of said grinding wheel, thereby to form with said grinding wheel a grinding throat for receiving work of round section, and means for supporting work of round section in the grinding throat formed by and between said adjacent oppositely-moving surfaces of said two wheels, whereby said regulating wheel controls the rotation of said work of round section in said grinding throat while the grinding wheel performs a grinding operation thereon.



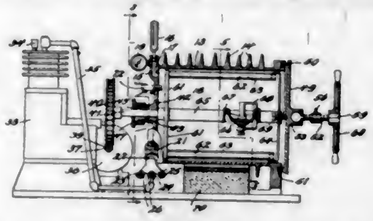
1,683,975. LOOSE-LEAF BINDER. HENRY STANLEY HORN, South Orange, N. J., assignor to W. C. Horn, Bro. & Co., Newark, N. J., a Corporation of New Jersey. Filed July 23, 1927. Serial No. 207,925. 5 Claims. (Cl. 129—25.)

1. A loose leaf binder or the like comprising a pair of connected members adapted to clamp filed papers therebetween, a flexible tongue carried by one of the members, a guard plate carried by the other member, said guard plate having a slot to receive the flexible tongue and a latching member pivotally carried by the guard plate having a part adapted to engage over the face of the



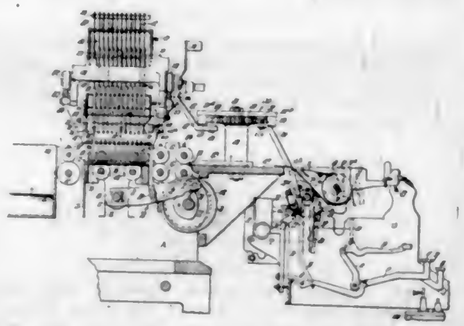
guard plate and a part to engage under the face thereof to hold the tongue against displacement after it is bent down over the guard plate, said engaging parts of the latching member being at all times out of engagement with the filed papers.

1,683,976. TRANSMISSION OF PICTURES BY ELECTRICITY. HERBERT E. IVES, Montclair, N. J., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Mar. 2, 1925. Serial No. 12,694. 7 Claims. (Cl. 178—7.)



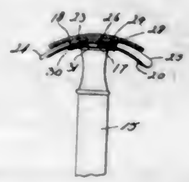
1. In a picture transmission system, a light source, a recording element, a source of alternating current, a light valve for controlling the light from said source falling upon said recording element, said light valve comprising a single string shutter element, and means for applying said alternating current to said valve to vibrate said string in the direction of movement of said recording element.

1,683,977. PROTECTIVE DEVICE. HENRY A. KEINER, Kew Gardens, N. Y. Filed Sept. 21, 1927. Serial No. 220,936. 2 Claims. (Cl. 126—215.)



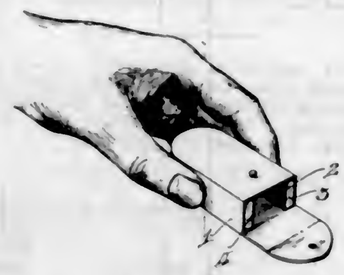
1. A device of the character described comprising a convex annular member having its inner and outer edges bent parallel to its axis, a plurality of projections upset from said member and terminating in apertures having their inner edges of greater height than their outer edges.

1,683,978. APPARATUS FOR PRODUCING DENTURES. MILTON M. KOHN, New York, N. Y. Filed July 3, 1924. Serial No. 724,155. 4 Claims. (Cl. 18—6.)



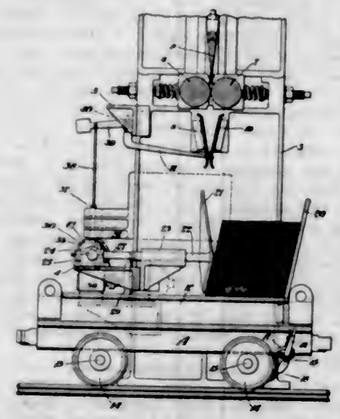
1. A device comprising a casing, a closure for said casing, means for heating said casing, an element adapted for rotation in said casing and extending longitudinally thereof, a tube for holding work adapted to fit over said element, a bearing for said tube in said closure and means for rotating said element and tube.

1,683,979. COMBINED TYPEWRITING AND CARD-PERFORATING MACHINE. ALFRED G. F. KUROWSKI, Brooklyn, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Aug. 7, 1925. Serial No. 48,723. 39 Claims. (Cl. 164—112.)



1. The combination with a set of keys or operators, of a typewriter mechanism controlled thereby and including a carriage, a perforating mechanism also controlled by said keys and also including a carriage, a driving train of mechanism mechanically connecting said carriages for simultaneous letter feed and return movements, and a single letter-feeding mechanism controlled by said keys for controlling both carriages.

1,683,980. COMBINED SAFETY RAZOR, HAIR TRIMMER, AND COMB. BERNARD KWARTIN, Philadelphia, Pa. Filed Nov. 20, 1926. Serial No. 149,593. 7 Claims. (Cl. 30—12.)

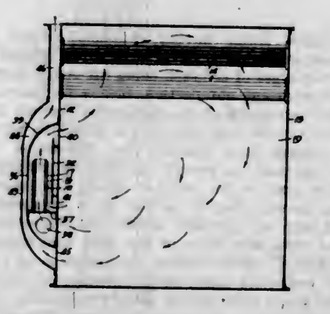


1. In a combined safety razor and hair-trimmer, in combination, a clamp of transversely curved cross section, a transversely curved guard of a transverse width greater than that of said clamp such that when said clamp and guard are assembled certain edges of the latter project beyond corresponding edges of the former, a handle for clamping said clamp and guard in assembled relation, and a multiple-edged blade arranged to be disposed either between said clamp and said guard for use as a razor, or between said handle and said guard for use as a hair-trimmer, the said edges of said clamp, in the latter instance, operating respectively as fulcrums for the cutting edges of said blade.

1,683,981. MAGNETIC SHARPENER FOR RAZOR BLADES. THOMAS G. LOVEGROVE, Philadelphia, Pa., assignor to Clara S. Lovegrove, Philadelphia, Pa. Filed July 21, 1925. Serial No. 44,906. 3 Claims. (Cl. 175—265.)

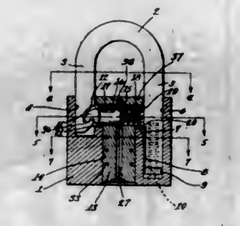
2. A sharpener for razor blades including a casing having an opening, a U-shaped magnet in the casing with its poles disposed at either side of the opening, a blade holder slidable through the opening, and means on the blade holder for holding a razor blade against transverse or longitudinal movement relatively to the blade holder.

1,683,982. APPARATUS FOR PACKING DOUBLED SHEETS AND PLATES. ARTHUR R. MCARTHUR, Gary, Ind., assignor to American Sheet and Tin Plate Company, Pittsburgh, Pa., a Corporation of New Jersey. Filed May 26, 1927. Serial No. 194,514. 3 Claims. (Cl. 153—28.)



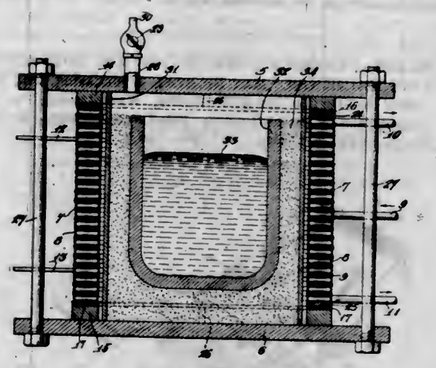
1. A doubling apparatus for sheets and plates comprising, in combination, a housing having a passageway through its lower end through which a wheeled carrier is adapted to pass, a wheeled carrier adapted to be located in said passageway, said carrier being provided with an upright head at one end to support the doubled sheets or plates delivered onto said carrier, a doubling mechanism mounted on said housing, means for receiving and guiding the doubled sheets or plates onto said carrier, a packing head reciprocably mounted on said housing, said head being adapted to be withdrawn to permit each of the doubled sheets or plates to be delivered onto said carrier and to be moved toward and engage said doubled sheets or plates after they are delivered onto said carrier, power means for reciprocating said head, and means controlled by the doubled sheets or plates as they are being delivered to said carrier for controlling the operation of said head, said head having a constant stroke and being adapted to move said carrier forwardly a distance substantially equal to the thickness of the doubled sheets or plates so as to position said carrier to receive the next doubled sheet or plate.

1,683,983. WEAVING. RONALD CRAWFORD MCILROY, Lewiston, Me., assignor to Columbia Woolen Company, a Corporation of Maine. Filed May 9, 1927. Serial No. 189,794. 2 Claims. (Cl. 139—335.)



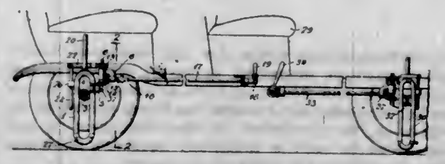
1. A series of cards for use in a Jacquard loom composed of a plurality of groups of cards each group representing one character of a series of characters, and each group being laced together in such a manner as to be interchangeable as a unit in said series relatively to the other groups.

1,683,984. DRYING SYSTEM. HARRY V. MOONEY, Seattle, Wash., and WILLIAM WESLEY HICKS, San Francisco, Calif. Filed May 3, 1926. Serial No. 106,202. 5 Claims. (Cl. 34—19.)



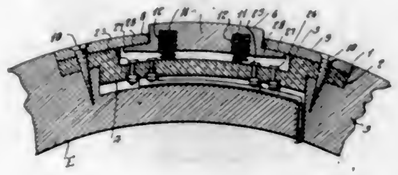
1. A drying system comprising a chamber within which articles to be dried are adapted to be placed, a source of heat associated with said chamber, means forming a flue for convection currents of air associated with said source of heat, said flue communicating with said chamber at vertically spaced points whereby the air within the chamber is circulated into contact with the articles to be dried, an intake passage communicating with said flue near the lower end of the same for introducing fresh quantities of air into the system at atmospheric pressure, and a second flue in heat absorbing relationship with said source of heat, said second flue receiving air from the lower portion of the chamber and discharging the same from the system.

1,683,985. PADLOCK. JAMES A. MUZZIO, Cleveland, Ohio, assignor to Rosa S. Muzzio, Cleveland, Ohio. Filed Jan. 2, 1923. Serial No. 610,201. 6 Claims. (Cl. 70—108.)



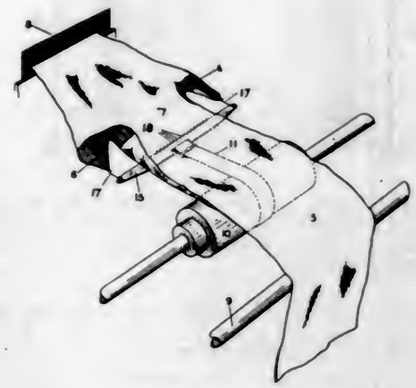
1. A padlock, comprising a body portion, a shackle movably mounted thereon, a rotatable plug, and a locking bolt rotatable with and slidably mounted on said plug for movement radially thereto, said bolt being adapted to be moved to release position by rotation of said plug.

1,683,986. INDUCTION PRESSURE OR VACUUM FURNACE. EDWIN F. NORTHRUP, near Princeton, N. J., assignor to Ajax Electrothermic Corporation, Trenton, N. J., a Corporation of New Jersey. Filed Aug. 1, 1925. Serial No. 47,594. 16 Claims. (Cl. 266—15.)



1. A furnace having top and bottom walls and an inductor side wall all vacuum-sealing against air passage, the inductor side wall comprising the sealing part of the side of the enclosure.

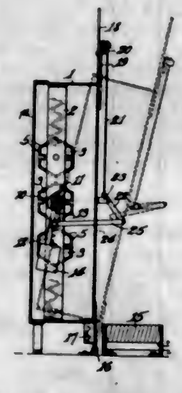
1,683,987. MOUNTED AUTOMOBILE JACK. GEORGE PULLETS, New York, N. Y. Filed Sept. 6, 1927. Serial No. 217,692. 7 Claims. (Cl. 254—86.)



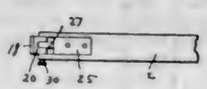
1. An automobile jack mounted on the chassis of a car, and comprising a slotted supporting frame mounted on and slidable over the axle of an automobile, a bracket fixed to the chassis and supporting a lifting screw attached to the said frame, an internally threaded sleeve adapted to engage the said screw, and means for turning the said sleeve to produce a vertical movement of the said screw.

1,683,988. DIRECTION-INDICATOR SWITCH FOR AUTOMOBILES. WALTER J. READING, Easton, Pa. Filed Oct. 29, 1926. Serial No. 144,988. 1 Claim. (Cl. 200—59.)

In a signal control device, a steering wheel having a recess therein, a hollow base of insulating material mounted in said recess, a plurality of pairs of contacts carried by and spaced along the base, a circuit closing plate having a flange extending into the hollow of the base, the inner face of the flange being beveled, recesses in said plate resilient means in the recesses between the base and the plate normally holding the latter in spaced relation with respect to the contacts, an arcuate keeper plate secured over the base and having an opening through which the outer portion of the circuit closing plate extends and confining the flange within the hollow of the base, and fastening means for securing the closing plate and the base to the steering wheel.



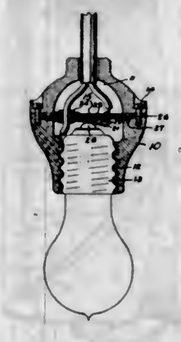
1,683,989. TENSION-TAKE-UP DEVICE FOR KNITTING MACHINES. MAX RICHTER, Wyomissing, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a Corporation of Pennsylvania. Filed Feb. 3, 1928. Serial No. 251,495. 1 Claim. (Cl. 66—149.)



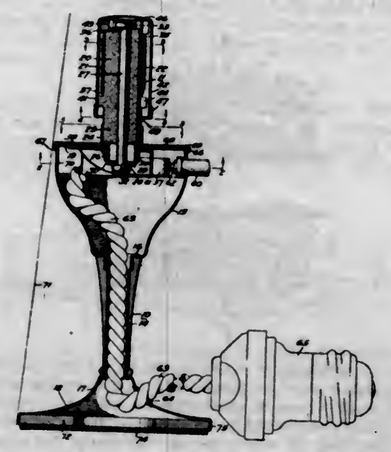
A tension take-up device for full fashioned hosiery knitting machines comprising a tension bar having heel tab engaging end hooks, and an intermediate row of empaling pins adapted to engage the instep portion of the fabric in a line determined by the engagement of said hooks so as to exert a practically equalized tensioning action throughout the width of the fabric.

1,683,990. MECHANICAL DISPLAY APPARATUS. ADOLPH M. SCHICK, Wheeling, W. Va. Filed Dec. 15, 1926. Serial No. 155,071. 2 Claims. (Cl. 40—51.)

1. In a display mechanism, a pivoted casing, rollers journaled within said casing, each roller having a plurality of inscription-bearing faces adapted to be successively exposed through the front of said casing, a ratchet carried by one of said rollers, a member pivoted upon a fixed part of the casing, a pawl carried by said member for operatively engaging said ratchet, a weight normally maintaining said member in a predetermined position relative to the casing, and electrical means whereby said casing may be rocked on its pivotal mounting relative to said weight for imparting rotary movement to said one roller, and gearing between said one roller and the other rollers whereby rotation of the former is simultaneously communicated to the latter.



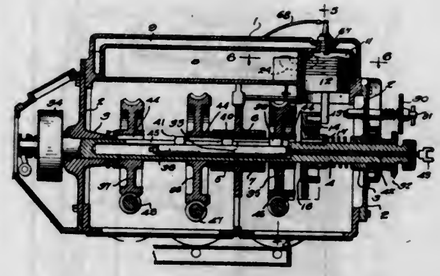
1,683,991. WINDOW-SASH CONSTRUCTION. LOUIS SCHUGERL, New Kensington, Pa., assignor of forty-eight per cent to Bruno Regali and John Regali, New Kensington, Pa. Filed Mar. 27, 1928. Serial No. 265,105. 3 Claims. (Cl. 20—49.)



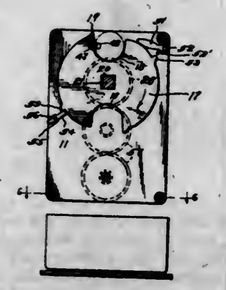
1. A window frame having channels formed in the sides thereof, a window sash for disposition in said frame, the outer side edges of the sash being cut out, a locking bar operable in each cut out portion, means for moving said locking bar outwardly of the respective channel for disposition beyond the side edge of the sash, the outwardly disposed locking bars adapted for disposition in the respective channels to permit the slidable movement of the window sash in the window frame, and means for permitting the swinging of the sash on a horizontal pivot when said bars are disposed within the respective channels in the outer side edges of the sash, said means comprising a pair of sleeves having their outer ends arranged within the respective channels in the sides of the window frame, the inner ends of the sleeves projecting through slots formed in the intermediate portions of the respective locking bars, and pintles secured at the inner ends to the opposite sides of the sash for revoluble disposition in the respective sleeves.

1,683,992. CIRCUIT INTERRUPTER AND SOCKET. MILTON H. SHOENBERG and LESTER SCHON, San Francisco, Calif.; said Schon assignor to said Shoenberg. Filed May 24, 1926. Serial No. 111,119. 9 Claims. (Cl. 200—115.5.)

5. A combined socket and circuit interrupter comprising a hollow casing, a threaded sleeve disposed in the lower end of the casing for receiving a light base, a metal disc disposed within said casing above said sleeve, a circuit interrupter mounted on said disc and offset from the center of the same, a spring strip mounted on the underside of said disc and insulated from the same, the end of said strip being adapted to be contacted by a lamp base inserted in the sleeve, said disc and strip forming the two terminals for the circuit interrupter, means for connecting a supply of current to said disc and sleeve whereby a light inserted in the sleeve will be connected in series with the interrupter element but may be further inserted to force the spring strip into contact with the disc to shunt out the circuit interrupter.

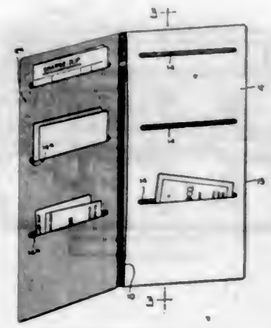


1,683,993. ELECTRICAL CIGAR LIGHTER. MILTON H. SHOENBERG and LESTER SCHON, San Francisco, Calif.; said Schon assignor to said Shoenberg. Filed Aug. 9, 1926. Serial No. 128,066. 2 Claims. (Cl. 219—32.)



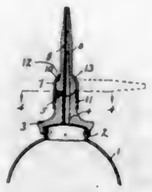
2. In a lighter of the class described, an elongated refractory core having parallel ribs spaced circumferentially about its periphery, a resistance wire wound upon said core, a cylindrical metal guard surrounding said core and wire and mounted upon the core, said guard having side walls lying adjacent to but spaced from said wires, said guard having its side walls perforated whereby air drawn thru any side of the guard will be heated by contact with said core and wire.

1,683,994. HYDROCARBON TURBINE ENGINE. WILLIAM G. SIMPSON, Ferndale, Mich. Filed Nov. 8, 1924. Serial No. 748,740. 1 Claim. (Cl. 60—41.)



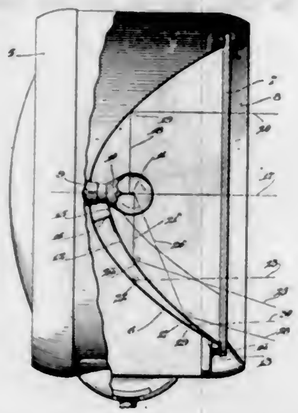
In the device of the character described, a main shaft, a cylinder arranged adjacent said shaft, a piston mounted in said cylinder and operatively connected to said shaft, a plurality of gears loosely mounted on said main shaft, auxiliary shafts carrying worm wheels meshing with said gears and adapted to drive said gears, means for connecting the desired one of said gears to said main shaft, a tank adapted to receive gases from said cylinder, and turbines mounted on said auxiliary shafts, said turbines being adapted to be connected to said tank to receive gases therefrom.

1,683,995. COIN-CONTROLLED DEVICE. GOODWIN B. SMITH, Philadelphia, Pa., assignor to The Junoform Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 27, 1921. Serial No. 464,770. 5 Claims. (Cl. 194—63.)



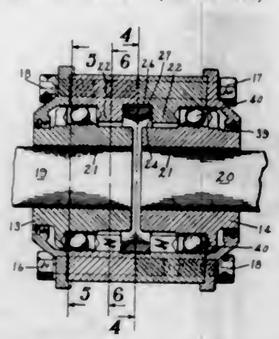
5. The combination of a flat rotary disk of uniform thickness, adapted to be exchanged for another disk suited for another size of coin, and having diametrically opposite coin receiving slots, so that when a coin drops from the slot positioned at the bottom of the disk the other slot will be at the top of the disk ready to receive the coin of the next customer, a fixed coin receiving aperture with which the slot at the top registers, separable supporting plates enclosing said disk and adapted to be attached to a vending mechanism; coin-collecting means in which coins dropping from the slot at the bottom of the disk are deposited, and means to arrest the disk at each half revolution, and for locking the disk which locking means are released by a coin in the upper slot.

1,683,996. FILING CONTAINER. WALTER A. SNOW, New York, N. Y. Filed Nov. 6, 1926. Serial No. 146,627. 3 Claims. (Cl. 129—20.)



1. A container having oppositely disposed portions of sheet material secured to one another at all edges excepting one edge to provide a pocket having an opening at said one edge, one of said portions being provided with a slot extending approximately at right angles to said one edge and communicating freely and directly with the interior of said pocket.

1,683,997. OIL CAN. ANTON F. STRAFUS, Los Angeles, Calif., assignor of one-half to Luther R. McGarvin, Los Angeles, Calif. Filed Aug. 5, 1926. Serial No. 127,211. 1 Claim. (Cl. 221—56.)



Closure means for an oil can having a discharge neck, comprising an integral member having a bore opening therethrough with one end of the integral member forming detachable engaging means adapted to engage the neck of the oil can and the opposite end of the integral member being recessed to form a semi-spherical concave-bearing seat surrounding the bore of the integral member, a spout having a spherical bearing member at its inner end with the bore of the spout opening through said spherical bearing member, the said spherical bearing member being adapted to fit snugly in the semi-spherical concave bearing seat, and a thimble adapted to be received over the spherical bearing member and forming a concave semi-spherical bearing seat adapted for snug engagement with the spherical bearing member, the integral closure member being formed with means for detachably engaging the thimble so as to retain the spherical bearing member in snug engagement in its semi-spherical concave bearing seats with the bores of the spout and integral closure member adapted for alinement or nonalinement by swinging the spout relative to the closure member, and the thimble having an arcuate slot for the projecting spout to permit said swinging of the spout.

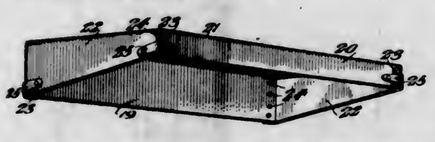
1,683,998. HEADLIGHT. SEYMOUR SUITS, Philadelphia, Pa. Filed Apr. 6, 1927. Serial No. 181,372. 1 Claim. (Cl. 240—48.2.)

In a headlight having a paraboloidal reflector, a glass closure and a lamp, an antiglare device including a sub-reflector covering the lower portion of the reflector and of the same contour as the portion covered, a bracket attached to the upper portion of the sub-reflector for spacing it from the reflector, and a flange on the sub-reflector bolted to the closure adjacent its edge and disposed between it and the edge of the reflector.

1,683,999. FLEXIBLE SHAFT COUPLING. WILLIAM E. SYKES, Buffalo, N. Y. Filed June 7, 1926. Serial No. 114,173. 12 Claims. (Cl. 64—91.)

1. In a coupling for shafts or the like, a hollow casing and a hub member enclosed thereby, said casing having spaced apart depending lugs upon its internal periphery, said lugs having grooves in the side faces thereof extending inwardly from the outer end of said casing the greater part of the length thereof, the remaining portion of said lugs forming closure members for said grooves, said hub member having spaced apart outwardly extending lugs upon its periphery, said hub member lugs being adapted to enter the spaces between the lugs of said casing and having grooves in the side faces and open at the inner end thereof and extending outwardly from the inner end thereof the greater part of the length thereof, the remaining portions of said lugs forming closure members for said grooves, and a rotatable member interposed between the opposing sides of said lugs within the grooves therein.

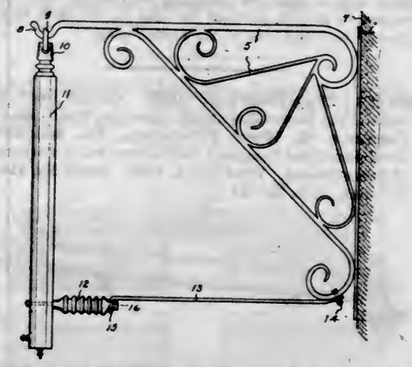
1,684,000. MATCH. GEORGE A. TAYLOR, Boston, Mass. Filed Aug. 4, 1927. Serial No. 210,675. 9 Claims. (Cl. 44—44.)



1. A match having a splint portion provided with a metallic reinforce.

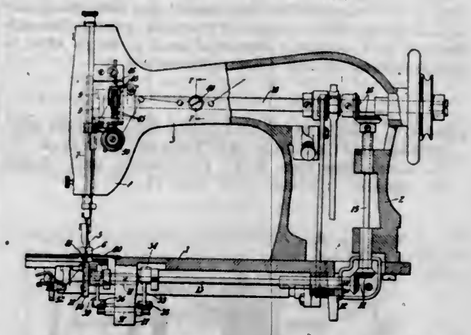
1,684,001. ALPHABETICAL KEYBOARD PUNCH. ALFRED WEILAND, Neshanic, N. J.; HAROLD R. RUSSELL, Douglaston, N. Y.; and CHARLES A. METZGER, New Brunswick, N. J., assignors, by mesne assignments, to Remington-Rand Inc., New York, N. Y., a Corporation of Delaware. Filed July 28, 1925. Serial No. 46,583. 4 Claims. (Cl. 164—113.)

1. In a card perforating machine, the combination of a keyboard mounted on the machine, a punching mechanism including a plurality of rows of punches, each row corresponding to a column of a record card and having a less number of punches than there are keys on said keyboard, set-up bars for the respective punches, a selecting device arranged to travel across said set-up mechanism, automatic means for successively feeding cards to said punching mechanism, means actuated by any one of a group of said keys for causing said selecting device to set two set-up bars predetermined by the keys operated, and means actuated by any one of another group of keys for causing said selecting device to set one-set-up bar predetermined by the key operated.



1,684,002. TOOL BOX FOR AUTOMOBILES. WILLIAM WALLACE WHITE, Kennett Square, Pa., assignor to Standard Fibre Company, Kennett Square, Pa., a Corporation of Delaware. Filed June 8, 1926. Serial No. 114,395. 2 Claims. (Cl. 206—16.)

1. In a tool box, in combination a receptacle portion consisting of a bottom and front, rear and side walls the front wall being appreciably higher than the rear wall and the top edges of the side walls inclining from the front to said rear wall, a longitudinally extended, vertical partition arranged at an inclination with respect to the said front and rear walls fixed at one end to an end wall of the box and having the other end thereof spaced from the opposite end wall of the box, means for securing said parts together, and a cover for said receptacle portion.



1,684,003. RADIOANTENNA. MCKAY WRIGHT, Seattle, Wash. Filed Sept. 16, 1926. Serial No. 135,836. 4 Claims. (Cl. 250—33.)

1. A radio receiving antenna embodying a piece of insulated copper pipe having relatively heavy walls and supported in insulated relation in a vertical position, a condenser disposed within the lower end of said pipe means in said pipe above said condenser for supporting the condenser and electrically connecting one terminal of the same to said pipe, an insulator member forming a closure for the bottom

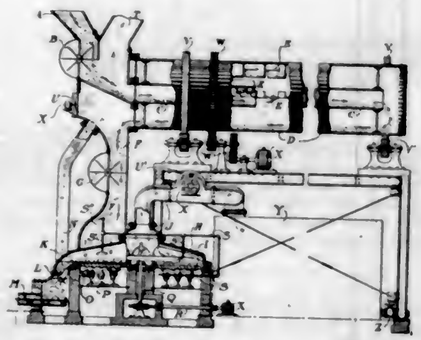
end of said pipe and having a terminal post extending therethrough for connecting the other terminal of said condenser with a receiving instrument and another binding post connected directly with the bottom end of said pipe.

1,684,004. CHAIN-STITCH SEWING MACHINE. RUDOLPH BECKER, North Plainfield, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Sept. 27, 1926. Serial No. 137,863. 12 Claims. (Cl. 112—199.)

1. In a sewing machine, in combination, feeding mechanism, a reciprocating needle, a loop-taker adapted to seize and detain a needle-loop and to cooperate with the feeding mechanism to move the detained needle-loop out of the needle-path, and means separate from said loop-taker for passing a loop of under thread through the detained needle-loop for entry by the descending needle.

1,684,005. CIGARETTE HOLDER. CHARLES MORTON BELLAK, New York, N. Y. Filed June 2, 1927. Serial No. 195,887. 4 Claims. (Cl. 131—10.)

1. A cigarette holder having a cigarette receiving slotted shell arranged within the cigarette receiving end of the holder formed separately from said cigarette holder and fitted with an ejector device comprising a portion extending to the outside of the holder through the front face of the



tip of the cigarette holder and formed to support the holder when laid upon a surface such as a table, the body of said ejector device being positioned between said slotted shell and the inner surface of the forward end of the cigarette holder, and a cigarette engaging portion of said ejector arranged to project through the slot in the shell into the cigarette receiving bore of the slotted shell.

1,684,006. TREATMENT OF ORES. QUINCY BENT, Bethlehem, Pa.; EDWIN BARNHART, Sparrows Point, Md.; and FREDERICK W. WOOD, Philadelphia, Pa., assignors to Bethlehem Steel Company, Bethlehem, Pa., a Corporation of Pennsylvania. Filed Oct. 4, 1920. Serial No. 414,705. 7 Claims. (Cl. 75—73.)

1. A process for rendering wet ores of plastic character suitable for a subsequent furnacing operation which consists in, feeding the ore into the cool end of an internally and longitudinally ribbed rotary kiln, whereby the plastic ore mass may be divided into a plurality of integral masses disposed longitudinally of the kiln, said kiln having its axis inclined to the horizontal and being rotated so as to carry the masses to a point at which they may become gravimetrically detached and fall downwardly and forwardly in the kiln, causing said detached masses to be individually carried upward and dropped forwardly in the kiln by the continued rotation of the latter, whereby the ore may be formed into masses of the size desired and submitting said masses during their downward tumbling passage through the kiln to a moderate degree of heat so as to effect a partial removal of their contained moisture.

1,684,007. METHOD OF TREATING OIL SHALES AND OTHER BITUMINOUS MATERIALS. WILLIAM W. BLAISDELL, New York, N. Y. Filed May 3, 1923. Serial No. 636,410. 1 Claim. (Cl. 202—16.)

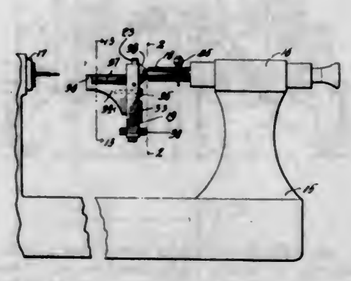
The method of treating shale or other bituminous material, which consists in initially preheating the material to a point somewhat below the point at which the hydrocarbon vapors are formed and in subsequently superheating the material to the point at which said hydrocarbon vapors are formed, the preheating and superheating steps being carried out in separate chambers, and the heat of the exhaust gases from the superheating chamber being used to heat the material in the preheating chamber, in passing the material from the preheating to the superheating chamber, in preventing the escape of vapor during such passage, in reducing the temperature of the heat of the exhaust gases preliminary to its delivery to the pre-heated chamber by introducing atmospheric air in the gases, in mechanically agitating the material in the preheater chamber during treatment, in removing the spent material from the superheater chamber, and in condensing the hydrocarbon vapors.

1,684,008. ROD RACK. JOHN G. BOUSLOG, Anaheim, Calif. Filed Nov. 1, 1924. Serial No. 747,260. 10 Claims. (Cl. 211—115.)

1. Suspension means for sucker rods having coupling collars comprising a support having a recess, a retaining member, and a flexible connection between the support and retaining member, the recess of the support being adapted for lateral reception of a sucker rod with the walls of the recess engaged by the coupling coller of the sucker rod so as to support the rod against longitudinal displacement independently of the retaining member, and the retaining member being adapted to be removably received around a sucker rod supported in the recess so as to prevent transverse displacement of the rod.

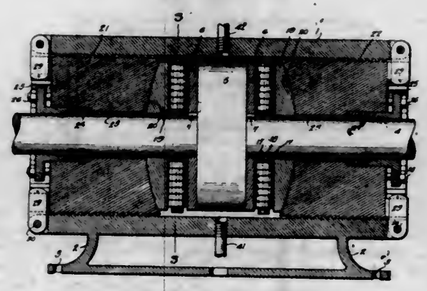
1,684,009. ANTENNA. HAROLD M. BROWN, Elmhurst, Ill. Filed May 29, 1926. Serial No. 112,508. 3 Claims. (Cl. 250—33.)

1. A radio antenna comprising a staff with a bore, and insulated wire continuously wound around said staff to



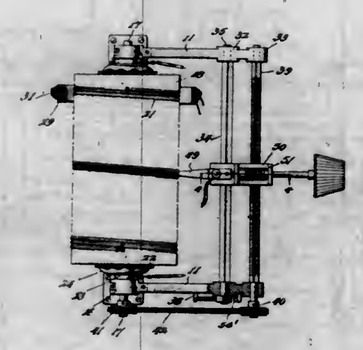
chiefly cover the same and partly extending through the walls thereof and through said bore to one end of the staff and being arranged for connection with a radio receiving wire.

1,684,010. RAILWAY-CAR CONSTRUCTION. ARGYLE CAMPBELL, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed May 18, 1925. Serial No. 31,144. 5 Claims. (Cl. 105—14.)



1. In a car wall element including a panel of sheet metal, said panel being strengthened within its margins by embossments defining intelligible indicatory characters and a rectangular embossment disposed outwardly of said first named embossments, said rectangular embossment being disposed inwardly of the edges of the sheets and provided with extensions adapted to continue the reinforcement beyond the main portion of said rectangular embossment.

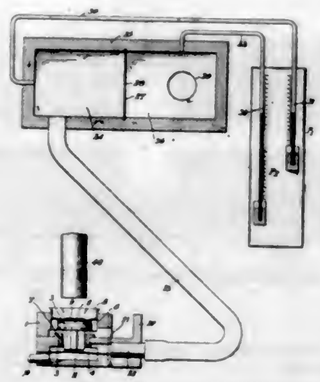
1,684,011. FILING FIXTURE. ALBERT J. CICHON, San Antonio, Tex. Filed Apr. 7, 1925. Serial No. 21,416. 2 Claims. (Cl. 82—34.)



1. A file supporting attachment for lathes comprising a supporting member, means carried by the member for attachment to the tail stock of the lathe and arranged to support the said supporting member in vertical position and in a plane at right angles to the axis of the tail stock, a plate mounted upon the said supporting member for vertical adjustment thereon, a screw vertically mounted upon the plate and having threaded engagement with the supporting member whereby to effect vertical adjustment of the plate in the rotative adjustment of the the screw, brackets extending forwardly in spaced relation to each other from the face of the plate, and rollers rotatably mounted in horizontal position at the upper sides of the brackets to support a file.

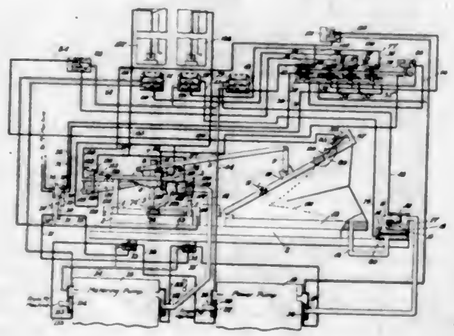
1,684,012. THRUST BEARING. ROBERT L. DENNISON, New York, N. Y. Filed Dec. 17, 1924. Serial No. 756,573. 3 Claims. (Cl. 308—234.)

1. A thrust bearing comprising an outer frame adapted to surround a shaft, a revolving member keyed to said shaft, a bearing cage arranged adjacent said member, a stationary member surrounding said shaft and arranged on the opposite side of said bearing cage, a filler member adjustably mounted in said frame on the opposite side of said stationary member, said frame being internally threaded, said filler member being provided with external threads adapted to engage said internal threads to permit adjustment of said filler member, the outer face of said filler member being provided with a plurality of pairs of spaced projections forming grooves therebetween, and said onter frame being provided with hinged locking members adapted to be received in said grooves.



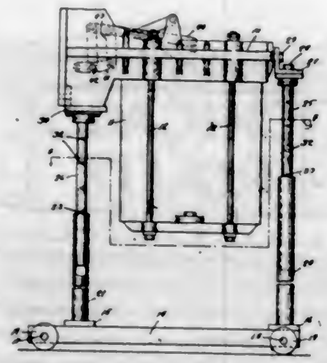
1,684,013. VARIABLE INDUCTANCE. JAMES C. DE PUE, San Antonio, Tex., assignor of one-half to Charles A. Meyer, San Antonio, Tex. Filed Oct. 14, 1926. Serial No. 141,570. 7 Claims. (Cl. 171—119.)

1. A variable inductance including a rotatable coil, a contact to coact therewith and movable laterally to follow the turns of said coil, means for feeding the contact



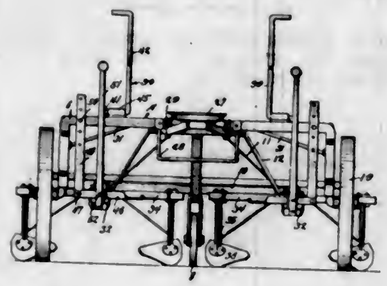
laterally, and means for actuating said feeding means and rotating the coil in timed relation to each other, said contact being releasable from its feeding means and slidable longitudinally of the coil to effect quick adjustment of the contact.

1,684,014. METHOD OF ADJUSTING VALVE THROW. BOYD DUDLEY, Jr., Syracuse, N. Y., assignor to American Piano Company, New York, N. Y., a Corporation of New Jersey. Filed July 10, 1924. Serial No. 725,312. 4 Claims. (Cl. 73—151.)



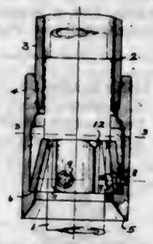
1. The method of adjusting valve throw which includes comparing the flow of fluid through a port controlled by said valve with the flow of the same fluid through an orifice of fixed area and adjusting the effective opening between said port and valve to cause the flow through said port and said orifice to assume a predetermined relationship.

1,684,015. APPARATUS FOR ADJUSTING VALVE THROW. BOYD DUDLEY, Jr., Syracuse, N. Y., assignor to American Piano Company, New York, N. Y., a Corporation of New Jersey. Filed July 10, 1924, Serial No. 725,313. Renewed Mar. 20, 1928. 16 Claims. (Cl. 73—151.)



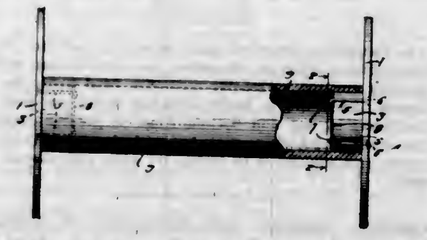
1. In a machine for adjusting valve throw in pneumatic valve actions, in combination, a press, means to actuate said press, and means controlled by the rate of flow of air through said valve action for controlling said actuating means.

1,684,016. ELECTRIC SWITCH. WILLIAM N. DUNN, Medford, Mass., assignor, by mesne assignments, to Condit Electrical Manufacturing Corporation, Boston, Mass., a Corporation of Masschusetts. Filed Nov. 16, 1922. Serial No. 601,256. 9 Claims. (Cl. 200—150.)



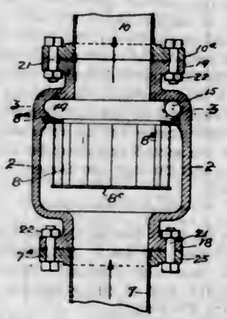
3. An electric switch having a switch frame provided with depending guide-extensions, and a carriage disposed beneath said frame having upwardly-extended tubular guide-members in which said guide-extensions are slidably received.

1,684,017. POTATO HILLER. JOSEPH E. DURKPO, Presque Isle, Me. Filed Mar. 5, 1927. Serial No. 173,114. 3 Claims. (Cl. 97—237.)



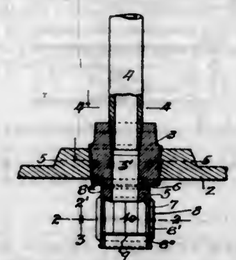
1. An agricultural implement comprising a main frame, longitudinally extending implement beams connected at their forward terminals to the frame for swinging movement in a horizontal and in a vertical plane, transverse implement beams secured to the longitudinal beams, blades connected with said transverse beams, foot pedals arranged on opposite sides of the frame rockably connected with the frame at their outer ends and with the beams at a point intermediate their ends, whereby upon downward movement of the pedals, the blades will be urged into contact with the ground.

1,684,018. PIPE PULLER. CHARLES R. EDWARDS, Houston, Tex. Filed Jan. 17, 1921, Serial No. 437,970. Renewed Jan. 30, 1928. 16 Claims. (Cl. 294—90.)



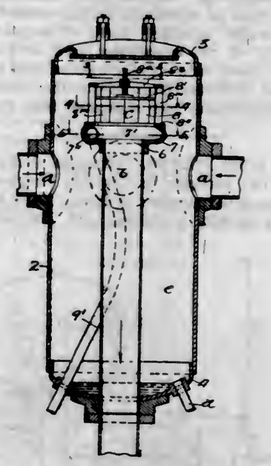
14. An overshot pipe puller including a casing and having a pipe engaging dog pivoted therein near its lower end and having an upper free end movable radially and circumferentially relative to the casing.

1,684,019. SPOOL. PRESTON J. FARLEY, Califon, N. J. Filed Sept. 14, 1927. Serial No. 219,506. 2 Claims. (Cl. 242—124.)



1. A spool of the type described, comprising a tubular barrel, a pair of heads mounted on each end of the barrel, these heads comprising a disc and a stub cylinder, nails driven through the disc and in contact with the outer surface of the stub cylinder, a metal ring resting on the free end of the stub cylinder, the nails having their ends bent to engage over the aforesaid metal ring to securely hold the stub cylinder to the disc.

1,684,020. CENTRIFUGAL FIXTURE. CHARLES GILBERT HAWLEY, Chicago, Ill., assignor to Centrifix Corporation, Cleveland, Ohio, a Corporation of Ohio. Filed May 4, 1925. Serial No. 27,833. 4 Claims. (Cl. 183—87.)

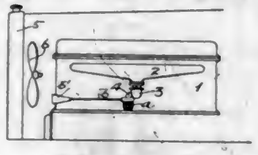


1. A centrifugal fluid purifying device, comprising, in combination, a casing, a hollow ring member therein and an internally smaller coaxial tuyère ring portion secured within said casing in the process of casting the casing, and adapted to whirlingly direct the fluid into and through said member, said hollow member having a still smaller central outlet axially remote from said tuyère portion and also having a peripheral discharge nozzle.

1,684,021. SEPARATOR. CHARLES GILBERT HAWLEY, Chicago, Ill., assignor to Centrifix Corporation, Cleveland, Ohio, a Corporation of Ohio. Filed May 4, 1925. Serial No. 27,843. 3 Claims. (Cl. 183—87.)

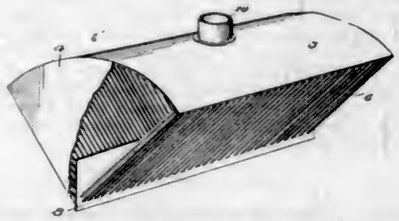
1. A reducer plug adapted to receive the offtake from a drum or conduit and containing an axial outlet passage, the inner end of said plug being reduced in diameter and shouldered concentrically with said axial passage, in combination with a tangentially tuyèred barrel having one end attached to and partially closed by the reduced shouldered end of said plug, the external diameter of said barrel being slightly less than the diameter of the body of said plug, and the inner diameter of said barrel being so much greater than that of the said passage as to present an annular abutment, and, a disc-like member closing the free end of said barrel.

1,684,022. RECEIVER SEPARATOR. CHARLES GILBERT HAWLEY, Chicago, Ill., assignor to Centrifix Corporation, Cleveland, Ohio, a Corporation of Ohio. Filed May 4, 1925. Serial No. 27,848. 2 Claims. (Cl. 183—82.)



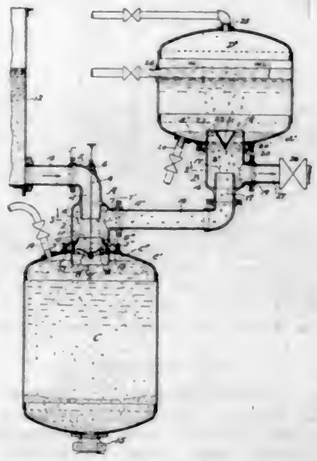
1. The herein described separator comprising a vertical drum having an inlet in its upper part, in combination with an outlet pipe leading from the upper part of the drum, a volumetrically adjustable and self-contained centrifugal separating unit fixed on the top of said pipe and forming the avenue through which the fluid must pass to reach said pipe.

1,684,023. AUTOMOBILE AIR CLEANER. CHARLES GILBERT HAWLEY, Chicago, Ill., assignor to Centrifix Corporation, Cleveland, Ohio, a Corporation of Ohio. Filed May 4, 1925. Serial No. 27,855. 3 Claims. (Cl. 183—83.)



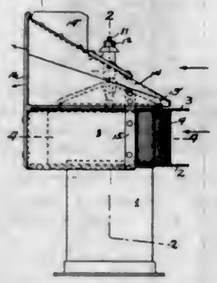
1. An air cleaner for internal combustion automotive engines, and the like, comprising a centrifugal dust sepa-

rator for association with the engine intake, and having at one end a tangential peripheral dust outlet, in combination with means for maintaining an auxiliary movement



of an ejector fluid first into said end of the separator and thence into said outlet and in the direction of the dust discharge.

1,684,024. STEAM PURIFIER. CHARLES GILBERT HAWLEY, Chicago, Ill., assignor to Centrifix Corporation, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 4, 1925. Serial No. 73,278. 2 Claims. (Cl. 122—491.)



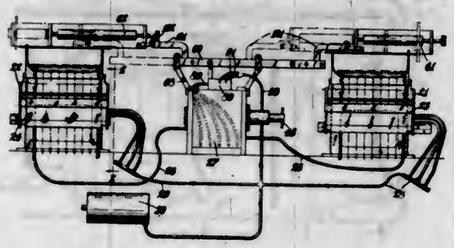
1. An apparatus of the class described comprising, in combination, a top, a purified fluid conduit leading from said top, downwardly inclined sides composed each of a plurality of rows of outwardly facing channel members, a central vertically arranged plate or member extending longitudinally of the apparatus, said channel members having their lower ends opening against said plate for discharging and directing downwardly the water and other impurities which have been separated from the fluid.

1,684,025. LINE FILTER. CHARLES GILBERT HAWLEY, Chicago, Ill., assignor to Centrifix Corporation, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 9, 1926. Serial No. 93,462. 4 Claims. (Cl. 210—51.)

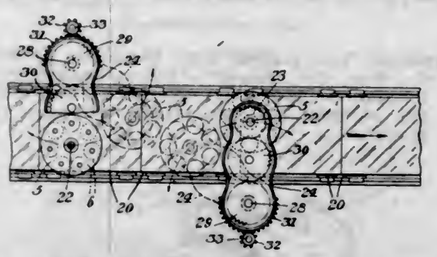
1. The improvement herein described, comprising a generally cylindrical and longitudinally extended head, closed at one end and open at the other, in combination with a direction pipe substantially coaxial with said head and extending inward through the closed end thereof, an outlet extending from the side of said head, laterally opposite the inner end of said pipe, and, a flange upon the exterior of said head, for its attachment to a drum or pocket.

1,684,026. ROOF VENTILATOR. CHARLES GILBERT HAWLEY, Chicago, Ill., assignor to Centrifix Corporation, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 6, 1927. Serial No. 238,041. 2 Claims. (Cl. 98—68.)

1. The herein described draft inducing ventilator device comprising a tubular extension, in combination with a multiply tuyèred barrel-like structure fixed upon the top thereof, containing a larger opening in its top and distinguished by top and bottom rings of greater diameter than itself, and a pressure air box enclosing one side of said tuyère and supported to swing its open end toward the wind.



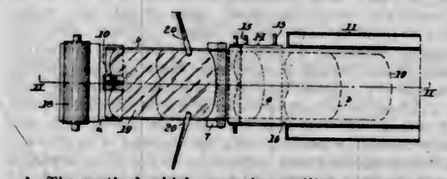
1,684,027. SCREEN FOR WINDOWS OF AUTOMOBILES. LAURA B. HINMAN, Syracuse, N. Y. Filed Aug. 5, 1927. Serial No. 210,977. 1 Claim. (Cl. 150—14.)



An automobile screen, including a screen covered frame having an opening, a second frame in the opening having a U-channel facing outwardly and receiving the edges of the screen covering which define said opening therein, the top side of the frame having spaced extensions which are bent downwardly to engage the outer side of the channel and are then rolled upwardly and inwardly to engage said downwardly bent part of the extension to form a plurality of loops, a door for the opening having a frame formed of U-channels which face inwardly, a covering for the door having its edges received in the last named channels, the top side of the door frame having cut-away parts to receive the loops of the second frame, and a pintle extending through the loops and through the channel of the top side of the door frame.

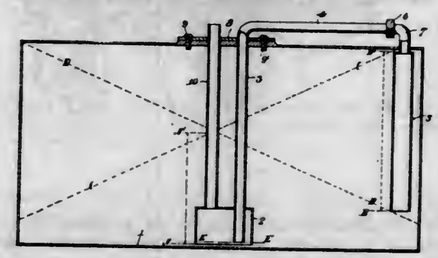
1,684,028. CODING AND DECODING APPARATUS AND CODE-CHANGING DEVICE THEREFOR. SIDNEY HOLE, Albourne, Hassocks, England. Filed Mar. 4, 1927, Serial No. 172,916, and in Great Britain Mar. 5, 1926. 45 Claims. (Cl. 178—22.)

1. In coding or decoding apparatus of the character described, the combination of a set of character-producing sign-keys, a second set of sign-keys which is a duplicate of the first set, a code-changing device comprising a plurality of transmission members arranged face-to-face, whereof at least two are movable one in relation to an adjacent one, and each said transmission member has a plurality of transmission points, one for each key of a said set of sign-keys, at least one of which movable transmission members situated between two others has a set of transmission points on one face connected in a "mixed" order with a second set on an opposite face, operative means passing through said transmission members by way of said transmission points and connecting the keys in pairs, one of one set to one of the other set, which transmission points on one face of one member are arranged to register simultaneously with those on an opposed face of an adjacent member and are so spaced that when one member is stepped one space relatively to another each transmission point of one member will be advanced to the preceding one of an adjacent member, so that the pairs of keys will be changed, and automatic means comprising a plurality of code-changing control members operatively allotted each to one of the movable transmission members, and adapted to be moved step-by-step by the operation of one set of keys and thereby move each its allotted transmission member.



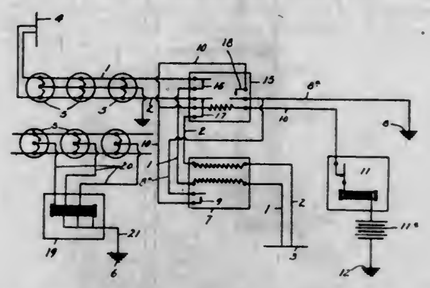
1,684,029. METHOD AND APPARATUS FOR POLISHING GLASS. GEORGE E. HOWARD, Butler, Pa., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Dec. 11, 1926. Serial No. 154,254. 6 Claims. (Cl. 51—278.)

1. The method of polishing sheet glass, which comprises advancing a sheet of glass beneath a polishing unit composed of a rotatable head upon which a series of freely rotatable polishing pads are disposed concentrically to the axis of the head, and traveling said head transversely of the path of movement of the glass a distance not materially less than one-half the diameter of the head.



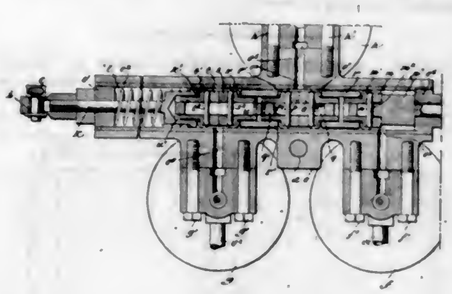
1,684,030. METHOD OF AND APPARATUS FOR FORMING PLATE GLASS. GEORGE E. HOWARD, Butler, Pa., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed Dec. 27, 1926. Serial No. 157,027. 9 Claims. (Cl. 49—33.)

1. The method which comprises rolling a plate of glass upon a table while the latter is stationary, and advancing the plate into a lehr, with its first formed portion foremost, at a rate of speed dependent upon the rate at which the sheet was rolled.



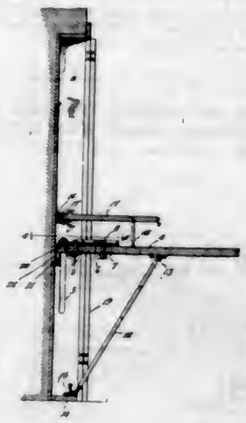
4. Sheet glass handling apparatus comprising a table having a removable segmental portion at one edge thereof, members for advancing the sheet, and means for moving said members into engagement with the glass when said segmental portion is removed.

1,684,031. AIR-SUPPLY SYSTEM. OSCAR L. INGRAM, Walla Walla, Wash. Filed Mar. 12, 1926. Serial No. 94,283. 2 Claims. (Cl. 73—54.)



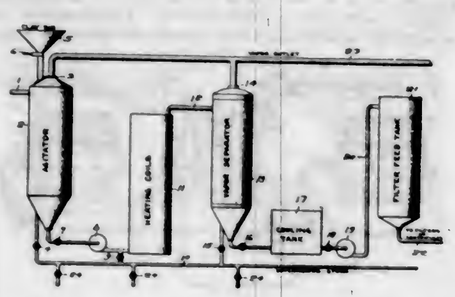
1. In combination with a liquid fuel tank, a pressure gauge air-bell mounted in the tank and having an opening communicating with the liquid at the depth to be gauged; a secondary air-bell mounted in the tank, the secondary air-bell having an opening in the lower end thereof; said air-bells being spaced apart horizontally and materially distant one from the other whereby slopping about of fuel in the tank may uncover the opening in the secondary air-bell and cause a difference in the pressure exerted in said air-bells; a pipe line connecting said air-bells and opening into the pressure gauge air-bell near the bottom thereof, whereby air will pass from the secondary air-bell into the air-bell for the pressure gauge when the slopping of the liquid in the tank causes a greater pressure to be exerted in the secondary air-bell than is exerted in the air-bell for the pressure gauge.

1,684,032. ALARM SYSTEM. RODOLPHE EMILE JORDON, Chicoutimi, Quebec, Canada. Filed May 6, 1926. Serial No. 107,023. 2 Claims. (Cl. 179—5.)



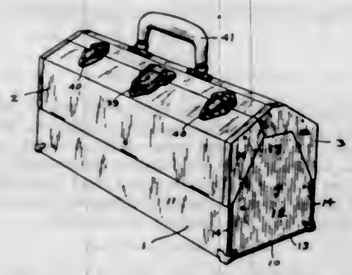
1. A signaling system comprising a tranamitting circuit, a local transmitting apparatus connected to said circuit, an alarm apparatus adapted to ground either limb of said circuit, a differential relay in said circuit, a signaling circuit controlled by said relay and including an annunciator, means including a relay in said signaling circuit for opening both limbs of said transmitting circuit, and means including a shunt to said signaling circuit closed by said last mentioned relay for retaining said signaling circuit closed independently of said differential relay.

1,684,033. CONTROL MEANS FOR THROTTLE VALVES AND THE LIKE. LYMAN C. JOSEPHS, Jr., Allentown, Pa., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 25, 1925. Serial No. 11,617. 4 Claims. (Cl. 121—38.)



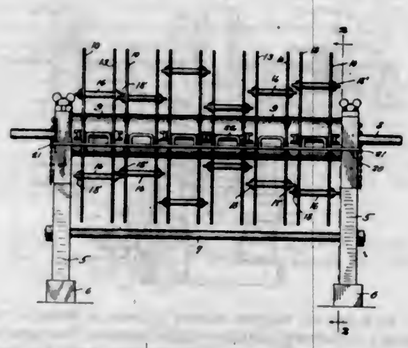
1. A pneumatic controlling device including an air cylinder, a plurality of movable piston sections each mounted slidably therein, a fixed abutment at one end of the cylinder to limit the movement of the piston sections in one direction, lost motion connections between the piston sections including hollow portions in each piston, pins mounted across the hollow portions and a link with slots to engage the pins, and means for moving the sections additively.

1,684,034. IRONING BOARD. JACOB KALAYJIAN, Pasadena, Calif. Filed Oct. 13, 1927. Serial No. 225,945. 1 Claim. (Cl. 68—10.)



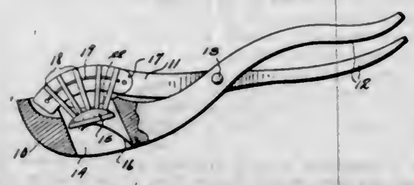
A device of the class described comprising a cabinet having grooves in its side frames, a plate having a cross bar carried thereby, the ends thereof slidably engaging the grooves, an ironing board having its rear end pivotally connected to the plate for movement in a horizontal plane, a cross bar fixed in the cabinet and having a recess formed therein, an extension carried by the ironing board, said extension being adapted for passage through the recess, whereby when the board is swung in a horizontal plane the extension will engage the upper surface of the second named cross bar, as and for the purpose set forth.

1,684,035. ART OF DECOLORIZING, CLARIFYING, AND PURIFYING PETROLEUM OILS. HAROLD LESTER KAUFFMAN and IRWIN ARTHUR CLARK, Parco, Wyo., assignors, by mesne assignments, to Harold L. Kauffman. Filed Nov. 28, 1924. Serial No. 752,697. 3 Claims. (Cl. 196—147.)



1. An improved process of decolorizing, clarifying and purifying petroleum oils by the use of untreated finely divided clays and similar filtering materials which consists in admixing with the oil such finely ground filtering material by agitating the mixture with superheated steam, passing the oil and clay mixture through a suitable heating device along with superheated steam slowly and without heating the mixture to a temperature in excess of the boiling point of the oil being treated, steaming down the hot oil and clay mixture to a temperature somewhat in excess of the boiling point of water, further cooling the mixture to the desired temperature for separating the spent filtering material from the oil and then separating the spent filtering material from the oil.

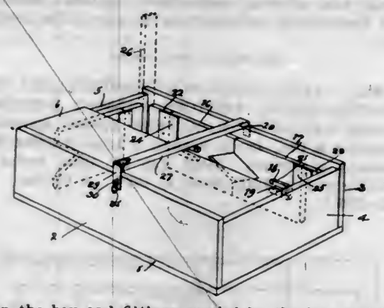
1,684,036. CANTILEVER KIT. HOWARD L. KENNEDY, Van Wert, Ohio, assignor to Kennedy Manufacturing Company, Van Wert, Ohio, a Corporation of Ohio. Filed Mar. 10, 1927. Serial No. 174,157. 8 Claims. (Cl. 206—16.)



1. In a sheet metal carrying case, in combination, a substantially rectangular box having end walls and side walls, said end walls extending substantially to the top of said case and above the upper edges of said side walls, means carried by said box to support a tray above the bottom of said box, a tray supported on said supporting means, covers hinged to said side walls and cooperating to completely enclose said case, linkage connecting said box and tray, and linkage connecting said tray and one of said covers, whereby said tray may be moved into outwardly extending position upon the opening of said cover, and vice versa, said tray supporting means being arranged to support said tray when said one cover is in either closed or open position.

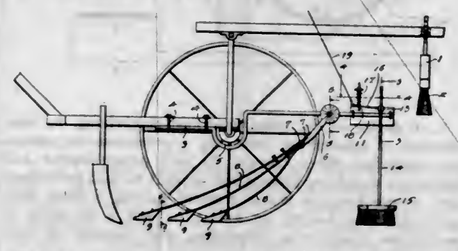
1,684,037. WIRE REEL. ELMER E. LEEDY, Newark, Ohio. Filed Feb. 25, 1927. Serial No. 170,940. 1 Claim. (Cl. 242—77.)

In a device of the character described, end members, a supporting shaft extending through the end members, a plurality of reels mounted on the shaft, each reel including a hub section, a disk-like member formed integral adjacent to one end of the hub, the opposite end of the hub being reduced defining a circular extension, a removable disk positioned over the extension, means extending through the last mentioned disk and into the hub for securing the last mentioned disk to the hub, said disks having elongated openings, pins having reduced threaded end portions fitted in the elongated openings and adjustable throughout the lengths of the openings, said pins providing supports for wire wound on the reels, and winged nuts on the threaded extensions of the pins for securing the pins to the disks at predetermined points throughout the lengths of the elongated openings.



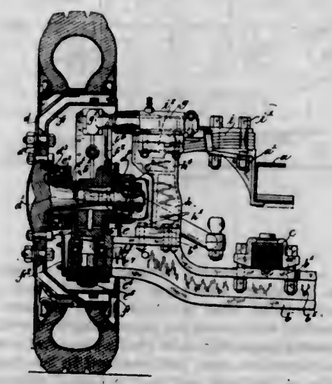
1,684,038. GOLF-BALL MARKER. CLYDE R. LONG, Smethport, Pa. Filed Sept. 15, 1927. Serial No. 219,759. 5 Claims. (Cl. 101—41.)

1. A golf ball marker including opposed jaws adapted to be manually shiftable toward or from each other, said jaws being concavely curved upon their inside faces to conform to the curvature of a golf ball, one of said jaws carrying printing members projecting inward and arranged in an arcuate curve, the other of said jaws having an inking pad disposed below the surface of the jaw and with which said type will contact when the jaws are closed.



1,684,039. COMBINATION LUGGAGE CARRIER, TABLE, AND BENCH. GEORGE O. MACKIE, JOHN S. MACKIE, and JAMES C. MACKIE, Winnipeg, Manitoba, Canada. Filed June 15, 1926, Serial No. 116,236, and in Canada Apr. 30, 1926. 2 Claims. (Cl. 190—12.)

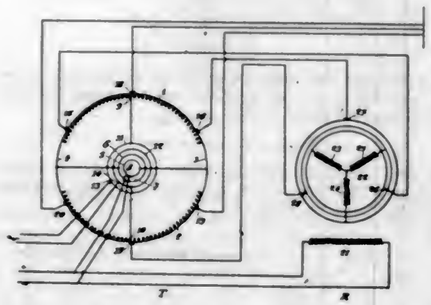
1. In combination, a luggage carrier comprising a substantially rectangular luggage box, similar cover sections detachably secured to the box, transversely extending blocks permanently secured to the inner faces of the covers adjacent the ends thereof, a brace bar hinged to each cover section and extending lengthwise between the blocks and adapted to take an extended position at right angles to the cover, pairs of removable legs normally stored



within the box and fittings carried by the legs and brace bars whereby a pair of legs can be detachably secured to each removed cover to form a bench.

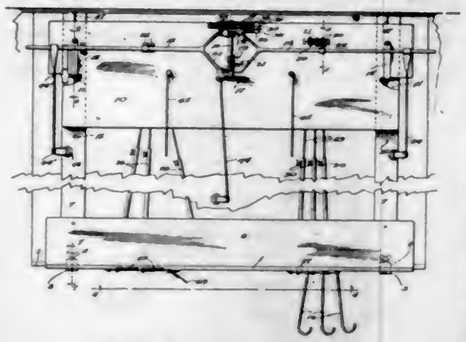
1,684,040. WEEVIL DESTROYER. ZOLECTUS T. MANN, Caviness, Tex. Filed Oct. 8, 1927. Serial No. 224,929. 1 Claim. (Cl. 43—138.)

In a weevil destroying device a bar, an arm adjustably connected with the bar and provided with a plurality of ledges, springs resting upon the ledges of the arm, said springs being of different lengths and different strength, and crusher plates carried at the free ends of the springs.



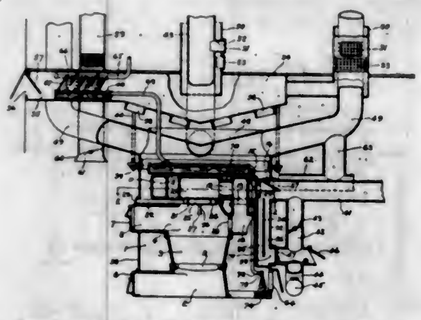
1,684,041. VEHICLE-SPRING CONSTRUCTION. ALFRED F. MASURY, New York, and ERVING R. GURNEY, Beechhurst, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Oct. 23, 1924. Serial No. 745,291. 3 Claims. (Cl. 267—41.)

1. In combination with the chassis frame wheel and spring suspension of a motor vehicle, an axle supported on the wheel below the center thereof and formed rigidly



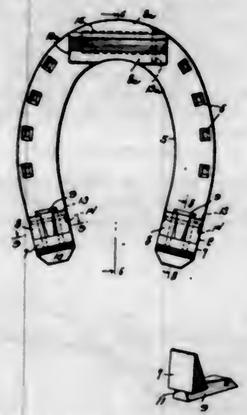
with a housing disposed above the center of the wheel, a resilient element secured to the frame forwardly of the axle and extending rearwardly and outwardly to enter the housing, and yielding non-metallic material contained within the housing and engaging the end of the resilient element.

1,684,042. APPARATUS FOR CONTROLLING THE POSITIONING OF DEVICES FROM A DISTANCE. NICOLAS EMILIEN METHLIN, Paris, France, assignor to Schneider & Cie., Paris, France, a Limited Joint Stock Company of France. Filed May 20, 1924, Serial No. 714,755, and in Italy Mar. 4, 1924. 8 Claims. (Cl. 172—239.)



3. A device of the class described comprising, in combination, a transmitter including a potentiometer, means for supplying direct current to said potentiometer and means for supplying alternating current to said potentiometer, a synchronous motor receiver having a fixed magnetic core and having an armature, and a plurality of conductors operatively connecting said receiver to said transmitter.

1,684,043. LEAF TURNER. GUSTAVE E. MEYER, New Meadows, Idaho. Filed Apr. 16, 1926. Serial No. 102,547. 2 Claims. (Cl. 84—493.)

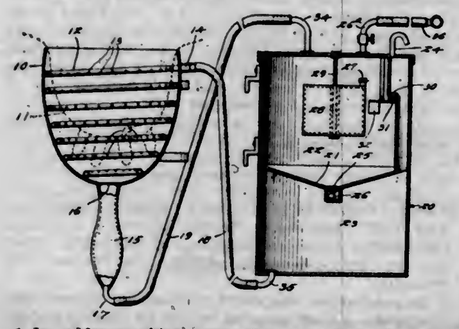


1. In a leaf turner, the combination of a leaf-supporting base, an upper frame bar supported above the said base, leaf-turning arms pivotally mounted upon the upper frame bar, and means for controlling said arms including forwardly projecting rock shafts operatively connected with the respective arms and mounted in bearings on the under side of the base and each provided with stop lugs arranged at the inner ends of the bearings and adapted to impinge against the base whereby to prevent endwise movement and limit the rocking movement of the shaft.

1,684,044. HOT-AIR HEATING SYSTEM. LOUIS SKELDING, Vancouver, British Columbia, Canada. Filed Apr. 5, 1927. Serial No. 181,164. 7 Claims. (Cl. 126—99.)

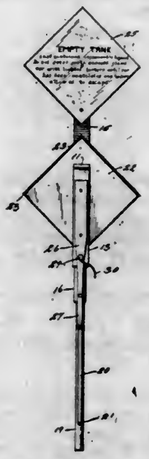
1. In a hot air furnace having a dome, a radiator comprising a cylindrical chamber supported upon the dome and communicating with an annular chamber having a smoke outlet, and separate means of communication between the dome and the cylindrical chamber and between the dome and the annular passage.

1,684,045. HORSESHOE. WILLIAM F. SLAGLE, Putneyville, Pa. Filed Nov. 1, 1926. Serial No. 145,616. 1 Claim. (Cl. 168—35.)



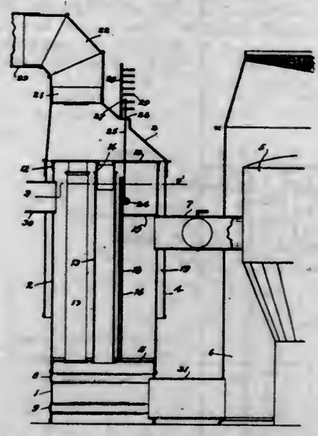
In a horseshoe, a body provided upon its under side at one end with spaced flanges flush at their outer sides with the portion of the body upon which they are formed, and a flange extending transversely between the rear ends of the first-mentioned flanges and having its outer side flush with the rear end of the portion of the body upon which the flanges are formed, the under sides of the flanges occupying a common plane parallel to the under side of the body, the opposing sides of the first-mentioned flanges occupying planes diverging upwardly in the direction of the under side of the body, the inner side of the second-mentioned flange occupying a plane perpendicular to the under side of the body, and a calk comprising a body having downwardly converging inclined front and rear sides and a flat upper side, and a shank integral with the calk body at the upper side of the body, the shank having a straight rear end perpendicular to the plane of the upper side of the body of the calk and spaced inwardly from the forward side of said body to provide a shoulder portion, the said shank of the calk having its opposite sides beveled and occupying upwardly diverging planes, the said shank being fitted between the first-mentioned flanges upon the body of the horseshoe with the rear end of the shank abutting against the inner face of the second-mentioned flange and with the upper side of the calk body resting in contact with the under sides of the first and second mentioned flanges, the said shank of the calk projecting beyond the forward side of the calk body and having a beveled end inclined upwardly and rearwardly with respect to the under side of the body of the horseshoe and terminating at its lower portion flush with the forward ends of the first-mentioned flanges upon the horseshoe body, the under side of the shank of the calk being inclined upwardly and forwardly from the forward face of the calk body to the said beveled end of the shank, the said shank and the first-mentioned flanges near their forward ends being provided with registering openings, and a securing element secured through said openings.

1,684,046. BABY PANTS. MAUD EVELNN SMITH, El Reno, Okla. Filed Sept. 28, 1926. Serial No. 138,255. 1 Claim. (Cl. 128—284.)



Baby pants comprising a blank of moisture-proof material formed with opposed side recesses intermediate its depth and adapted to be folded transversely to form front and rear sections of its end portions and define leg openings, strips of fabric secured along the ends of said blank and projecting therefrom longitudinally of the blank and constituting a porous waist-band when the blank is folded, strips of fabric secured along the side portions of the blank in overlying relation thereto between the recesses and ends of the blank and overlapping the ends of the waist-band forming strips and constituting reinforcements for the sides of the blank, binding strips for the margins of the recesses and sides of the end portions of the blank overlapping the reinforcing strips and ends of the waist-band forming strips, protecting strips extending along and secured to the waist-band forming strips in overlying relation thereto for the major portion of the depths thereof with their ends overlapping the reinforcing strips and their upper edge portions constituting pockets along the waist-band, elastic in said pockets, and means to releasably connect the side portion of the garment above the leg openings when in use.

1,684,047. DAIRY UTENSIL. DETLEF W. STOVEN, Park City, Utah. Filed Aug. 2, 1927. Serial No. 210,207. 7 Claims. (Cl. 119—1.)



1. In udder washing apparatus, a casing adapted to engage against and seal to an udder adjacent the body of the animal, a water receptacle communicating with the casing, suction operated means likewise communicating with the casing for causing a circulation of water through the water receptacle and casing and means within the casing for directing water circulating therethrough against an udder contained therein.

1,684,048. TANK-CAR PLACARD. WILLIAM A. TAYLOR and COLUMBUS M. GIDLEY, Borger, Tex. Filed Nov. 3, 1927. Serial No. 230,824. 7 Claims. (Cl. 40—62.)

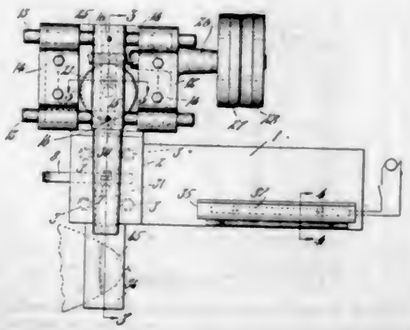
1. A placard supporting device for tank cars comprising a bracket, a shield mounted upon the bracket, a placard mounted upon the bracket above the shield and unobscured thereby, and a placard mounted upon the bracket for sliding movement from a position behind the shield to a position in front of and obscuring the second named placard.

1,684,049. HEAT ECONOMIZER. JAMES C. WILSON, Winnipeg, Manitoba, Canada. Filed Mar. 28, 1927. Serial No. 179,140. 2 Claims. (Cl. 257—167.)

1. A heat economizer comprising a cylindrical casing, a stationary lower head carried by the casing, a removable upper head enclosing the upper end of the casing, a vertically adjustable damper within the casing, a horizontal baffle wall extending between the damper and the adjacent wall of the casing, said damper and baffle wall dividing the interior of the casing into two compartments, sets of tele-

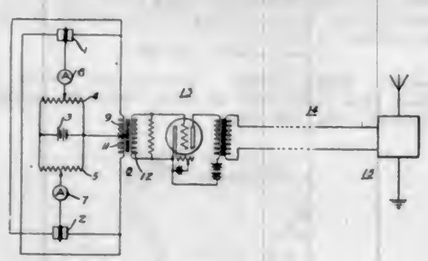
scoping tubes carried by the heads and extending through one of the compartments and having their lower ends communicating with atmospheric air, a demountable hood at the upper end of the casing, a hot air pipe leading from the hood, a flue pipe opening to the second compartment of the casing and a flue pipe leading from the tube containing compartment of the casing.

1,684,050. BUILDING BLOCK. HARRY F. ADAMS, Greenport, N. Y. Filed Oct. 31, 1923. Serial No. 672,011. 1 Claim. (Cl. 72—38.)



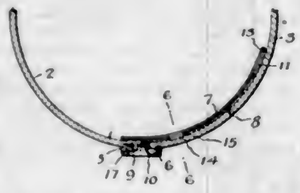
A building block having a tongue and groove on opposite sides thereof, and in corresponding positions to register with a groove and tongue on adjacent blocks, the tongue and groove being of dovetail shape, the narrow part of the groove being wide enough to pass the narrow part of the tongue.

1,684,051. SPACER. FRANCIS WILLIAM ANDERSON, Seattle, Wash. Filed Mar. 2, 1927. Serial No. 172,109. 2 Claims. (Cl. 72—76.)



1. A spacer of the character described comprising a rod formed with transverse hooks arranged at opposite ends thereof and running in the same direction and with a bend in the proximity of one of the hooks adapted to cooperate with said hook in holding a transverse element against endwise motion.

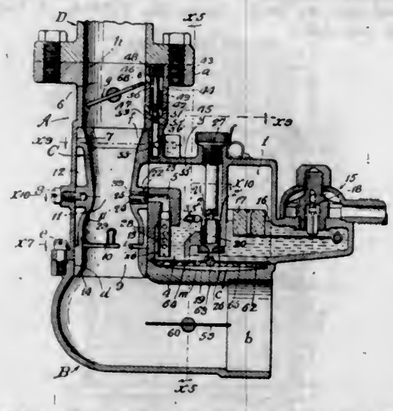
1,684,052. APPARATUS FOR ASSEMBLING STIFFENERS IN SHOE UPPERS. WILLIAM H. BAYNARD, Boston, Mass., assignor to Harry H. Beckwith, Brookline, Mass. Filed Mar. 13, 1924. Serial No. 698,830. 5 Claims. (Cl. 12—51.)



1. An apparatus of the class described comprising a vertically movable table, means normally holding said table elevated, means for depressing said table, a stationary platform adjacent to said table at the level of its depressed position, and a pressure member above said table at a fixed distance from the level of said platform and cooperating with said table to press material therebetween when said table is in elevated position.

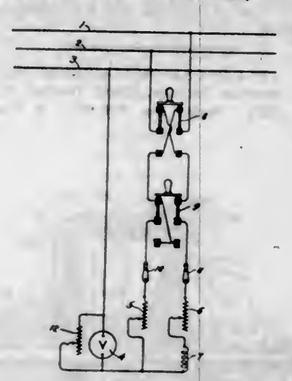
1,684,053. MICROPHONE SYSTEM. GEORGE E. BLIZIOTIS, Newark, N. J., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 22, 1924. Serial No. 687,727. 3 Claims. (Cl. 179—1.)

1. In combination, a plurality of differential microphones cumulatively connected to a translating device, a voltage source having a terminal thereof connected to said translating device, resistors connected in shunt to said voltage source, and a variable connection from an intermediate electrode of each of said microphones to one of said resistors, whereby the response characteristics of said microphones may be adjusted.



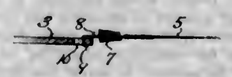
1,684,054. WRIST-STRAP DEVICE. ADOLPH BULOVA, New York, N. Y., assignor to Bulova Watch Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 20, 1926. Serial No. 96,294. 6 Claims. (Cl. 24—71.)

1. A wrist-strap device comprising, in connection with two wrist-watch strap members, two long, thin, flexible, curved leaves formed to lie folded face to face in superposed relation, a hinge connecting said leaves at one end of each, connections on the other ends of said leaves to receive the ends of said strap members, the relations being such that in the folding of the leaves the outer leaf carries one of the strap members over on top of the leaves, the leaves lying covered beneath said strap member, one of said leaves having a low fastening projection on its face inwardly of the edges, and the other leaf having a recess to receive said projection.



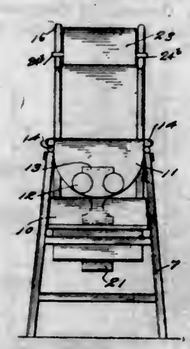
1,684,055. CARBURETOR. ROY F. ENSIGN, South Pasadena, Calif., assignor to Ensign Carburetor Company, Los Angeles, Calif., a Corporation of California. Filed Nov. 30, 1923. Serial No. 677,649. 4 Claims. (Cl. 261—41.)

1. In a carburetor comprising a fuel supply chamber, and an air intake, a shaft mounted in said air intake; a choke valve mounted upon said shaft; a fuel orifice; means to deliver fuel from said fuel supply chamber through said orifice to the air stream; means to equalize the depression caused by air resistance which would otherwise add to the flow of fuel through said fuel orifice; and means controlled



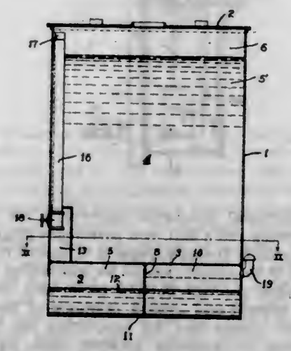
by operation of the choke valve to destroy the effect of the equalizer means to cause an increased flow of fuel through the fuel orifice during starting operation.

1,684,056. ELECTRICAL MEASURING INSTRUMENT. ROBERT DAVID EVANS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 10, 1924. Serial No. 736,842. 4 Claims. (Cl. 172—245.)



1. An instrument comprising an electroresponsive device, a plurality of impedances associated therewith, and means including a switch for so altering the connection of said impedances to said device that the operation of said device indicates the ratios of said impedances.

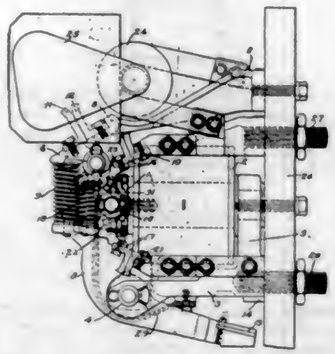
1,684,057. TENSIONING DEVICE FOR METAL STRINGS FOR MUSICAL INSTRUMENTS. JOHN J. FISHER, Milwaukee, Wis., assignor of one-half to Theodore Wittemann, Milwaukee, Wis. Filed Feb. 9, 1924. Serial No. 691,551. 1 Claim. (Cl. 84—297.)



A device for attaching the end of a metal string to a musical instrument comprising a helical spring, a hook formed at one end for attachment to the musical instrument, and a hook formed at the opposite end for receiving the string, the coils of said spring gradually increasing in size from the string receiving end toward the attaching end of the spring, whereby the coils of the spring are smallest adjacent the string receiving end and are largest towards the hook.

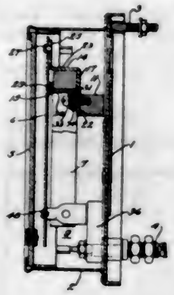
1,684,058. COMBINED BABY'S HIGH CHAIR AND COT. ARTHUR T. GOODING, London, England. Filed Oct. 11, 1923. Serial No. 667,968. 1 Claim. (Cl. 155—44.)

A convertible chair comprising a base structure, a seat of flexible material secured at its ends to the upper opposite side portions of the base structure, a foot rest hingedly mounted at the forward portion of the base structure, a back pivoted to the base structure near the level of the lowermost portion of the seat, said back being detachably secured to the base structure at a point above and to the rear of the pivotal connection between the back and base structure, a lip secured to a portion of the back projecting below the point where said back is pivoted and adapted to engage the foot rest to elevate the same and to aid in holding the back in approximately a horizontal position, said seat having a flexible front wall provided with a recess at its lower intermediate portion, and a flap secured to the front wall between the ends of the recess and forming leg openings at the opposite ends of the recess.



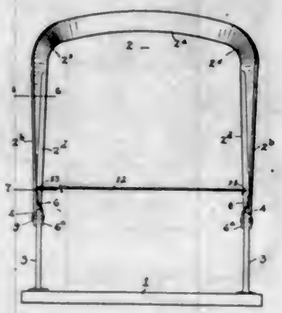
1,684,059. TANK STRUCTURE. LELAND H. HILL, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 4, 1922. Serial No. 592,256. 4 Claims. (Cl. 220—85.)

1. A tank comprising a main portion containing an expansible fluid, a supplementary portion adapted to contain a liquid for sealing the contents of said main portion from



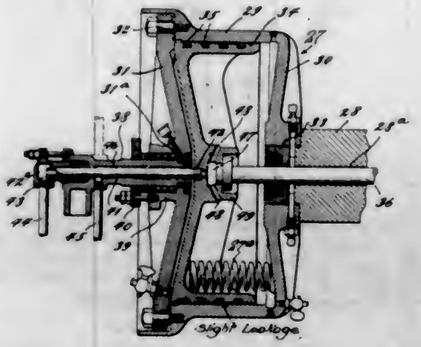
the atmosphere, means for establishing communication between said main and said supplementary portions whereby a change in the volume of the fluid contained in said main portion will cause a change in the level of the liquid contained in said supplementary portion, deoxidizing means for the fluid content of said tank, and a receptacle adapted to contain said deoxidizing means.

1,684,060. MAGNETIC SWITCH. HENRY D. JAMES, Edgewood Park, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 1, 1923. Serial No. 622,048. 5 Claims. (Cl. 200—104.)



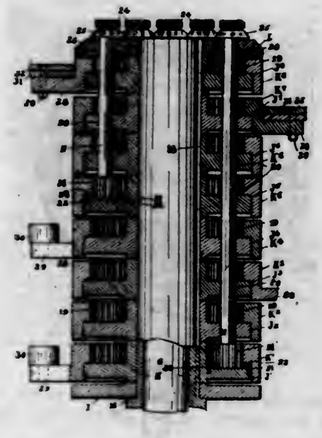
1. A contactor comprising a movable and a stationary contact member and operating means therefor, a pair of oppositely-extending auxiliary stationary members, and a pair of auxiliary members pivotally mounted solely on the movable member for bridging the auxiliary stationary members.

1,684,061. ELECTRICAL MEASURING INSTRUMENT. PAUL KAZISEL, Newark, N. J., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 12, 1923. Serial No. 638,621. 6 Claims. (Cl. 171—34.)



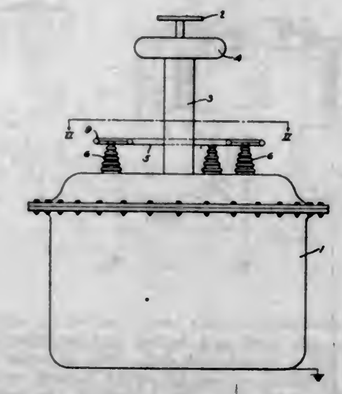
1. In an electrical measuring instrument, the combination with a casing and a dial, of a permanent magnet of inverted substantially U-shape disposed in spaced relation to the rear wall of the casing, means for suspending the magnet by its upper central portion comprising means for limiting the upward and inward positions of the magnet relative to the casing and for supporting the dial, and separate means co-operating between each leg of the magnet and the casing for positioning the magnet relative to said suspension means and to the casing and for supporting the dial.

1,684,062. BACK FOR AUTOMOBILE SEATS AND THE LIKE. SAGITO J. LEACH and ALFRED C. EBERLE, Ashtabula, Ohio, assignors to The Ashtabula Bow Socket Company, Ashtabula, Ohio, a Corporation of Ohio. Filed Dec. 22, 1924. Serial No. 757,374. 3 Claims. (Cl. 155—195.)



1. As an article of manufacture, a back frame member for a seat of the type described, said member being fashioned from a unitary flat piece of sheet metal of greater width than thickness and comprising a transversely extending top and two depending side arms continuous therewith and of substantially uniform thickness, and having a longitudinally extending portion lying in a plane approximately parallel with that of said top and a contiguous angularly related portion.

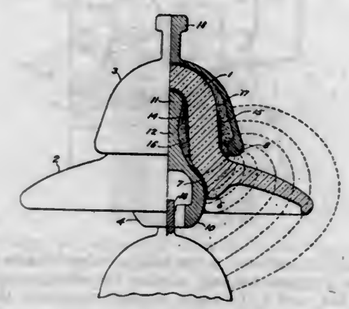
1,684,063. FLUID-PRESSURE-OPERATED DEVICE. THOMAS SPENCER MILLER, South Orange, N. J. Filed Aug. 1, 1924. Serial No. 729,462. 9 Claims. (Cl. 121—38.)



1. In combination, a fluid pressure operated device comprising a cylinder and piston, the piston being constructed and arranged to permit steam normally to leak past the same in sufficient amount to maintain the cylinder heated, a control therefor located in a space occupied by the operator, means for normally admitting to the cylinder steam sufficient in amount to warm the same but insufficient to operate said device, and means for conducting the steam leaking past said piston to a point remote from the space occupied by the operator.

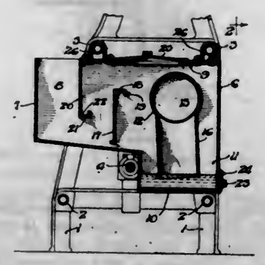
1,684,064. TIMING MECHANISM. WILLIAM J. MILLER, Swissvale, Pa., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed May 29, 1924. Serial No. 716,835. 20 Claims. (Cl. 74—1.)

18. In a timing device, the combination of a rotary support, a member rotatably mounted for adjustment on said support and fixable thereon, and a contact element carried by said member and adjustable circumferentially thereof.



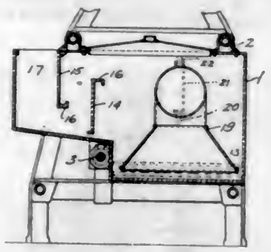
1,684,065. ELECTRICAL MEASURING INSTRUMENT. DOUGLAS F. MINER, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed May 7, 1924. Serial No. 711,552. 8 Claims. (Cl. 171—95.)

1. A measuring system comprising a sectional condenser element, and means connected to said element adapted to indicate both the maximum and effective values of the applied voltage.



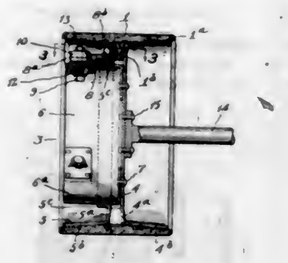
1,684,066. INSULATOR. DOUGLAS F. MINER, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 28, 1924. Serial No. 739,257. 4 Claims. (Cl. 173—318.)

4. An insulator comprising a cap having conducting side surfaces, conducting closed-end surfaces of gradual curvature and an open-end perimeter of substantially torus shape having a relatively great radius, the surfaces of said torus being conducting and merging gradually into said side surfaces, a pin element having a conducting-surface shank portion opposite said closed-end and side surfaces shaped to uniformly distribute the electrostatic field between the shank and said cap surfaces, a connector element for cooperation with the outer end of the pin, one



of said elements having an enlarged substantially spherical conducting-surface portion to widely distribute the field between the sphere and the torus, and an insulating member having a hollow head portion in said cap and over said shank and a petticoat portion projecting laterally outwardly between said sphere and said torus, the surfaces of said insulating member being shaped as substantially equi-potential and flow-line surfaces in the electrostatic field as determined by the surfaces of the cap and pin.

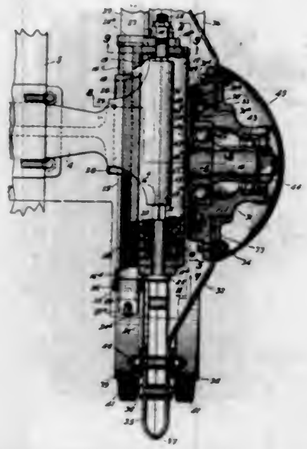
1,684,067. DUST COLLECTOR. JOHN C. MOON, St. Louis, Mo. Filed Feb. 17, 1926. Serial No. 88,815. 4 Claims. (Cl. 183—24.)



2. In a dust collector, a closed box having an opening in one side of its top and an inlet pipe extending through said box from end to end and located near the opposite side of the box, a water holding depression in the bottom of said box beneath said pipe, a conduit on said pipe leading into said depression, an upright longitudinal baffle spaced slightly from the bottom of said box and having a horizontal top flange below the top of the box and extending toward said pipe, a second upright longitudinal baffle between said first mentioned baffle and said top opening extending downwardly from the top of said box and having a horizontal lower flange above the bottom of the box and extending toward said first mentioned baffle, each of said flanges having a return bend on its longitudinal edge for trapping water in air striking against said flanges.

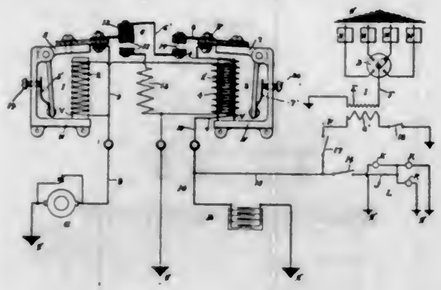
1,684,068. DUST COLLECTOR. JOHN C. MOON, St. Louis, Mo. Filed Apr. 8, 1927. Serial No. 182,106. 4 Claims. (Cl. 261—121.)

1. In a dust collector, a box having an opening in one of its walls, a closure for said opening, air inlets in the walls of said box, and a discharge member removable through said opening and adapted to be detachably connected to either one of said inlets and to lead therefrom to the dust receiving lower portion of said box.



1,684,069. BELT DRIVING MECHANISM. GORDON R. PENNINGTON, Cleveland, Ohio. Filed Apr. 18, 1922, Serial No. 555,135. Renewed Dec. 16, 1927. 7 Claims. (Cl. 74—21.)

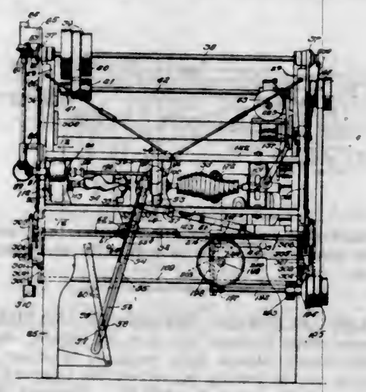
1. In a friction drive mechanism, the combination of an endless belt having inner, outer and lateral surfaces and a wheel structure over which the belt passes, said wheel structure comprising a pair of co-axial relatively turnable rim sections disposed side by side and having treads arranged to engage the inner surface of the belt and lateral surfaces arranged to engage opposite lateral surfaces of the belt, and means on said rim sections adjacent the belt-engaging surfaces thereof adapted when the rim sections turn circumferentially in relation to each other to force said sections together axially and grip the belt between their said lateral surfaces.



1,684,070. MOTOR VEHICLE. GORDON R. PENNINGTON, Cleveland, Ohio. Filed May 29, 1922. Serial No. 564,304. 4 Claims. (Cl. 305—9.)

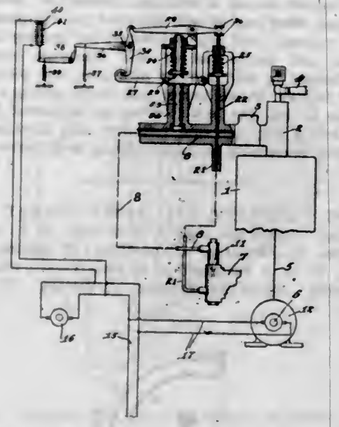
4. In an endless track vehicle, the combination of an endless track, a pair of wheels around which the track passes, an axle structure for one of said wheels comprising a support fixed in relation to the vehicle frame, a stub axle slidably mounted on said support for adjustment toward and from the other wheel, and means for securing the stub axle in adjusted position comprising a resilient

member adapted to yield when the tension in the track exceeds a certain value so as to permit said axle to move toward the other wheel.



1,684,071. ELECTRIC-CIRCUIT CONTROL SYSTEM. JOHN R. PRICE, Charlottesville, Va. Filed Dec. 1, 1922. Serial No. 604,351. 8 Claims. (Cl. 290—50.)

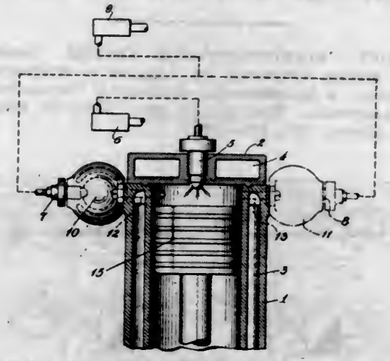
1. The combination with a load, a battery for supplying current to said load, said battery and generator being normally out of circuit with each other, of means automatically operative to close the circuit through said generator and battery when the voltage of the generator exceeds that of the battery, means automatically operative to open said circuit when the battery is fully charged, a resistance coil, and means automatically operative on the opening of said circuit to close a circuit through said generator and resistance coil.



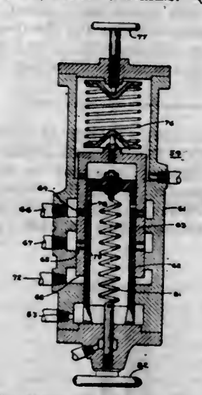
1,684,072. LATHE. CHARLES E. REED, McHenry Township, McHenry County, Ill. Filed July 7, 1923. Serial No. 650,194. 14 Claims. (Cl. 142—15.)

1. In a last lathe, the combination of a support, a driving shaft journaled on said support, a swing frame pivoted to swing about the axis of said shaft, work and pattern rotating means carried by the swing frame, a driving element carried by said driving shaft, a driven element fixed to said support, a universal joint centered in the axis

of said shaft and driven by said driven element, and means for driving said rotating means through said universal joint.



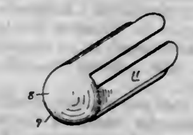
1,684,073. ELECTRICAL POWER EQUIPMENT. MAX ROTTER, Milwaukee, Wis., assignor to Busch-Sulzer Bros.-Diesel Engine Co., St. Louis, Mo., a Corporation of Missouri. Filed Nov. 15, 1924. Serial No. 750,188. 7 Claims. (Cl. 290—7.)



2. The combination of an internal combustion engine of the fuel injection type, its fuel pump, a dynamo connected to the engine and arranged to alternately act as a motor to drive the engine and as a generator driven by the engine, and a charging device to deliver the initial charge of fuel to a cylinder at the beginning of the fuel operation of the engine.

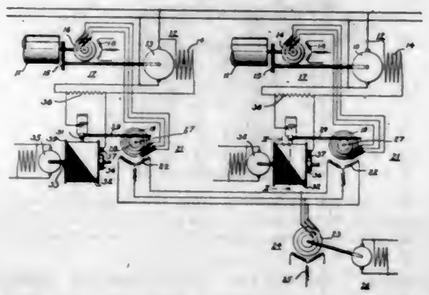
1,684,074. INJECTION DEVICE FOR INTERNAL-COMBUSTION ENGINES. ERNST SCHAEREN, Winterthur, Switzerland, assignor to Busch-Sulzer Bros.-Diesel Engine Company, St. Louis, Mo., a Corporation of Missouri. Filed May 19, 1925, Serial No. 31,259, and in Switzerland June 11, 1924. 3 Claims. (Cl. 123—33.)

1. In an injection type engine the combination with the main fuel injection means, of a hot-blast chamber in relatively restricted communication with and arranged to deliver substantially tangentially of the combustion space, and means for injecting into said hot-blast chamber supplementary fuel separately from the main fuel, whereby combustion of the supplementary fuel therein projects a turbulence-creating hot-blast into the combustion space.



1,684,075. HYDRAULIC TRANSMISSION SYSTEM. ANTHONY F. SCHWENDNER, Essington, and JOHN S. MYERS, Philadelphia, Pa., assignors to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 8, 1924, Serial No. 736,660. Renewed July 21, 1927. 9 Claims. (Cl. 137—158.)

1. In a fluid-pressure transformer device, the combination of a chamber, a sleeve disposed within the chamber, said sleeve having ports adapted to communicate with a source of fluid under pressure, a second sleeve having ports adapted to communicate with the ports of the first sleeve, means associated with the second sleeve for permitting the accumulation of a predetermined fluid pressure in response to the movements of the first sleeve, and means for actuating said first sleeve.



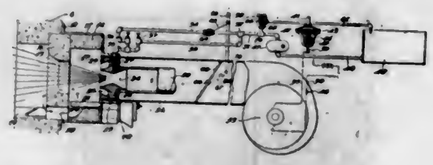
1,684,076. DIGIT GUARD. JOHN MORGAN SMITH, Chihuahua, Mexico. Filed June 2, 1926. Serial No. 113,114. 2 Claims. (Cl. 128—87.)

1. In a dressing for a digit, a stiffening member formed of relatively hard pliable material comprising a cap portion arranged to be positioned at the end of the digit to

present a concavity in opposed relation thereto, and laterally spaced tongue portions extending from said cap portion to lie longitudinally along the digit.

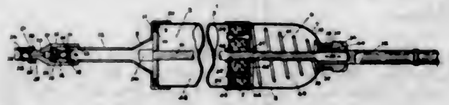
1,684,077. SPEED-REGULATOR SYSTEM. STEPHEN A. STAEGE, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 12, 1921. Serial No. 460,838. 11 Claims. (Cl. 172—293.)

1. In a regulator system, the combination comprising a plurality of rotating members, a frequency changer operated by each of said members, an auxiliary frequency-changer, and means for controlling the speed of each rotating member, said means being jointly controlled by the auxiliary frequency changer and the frequency changer associated with each rotating member and including a circuit interrupter comprising a co-operating brush and commutator device.



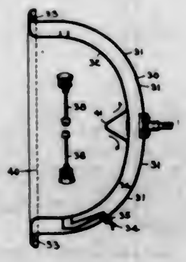
1,684,078. ARRANGEMENT FOR AVOIDING REFLECTIONS OF SOUND INSIDE BUILDINGS. GEORG VON ARCO, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed June 25, 1924, Serial No. 722,423, and in Germany July 25, 1923. 4 Claims. (Cl. 181—30.)

1. An acoustic wall comprising a supporting layer and a coating of flaky sound absorbing material having suitable binding material carried by said layer.



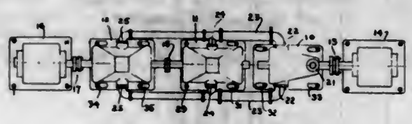
1,684,079. LIQUID-FUEL BURNER AND CONTROL MECHANISM THEREFOR. RAYMOND E. WHITE, Chicago, Ill., assignor to Winslow Safety High Pressure Boiler Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 14, 1921. Serial No. 522,350. 5 Claims. (Cl. 158—28.)

1. In a liquid fuel burner, the combination of a mixing chamber, means for supplying liquid fuel thereto, a primary air passageway for supplying the requisite volume of air to said mixing chamber for supporting combustion during a relatively low stage of firing, a secondary air passageway for supplying a supplementary volume of air to said mixing chamber during an advanced stage of firing, a throttle controlling the air flow through said secondary air passageway, valve means for supplementing the supply



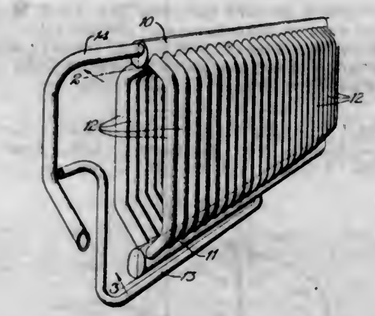
of liquid fuel to said mixing chamber, and actuating means co-operating with said throttle and said valve means.

1,684,080. AUTOMATIC GREASE GUN AND THE LIKE. OSCAR ZERK, Chicago, Ill., now, by judicial change of name, Oscar Ulysses Zerk, assignor, by mesne assignments, to The Bassick Manufacturing Company. Filed July 5, 1923, Serial No. 649,702. Renewed Mar. 12, 1928. 5 Claims. (Cl. 221—47.3.)



5. A lubricant compressor comprising a lubricant containing barrel having a discharge conduit at one end, a cap at the other end of said barrel, a central plunger extending through said cap and barrel for forcing the contents of said barrel out of said discharge conduit, a spring housed in said cap for returning said plunger, an annular follower in said barrel, said barrel having a turned-in flange at its rear end forming an abutment for said spring and a stop for said follower, said discharge conduit being removable to permit filling said barrel.

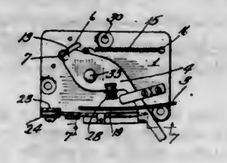
1,684,081. THERAPY AND INFRA-RED-RAY LAMP. HERBERT SHERWOOD AKERS, Montvale, N. J., assignor to The Kny-Scheerer Corporation of America, New York, N. Y., a Corporation of New York. Filed June 26, 1926. Serial No. 118,682. 6 Claims. (Cl. 174—177.)



3. In an infra-red ray lamp the combination of electrical heat elements maintaining a low temperature, a deflecting means having a central pyramidal element and an arcuate reflector adapted to diffuse the largest possible amount of long heat waves and means for securing said lamp in any desired position in a vertical plane and a horizontal plane.

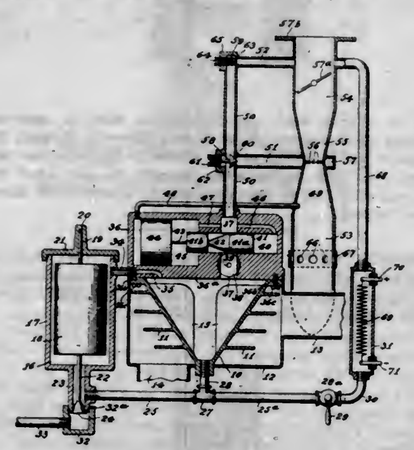
1,684,082. POWER PLANT. ROBERT C. ALLEN, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 24, 1925. Serial No. 58,375. 6 Claims. (Cl. 60—70.)

6. In a power plant, the combination of a single flow high pressure turbine element, two double flow low pressure turbine elements disposed in end-to-end relation with respect to each other and with respect to the high pressure turbine element, all of said turbine elements having their axes located in substantially a common vertical plane, receiver piping extending longitudinally from each side of the axes of the turbine elements and rigidly connecting the high pressure turbine element with the respective low presure turbine elements, said receiver piping providing communication between the exhaust connection of the high pressure turbine element and the inlets of the low pressure turbine elements, one end of one turbine element being fixed and the remaining end of that turbine element, as well as both ends of all the other turbine elements, being movable longitudinally, an electrical generator directly connected to and driven by the high pressure turbine element, and a second electrical generator directly connected and driven by the two low pressure turbine elements.



1,684,083. REFRIGERATING COIL. SAMUEL C. BLOOM, Chicago, Ill. Filed June 2, 1927. Serial No. 196,093. 9 Claims. (Cl. 62—126.)

1. A refrigerating coil comprising; an upper suction header; a lower liquid header; a plurality of circulating pipes joining said headers; a dry pipe connected to the suction header; a liquid distributing header in the liquid header provided with a plurality of outlets; and a liquid feed pipe connected to said liquid distributing header.



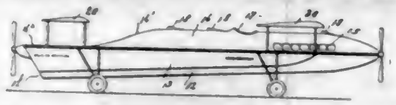
1,684,084. AUTOMATIC STOP FOR ELECTRICALLY-DRIVEN PHONOGRAPHS. JOSEF BRANDSTETTER, Chicago, Ill. Filed Nov. 5, 1927. Serial No. 231,305. 7 Claims. (Cl. 192—119.)

1. An attachment for a phonograph driven by an electric motor and including a tone arm: automatic stop including a switch, a pivoted lever controlling the switch and having the movable contact member of the switch mounted on the lever, spring means continuously tending to move the lever in a switch-opening direction, and a pivoted detent member having an arm disposed in the path of the tone arm and having a detent portion normally engaging the said lever to hold the latter in its switch-

closing position, the said detent portion being moved out of its said lever-holding position when the tone arm engages the impact portion.

1,684,085. CARBURETOR. JOHN J. CRAIN, Waterbury, Conn. Filed May 15, 1923. Serial No. 639,097. 10 Claims. (Cl. 123—133.)

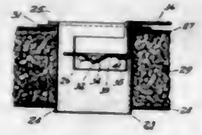
1. In a carburetor for an internal-combustion engine, a heated chamber for vaporizing a pool of liquid fuel, means for mixing the fuel vapor with a supply of air, and an automatic pressure-operated mechanism for maintaining a constant ratio of fuel to air, and means controlled by the vapor pressure in the engine intake for varying the level of said liquid fuel in the chamber in accordance with the demand for fuel from the engine.



1,684,086. WATERPROOFING PASTE. GERALD B. DYDE, Portland, Oreg. Filed Sept. 16, 1926. Serial No. 136,001. 1 Claim. (Cl. 134—15.)

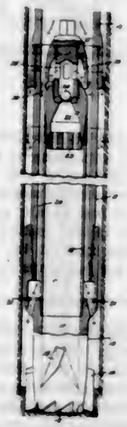
A water-proofing paste consisting of approximately one gallon of boiled linseed oil, one pint of turpentine, one pound of Burgundy pitch and one pound of yellow beeswax.

1,684,087. AEROPLANE. JOSEPH CARL ELGER, Pittsfield, Mass. Filed Dec. 20, 1927. Serial No. 241,294. 2 Claims. (Cl. 244—30.)



1. In an aeroplane, a fuselage or body formed of a flat piece of rigid material provided with a number of longitudinally extending tubular flutes spaced apart and projecting below the surface, the spaces between said flutes forming tunnels or channels, said flutes being made to gradually increase in depth toward the rear, the central flute being provided with a hood and serving as a compartment or gondola, while the lateral flutes and chan-

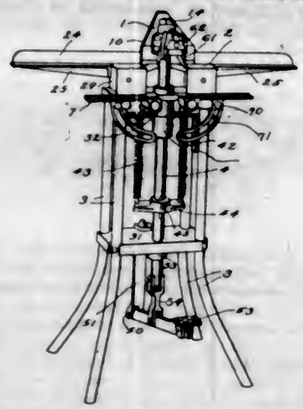
nels serve to stabilize the plane in flight, preventing lateral tipping, assuring safe landing and promoting the forward



propulsion of the aeroplane as well as gliding, the partition of the air below the plane surface by single arrowlike walls or by hollow tubes as shown in the drawings.

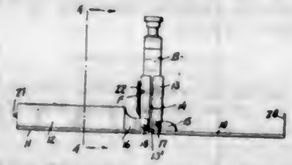
1,684,088. RANGE VENT. FRANK F. FORSHEE, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 9, 1927. Serial No. 218,435. 10 Claims. (Cl. 126—292.)

4. In a oven vent, the combination with an open-end tubular shell, a pivot pin extending laterally through the walls of the shell and a disk pivotally supported on said pivot pin, of a semi-annular member in said shell for turning said disk on the pivot pin by a peripheral movement thereof.



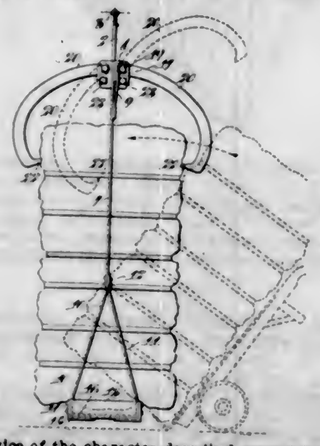
1,684,089. CORING DEVICE. REID B. GRAINGER, Redondo Beach, Calif., assignor to Elliott Core Drilling Company, a Corporation of California. Filed June 1, 1927. Serial No. 195,638. 8 Claims. (Cl. 255—72.)

1. In combination, a core drill having an inner and outer barrel forming a passage therebetween for circulating fluid, a valve at the upper end of the inner barrel, and means for forming an annular discharge outlet for said valve, discharging into the circulating fluid passage.



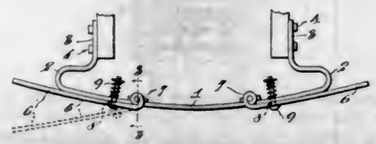
1,684,090. MITER JACK AND COPING CUTTER. WILLIAM H. GREENFIELD, Seattle, Wash. Filed May 4, 1926. Serial No. 106,777. 15 Claims. (Cl. 144—217.)

1. In a miter jack, the combination with a supporting frame having a laterally-disposed work table, of a vertical guide carried by said frame below the work table, a miter head vertically movable relative to said table, and normally



thereabove, and a rod vertically reciprocable in said guide, said rod being secured in said head to form the sole support and guide thereof.

1,684,091. BOX. LOUIS WILLIAM HALK, Hackensack, N. J., assignor to Northam Warren Corporation, New York, N. Y., a Corporation of New York. Filed Sept. 16, 1927. Serial No. 219,002. 3 Claims. (Cl. 132—79.)

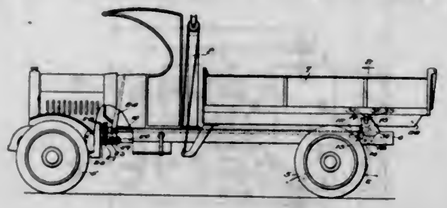


1. In a box, a lid and a body, said lid and body lying in one plane when the box is in an open position, holding ears on each side of said lid and body at right angles to said lid and the bottom of said body and a rectangular holder for a series of toilet articles secured to said holding ears.

1,684,092. TRAVELING-CONVEYER TRAY. EDWARD HANAK, Houston, Tex. Filed Sept. 1, 1927. Serial No. 216,972. 9 Claims. (Cl. 204—67.)

1. A device of the character described comprising a support bar, means to mount the bar on a conveyer, end standards carried by the bar, a tray carried by the standards, and means independent of said mounting means carried by the bar to engage an article mounted on the tray and secure it against inadvertent displacement.

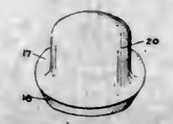
1,684,093. AUTOMOBILE BUMPER. WILLIAM E. HART, San Jose, Calif. Original application filed Oct. 7, 1927, Serial No. 224,662, Patent No. 1,670,963, dated May 22, 1928. Divided and this application filed Mar. 24, 1928. Serial No. 264,383. 3 Claims. (Cl. 293—55.)



1. In bumpers, a transverse resilient bar bent at its ends to form resilient end loops and mounting arms adapted to be secured to suitable supports, a yieldable bumper extending laterally beyond each end loop and pivoted to the transverse bar inwardly of the loop, and spring connections to hold each yieldable bumper member against the transverse bar to cooperate therewith in absorbing shocks in certain directions but permitting said yieldable bumper members to yield and move away from the transverse bar when engaged in other directions.

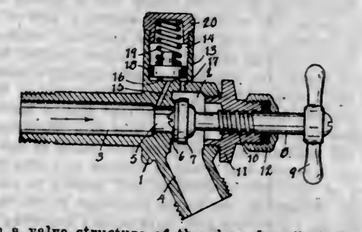
1,684,094. ICE CREAM AND METHOD OF MAKING SAME. JAMES ROBINSON HATMAKER, Paris, France. Filed Sept. 20, 1927. Serial No. 220,850. 5 Claims. (Cl. 99—11.)

1. The process of making ice-cream mixtures which consists in drying a suitable portion of a given quantity of natural whole milk and in incorporating the dry solids obtained integrally therefrom with the remaining portion of such milk and in adding thereto suitable quantities of cream, sugar and stabilizing and flavoring materials, substantially as described.



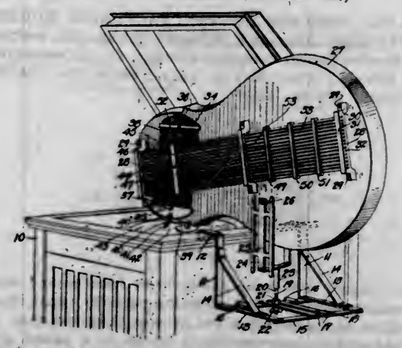
5. Ice-cream mixtures containing approximately 62 per cent of water and being composed to the extent of approximately 57⅛ per cent by weight of natural whole milk, the remainder of the milk solids and of the water of the mixtures (amounting approximately to a total of 26½ per cent) being obtained integrally from natural whole milk and from cream, the remaining 16 per cent of the mixtures being made up principally of sugar.

1,684,095. DUMPING VEHICLE. HERMAN C. HEATON, Chicago, Ill. Filed Dec. 7, 1925. Serial No. 73,546. 9 Claims. (Cl. 298—1.)



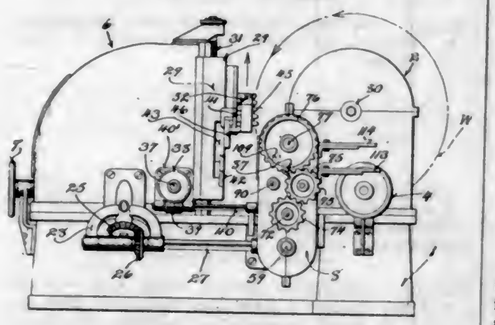
1. In a vehicle of the class described, the combination of a vehicle frame, a dumping body having relatively fixed pivotal support upon said frame and adapted for tilting movement thereon, said body normally having a generally horizontal position and being tiltable therefrom, and means for vibrating the body, said vibrating means permitting movement of the body into and out of tilted position and being cooperable with the body upon completion of the tilting movement thereof to vibrate same after tilting and independently of said frame and augment the tilting of the body in dislodging and discharging the contents therefrom, said vibrating means being inoperative until the body has reached tilted position.

1,684,096. CAP NUT. JAMES W. HUGHES, Philadelphia, Pa. Filed Dec. 27, 1927. Serial No. 242,758. 4 Claims. (Cl. 85—35.)



4. A cap nut provided with an external wrench engaging surface of a continuously curved contour having major and minor axes.

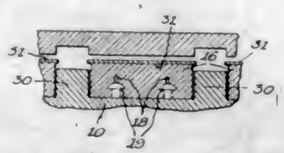
1,684,097. COMBINED DRAIN COCK AND RELIEF VALVE. HERBERT S. HUMPHREY, Kalamazoo, Mich., assignor to Ruud Manufacturing Company, Kalamazoo, Mich. Filed Sept. 8, 1927. Serial No. 218,225. 3 Claims. (Cl. 277—54.)



1. In a valve structure of the class described, the combination of a casing having a main valve chamber provided with an inlet port and a relief valve chamber disposed at the side of said main valve chamber and having an inlet port opening centrally to said relief valve chamber and communicating with the inlet port of said main valve chamber, said relief valve chamber having a discharge port opening to said main valve chamber, said ports being surrounded by raised annular valve seats, a main valve coacting with said main valve chamber port and provided with a threaded stem in alignment with said inlet port, a relief valve coacting with said relief valve port, a spring acting to hold said relief valve to its seat, and means for adjusting said spring.

1,684,098. SOUND-REPRODUCING MECHANISM. EBBT U. IWWERKS, Kansas City, Mo. Filed June 18, 1926. Serial No. 116,898. 10 Claims. (Cl. 274—25.)

1. A sound reproducing device comprising a sound box, a stylus supporting member, and a plurality of sets of rigid, elongated vibratory members mounted on said sound box, one of said sets being secured to the stylus supporting member and the other set being connected with said first set.

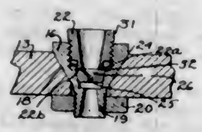


1,684,099. GEAR-CUTTING MACHINE. FRANK W. JURY, Milwaukee, Wis., assignor to The Falk Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed June 1, 1926. Serial No. 112,979. 11 Claims. (Cl. 90—9.)

1. A gear cutting machine for cutting double helical gears, comprising a pair of crank shafts having cranks thereon, means for rotating said shafts, a pair of angularly set guides, a pair of cutter carrying members directly operated from said cranks, cutters carried by said members, means for supporting and rotating a blank adjacent said cutter, gearing transmitting motion to said blank rotating means, and intermittent motion mechanism interposed between said gearing and said blank rotating means for intermittently rotating said blank in one direction only, whereby said blank is rotated in a step by step manner as said cutters oscillate and rotates in the same direction throughout the entire operation of the machine in producing a complete gear, said cutters executing only a single cut on each successive tooth completely around the blank until the entire gear is formed.

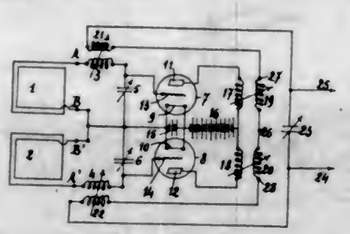
10. A gear cutting machine for cutting double helical gears comprising work carrying means adapted to drive and index said work, a gear train for operating said work driving means and comprising intermittent motion mechanism for indexing the work, a pair of reciprocatory cutters, a pair of cranks for driving said cutters, gearing connecting said cranks and said gear train for imparting motion to said gear train, a sliding plate carrying said cutters, means for advancing said plate, gearing for compounding the advancing motion of said plate with the indexing motion of said gear train, said gear train having one set of gears determining the number of teeth cut in the work and having a second set of gears determining the pitch of such teeth.

1,684,100. PROCESS OF MANUFACTURING RUBBER ARTICLES. RICHARD F. KINSLEY, Chicago, Ill., assignor to Dryden Rubber Company, Chicago, Ill., a Corporation of Illinois. Filed May 9, 1924. Serial No. 714,195. 1 Claim. (Cl. 18—59.)



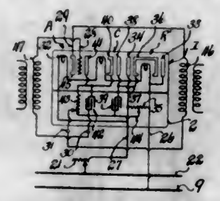
The process of forming rubber heels from ground waste vulcanized rubber including forming partially cured blanks therefrom of smaller area but greater thickness than the finished article, inserting these blanks in a mould placing a layer of rubber material thereon of greater plasticity and lesser elasticity than that of the blank and subjecting the whole to heat and pressure to produce the finished article.

1,684,101. INDICATING MECHANISM. JOSEPH LAWSON, Great St. Helens, London, England, assignor to Asiatic Petroleum Company, Limited, St. Helens Court, London, England. Filed Jan. 3, 1928, Serial No. 244,340, and in Great Britain Sept. 24, 1926. 12 Claims. (Cl. 235—94.)



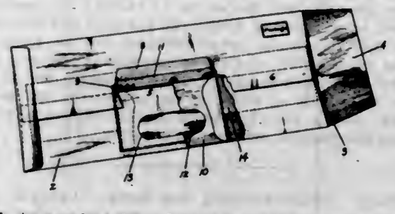
9. In an indicating mechanism, the combination of a setting indicator comprising an indicator drum, energy storing means within said drum energized by manual actuation of said setting indicator, release escapement means for said drum, a delivery indicator comprising a drum operated by said energy storing means upon actuation of said escapement means.

1,684,102. WIRE-DRAWING APPARATUS. BENNO B. LEUSTIG and JOSEPH D. PETSCHE, Cleveland, Ohio. Filed Nov. 9, 1925. Serial No. 67,774. 2 Claims. (Cl. 205—25.)



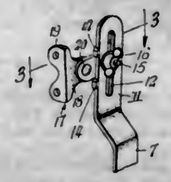
1. In a device of the character described, the combination of a support, a holder mounted in the support in the form of a sleeve having a tapered exterior occupying a tapered opening of the support and having a threaded portion projecting beyond the support, a nut screwed onto said threaded portion to clamp the holder in the support, said holder having a die cavity, a button die in said cavity, the holder having an enlarged recess beyond the cavity internally threaded, and a nut screwed into such internal thread and bearing against the end of the button die.

1,684,103. ELIMINATION OF WIRELESS PARASITIC CURRENTS. LUCIEN LEVY, Paris, France. Filed Nov. 24, 1924, Serial No. 751,907, and in France Nov. 30, 1923. 9 Claims. (Cl. 250—20.)



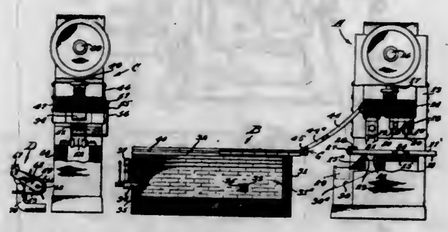
1. An antiparasitic system of wireless telephonic and telegraphic transmission comprising two receiving circuits symmetrically distuned with respect to the waves to be received, means for symmetrically amplifying the energy from said circuits, a third circuit and means to oppose the amplified energies in said third circuit at radio frequencies.

1,684,104. ELECTRON-DISCHARGE DEVICE. ARISTOTE MAVROGENIS, Milwaukee, Wis. Filed Feb. 21, 1927. Serial No. 169,876. 4 Claims. (Cl. 250—27.5.)



1. A unitary electron discharge device including an evacuated vessel, an audion mounted within said vessel and having a plate, a cathode and an interposed grid, a rectifier mounted within said vessel for supplying energy to said audion, means carried by and forming a unitary portion of said device for impressing a negative voltage on said grid with reference to the cathode of said audion, and means for smoothing out the pulsations in the energy supplied by said rectifier.

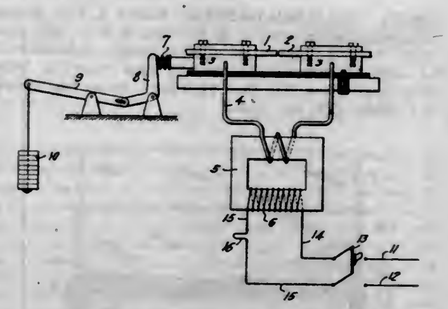
1,684,105. ENVELOPE. OSCAR J. OLM, Minneapolis, Minn., assignor to Northwestern Paper Goods Company, St. Paul, Minn., a Corporation of Minnesota. Filed Oct. 24, 1921. Serial No. 510,067. 17 Claims. (Cl. 229—72.)



17. An envelope formed from a single piece of material having substantially equal side walls, a slit in one of said walls located in a region substantially removed from the edges of said wall, and a flap formed on said wall adjacent to the slit adapted to be sealed to said wall over the slit.

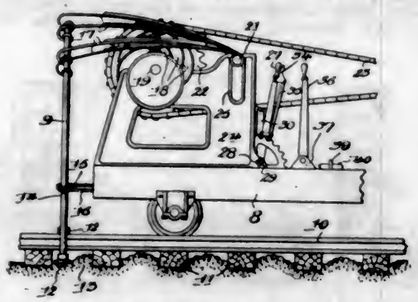
1,684,106. ADJUSTABLE BACK REST FOR CHAIRS. PERCY W. OLSON, St. Paul, Minn., assignor to William S. Ferris, Elkhart, Ind., trading as The Domore Chair Company. Filed Feb. 18, 1927. Serial No. 169,179. 2 Claims. (Cl. 155—157.)

1. An adjustable back rest for chairs including a side arm having a longitudinal slot in one end thereof, a plate associated with each arm end and having parts to engage an edge of the arm end to hold the plate at a right angle thereto, means passing through said plate and slotted arm end to adjustably secure said plate thereto and a member pivoted to said plate and to which a back rest member is attached.



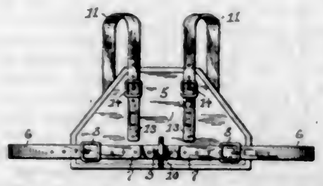
1,684,107. MEANS FOR AND METHOD OF FORMING TIE-PLATES. MELVIN OVESTRUD, Stillwater, Minn., assignor to Twin City Forge & Foundry Company, Stillwater, Minn., a Corporation of Minnesota. Filed Apr. 29, 1925. Serial No. 26,671. 8 Claims. (Cl. 29—34.)

1. Means for forming tie-plates of the character described from a steel blank comprising an elongated body plate formed with a flange longitudinally thereof, said means including a press for punching spike holes in the body of said blank and shearing the blank transversely to sever punched sections therefrom, a furnace adapted to slidably receive a train of tie-plate sections and heat the flanges thereof, a second press for bending the heated flanges of the respective sections into jaw forming relation, said furnace constituting the conveying medium between said first and second presses, and means actuated by said first press for propelling tie-plate sections through said furnace.



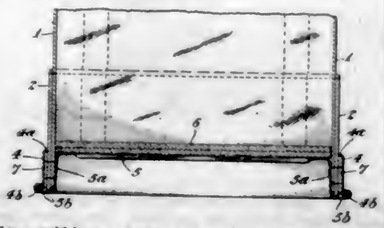
7. A tie plate forming machine comprising a punch press including a bed and a ram for punching and shearing tie plate sections, a furnace positioned in proximity to said press having a guide along the upper portion thereof for guiding tie plate sections during the passage of the same along said furnace, said guideway being arranged to convey the tie plates in the same direction as the movement of said tie plates across said punch press bed, a feeder bar hingedly connected at one end to said ram and slidably mounted at its other end along said guideway, said feeder bar being adapted to simultaneously move the tie plates mounted on said guide way along said furnace upon reciprocation of said ram.

1,684,108. ELECTRIC WELDING. GEORGE H. PHELPS, Warehouse Point, Conn., assignor to Thomas E. Murray, Brooklyn, N. Y. Filed Oct. 22, 1921. Serial No. 509,459. 2 Claims. (Cl. 219—4.)



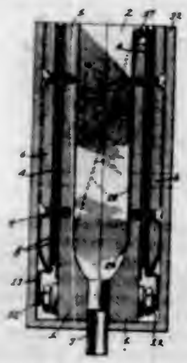
1. A high speed electric welding apparatus including in combination means for pressing the parts together and means for passing a welding current between them to weld their faces directly to each other and a circuit breaker in the welding circuit adapted to break the circuit immediately upon the current's reaching normal amperage.

1,684,109. TRACK-TAMPING MACHINE. ERNEST E. PETERSON, South Hibbing, Minn. Filed May 31, 1927. Serial No. 195,282. 10 Claims. (Cl. 104—12.)



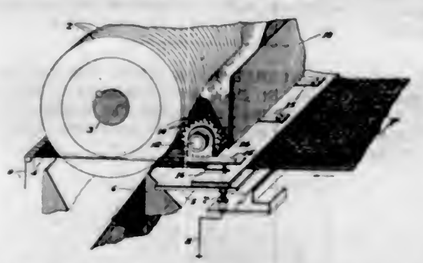
1. In a machine for tamping a railway road bed between ties, adapted to be mounted on a railway car, a power driven shaft on said car, a series of pivoted arms projecting substantially horizontally from an end of said car, means operatively connecting said arms to said shaft for imparting oscillating movement to said arms and a series of tamping members severally connected to said arms and extending downward therefrom beyond the end of said car, said members being arranged to be actuated thereby to tamp the road bed between ties of the track.

1,684,110. BABY HARNESS. ALBERT STEVENSON PICKLES, Providence, R. I. Filed Aug. 8, 1927. Serial No. 211,438. 2 Claims. (Cl. 155—189.)



1. A baby harness having a back pad, a waist strap adjustably secured to the back pad, shoulder straps fixed to the waist strap and adjustably secured to the back pad, a breast strap slidable on the shoulder straps, means for adjustably securing the waist strap to the back pad and means for adjustably securing the shoulder straps to the back pad.

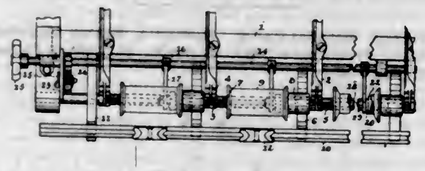
1,684,111. GOLF-BAG BOTTOM. HENRY V. RAU, Brooklyn, N. Y., assignor to A. G. Spalding & Bros. Inc., New York, N. Y., a Corporation of New Jersey. Continuation of application Serial No. 36,915, filed June 13, 1925. This application filed Dec. 17, 1925. Serial No. 75,942. 5 Claims. (Cl. 150—1.5.)



1. In a golf bag, a body, a shoulder formed on said body, a member secured to an end of said body and formed of two parts held together by a spun seam, said member being attached to the bag by having a part engaging the shoulder on the body.

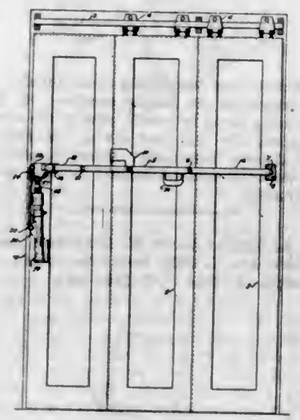
1,684,112. PREHEATER FOR TYPE AND LEAD CASTING MACHINES. RICHARD J. ROBERTS, San Francisco, Calif. Filed Sept. 24, 1927. Serial No. 221,745. 6 Claims. (Cl. 219—19.)

6. A preheater for lead and slug casting machines comprising a pair of cast iron blocks secured together and having matching recesses formed in their adjacent faces to form a chamber arranged to receive pigs of casting metal; a pair of metal plates secured upon opposite outer faces of the blocks; electrical heating units mounted between the plates and the blocks, said units being arranged to be connected to a source of electrical energy for heating the chamber; a cut out switch connected between the units and the source of energy; an automatic control lever mounted within the chamber and arranged to be held in cut out circuit breaking position by metal within the chamber; and means actuated by the lever and the cut out switch for automatically breaking the circuit when the supply of metal to the chamber is not maintained; and a heat insulating casing substantially enclosing the chamber and heating elements.



1,684,113. PILE-CUTTING MACHINE. CHARLES ANDREW ROBINSON, Lowell, Mass., assignor to Merrimack Man'f'g Co., Lowell, Mass., a Corporation of Massachusetts. Filed Feb. 7, 1927. Serial No. 166,306. 5 Claims. (Cl. 26—10.)

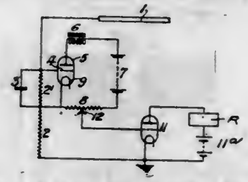
1. In a machine for cutting the threads of fabrics to form a pile thereon, the combination with a cutter and a guide therefor adapted to enter the fabric between the body portion thereof and the pile forming threads, of a toothed contact disk, and means for supporting said disk in cooperative relationship to said guide.



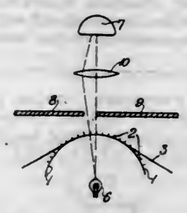
1,684,114. WINDING MACHINE. CHRISTIAN L. SAAL, Paterson, N. J., assignor of one-fourth to William Laessig, Paterson, N. J. Filed Apr. 29, 1927. Serial No. 187,585. 5 Claims. (Cl. 242—39.)

1. In combination, a frame, rotary driving means therein having its axis substantially horizontal, the frame having means for supporting the cores of the packages to be formed in contacting relation to but so as to be movable from the driving means, a row of ejector devices arranged to be engaged by the peripheries of the wound

masses of the respective packages in the winding thereof and on such engagement shift the packages away from the driving means, and a common support for all the ejectors adjustable in the frame to move the ejector simultaneously toward or from the packages.



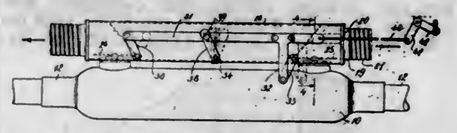
1,684,115. CLOSURE OPERATOR FOR SLIDING DOORS. HAROLD W. SHONNARD, Upper Montclair, N. J., assignor to Elevator Supplies Company, a Corporation of New Jersey. Filed May 6, 1927. Serial No. 189,290. 9 Claims. (Cl. 268—52.)



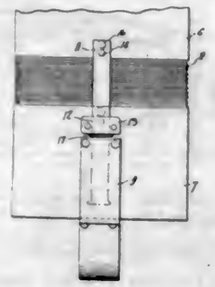
1. In a door operating structure for horizontally sliding doors, means for closing said door comprising a power unit, a lever connecting said power unit with the door, a pivot bearing about which said lever turns while said door is opening or closing, a supporting lug for said power unit, manual means for opening said door against the resistance of said power unit, and means for relatively disposing said pivot bearing and said supporting lug so as to cause the resistance offered by said power unit to increase continuously from a minimum value at the initiation of the opening movement to a maximum toward the end of the opening movement.

1,684,116. CABLE TELEGRAPHY AND THE LIKE. WILLOUGHBY STATHAM SMITH, Benchams, Newton Poppleford, and NORMAN WILLIAM MCLACHLAN, London, England. Filed Dec. 27, 1927, Serial No. 242,808, and in Great Britain Aug. 23, 1926. 12 Claims. (Cl. 178—63.)

1. In a cable telegraph or the like receiver, the combination of an impedance located in the common path of signal currents and low frequency disturbances, said impedance comprising a plurality of sections whose reactances at a given frequency are different, and means for applying to a receiving device a compensating voltage change of opposite effect to a voltage change applied thereto by a disturbance, said means comprising thermionic means associated on the input side with one of said sections and on the ouput side with said receiving device.

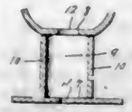


1,684,117. TELEGRAPH SYSTEM AND CIRCUIT ARRANGEMENT THEREFOR. WILLOUGHBY STATHAM SMITH, Newton Poppleford, and NORMAN WILLIAM MCLACHLAN and WILLIAM GORDON REED JACOB, London, England. Filed Jan. 21, 1928, Serial No. 248,462, and in Great Britain Sept. 21, 1926. 12 Claims. (Cl. 178—17.)



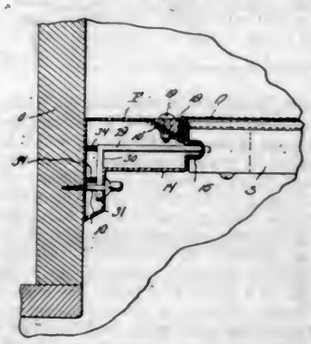
1. A telegraph transmitter comprising in combination means for radiating light, light sensitive means in the path of said light, means located between said light radiating means and said light sensitive means for interrupting said light, telegraph tape associated with said interruption means for permitting or preventing light from falling upon said light sensitive means in accordance with the signals punched upon said tape, and adjustable means for limiting the period during which light may fall upon said light sensitive means.

1,684,118. AUTOMOBILE HEATER. SAMUEL A. SNELL, Detroit, Mich., assignor to Frederick C. Matthaei, Detroit, Mich. Filed July 3, 1926. Serial No. 120,500. 7 Claims. (Cl. 257—241.)



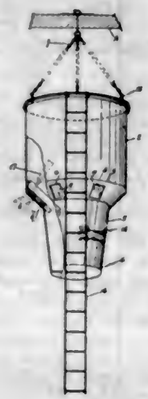
6. A heating device which comprises the combination of a heating element through which a hot medium may be passed, a passage in the element through which air may be led to be heated by the hot medium, a tube disposed adjacent the element, a pipe leading from one end of the tube to a delivery point, an air intake at the oposite end of the tube, connections leading from the tube near opposite ends thereof to opposite ends of the air passage in the heating element, dampers pivotally mounted within the tube one near each connection, each damper including a pair of plates and being movable to a position in which one plate closes the connection while the tube is left open, and to a second position in which the other plate closes the tube while the connection is left open, linkage connecting the dampers to cause them to move in unison from one position to the other, and means for moving the dampers from one position to another.

1,684,119. ACCORDION-LOCKING MEANS. FRANK UMBIACO, New York, N. Y. Filed Mar. 8, 1927. Serial No. 173,658. 2 Claims. (Cl. 84—376.)



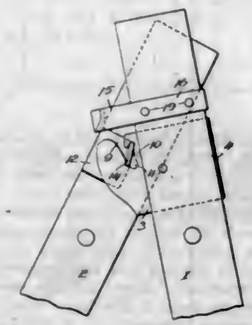
1. In an accordion provided with bellows intermediate its sections, a guide plate provided with a slot therein secured to one of the sections, a movable locking plate passing through the said slot and provided with an opening near one end thereof, a stud in the other section passing through the said opening for releasably maintaining the locking-plate in locking position therewith and a stop on the locking-plate to limit the movement thereof in locking direction.

1,684,120. WIRE FASTENER. GEORGE F. VOIGHT, Oakland, Calif., assignor to Economy Products Corporation, a Corporation of California. Filed Jan. 16, 1926. Serial No. 81,710. 8 Claims. (Cl. 72—120.)



2. In a wire fastener of the character described, a strip of sheet metal having opposite ends struck over flat ways to the same side, thereby forming a base plate, a lath supporting plate and an intermediate portion, said lath supporting plate having a plurality of lath retaining extensions extending upwardly and a cooperating nail projecting through said plates between said extensions, said nail having a head adapted to engage and bind a lath wire on said lath supporting plate between one of said extensions and the body of said nail.

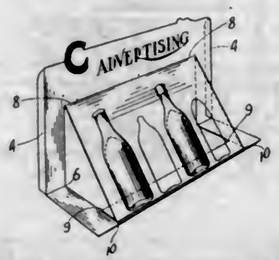
1,684,121. SCREEN DEVICE FOR CASEMENT WINDOWS. AMOS W. WENTZELL, Salem, N. J. Filed Oct. 30, 1926. Serial No. 145,238. 2 Claims. (Cl. 156—14.)



2. In a window screen frame structure of the class described, a frame member comprising a hollow side rail provided with a hollow tenon extending inwardly and longitudinally of said frame, a lateral hollow flange on one side of the rail, said rail having a recess exteriorly of the frame, and a bar in the recess for holding a portion of mesh sheet in the recess besides reinforcing the hollow rail.

1,684,122. GUARD CAGE. EDWARD A. BAKER, Mansfield, Ohio. Filed Aug. 6, 1927. Serial No. 211,199. 8 Claims. (Cl. 89—36.)

7. In a guard cage comprising three tubular members, means for connecting the tubular members, the intermediate member being flared to permit viewing the area beneath and surrounding the cage and having openings provided therein and slidable transparent closure members movably secured to the intermediate member to close or partially close the openings.

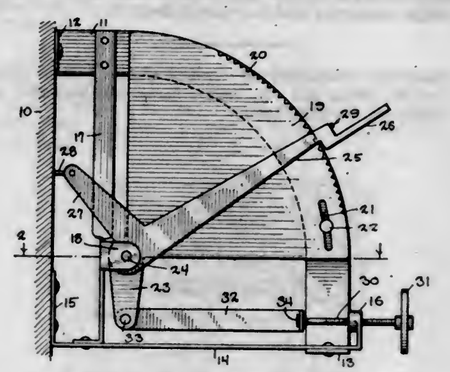


1,684,123. LADDER. DAVID W. BOARDMAN, Los Angeles, Calif. Filed Jan. 7, 1926, Serial No. 79,863. Renewed Feb. 16, 1928. 1 Claim. (Cl. 228—25.)

In combination with a pair of ladder sections, of cooperating means associated with the upper ends thereof to provide a hinge whereby the ladder sections are adapted to form an A-type ladder, said means further acting as a lock to prevent the accidental collapsing of the A-type ladder, the aforementioned means comprising a plate secured on the inner face of each side rail of one of the ladder sections, the forward portion of the plate projecting beyond the forward edge of the respective side rail and being provided with a diagonally disposed slot which extends downwardly from the upper forward edge of the plate, the forward portion of the plate being further provided with an additional diagonally rearwardly disposed slot, the same

being disposed at an angle with respect to the aforementioned diagonal slot and communicating therewith, the lower rear portion of the last mentioned slot being wider than the upper portion thereof, the respective sides of the slots being cut away at the juncture of said slots to provide a relatively wide entrance to the last mentioned diagonally disposed slot, an additional plate secured to the inner face of each of the side rails of the complementary ladder section, an obliquely disposed pintle extending laterally from said last mentioned plate, said pintle adapted to pass through the first mentioned diagonal slot when the ladder sections are arranged in a predetermined manner, the ladder sections being further locked in A-type formation when the pintle is disposed in the last mentioned diagonal slots in a predetermined manner.

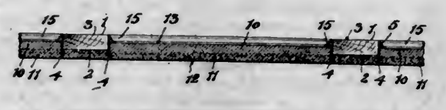
1,684,124. DISPLAY STAND. JOSEPH EDWIN BURGESS, Astoria, N. Y., assignor to The United States Printing & Lithograph Company, Brooklyn, N. Y., a Corporation of Ohio. Filed Oct. 1, 1927. Serial No. 223,367. 1 Claim. (Cl. 211—157.)



A display stand formed of a single sheet cut in parallel vertical lines spaced from the sides and substantially parallel therewith, and said vertical cut lines terminating at the same distance from the top and bottom respectively of the sheet and connected at their upper ends, at their lower ends and between their upper and lower ends by foldable transverse lines parallel to each other, and the portions of the sheet outside said vertical cut lines being formed with transverse foldable lines in the same line, between and parallel to the upper and lower foldable lines of the medial cut out portion so that when the side portions are bent on their transverse foldable lines, the upper portions thereof will stand upright and the lower portions thereof will lie in the horizontal plane and the medial cut out portion when bent on its upper, lower, and medial transverse lines will extend on an inclination from its upper transverse line to its medial transverse line, and the lower part of the cut out portion, between its medial and lower transverse lines, will rest upon the lower part of the sheet below said lower foldable line.

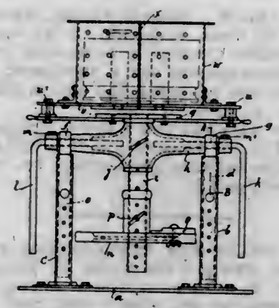
1,684,125. ATOMIZABLE MOBILE FUEL PRODUCT. ARTHUR W. BURWELL, Niagara Falls, N. Y., assignor to Alox Chemical Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 2, 1927. Serial No. 172,214. 8 Claims. (Cl. 44—8.)

1. Process which comprises producing a petroleum soluble, non-aqueous mobile colloidal gel from a normally liquid petroleum hydrocarbon mixture and suspending in said non-aqueous mobile colloidal gel finely divided solid fuel.



1,684,126. FUEL-CONTROL MECHANISM FOR INTERNAL-COMBUSTION ENGINES. EDWARD L. CORMAN, Upland, Calif. Filed Nov. 20, 1926. Serial No. 149,728. 1 Claim. (Cl. 74—39.)

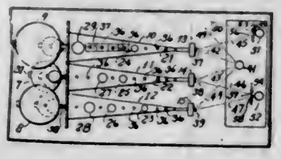
A control mechanism for operating the throttle valve of internal combustion engines comprising a support for attachment to an instrument board, a plate pivotally mounted on the support for swinging movement, a control lever pivotally mounted upon the plate and having an extension arm connected to the throttle extension rod, the said lever being adjustable independently of the plate and embodying



locking means for engagement therewith, and an auxiliary control mechanism operatively connected with the plate and adjustable to swing the plate and control lever simultaneously to permit accurate adjustment of the throttle valve.

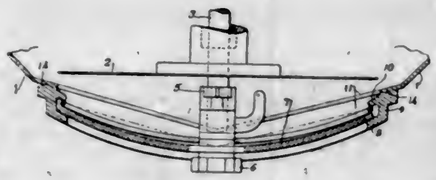
1,684,127. BUILDING CONSTRUCTION. JOHN E. DE BAUN, Saddle River, N. J. Filed June 21, 1927. Serial No. 200,411. 5 Claims. (Cl. 72—46.)

1. In a building construction, a wall formed of a plurality of spaced studs, metal stanchions secured to the edges of said studs, said stanchions being provided with a plurality of L-shaped slots, L-shaped lathing extending through said slots and supported by the stanchions, and plastic covering placed over and surrounding said lathing.



1,684,128. DEVICE FOR BRINGING AND HOLDING HEAVY WELDING PIECES IN A SUITABLE POSITION DURING THE WELDING PROCESS. EMIL OSKAR EDELMANN, Elberfeld, Germany. Filed Aug. 18, 1926, Serial No. 129,976, and in Germany Aug. 20, 1925. 4 Claims. (Cl. 248—5.)

1. A device for the purpose described comprising a foundation plate, spaced apart hollow supports, tubular members adjustable in said supports and terminating in tubular

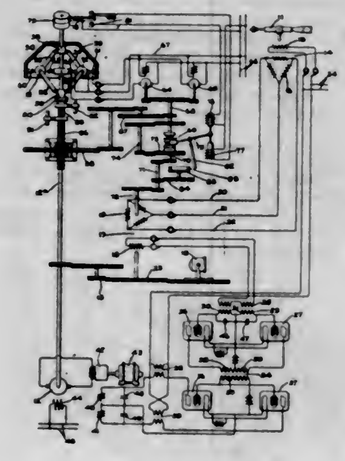


portions forming clamping devices, a hollow shaft selectively rotatable in said clamping devices and rigid with a cross-shaped middle portion, right angled curved arms received in the ends of said hollow shaft, a vertically disposed shaft extended through said cross portion, and a counter weight carried by said last named shaft.

1,684,129. PHONODYNE. EDWIN HOPKINS, New York, N. Y. Filed Mar. 18, 1922. Serial No. 544,928. 19 Claims. (Cl. 179—100.1.)

1. The process of sound recording which comprises transforming the air waves into vibrations in another medium, in selecting from such vibrations a plurality of stages and in recording each of said stages independently.

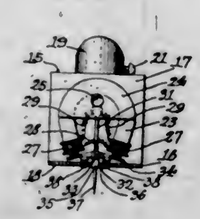
1,684,130. GASOLINE PUMP. EARL E. EICKMEYER, Dayton, Ohio, assignor to The Dayton Pump & Mfg. Company, Dayton, Ohio, a Corporation of Ohio. Filed Apr. 13, 1927. Serial No. 183,422. 1 Claim. (Cl. 116—129.)



An article of manufacture for use in connection with gasoline dispensing pumps consisting of an angular bezel plate, a frame member mounted thereon, means to retain a glass in said frame member and a glass mounted therein having a vertical face transversely curved.

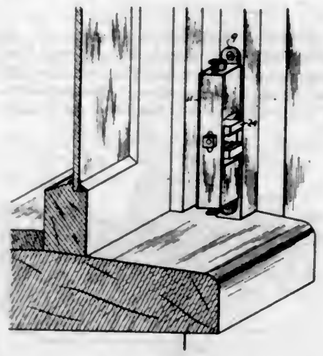
1,684,131. ALLOY. RUSSELL FRANKS, Elmhurst, and BURNHAM E. FIELD, Douglaston, N. Y., assignors to Haynes Stellite Company, a Corporation of Indiana. Original application filed Jan. 8, 1925, Serial No. 1,305. Divided and this application filed Mar. 5, 1926. Serial No. 92,584. 3 Claims. (Cl. 75—1.)

1. An alloy containing from 3 to 5% aluminum, 3.5 to 6% silicon, 5 to 12% tungsten, 6 to 12% titanium, boron in substantial and effective amounts up to 1%, the balance being principally nickel.



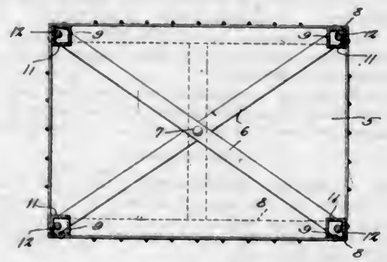
1,684,132. MEANS FOR REPRODUCING POSITION. EDWARD M. HEWLETT and WALDO W. WILLARD, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Nov. 30, 1925. Serial No. 72,201. 26 Claims. (Cl. 172—239.)

3. Means for driving an object into positional agreement with a controlling object, comprising a driving motor for said driven object, control means for said motor operated by said objects to cause said motor to drive the driven object into positional agreement with the controlling object, and auxiliary means responsive to the movement of said driven object for actuating said control means to anticipitate the final position of said driven object so as to bring said driven object to rest in positional agreement with said controlling object without overrunning.



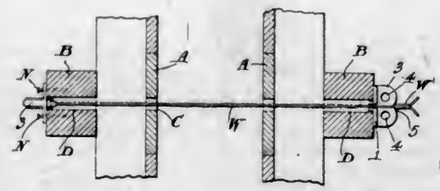
6. Means for driving an object into positional agreement with a controlling object, comprising a driving motor for said driven object, control means for said motor actuated by said objects to cause said motor to drive the driven object into positional agreement with the controlling object, and auxiliary means responsive to the movement of said driven object for actuating said control means to anticipitate the final position of said driven object so as to bring said driven object to rest in positional agreement with said controlling object without overrunning.

1,684,133. REPRODUCER. HILDA M. LARSON, Tacoma, Wash. Filed Apr. 16, 1927. Serial No. 184,368. 3 Claims. (Cl. 179—100.1.)



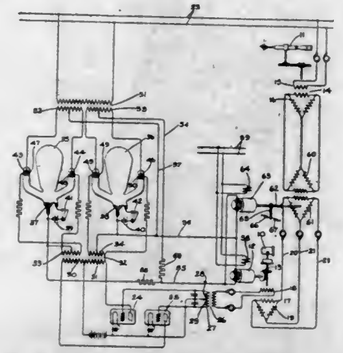
1. In a device of the class described, a sleeve provided with an abutment, an angle bracket comprising main and auxiliary flanges, a magnet disposed against the main flange, a retainer cooperating with the magnet, a securing element passing through the retainer, the main flange and the magnet, and engaging the abutment, coils on the poles of the magnet, an armature pivoted intermediate its ends and cooperating with the poles of the magnet, and means carried by the auxiliary flange for limiting the movement of the armature, the armature being supplied with a needle holder.

1,684,134. STORM-WINDOW FASTENER. CHARLES LE MESURIER, Campbellton, New Brunswick, Canada. Filed Mar. 7, 1927. Serial No. 173,370. 6 Claims. (Cl. 292—32.)



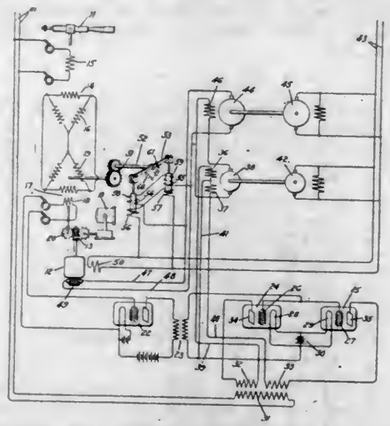
1. In a fastener of the class described, a casing, jaws mounted centrally of said casing and slidably therein, guiding means to direct the jaws in either opened or closed position, and pressure means back of said jaws to maintain them under tension.

1,684,135. KNOCK-DOWN COOP. JAMES H. LIPSCOMB, Bokchito, Okla. Filed Sept. 23, 1927. Serial No. 221,527. 2 Claims. (Cl. 220—6.)



1. A shipping crate for shipping live stock including a bottom section, side and end sections, the side and end sections being formed of wire mesh material, said side end sections including vertical end angle bars arranged with their open sides disposed outwardly, bolts extending through the sections for holding the sections together, the angle bars at the ends of the sections defining housings, and a cover constructed of wire mesh material for closing the upper portion of the crate.

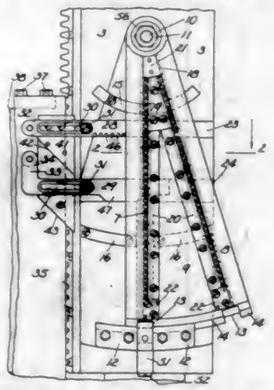
1,684,136. TIE LUG. JAMES A. LYNCH, Los Angeles, Calif. Filed Jan. 9, 1928. Serial No. 245,437. 6 Claims. (Cl. 25—131.)



4. The combination with a form member having an opening therein, of a tie wire extending through the opening, a tie lug having a base provided with slots extending therein from the periphery thereof, a wing extending from the base between the slots, said wire being looped over the wing and having opposed portions seated in the slots, there being an aperture in the wing for the reception of a turning tool, and fastening means extending through one of the slots into the form member for holding the lug against rotation.

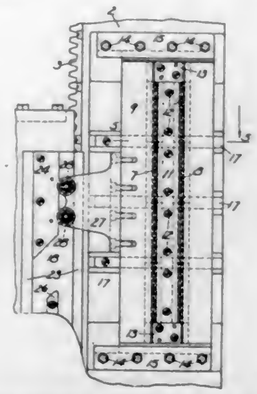
1,684,137. MEANS FOR REPRODUCING POSITION. ALBERT H. MITTAG, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 30, 1925, Serial No. 72,177. Renewed Jan. 26, 1928. 9 Claims. (Cl. 172—239.)

1. Means for driving an object in accordance with the movements of a controlling object, comprising a driving motor for said driven object, means comprising a vapor electric device for supplying current to said motor, and means responsive to the movements of said controlling object for controlling said vapor electric device so as to cause said motor to drive said driven object into positional agreement with said controlling object.



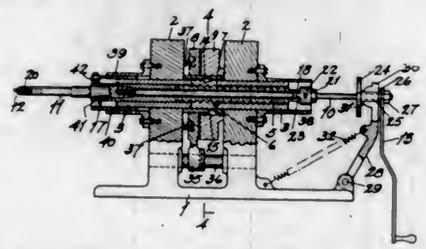
1,684,138. MEANS FOR REPRODUCING POSITION. SAMUEL P. NIXDORFF, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York Filed Sept. 29, 1925, Serial No. 59,409. Renewed Jan. 26, 1928. 13 Claims. (Cl. 172—239.)

2. Means for driving an object into positional agreement with a remote controlling object, comprising an electric driving motor for said driven object, control means for said motor actuated by said object to cause said motor to drive the driven object into positional agreement with



the controlling object, and electrical means responsive to the energization of said motor acting upon said control means so as to reduce the speed of said motor to prevent overrunning.

1,684,139. BROACH MECHANISM. JOHN OAKLEY and HIRAM D. CROFT, Springfield, Mass., assignors to Perkins Machine and Gear Company, Springfield, Mass., a Corporation of Massachusetts. Filed Apr. 2, 1927. Serial No. 180,380. 8 Claims. (Cl. 90—33.)



3. The combination, in mechanism of the class described, with a reciprocating member provided with a horizontal pivot, of a holder mounted to swing in a vertical plane of said pivot, said holder being for lengthwise radial broaches, and capable of independent movement relative to said member, means automatically to change the position of said holder, each time said member approaches either end of its travel, to locate one of said broaches vertically in cutting position and the other in angular relation thereto, and then to locate the second broach vertically in cutting position and the first broach in angular relation thereto, and means automatically to lock said holder when disposed with either broach in vertical position, and to release the same after the cut has been made.

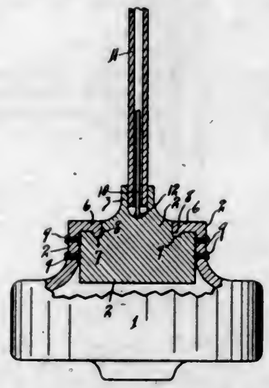
1,684,140. BROACH MECHANISM. JULIAN L. PERKINS, West Springfield, and HIRAM D. CROFT, Springfield, Mass., assignors to Perkins Machine and Gear Company, Springfield, Mass., a Corporation of Massachusetts. Filed Apr. 7, 1927. Serial No. 181,841. 9 Claims. (Cl. 90—33.)

2. The combination, in mechanism of the class described, with a reciprocating member having a flat face, of a holder, for parallel broaches, mounted for independent lateral movement on said face, and means automatically to shift the position of said holder, each time said member approaches either end of its travel, whereby said broaches are alternately positioned in the cutting field.

1,684,141. FEED MECHANISM. JULIAN L. PERKINS, West Springfield, and HIRAM D. CROFT, Springfield, Mass., assignors to Perkins Machine and Gear Company, Springfield, Mass., a Corporation of Massachusetts. Filed June 11, 1927. Serial No. 198,186. 15 Claims. (Cl. 90—56.)

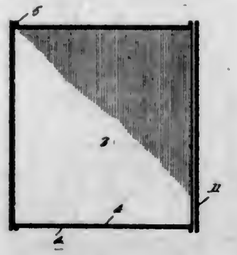
1. In feed mechanism of the class described, a rotary member provided with work-carrying means, means to cause said member to move longitudinally when rotated, and yielding means to apply pressure to said member in the direction of its axis without preventing the rotation of the member whenever sufficient force is applied thereto.

1,684,142. PROCESS OF PREPARING PHENOL-FORMALDEHYDE CONDENSATION PRODUCTS. GRIGORI PETROFF, Moscow, Russia, and PETER SHESTAKOFF, Paris, France. Filed Dec. 30, 1925. Serial No. 78,485. 6 Claims. (Cl. 260—4.)



1. In the process of preparing condensation products of phenols with formaldehyde, the step which comprises carrying out the process in the presence of powdered metals.

1,684,143. DENTAL INSTRUMENT. OSCAR H. PIEPER and CHARLES R. METZLER, Rochester, N. Y., assignors to Oscar H. Pieper and Alphonse F. Pieper, Rochester, N. Y. Filed Dec. 16, 1926. Serial No. 155,149. 9 Claims. (Cl. 174—89.)



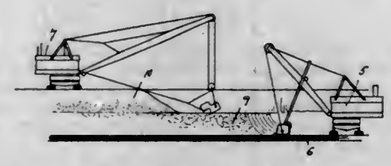
1. In a dental instrument, the combination of a body part and a tip, said body part comprising a central contact and terminal rod, a contact and conductor sleeve concentric with said rod, insulating material supporting said conductor members and insulating them from each other, said conductor sleeve at its outer end forming a terminal socket, said tip comprising a body part having plug engagement in said socket and a terminal sleeve for said tip for receiving the end of said conductor rod, and a heat generating member connected to said tip frame and sleeve, the outer end of said body part conductor sleeve and rod being adapted for connection with circuit terminals.

1,684,144. CEILING-FAN HANGER. BRUCE C. RETTIG, Fort Worth, Tex. Filed Aug. 27, 1926. Serial No. 131,928. 2 Claims. (Cl. 248—30.)

1. A fan hanger comprising a motor casing having inwardly projecting lugs on the upper end thereof, a head having vertical grooves in the periphery thereof and seats in the upper surface thereof and cavities in the bottom parts of said seats, tips on the bottom parts of said lugs occupying said cavities, and set screws for securing said head in said casing.

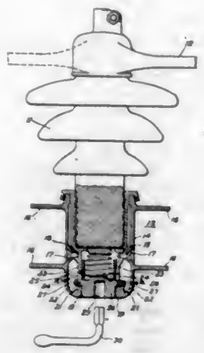
1,684,145. REFRIGERATOR LINING AND METHOD OF MAKING. RUDOLPH A. RIEK, Rhinelander, Wis. Filed June 10, 1924. Serial No. 719,204. 3 Claims. (Cl. 113—116.)

1. The method of assembling sheets of metal which consists in bending a metal sheet to provide flanges along two opposed edges, bending the sheet of metal along lines extending transversely of the flanges, thereby to provide three angularly disposed walls with the flanges extending continuously along opposed free edges thereof and extending outwardly from the walls, thereafter applying flat sheets of metal to the outer faces of the flanges, the edges of said sheets being substantially flush with the free edges of the flanges and said sheets being supported in planes substantially parallel with the planes occupied by the flanges, joining the marginal portions of said sheets to the flanges by spot welding, and finally producing a continuous unbroken weld between each flat sheet and the flanges contacted thereby, thereby to produce a continuous sealed joint extending from one end to the other of the flange and along three edges of the applied sheet.



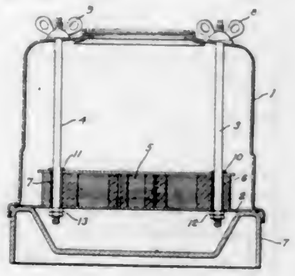
2. A sheet metal lining structure for refrigerators including a single sheet of metal, parallel flanges extending from one end to the other of said sheet at opposed sides thereof, the said sheet being bent transversely along lines extending across the flanges to provide a back and opposed side walls, each flange occupying a plane at right angles to the plane occupied by the back and side walls and being extended outwardly from said walls and from the angles formed thereby, and flat metal sheets bearing upon the outer faces of the flanges at the respective sides of the bent sheet, said flat sheets being parallel with the planes occupied by the flanges and being joined to said flanges by continuous unbroken welds extending throughout the width and length of the flanges and past the angles formed by the bent sheet, thereby providing unbroken sealed connections between the sheets.

1,684,146. RAILWAY JOURNAL BEARING. CHARLES TREscott RIPLEY, Chicago, Ill., assignor to S. & T. Metal Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 24, 1925. Serial No. 77,476. 2 Claims. (Cl. 308—242.)



1. A journal bearing the body of which is composed of an anti-friction metal alloy of sufficient tensile strength at normal temperatures to withstand the stresses on the bearing and which has a a surface portion shaped for contact with the journal of uniform composition with the rest of said body, in combination with a cover plate composed of metal having a higher melting point than the anti-friction metal body, the bearing face of said anti-friction metal body being recessed and the recess filled with a material of a lubricating character having a melting point approximately the same as the melting point of the anti-friction metal whereby in case the anti-friction metal body melts, the journal will be coated with said lubricating material to prevent freezing of the anti-friction metal to the journal.

1,684,147. METHOD OF STRIPPING. WILLIAM C. ROBERTS, Duquoin, Ill.; Flossie Roberts executrix of said William C. Roberts, deceased. Filed Dec. 17, 1926. Serial No. 155,540. 1 Claim. (Cl. 37—195.)



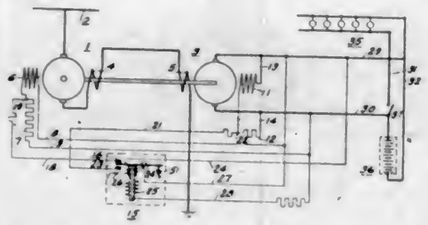
The improved method of stripping overburden which consists first, in removing the top soft portion of the overburden by excavating along the wall of a pit in a direction substantially parallel to said wall and simultaneously sloping said wall upwardly and outwardly to prevent cave-ins; second, in removing the lower hard portion of the overburden by excavating in a direction substantially parallel to the wall of said pit.

1,684,148. DISCONNECTING SWITCH. FRITZ RONNEBERGER, Berlin, Germany, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 16, 1927, Serial No. 168,572, and in Germany Feb. 19, 1926. 11 Claims. (Cl. 200—42.)

1. In combination, an insulator, an electrical device cooperating therewith, and a support for the insulator comprising an outer socket member having a stop member formed thereon, an inner socket member having a slot formed therein, and a locking means cooperating with the socket members and comprising an arm extending through the slot into engagement with the stop member.

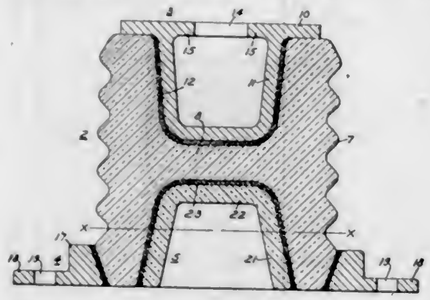
1,684,149. WATTHOUR METER. ARGYLE R. RUTTER, Forest Hills, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Nov. 19, 1926. Serial No. 149,319. 8 Claims. (Cl. 171—264.)

6. In combination in a meter, a magnetizable core, means for producing an alternating flux in said core, and a current path comprising a cover and supporting structure, the alternating flux in said core linking said path, of means for reducing the magnitude of the current induced in said path by said flux.



1,684,150. ADJUSTABLE-LENGTH TIE. MAX SCHACHTER, New York, N. Y. Filed Mar. 26, 1927. Serial No. 178,522. 1 Claim. (Cl. 2—155.)

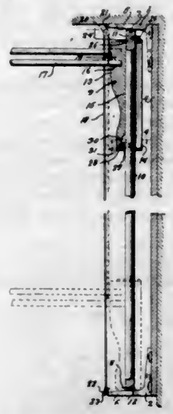
An adjustable tie comprising two separable sections, one of said sections having an open loop at one end and the corresponding end of the second section being overlapped on itself and provided with an open pocket adapted to receive the end of a pointed instrument therein whereby it may be inserted with said instrument within the open loop of the first mentioned section for



adjustment relative thereto and a separable, outside fastening element for connecting the two interconnected sections when adjusted.

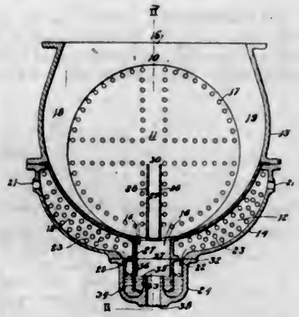
1,684,151. VOLTAGE REGULATOR. WALTER SCHAELCHLIN, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Jan. 28, 1926. Serial No. 84,304. 9 Claims. (Cl. 171—229.)

1. In a regulator system, a motor, a generator driven thereby, a field winding for said motor and a field winding for said generator, and means actuated in accordance with the generator voltage for short-circuiting said field windings.



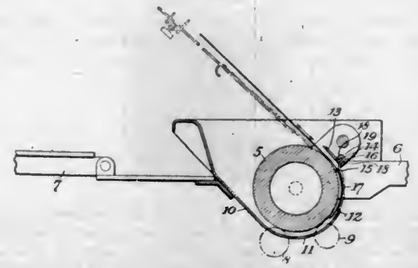
1,684,152. INSULATOR. WALTER H. SCHRAMM, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 10, 1927. Serial No. 174,131. 5 Claims. (Cl. 173—318.)

1. An insulator subject to cantilever load comprising an insulating member having a cupped base end and means for reinforcing the same against normal load fracture including a cupped insulating member in said end.



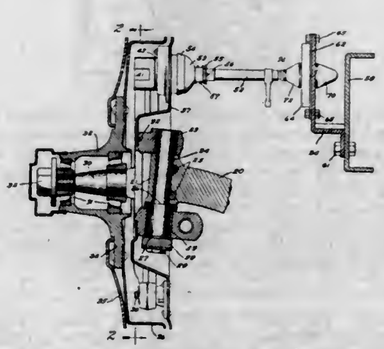
1,684,153. CLOTHES-DRYING RACK. CHARLES FRANKLIN SMITH, Tacoma, Wash. Filed Apr. 25, 1927. Serial No. 186,442. 1 Claim. (Cl. 211—101.)

In a clothes drying rack, upper and lower bracket members comprising attaching portions adapting them to be secured to a support, the said bracket members including outstanding arms, studs projecting from the under and upper sides of the arms of the upper and lower brackets respectively, a standard extending vertically between the said arms of the bracket members and having socketed ends engaging said studs, a head having a channel in its rear side, the head being slidably assembled with said standard with the wall of the channel fitting the standard, whereby the head may be vertically adjusted, plates secured to the upper and lower ends of the said head and provided with alined openings



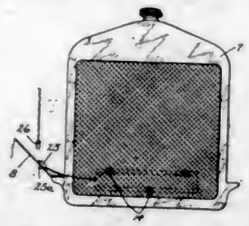
through which the standard extends, the plates constituting means for maintaining the head in slidable engagement with the standard, anti-friction rollers mounted upon the plate at the upper end of the head and engaging the rear side of the standard, anti-friction rollers mounted upon the plate at the lower end of the head and engaging the forward side of the standard, clothes supporting arms extending radially from the head, and means connected with the head and adjustable to elevate and lower the same along the standard.

1,684,154. CONDENSER. JOHN H. SMITH, Philadelphia, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 3, 1923. Serial No. 622,574. 11 Claims. (Cl. 257—43.)



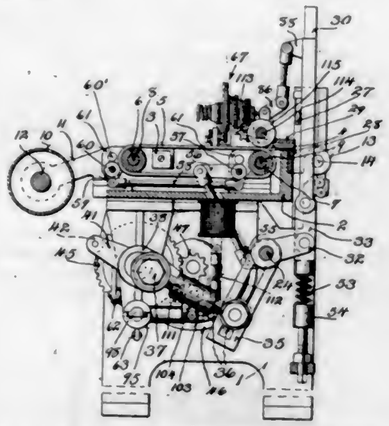
1. In a surface condenser, a condensing chamber having a region of relatively low pressure and temperature and a region of relatively higher pressure and temperature, a hot well having a condensate outlet, an air cooling chamber isolated from the condensing chamber and communicating only with the region of low pressure and temperature in the condenser and water seal means between the air cooling chamber and the condensate outlet.

1,684,155. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Apr. 16, 1926. Serial No. 102,420. 5 Claims. (Cl. 197—128.)



1. In a fan-fold typewriting machine, the combination with a platen, a front paper-table extending above the platen at the delivery side thereof, a rear paper-table having a paper-guide extending around the under portion of the platen and ending at the front below the printing line thereof, and feed-rolls for feeding a fan-fold web inserted at the rear side of the platen in a forward direction, and for feeding the same rearwardly together with a front-inserted independent work-sheet wider than the fan-fold web positioned between the plies of a set of forms of the fan-fold web, while the forms are fed to an accessible position above the front of the platen with a portion of the wide work-sheet extending beyond the side of the fan-fold web, of means for guiding said extending portion of the work-sheet during the rearward feeding of the fan-fold web by said feed-rolls together with said work-sheet consisting of one or more fingers extending from a position adjacent the lower edge of the front paper-table downwardly between the paper-guide and the platen, so that the edge of the extending portion of the work-sheet will not contact with the edge of the paper-guide during the downward movement of the sheet into said paper-guide.

1,684,156. BRAKE. EDWIN G. SPRUNG, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Nov. 12, 1928. Serial No. 147,975. 20 Claims. (Cl. 188—194.)

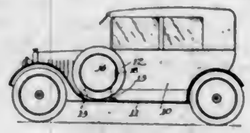


2. In combination with a vehicle brake associated with a steering wheel and a chassis frame, a mounting for supporting an end of a brake operating part, said mounting comprising a casing, and a formed rubber member secured therein, said casing being supported by said frame and having an opening to allow said end of said brake operating part to be carried by said rubber member

1,684,157. MOTOR HEATER. LAURENCE B. STERLING, Minneapolis, Minn., assignor to George H. Sterling, Minneapolis, Minn. Filed May 31, 1924. Serial No. 716,954. 1 Claim. (Cl. 219—38.)

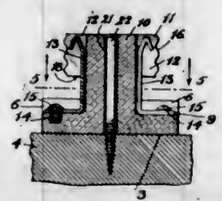
An electric heater for automobile motors comprising a relatively shallow trough-like casing having upturned longitudinal edges and an upturned lateral edge at one end thereof, a pad of dielectric material cemented to the bottom of said casing fitting snugly with in said upturned sides, a heating element embedded within said pad and forming a core thereof, a block of insulating material disposed within said casing at the end opposite said upturned end, terminals carried by said block and a cover of sheet material enclosing said pad and block.

1,684,158. RUBBER-STRIP-CUTTING MACHINE. CLIFTON O. STROM and HERBERT M. NELSON, Jr., Racine, Wis., assignors to Nelson Bros. and Strom, Racine, Wis. Filed Mar. 14, 1927. Serial No. 175,125. 6 Claims. (Cl. 164—48.)



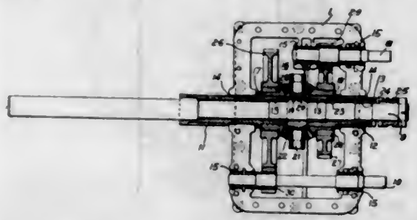
1. In a machine for cutting a sheet of material into lengths, the combination of feeding means, cutting means, and registering means driven directly by the material while it is being fed for controlling the cutting means and the feeding means, said registering means including an automatically reset registering member and an adjustable stop for controlling the starting point to which the registering member is automatically reset, whereby the machine may be set to cut sheets of any predetermined length.

1,684,159. PROCESS OF REFINING OILS. SIJBREN TIJMSTRA, Madison County, Ill., assignor to Roxana Petroleum Corporation, a Corporation of Virginia. Filed Dec. 6, 1926. Serial No. 153,044. 3 Claims. (Cl. 196—33.)



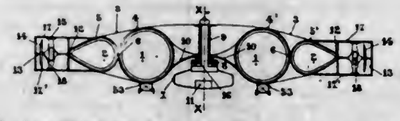
1. The process of treating oils which consists in adding thereto a doctor solution and then adding to said treated oil a water solution of a polysulphide capable of releasing free sulphur for precipitating the lead compounds from the oil.

1,684,160. COMBINATION SPARE-TIRE AND ACCESSORY CARRIER. HERBERT R. TINKER, Lankershim, Calif., assignor of one-half to Stephen M. White, San Francisco, Calif. Filed Apr. 22, 1924. Serial No. 708,177. 7 Claims. (Cl. 224—29.)



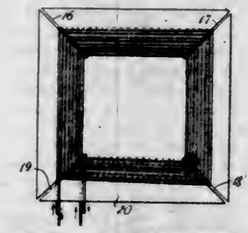
7. In a device of the character described, a closed hollow storage drum having a door, a plurality of independent rim supports projecting from the periphery thereof, some of said supports having portions adjustable radially to and from rim releasing positions, and mechanism housed wholly within said drum and connected through the periphery of said drum with a plurality of said portions for the simultaneous actuation thereof to and from said positions.

1,684,161. ELECTRICAL OUTLET. SYDNEY M. TRAUBITZ, New York, N. Y. Filed Nov. 16, 1927. Serial No. 233,602. 5 Claims. (Cl. 173—338.)



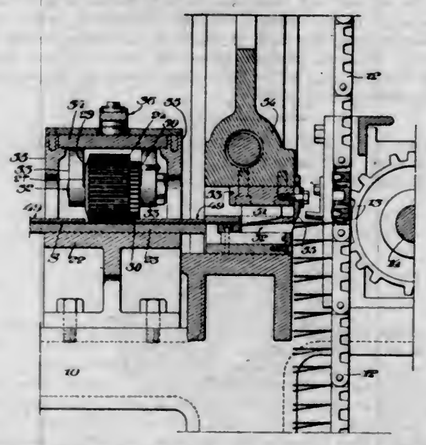
1. An electric outlet comprising a body portion having an opening extending through it for receiving securing means, a flat base on said body portion having a grooved upper face, spring contact fingers secured in and extending out of several of said grooves, an integrally formed slotted projection extending from said base, said projection having an enlarged threaded head, and an internally threaded cap adapted to be received on said head and cover the upper face of the base and the contact fingers thereon.

1,684,162. TRANSMISSION. WILLIAM E. TRUMPLER, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 26, 1925. Serial No. 11,723. 2 Claims. (Cl. 74—34.)



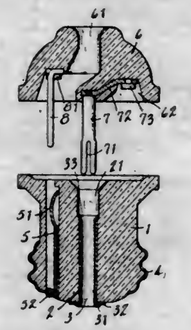
1. A transmission system comprising a casing, a plurality of shafts disposed in parallel alinement therein, a pair of sun gear-wheels loosely mounted on one of said shafts, a planetary gear-wheel secured to said shaft, spur gear-wheels mounted on said sun gear-wheels, spur pinions mounted on the others of said shafts in cooperative engagement with said spur gear-wheels, and a clutch member on said shafts for engaging one of said sun gear-wheels.

1,684,163. FLYING MACHINE. PAUL VALENTIN, Paris, France, assignor to René Dreux, Paris, France. Filed July 22, 1924, Serial No. 727,520, and in France July 26, 1923. 7 Claims. (Cl. 244—15.)



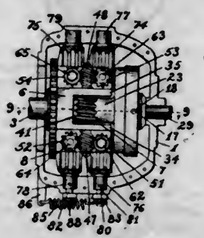
1. A machine for aerial navigation, comprising, a main body and a helicopter screw, the main body being externally in the form of a permanent biconvex lenticular rim, and being adapted to be filled with a gas lighter than air, and wing surfaces arranged upon the periphery of the main body to form the helicopter screw.

1,684,164. RADIORECEPTION. PAUL G. WEILLER, East Orange, N. J., assignor to Wired Radio, Inc., New York, N. Y., a Corporation of Delaware. Filed Apr. 23, 1924. Serial No. 708,341. 5 Claims. (Cl. 175—359.)



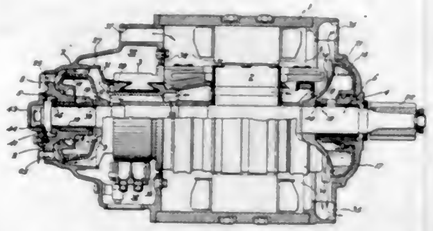
1. A combined inductance for the grid and plate circuits of a vacuum tube receiver comprising a frame having a plurality of radial slots therein, a wire wound on said frame beginning at the center and alternating from one side of the frame to the other at each slot, a second winding begun simultaneously with said first winding and from the same point but on the opposite side of said frame and continuing with said first mentioned winding but always on the opposite side of said frame.

1,684,165. MACHINE FOR MAKING MATCHES FROM SHEET MATERIAL. CHARLES F. WRIGHT, Akron, Ohio, assignor to The Diamond Match Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 9, 1927. Serial No. 218,383. 8 Claims. (Cl. 144—51.)



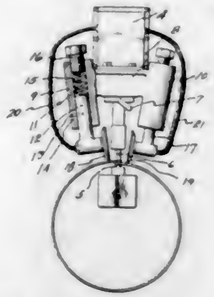
1. The combination with means for feeding sheet match stock, of a revoluble cutter having its axis of rotation longitudinally of the path of the stock and having a series of spaced apart peripheral blades parallel to said axis, and means for effecting cooperative relative movement between the said cutter and the stock, transversely of the latter, whereby the blades operate consecutively to incise the stock in parallel longitudinal splint lines.

1,684,166. PLUG FOR ELECTRIC-LIGHT SOCKETS. HARRY A. AUSTIN, Kalamazoo, Mich. Filed May 20, 1926. Serial No. 110,426. 3 Claims. (Cl. 173—343.)



1. In a separable plug, the combination of a screw portion of insulating material having a central metallic contact tube disposed in a central bore therein, a suitable contact means at its outer end and expanded into an enlargement at its inner end adapted to retain the said tube and to guide a contact pin, a lateral electric contact spring with convex portion disposed in a lateral recess and a screw contact covering connected thereto, a detachable portion of said plug composed of the insulation block 6, a central pilot contact pin secured in the same and provided with suitable electric connections, and a contact finger shorter than the pilot contact pin disposed in a suitable recess and positioned to enter and coact with the lateral spring contact of the said screw portion of said plug, after the pilot pin has been inserted as specified.

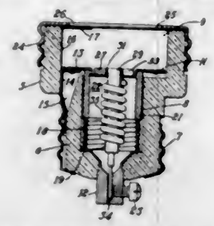
1,684,167. SPEED-CHANGING MECHANISM. ROBERT B. BEAUCHAMP, East Cleveland, Ohio. Filed Sept. 30, 1925. Serial No. 59,548. 7 Claims. (Cl. 74—34.)



1. In a speed changing mechanism, the combination of a driving member, a gear rotatable with the driving member, means rotatably mounted upon the driving member, idler-gears carried by said means and engaging said gear, means for imparting the motion of the idler-gears to the driven member, a worm-wheel fixed to the first mentioned means, a worm supported by the driving member in engagement with said worm-wheel, a finger-gear consisting of a head carrying a plurality of pins for causing rotation of the worm, a ring-gear adapted to be engaged by said pins of the finger-gear for causing rotation of the finger-gear, and means for manually actuating the ring-gear to cause it to change the speed of rotation of said finger-gear, substantially as described.

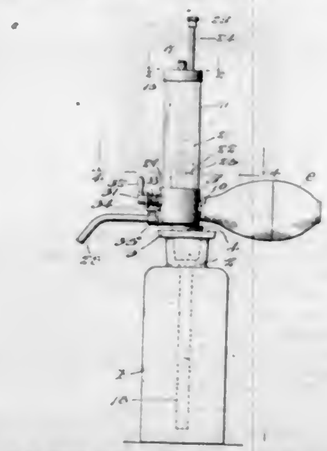
1,684,168. ROTARY OILER AND VENTILATION. CLAUDE BETHEL, Wilkinsburg, and FREDERICK W. MCCLOSKEY, Edgewood, Pa., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 12, 1926. Serial No. 101,355. 10 Claims. (Cl. 172—36.)

4. In a railway motor having a stator and a rotor, said rotor having a commutator member at one end and a pinion at the other end, the combination including a bearing for rotatably supporting the shaft at each end of the stator, said rotor having longitudinal ventilating passage-ways extending beneath said commutator member, the bearing housing having a ventilating opening outside of the bearing at the commutator end, baffle means surrounding said last-mentioned bearing for isolating the space surrounding said commutator member from the ventilating air entering through said ventilating opening and passing through said passageways beneath said commutator member, an oil reservoir for said bearing at the commutator end, and means for causing a cooling fluid to flow past said oil reservoir into said passageways beneath said commutator member.



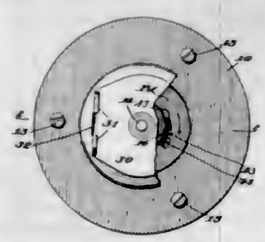
1,684,169. APPARATUS FOR LAP-WELDING. JULIUS R. BRUECKNER and HOMER L. CLARK, Bay City, Mich., assignors to Gibb Welding Machines Company, Bay City, Mich., a Corporation of Michigan. Filed Mar. 26, 1925. Serial No. 18,856. 3 Claims. (Cl. 219—4.)

1. In apparatus for lap welding, an anvil across which the overlapped metal edges may be continuously moved, an electrode on each side of the anvil, yieldable means holding the electrodes in contact with the surface of the metal opposite the anvil on each side of the lap, an automatic hammer positioned between the electrodes and over the anvil and lapped edges, and means for passing the current between the electrodes to heat the joint during the hammering process.



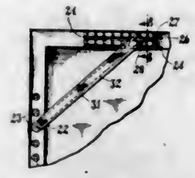
1,684,170. THERMAL PLUG CUT-OUT. EARL K. CLARK, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 2, 1927. Serial No. 180,465. 4 Claims. Cl. 200—123.)

1. A composite thermal-responsive refill for a circuit cut-out comprising a pair of separable members joined by fusible metal, one of which constitutes a terminal member and the other a tubular heat-storing member, and a heating conductor connected, at one end, to the tubular



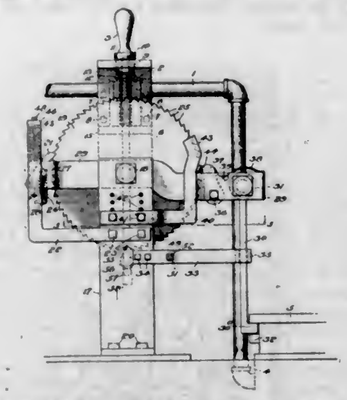
member and wound about the exterior thereof and having its free end extending through the tubular member and constituting a terminal member.

1,684,171. LIQUID-DISPENSING DEVICE. JOHN H. DAVIS, Boston, Mass. Filed Mar. 25, 1927. Serial No. 178,241. 7 Claims. (Cl. 221—95.)



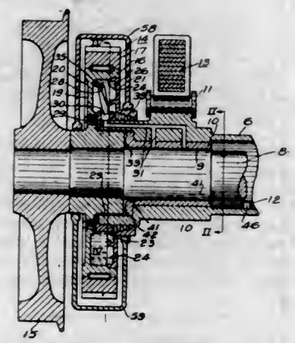
5. In a liquid dispensing device of the pneumatic type the combination with a bottle, a stopper for supporting the device in said bottle and a head supported on the stopper, of a vessel having a discharge chamber and supported in the head, a variable measuring device for predetermining the bulk of liquid, a regulating device to stop or hold the variable measuring device at any position desired, and valve controlled means for dispensing the predetermined bulk.

1,684,172. INTERMITTENT BALL CLUTCH. JAMES M. DAYTON, Torrington, Conn. Filed June 3, 1927. Serial No. 196,320. 6 Claims. (Cl. 192—12.)



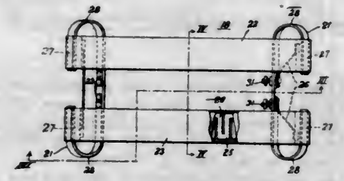
1. In an intermittent clutch, a movable member including a cylindrical core, a bearing to support said core for rotation, two annular clutch plates having inclined notches at their inner peripheries, said peripheries fitting said core and being alined thereby, all of said notches being inclined in the same direction, a clutch ball and spring in each of said notches, means to hold one of said clutch plates, and a second movable member operatively connected to the other of said clutch plate.

1,684,173. REMOVABLE CARD-TABLE COVER. MARCUS DIAMOND, SAMUEL DIAMOND, and JACOB DIAMOND, New York, N. Y. Filed Aug. 1, 1927. Serial No. 209,846. 2 Claims. (Cl. 45—68.3.)



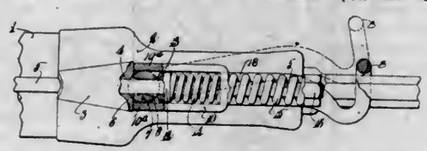
1. A removable cover for card tables comprising a cover member, binding members attached to the edge portions of said cover member, a channel member mounted on one of the binding members of said cover member, spaced rods in said channel member, a hook element disposed in the groove of said channel member and having an extension, a strap comprising a fabric covering and a sheet lead lining rotatively mounted at one end on said extension, snap fastener elements attached to the other end of said strap, and snap fastener elements attached to the binding member of the adjacent edge of said cover member adapted to accommodate the snap fastener element of said strap, said hook element being adapted to be selectively engaged on the rods of said channel member for suitably positioning one end of said strap and said first mentioned snap fastener being adapted to be selectively engaged on any desired snap fastener of said adjacent binding member for suitably positioning the opposite end of said strap.

1,684,174. MOLD-JARRING DEVICE. JOSEPH R. DUNBECK, Rochester, N. Y., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed Nov. 9, 1925. Serial No. 68,018. 10 Claims. (Cl. 192—139.)



3. The combination with a fluid pressure actuated jolting device, of a valve controlling the supply of fluid pressure thereto, resilient means for normally retaining said valve closed, manual means for opening said valve, means for retaining said valve open, a ratchet wheel pivotally mounted adjacent said valve, means allowing turning of said wheel in only one direction, a lever pivoted adjacent said wheel, means mounted on said lever and adapted to engage said ratchet wheel and turn it in the allowed direction when the lever is moved in said direction, and slide over said ratchet wheel when the lever is moved in the opposite direction, a portion on said ratchet wheel engageable with the retaining means to release said means after a predetermined movement of the ratchet wheel and a connection between the jolting device and lever for effecting movement of the ratchet wheel by oscillation of the lever.

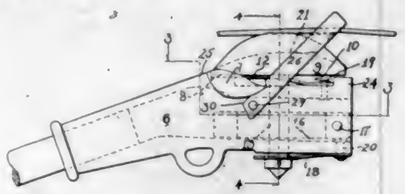
1,684,175. ROTARY OILER. GEORGE M. EATON, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 21, 1927. Serial No. 169,711. 6 Claims. (Cl. 105—113.)



1. An axle-mounted-vehicle-motor structure comprising a driving wheel, an axle therefor, an axle bearing, a driving motor mounted on said axle and a rotary oiler for said axle bearing.

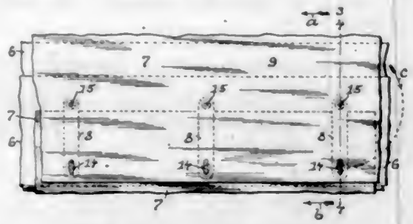
1,684,176. WAFFLE-IRON HEATING ELEMENT. FRANK F. FORSHEE, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Oct. 10, 1925. Serial No. 61,696. 7 Claims. (Cl. 219—19.)

4. In a cooking device, the combination with a container and a baking member associated therewith, of a heating unit located in the container and comprising a plurality of thermally-conductive sheathed members having resilient laterally-extending end portions, and resilient supporting members secured thereto and effective to maintain the heating means in intimate contact with, and in proper operative relation to, said baking member.



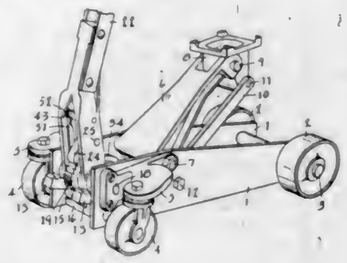
1,684,177. TOOL RETAINER. ELMER G. GARTIN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 15, 1922. Serial No. 607,036. 13 Claims. (Cl. 121—32.)

1. In a tool retainer, a pair of tension members adapted to hold the parts of a drill assembled, a retainer yoke pivoted on said members, springs surrounding said members and adapted when placed in compression to hold



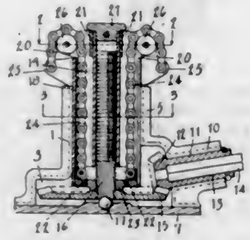
said retainer member in position, a yoke extending on opposite sides of said springs and also carried on said members, heavier springs overlying said members, and means for placing said springs under compression.

1,684,178. TROLLEY. CLARENCE A. GOUTY, Bushnell, Ill. Filed Oct. 12, 1925. Serial No. 62,085. 5 Claims. (Cl. 191—59.1.)



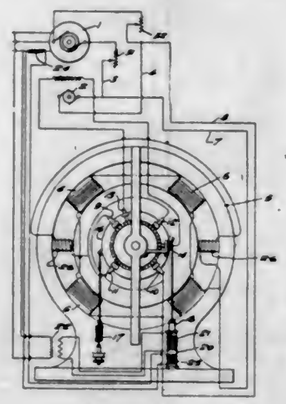
1. A trolley comprising a harp, having in its upper part a depression adapted to receive the forward end of an oscillative shoe and a depression adapted to receive a contact plate; said harp having also upwardly and laterally extending members effective to limit lateral movement of the forward part of the shoe; and a shoe above the upper surface of the harp and having its forward part located between the upwardly extending lateral members of the harp.

1,684,179. ROLL ROOFING. ALBERT ABBE GRISWOLD, Providence, R. I. Filed Dec. 3, 1926. Serial No. 152,492. 1 Claim. (Cl. 108—33.)



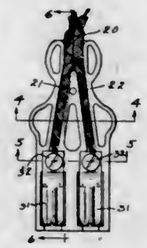
In roll roofing construction, a flat elongated metal roll roofing fastener having a rivet slot in one end and a nail hole in the other end, a rivet through the rivet slot in the fastener and extending into the roll roofing and a nail through the nail hole in the fastener into a roof, whereby the roll roofing is secured to the roof and expansion and contraction of the roll roofing or the roof boards is compensated for, by the slot in the fastener.

1,684,180. LIFTING JACK. ARTHUR C. HOPKINS, Niles, Mich., assignor to National Standard Company, Niles, Mich. Filed Apr. 9, 1927. Serial No. 182,313. 12 Claims. (Cl. 254—2.)



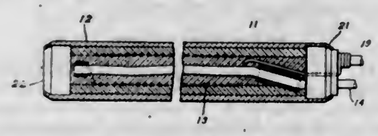
12. In a lifting jack, the combination of a frame, a lifting member, a ratchet wheel operatively connected to said lifting member, an actuating lever, a lifting pawl pivotally mounted on said actuating lever to coact with said ratchet wheel, a holding pawl pivotally mounted on said frame to coact with said ratchet wheel, a reversing member mounted on said actuating lever to coact with said holding pawl, a reversing rod slidably mounted on said actuating lever, a spring acting to hold said reversing member normally in inoperative position, and operating connections for said reversing rod and lifting pawl and said reversing rod and reversing member whereby the pawls are alternately disengaged by successive actuations of said reversing rod.

1,684,181. LIFTING JACK. ARTHUR C. HOPKINS, Niles, Mich., assignor to National Standard Company, Niles, Mich. Filed May 18, 1927. Serial No. 192,269. 10 Claims. (Cl. 254—148.)



6. In a lifting jack, the combination with a standard, of a lifting member telescoping therein and comprising telescopingly associated sections, a screw with which the inner of said sections is telescopingly associated, the outer section having threaded engagement with said screw, and a cable connected to the inner lifting member and to said standard, the outer lifting member being provided with a thrust member over which said cable is passed.

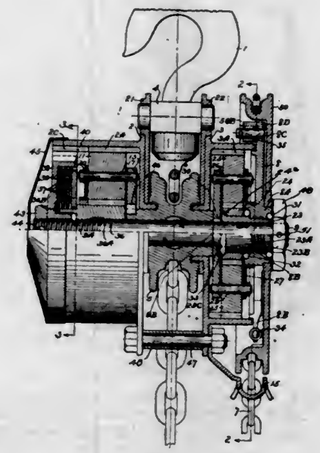
1,684,182. AUTOMATIC VOLTAGE CONTROL. GROVER C. HUBBLE, Bonners Ferry, Idaho. Filed Mar. 17, 1926, Serial No. 95,443. Renewed Feb. 1, 1928. 15 Claims. (Cl. 171—221.)



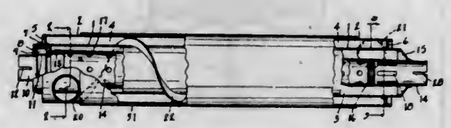
1. In combination, an alternator, a direct current field exciter generator for said alternator, a control motor electrically driven from the exciter, said control motor being capable of supplying the field energizing current for said exciter, and means whereby the output of the control motor generator will be regulated by the output voltage of the alternator.

1,684,183. ELECTRIC PLUG. WILLIAM ILE, Little Falls, N. J., assignor to Ilcite Electric Manufacturing Corporation, Tuckahoe, N. Y., a Corporation of New York. Filed Mar. 19, 1925. Serial No. 16,607. 2 Claims. (Cl. 173—332.)

1. A device of the character described comprising a pair of sections cooperating to form a housing, each section being formed with a hollow protuberance at one end of substantially hemispherical form connected by a neck with the body portion, there being projecting shoulders at opposite sides of the body and some distance from the opposite end, whereby when said sections are placed facing each other a spherical knob is obtained, separated by said neck and shoulders from the terminal portion of the device, there being passageways in the body leading from said terminal portions to a single passageway extending axially through the knob.



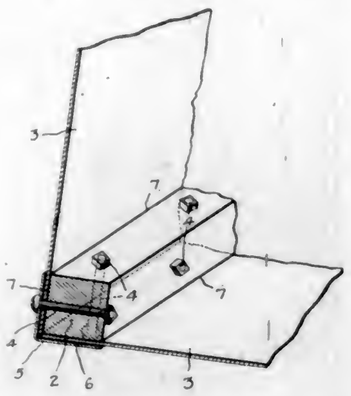
1,684,184. METHOD OF MAKING HEATER UNITS. WILLIAM R. KING, Mansfield, Ohio, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 1, 1927. Serial No. 165,126. 2 Claims. (Cl. 201—64.)



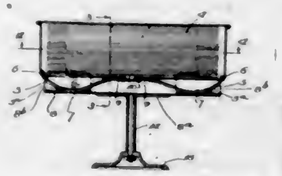
1. The method of making a tubular heating unit which comprises winding a resistor wire into helical form, locating within the helix a terminal rod one end of which is electrically connected to the corresponding end of the resistor wire, locating on the terminal rod and within the helix an open helix of a strip of metallic magnesium, locating an open helix of a strip of metallic magnesium around said helix, placing the helix, terminal rod and two helices of magnesium loosely within a tubular metal casing, and then subjecting the parts thus assembled to the action of high pressure steam in a container to expansively oxidize the metallic magnesium into a crystalline mass of electric insulating material.

1,684,185. HOISTING BLOCK. JOHN W. KITTREDGE, Akron, Ohio. Filed Mar. 11, 1926. Serial No. 93,952. 26 Claims. (Cl. 254—171.)

1. In a hoisting block, the combination of a driving wheel, a drive shaft, a drive connection from the driving wheel to the drive shaft, a driven wheel, a brake, a planetary gear train comprising a central gear, a planet gear member, a carrier, and an annular gear, and a screw connection in the said brake between the drive shaft and the central gear whereby backward rotation of the central gear sets the brake and backward rotation of the drive shaft releases the brake.



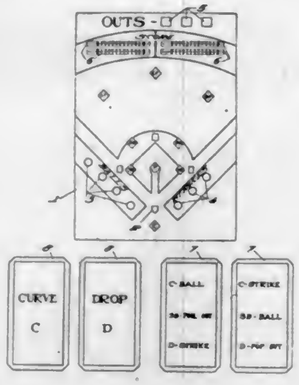
1,684,186. COMBINED MUFFLER AND HEATER. WALTER A. KYSOR, Allegan, Mich. Filed Mar. 7, 1927. Serial No. 173,491. 2 Claims. (Cl. 257—16.)



1. In a device of the class described, the combination of concentrically disposed inner and outer tubular walls providing a central elongated gas chamber and a surrounding air chamber, said air chamber having inlet and outlet openings at the respective ends thereof, front and rear supporting collars for said outer wall closing the ends of said air chamber, one of said supporting collars being disconnected from one of said walls permitting relative movement of said walls due to unequal expansion, a coupling member removably secured within the front end of the inner wall and provided with an inwardly projecting flange, a rearwardly tapered discharge pipe disposed centrally within said gas chamber with its front end slidably engaging the projecting flange from said coupling member, thus permitting relative movement of the inner wall and discharge pipe due to unequal expansion, said discharge pipe having a partition spaced from its rear end, with a plurality of discharge orifices around it in front of said partition and a plurality of exhaust openings at the rear of said partition, and a conical end head for said gas chamber tightly fixed to the rear of said inner wall and to said discharge pipe at the rear of its discharge openings, said discharge pipe projecting beyond said rear head to provide a coupling member.

1,684,187. CONSTRUCTION FOR AIRPLANE FLOATS. GROVER LOENING, New York, N. Y. Filed Oct. 21, 1927. Serial No. 227,733. 1 Claim. (Cl. 244—31.)

Construction for airplane floats comprising the combination of wood frame members, an outer metal skin, bolts for securing said metal skin to said frame members, and said skin being entirely separated from said frame members by a layer of protecting material.

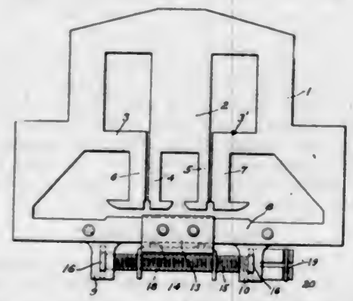


1,684,188. DISPENSING CONTAINERS. SAMUEL A. MERRIN, Chicago, Ill., assignor, by mesne assignments, to Marathon Paper Mills Company, Rothschild, Wis., a Corporation of Wisconsin. Filed Aug. 23, 1926. Serial No. 130,856. 9 Claims. (Cl. 312—61.)

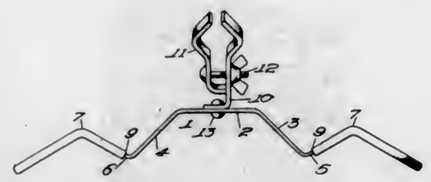
1. A dispenser comprising a box like structure having a top wall formed with a delivery opening and a bottom consisting of two members hinged respectively to opposite vertical walls of the box and extending toward each other, the free ends of said members being adapted to swing upwardly toward the delivery opening, and said members having downwardly extending parts between their hinges and said free ends on which the weight of the dispenser is carried.

1,684,189. BASEBALL GAME. ALBERT MEYER, Chicago, Ill. Filed May 8, 1926. Serial No. 107,689. Renewed Feb. 10, 1928. 1 Claim. (Cl. 273—93.)

In a base ball game, a game board representing a base ball playing field comprising the diamond and score spaces, certain of said score spaces being located adjacent the home plate and receiving indicia denoting the individual plays as made, the remaining score spaces being located in the outfield and receiving indicia denoting the cumulative results of the indicia of the home plate score spaces, markers adapted for movement over the diamond, playing cards comprising separate packs, the cards of said packs having inscriptions on their faces, the cards of two of said packs being adapted to be turned face up, one card at a time, alternately; the inscription upon the exposed faces of the cards of one pack being readable through reference to the exposed faces of the other pack, and a third pack of cards adapted for optional play by one of the contending parties to the game, the exposed card inscriptions determining the movements of the markers over the board and the score indicia, substantially as set forth.

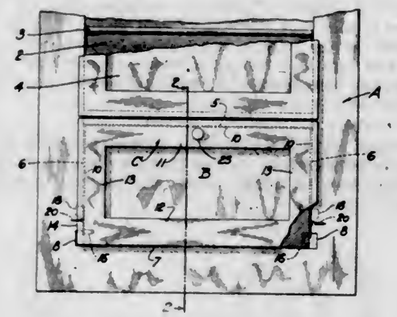


1,684,190. DEVICE FOR HOLDING TOILET-PAPER ROLLS. CHARLES MOSER, Los Angeles, Calif. Filed Oct. 2, 1926. Serial No. 139,073. 3 Claims. (Cl. 242—55.2.)



2. A device of the class described comprising a metal bracket adapted to be secured to a support, a tubular spindle secured to said bracket for supporting a roll of paper thereon, and a spring controlled flange pivotally secured to the free end of said spindle.

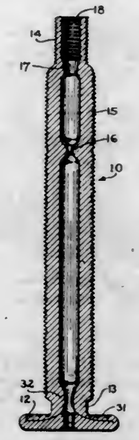
1,684,191. ELECTRICAL MEASURING INSTRUMENT. WALTER G. MYLIUS, Wilkinsburg, Pa., and CHARLES M. HOEFTMAN, Newark, N. J., assignors to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 17, 1927. Serial No. 176,078. 8 Claims. (Cl. 171—264.)



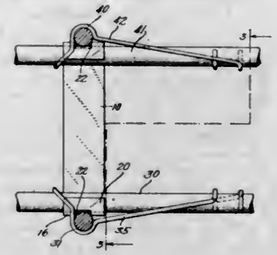
3. A light-load adjusting device for electric meters comprising a core member having extensions therefrom, a movable carrier, a conducting plate of substantially U-shape secured to said movable carrier and adapted to frictionally engage the core member, and means for adjustably mounting the movable carrier on the said extensions.

1,684,192. PUTTER ATTACHMENT. STEFFEN P. NEMETH, Chicago, Ill., assignor, by mesne assignments, of one-half to Bert Coates Nemeth, Chicago, Ill. Filed Aug. 25, 1926, Serial No. 131,443. Renewed Apr. 25, 1928. 6 Claims. (Cl. 273—35.)

1. In a putter attachment, an angular bar, a link adjustably connected to said bar, and a bracket pivotally connected to said link.



1,684,193. COMBINATION SHELF AND DROP DOOR. WILLIAM A. NOACK, Oakland, Calif., assignor to Concealo Fixture Company, Inc., a Corporation of Nevada. Filed May 21, 1924. Serial No. 714,861. 3 Claims. (Cl. 312—189.)

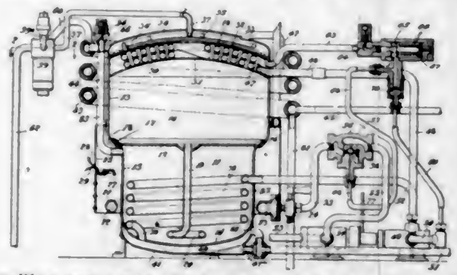


1. The combination with a cabinet having a door opening formed therein, said opening being enlarged at each side at the bottom of the opening, a door forming a closure for the opening and fitting all of the opening except the enlarged lower side portions, a projecting molding surrounding the door and overlapping the sides of the door opening and the upper end thereof, the outer edge of said molding fitting the bottom of the door opening and the enlarged sides thereof, a pair of pivots adjacent the enlarged lower side portions of the door opening, said pivots permitting the lower portion of the door to swing into the enlarged lower portion of the door opening, and means for stopping swinging movement of the door and for supporting the door when it reaches a horizontal position.

1,684,194. METHOD OF MAKING TIRE-VALVE STEMS AND THE LIKE. ERASTUS G. OAKLEY, Southport, Conn., assignor to Bridgeport Brass Company, Bridgeport, Conn. Filed Mar. 12, 1923. Serial No. 624,532. 15 Claims. (Cl. 29—157.)

1. The process of making a valve stem or like article, which comprises folding over a wall of a blank in the form of a piece of tubular stock of uniform diameter throughout its length adjacent one end thereof to form a flat disk-like head and simultaneously flowing the metal of the blank inwardly adjacent the head to form a thickened wall, while limiting the movement of the metal into the bore of the blank to preserve the opening therethrough.

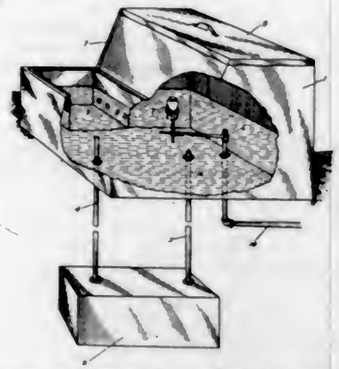
1,684,195. REENFORCEMENT FOR CONCRETE STRUCTURES. RUSSELL C. OLMSTED, Hudson Heights, N. J. Filed Nov. 23, 1926. Serial No. 150,195. 8 Claims. (Cl. 94—8.)



7. A concrete reenforcing structure comprising a spacer element, a reenforcing element receiving loop provided at one end thereof, an outwardly disposed notch formed in said loop, an outer reenforcing element mounted in said notch, an inner reenforcing element positioned in said loop, and means for securing the outer reenforcing element in said notch and securing the inner reenforcing element in said loop.

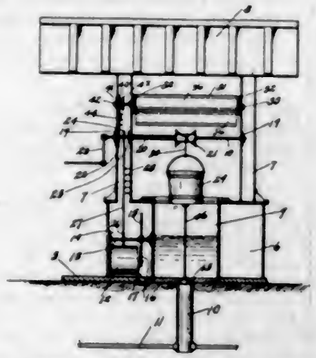
1,684,196. REFRIGERATING APPARATUS. STUART OTTO, Scranton, Pa., assignor to Iceless Automatic Refrigerator Company, a Corporation of Delaware. Filed Dec. 5, 1923. Serial No. 678,572. 15 Claims. (Cl. 62—118.)

4. A boiler-absorber for refrigerating apparatus including a vessel having an upper distillation chamber, a lower absorption chamber, communication means from the lower part of one chamber to the lower part of the other, a water jacket for cooling the top wall of the upper chamber, and a separate water jacket for cooling the bottom wall of the lower chamber.



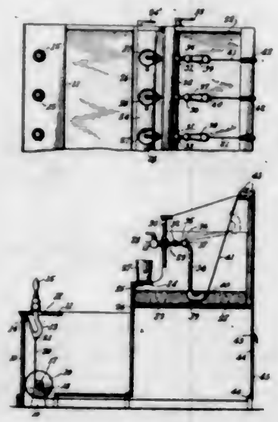
13. A refrigerating apparatus, including a boiler-absorber, a heater, a controlling means for the supply of heating medium to said heater, an emergency outlet conduit leading from said boiler-absorber, a rupture disk

in said conduit for permitting escape of refrigerant gas through said conduit when the pressure exceeds a predetermined pressure, and means operable to close said con-



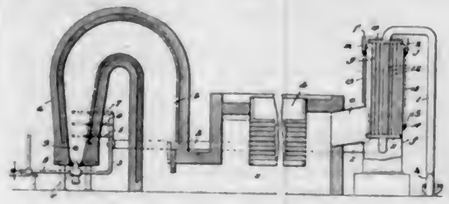
trolling means when the gas pressure in said conduit in advance of said rupture disk reaches a second, but lower predetermined limit.

1,684,197. SYSTEM FOR PREVENTING LIQUIDS FROM FREEZING. EVERETT C. PETSCH, Pleasant Dale, Nebr. Filed May 1, 1923. Serial No. 635,996. 5 Claims. (Cl. 119—73.)



1. A stock tank which is partially submerged beneath the surface of the earth, means for supplying said tank with water and for maintaining the water within the tank at a constant level, a water reservoir positioned in the subsoil beneath the front line, and a thermo-siphon connection between said reservoir and said tank.

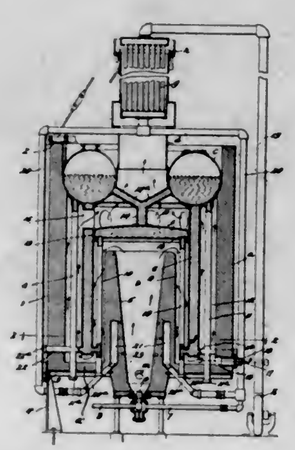
1,684,198. DISPLAY DEVICE. WALTER PETTIT, Clare, Mich. Filed July 23, 1926. Serial No. 124,456. 7 Claims. (Cl. 40—126.)



1. In a machine of the character described, the combination with a housing having a source of water supply, of a pair of hollow supports, a transversely disposed shaft and sleeve, a drum mounted thereon and a bucket hung therefrom, a crank, a jointed manikin connected thereto, means for driving said shaft and means for intermittently driving said sleeve.

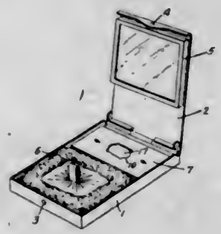
1,684,199. AMUSEMENT RACING DEVICE. HARRY PITT, Elizabeth, N. J. Filed Aug. 5, 1927. Serial No. 210,988. 8 Claims. (Cl. 273—86.)

1. An amusement racing device comprising a tank receptive of a liquid, a plurality of scoops above said tank, a tap in said tank for each of said scoops, tubular connections having ball-and-socket joints between said scoops and said taps, and individual means to raise said scoops above said taps permitting the liquid therein to flow out of said taps.



1,684,200. APPARATUS FOR BURNING FINE FUEL IN SUSPENSION. JAMES POLLOCK, New York, N. Y. Filed Sept. 13, 1926. Serial No. 135,222. 3 Claims. (Cl. 110—28.)

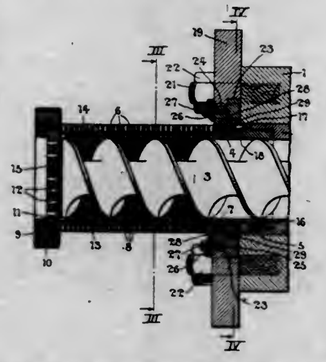
1. In an apparatus for burning fine fuel in suspension, a furnace chamber, a relatively low stack and passageways connecting the top of the chamber with the lower part of the stack, an air heater in the stack having a hollow head extending over the stack and spaced from the same, leaving an annular gap for the escape of gases, an annular damper slidable vertically upon the stack for varying the width of said gap, and means for blowing air through the heater into the furnace chamber.



1,684,201. BOILER FOR UTILIZING FINE COAL. JAMES POLLOCK, New York, N. Y. Filed Feb. 26, 1927. Serial No. 171,241. 4 Claims. (Cl. 122—332.)

4. In a steam boiler, a furnace chamber open at the top and having an upwardly flaring inner surface, an outer wall spaced from the chamber, a base connecting said wall with said chamber, an annular steam drum above the chamber, an annular container extending from the drum downwardly around the chamber and spaced therefrom and also from said base, a header secured to the inner wall of the container and extending over the

chamber, said header and container adapted to direct the gases from said chamber downwardly, thence under the container, and thence upwardly between the container and the outer wall, and sight openings arranged in said outer wall adjacent the bottom of the container.

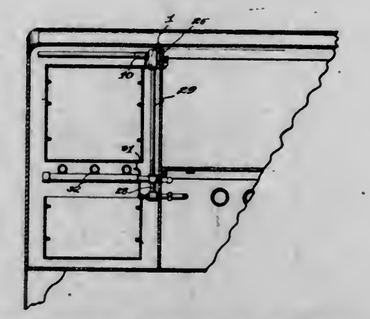


1,684,202. VANITY CASE. HYACINTHE ALPHONSE POVEL, Paris, France. Filed Jan. 6, 1927, Serial No. 159,254, and in France Dec. 1, 1926. 6 Claims. (Cl. 132—83.)

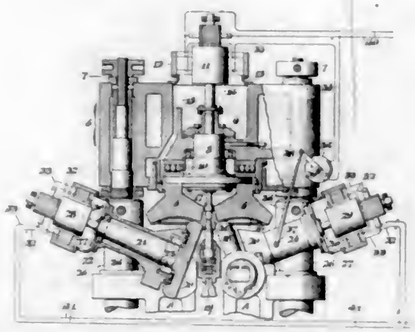
6. In a vanity case, a powder box therein and a powder puff in juxtaposition to said box, said box having a lateral discharge opening facing said powder puff, a resilient member associated with said powder box for discharging powder through said opening by pressure applied against said resilient member and a cover for said case for closing the same and for applying pressure against said powder puff to cause it to expand whereby it will close said discharge opening.

1,684,203. STRAINER HEAD FOR TUBING MACHINES. VERNON ROYLE, Paterson, N. J. Filed Dec. 26, 1919. Serial No. 347,569. 34 Claims. (Cl. 146—174.)

32. A device of the character described comprising, a tubular element composed of inner and outer perforated members, a perforated end member for said element, means for removably securing the end member to the outer member, said outer member being provided at its rear end with lateral projections, which said projections are adapted to be moved into and out of engagement with projections on the tubing machine for bringing the outer member and end member into and out of operative position with respect to the machine.

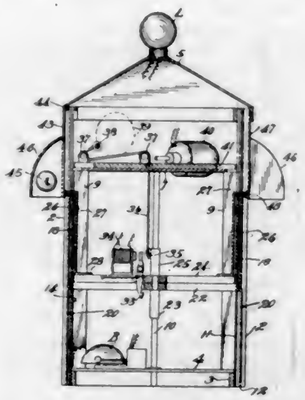


1,684,204. METHOD OF CONSTRUCTING BALLAST RESISTANCES. SAMUEL RUTTENBERG, Brooklyn, N. Y., assignor to Samuel Ruttenberg and Meyer Nathan Leibowitz, New York, N. Y. Filed May 3, 1926. Serial No. 106,291. 5 Claims. (Cl. 153—64.)



1. The method of winding resistance wire on a form of substantially flat shape having serrated edges with the coils of said wire supported in said serrations, but otherwise spaced from the form, which consists in supporting said form within a core with its serrated edges projecting from the sides thereof, and winding said wire on said core between the serrations on the side edges of the form.

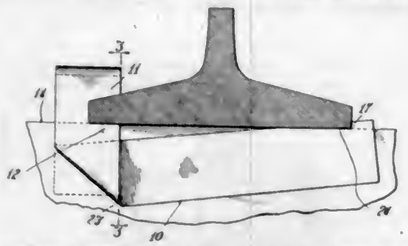
1,684,205. HEAT-CONTROL DEVICE FOR OVENS. ALVIN G. SHERMAN, GEORGE SMITH, and GEORGE H. RAMIO, Detroit, and CYRIEL A. ROOSE, Grosse Pointe Farms, Mich., assignors to the Detroit Vapor Stove Co., Detroit, Mich., a Corporation of Michigan. Filed May 19, 1926. Serial No. 110,085. 12 Claims. (Cl. 236—15.)



1. A heat control device for ovens, or similar structures, comprising in combination a heat control unit secured to the interior of the oven, the oven having an opening adjacent said heat control unit and a shield on the exterior of the oven readily removable to permit access to said heat control unit.

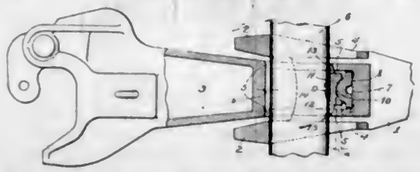
1,684,206. MEANS FOR ROLLING THIN SECTIONS. JOHN W. SMITH, Philadelphia, Pa. Filed Mar. 14, 1927. Serial No. 175,335. 8 Claims. (Cl. 80—16.)

1. In a rolling mill embodying a rotary forming die and co-operative rolling means movable radially of the forming die, the combination of means with automatic control to positively drive the forming die and the rolling means at synchronized surface speed in different cooperative positions assumed incidental to the rolling operation.



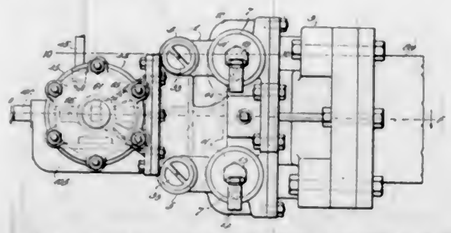
1,684,207. TRAFFIC SIGNAL. CLARENCE D. SMYTH, Rox, Nev., and GUY M. ROBEY, Los Angeles, Calif. Filed July 15, 1924. Serial No. 726,139. 12 Claims. (Cl. 177—337.)

1. A traffic signal including a housing having fixed walls with outer traffic sign faces, a set of slidable traffic sign plates operative to cover and uncover the relative fixed sign faces; means to conceal the plates in one position in the housing, said fixed walls having also "Fire" indicia, movable curtains lying over the said indicia, and means for moving the plates alone and for moving them and the curtains together to cover the traffic signals and disclose the "Fire" indicia.



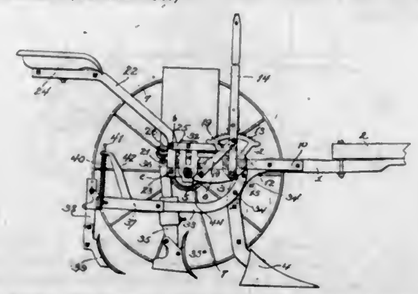
1,684,208. RAIL ANCHOR. HAROLD G. WARR, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed June 9, 1927. Serial No. 197,602. 17 Claims. (Cl. 238—330.)

1. A rail anchor made from a flat metal strip of substantially uniform width formed along one margin with a rail base receiving recess and bent upon itself to provide a jaw portion adapted to be driven into gripping engagement with the rail base flange at one side of the rail and



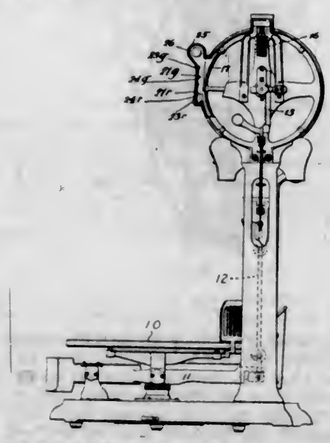
formed with means for engagement with the base flange at the other side of the rail to lock the jaw portion of the anchor in its gripping position on the rail.

1,684,209. COUPLER SHANK AND YOKE CONNECTION. JOHN CLIFFORD WHITRIDGE and GEORGE T. JOHNSON, Columbus, Ohio, assignors to The Buckeye Steel Castings Company, Columbus, Ohio. Filed Jan. 28, 1927. Serial No. 164,303. 5 Claims. (Cl. 213—69.)



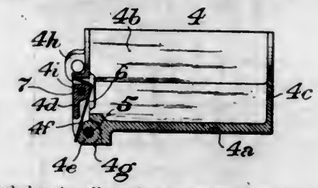
1. The combination of a slotted coupler shank, a slotted yoke, and a key inserted therethrough, said shank provided with a vertically extending horizontally convex bearing surface at the rear of the slots therein, and an equalizer between the key and said surface having a concave rear face seating on the bearing surface.

1,684,210. MOTOR. NORMAN EDLOW WOODS, Paterson, N. J.; Lelia P. Woods administratrix of said Norman Edlow Woods, deceased. Filed Nov. 5, 1923. Serial No. 672,905. 13 Claims. (Cl. 121—41.)



1. In a motor, a housing, a driven shaft disposed axially of the housing, cylinders and pistons disposed in working pairs on opposite sides of said shaft, the cylinders of each pair communicating with a crank chamber therebetween, transmission shafts on opposite sides of and in gear with the driven shaft and in alinement with the crank chambers and extending thereinto, connections in the crank chambers between the pairs of pistons and the transmission shafts for transmitting the rectilinear motion of the former into curvilinear motion of the latter, duplex valve devices, one for each pair of cylinders, controlling the supply of fluid pressure to and its exhaust from the respective pairs of cylinders, a throttle valve device controlling the supply of fluid pressure to and exhaust from said duplex valve devices, a slidable, non-rotatable rod coupled to the throttle valve, and a sleeve slidable with the rod and rotatable with the driven shaft, said sleeve being operatively coupled to the rod in the rotation of the shaft for controlling said throttle valve to cut off the supply of fluid pressure to the motor upon a predetermined number of revolutions of said shaft.

1,684,211. PLANTER. HERMAN E. ALTGELT, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed Oct. 2, 1925. Serial No. 60,058. 10 Claims. (Cl. 111—60.)



1. In a planter, the combination with a wheeled axle, a beam, a connection between the wheeled axle and beam, a furrow opener carried by said beam, bars secured to and extending rearwardly therefrom, a seed sprout or boot and coverers carried by said bars, means for raising and lowering said beam and the devices carried thereby, a seed can, a horizontal gear for the feed mechanism of said seed can, a vertical gear mounted on the axle and slidable thereon, said vertical gear having a beveled portion, an adjustable plate carried by one of said bars for cooperation with the beveled portion of the vertical gear to move the latter out of mesh with the horizontal gear when the beam and the devices carried thereby are raised, and means for moving the vertical gear into mesh with the horizontal gear when the beam and said bars together with the devices carried thereby are lowered.

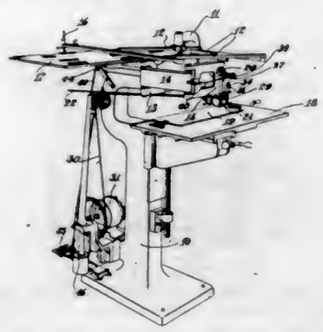
1,684,212. INDICATING CHART AND MEANS FOR VIEWING THE SAME. CHRISTIAN BERGER, Brooklyn, N. Y., assignor, by mesne assignments, to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Apr. 28, 1921. Serial No. 465,177. 11 Claims. (Cl. 88—1.)

1. In a weighing scale, a chart and means for displacing the same in accordance with an applied load, a plurality of differently colored sets of numbers thereon, said sets being each arranged in concurrently ascending arithmetical progressions with their zero points offset by a certain amount, a pair of color filters on the same side of said chart each filter rendering visible one set of numbers and rendering the other set invisible, and reading lines associated with each said filter spaced apart by the distance of the zero offsets whereby correlated numbers based upon the same weight may be concurrently read by the operator.

1,684,213. LOCOMOTIVE-DRIVING-BOX CELLAR. JAMES G. BLUNT, Schenectady, N. Y. Filed May 14, 1926. Serial No. 109,059. 1 Claim. (Cl. 308—83.)

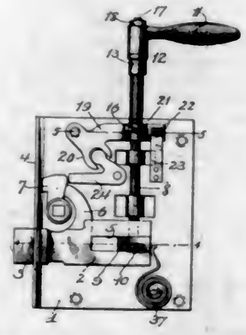
In a lubricant cellar, for axle boxes, the combination of a receptacle, having one end open, and a hinge lug at said end, the lug having a plurality of cam faces; a lid for closing the open end of the receptacle, comprising a hinge lug, and two hinge recesses, one disposed above the other; a pintle connecting the hinge lugs; and a plate spring, having an intermediate portion bearing on the inner side of the lid, a bottom portion projecting through the lower recess in the lid, and bearing on one of the cam faces of the hinge lug, and a top portion projecting into the upper recess in the lid, and locking the spring in position.

1,684,214. RECEPTACLE CLOSURE. FREDERICK C. CLEMENT, Philadelphia, Pa. Filed Feb. 5, 1926. Serial No. 86,119. 3 Claims. (Cl. 215—52.)



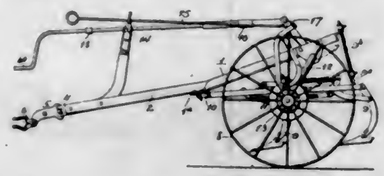
1. A receptacle closure comprising a longitudinally-divided tubular body member of springy material, a grasp member, and a resilient member medially connected coaxially of the grasp member having opposed complementary-shaped free arms that are rigidly secured to the body member at its top, whereby freedom for gradual increasing resistivity to contraction is afforded the body member when engaging the wall of the receptacle opening.

1,684,215. NUT. HARRY W. CONNELL, Baldwinsville, N. Y. Filed Mar. 18, 1925. Serial No. 16,312. 2 Claims. (Cl. 85—32.)



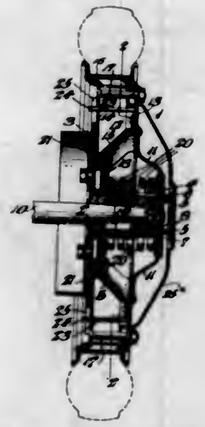
1. A nut having a wrench engaging portion and an extension formed integral therewith and at the outer end thereof and upon which a wrench may freely rotate and a pin passing through said extension to prevent the removal of the wrench over said extension.

1,684,216. ENGRAVING MACHINE. WILLIAM J. DONOVAN, Sag Harbor, N. Y., assignor to Engravers & Printers Machinery Company, Inc., Sag Harbor, N. Y., a Corporation of New York. Filed Oct. 27, 1924. Serial No. 746,031. 12 Claims. (Cl. 90—13.1.)



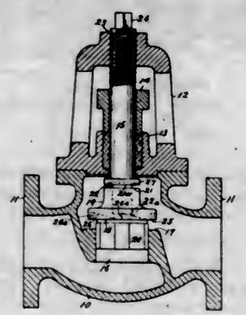
1. An engraving machine embodying therein a pantographic lever system, a work head actuated thereby, a tracing stylus carried by said lever system, a pattern support in operative relation to said stylus, a work table in operative relation to said work head, a tool carried by said work head, means having a normal tendency to move said work head from, and maintain it out of, the operative relation to work upon said work table, means whereby said work head may be moved toward said work table, a stop member projecting towards said tool to a position closely adjacent and above the working point thereof, whereby downward movement of said work head will be arrested by engagement of said stop member with a plate or sheet upon said work table, and thus ensure uniformity in the depth of cut made by said tool irrespective of surface irregularities in a plate or sheet upon said work table and means operative upon said stop member and acted upon both by the means for moving the work head toward and the means for moving the work head from said work table whereby said work head and said stop member will be simultaneously actuated through the same mechanism and to the same extent.

1,684,217. LATCH. JOHN B. FREYSINGER, New Britain, Conn., assignor to North & Judd Manufacturing Company, New Britain, Conn. Filed Sept. 21, 1925. Serial No. 57,716. 6 Claims. (Cl. 292—169.)



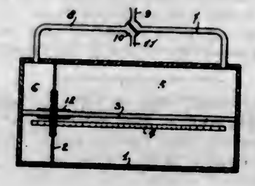
1. In a door latch, the combination of a latch-bolt, a vertical rotatable spindle for moving the bolt, a roll-back by which the bolt may be moved, a locking element having one end arranged to abut the roll-back whereby to prevent movement thereof, an operating angle lever provided with a fork at one end having sliding engagement with the locking element, and means carried by the spindle and engaged with the opposite end of the operating lever to set the same.

1,684,218. CULTIVATOR. ARTHUR D. GALLAGHER, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Original application filed July 23, 1924, Serial No. 727,743. Divided and this application filed Oct. 7, 1925. Serial No. 61,111. 3 Claims. (Cl. 97—243.)



1. In a cultivator, the combination with a frame, a crank-axle supporting the rear portions of the frame, and carrying wheels, of an arm rigid with the intermediate cranked portion of the crank-axle and extending angularly therefrom, a standard rigid with the frame in advance of the axle, a sleeve pivotally supported by said standard, an internally threaded screw member connected to said arm, a screw shaft passing freely through said pivoted sleeve and cooperating with said threaded screw member to effect depth adjustment by raising or lowering the cranked portion of the axle, means for raising or lowering the frame, and a stop on said screw shaft to engage the pivoted sleeve and limit rearward movement of the shaft when the frame is actuated by said frame raising and lowering means.

1,684,219. RESILIENT WHEEL. HUGO C. GIBSON, Philadelphia, Pa. Filed Jan. 24, 1927. Serial No. 162,994. 4 Claims. (Cl. 152—44.)

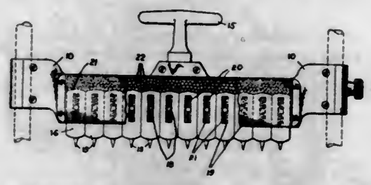


1. In a road wheel, a hub body having a fixed flange and a removable flange, a hollow wheel having wheel plates of ring form united by a substantially cylindrical band at their outer edges and by a radially corrugated bowl at their inner edges slidably mounted between said flanges, a radially corrugated disc mounted upon the hub body and within the radially corrugated bowl and having splines coacting with the hub body, the corrugations of the disc by coaction with those of the bowl permitting the axis of the hollow wheel with its bowl to become eccentric to the axis of the hub and the wheel to rotate in relation to the hub, such rotation being limited by the construction to less than the width of any one corrugation, and a spring interposed between the radially corrugated disc and the removable hub flange.

1,684,220. CHECK VALVE. JOHN L. GIBSON, Brooklyn, N. Y. Filed Dec. 16, 1925. Serial No. 75,768. 4 Claims. (Cl. 251—129.)

1. In a check valve, a valve seat having a discharge passage, a valve movable with respect to said seat and having a face adapted to engage the latter and close said passage, and one or more pockets formed in said valve face in opposite relation to said seat and adapted to be closed thereby, the said pockets having a bottom wall inwardly inclined from the face of said valve.

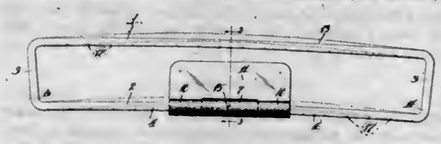
1,684,221. RESPIRATION GYMNASTIC APPARATUS. HENRI GOUGNARD, Ahin-lez-Huy, Belgium, assignor to Société Belge des Produits Rationnels, Societe Anonyme, Ahin-lez-Huy, Belgium, a Company. Filed Mar. 16, 1927, Serial No. 175,905, and in Belgium Mar. 18, 1926. 3 Claims. (Cl. 73—112.)



1. In a respiration apparatus, a transparent airtight cylinder having an interior longitudinal rod, a plate fitted to the interior of said cylinder and slidable upon said rod, a scale on said cylinder to indicate the position of said plate, inlet pipes communicating with the interior of said chamber near its ends and on either side of said plate, a third pipe and a cock connecting each of said inlet pipes alternately with said third pipe and with the atmosphere.

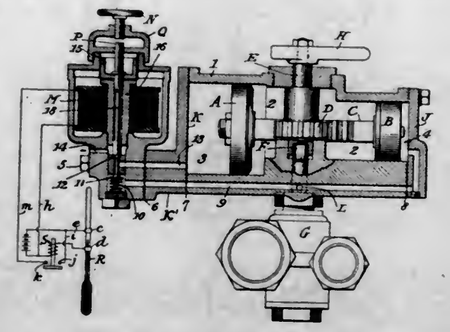
1,684,222. METHOD OF PRESERVING WOOD AND WOOD PRESERVATIVE. GILBERT GUNN, Pollokshaws, Scotland. Filed June 2, 1926, Serial No. 113,327, and in Great Britain Mar. 26, 1926. 9 Claims. (Cl. 99—12.)

1. As a new wood preservative, a slightly acid aqueous solution of a soluble chromate and a soluble copper salt.



8. In the preservation of wood, the process which comprises treating wood with a slightly acid aqueous solution containing potassium dichromate and copper sulfate and their products of reaction, the proportion of potassium dichromate being greater than corresponds molecularly to the copper sulfate.

1,684,223. MEAT CLAMP. JOSEPH HOPKINSON, Dayton, Ohio, assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed May 11, 1926. Serial No. 108,330. 15 Claims. (Cl. 146—217.)

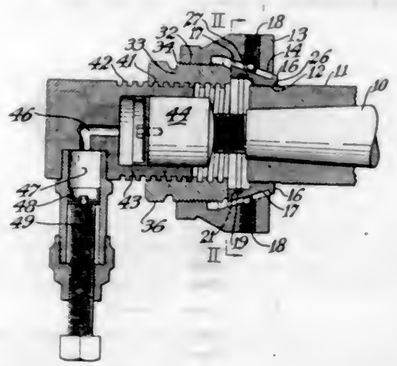


1. A clamping bar comprising a movable supporting structure and a plurality of clamping elements movably supported thereon for individual and independent movements in the line of movement of the supporting structure.

1,684,224. ADJUSTABLE DRAFTING INSTRUMENT. WALTER E. HOWDEN, Edwardsville, Ill. Filed Apr. 12, 1924. Serial No. 705,987. 4 Claims. (Cl. 33—177.)

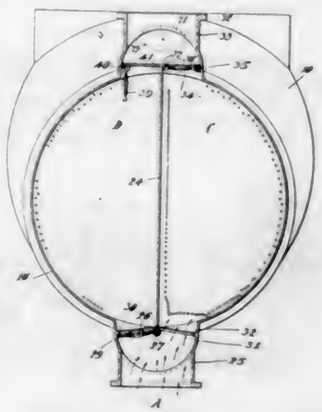
1. A drafting instrument made from a length of resilient material bent into an oblong shape having the ends of the material length disposed on one side of the oblong, and drawing means connected to the ends of the material length for flexing a portion of the material length.

1,684,225. VALVE ENGINE FOR STEAM HEATING. LEE P. HYNES, Albany, N. Y., assignor, by mesne assignments, to Consolidated Car-Heating Company, Inc., Albany, N. Y., a Corporation of New York. Filed Feb. 16, 1922. Serial No. 536,876. 13 Claims. (Cl. 236—84.)



1. A fluid pressure valve engine comprising a rotatable shaft provided with valve stem engaging means, a reciprocably mounted operating member engaging said shaft, fluid pressure means for actuating said operating member, and a single magnetically controlled valve controlling said fluid pressure means.

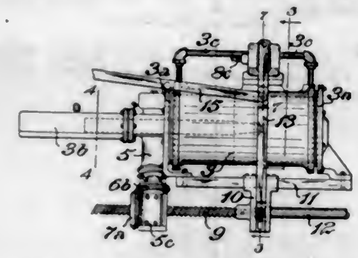
1,684,226. WHEEL PULLER. DAVID CLEVELAND JOHNSON, Carbon Hill, Ala. Filed Feb. 2, 1928. Serial No. 251,438. 7 Claims. (Cl. 29—86.)



1. A wheel puller comprising an outer sleeve member having its inner surface bored to form a frustum of a cone, a plurality of internally threaded segmental hub engag-

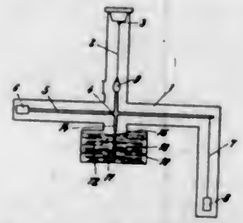
ing members fitting within the outer sleeve, an inner sleeve member screwed into the outer sleeve member and bearing against the segmental members, said inner sleeve member

being internally threaded, and means screwed into the inner sleeve member and bearing against the wheel axle to exert a pulling force on the hub.



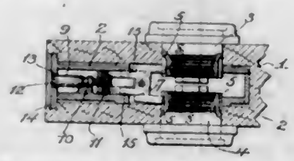
1,684,227. CONDENSER. EINAR A. JOHNSEN, Mountain Lakes, N. J., assignor to Engineering Development Company, New Brunswick, N. J., a Corporation of New Jersey. Filed Jan. 6, 1927. Serial No. 159,274. 19 Claims. (Cl. 257—43.)

1. In a surface condenser, a shell, a plurality of tubes therein, and means in the condenser for reversing the direction of the flow of a cooling medium through the said tubes.



1,684,228. STEAM-ENGINE VALVE REVERSING GEAR. JULIUS KINDERVATER, New York, N. Y. Filed July 19, 1923. Serial No. 652,542. 4 Claims. (Cl. 121—41.)

1. In a valve cut-off and reversing gear, a fluid pressure cylinder, a piston fitted to traverse therein, means for admitting motive fluid to the cylinder, a piston rod secured to the piston and having a rack on one of its sides, a gear shaft journalled transversely to the line of traverse of the piston, a pinion on said shaft engaging the rack of the piston rod, a nut rotatably mounted, gears transmitting rotary motion from the gear shaft to said nut, a reversing screw engaging said nut, and a cross-head actuated by said reversing screw and operatively connected to the valve; said fluid admission means comprising an operating valve for controlling the supply and exhaust

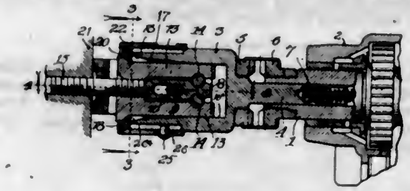


of motive fluid to and from the fluid pressure cylinder, a link between said operating valve and the cross-head, and a control rod operatively connected to said link.

1,684,229. MEASURING INSTRUMENT. JOHANN KOENIGSBERGER, Freiburg, Germany. Filed July 21, 1926, Serial No. 123,988, and in Germany Aug. 10, 1925. 4 Claims. (Cl. 265—68.)

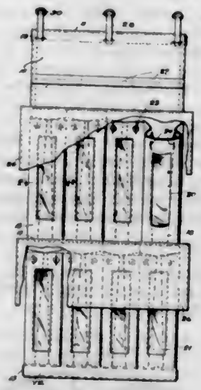
3. In a liquid damping arrangement for measuring instruments, in particular for torsion balances, a damping device proper consisting of a plurality of discs suspended in the damping liquid, a short thin wire bearing said damping device and suspended from the suspended moving element of the instrument, said wire passing through the centre of the surface of the damping liquid.

1,684,230. SECURING OR CLAMPING MEANS FOR LOCK CYLINDERS. JOSEPH S. LACH, Stamford, Conn., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn. Filed Nov. 14, 1925. Serial No. 69,034. 1 Claim. (Cl. 70—46.)



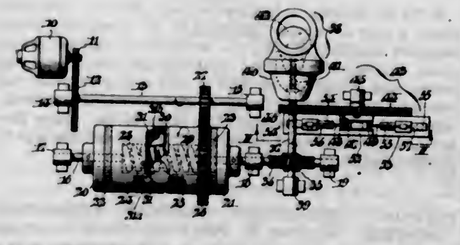
Means for securing lock cylinders comprising a yoke having open sides, a dog pivoted in the inner end of the yoke and constructed at its inner end to engage the lock cylinders, fingers projecting from the outer end of the dog between the top and bottom of the yoke and arranged to extend through the open sides of the yoke as the dog moves pivotally, and means for securing and adjusting the yoke.

1,684,231. STUD DRIVER. AXEL LEVEDAHL, Aurora, Ill., assignor to Independent Pneumatic Tool Company, Chicago, Ill., a Corporation of Delaware. Filed Apr. 20, 1925. Serial No. 24,697. 7 Claims. (Cl. 81—53.)



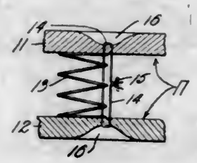
1. In a stud driver, the combination with a socketed body member, of a holder slidably retained in said socket

and having longitudinal slots and a cross-slot at the front end thereof, stud engaging jaws fulcrumed on the holder in the longitudinal slots with the outer ends of the jaws in the cross-slot, and coacting cam surfaces on the jaws



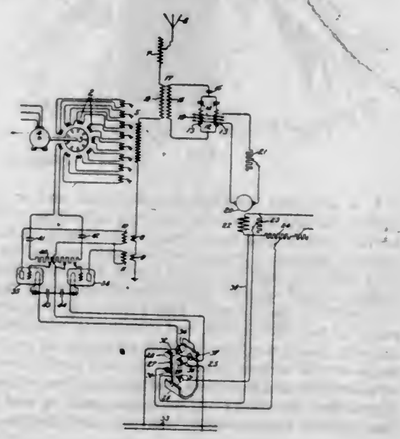
and body member, respectively, for engaging the jaws with and allowing the same to be released from a stud on sliding the outer end of the holder into and out of said socket.

1,684,232. SHOE AND LOCKER BAG. MAX LEVIT, Shenandoah, Pa. Filed Nov. 19, 1927. Serial No. 234,527. 7 Claims. (Cl. 150—52.)



1. A shoe or locker bag comprising a backing sheet, pockets formed therewith and each comprising two plies of material stitched to said backing sheet and having a front cut-out portion, and transparent material inserted between said plies and closing said cut-out portion.

1,684,233. DIFFERENTIAL RELEASE TRANSMISSION. HARRY A. LEWIS, Norristown, Pa. Filed July 16, 1927. Serial No. 206,204. 9 Claims. (Cl. 192—142.)

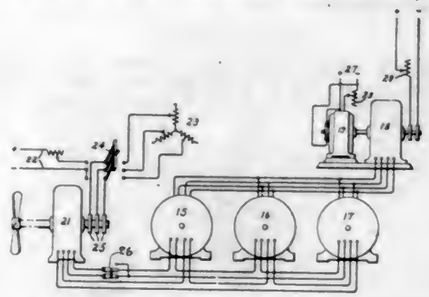


5. A differential release transmission comprising a motor, a transmission shaft with spaced abutments thereon, and a pair of loosely-mounted clutch members in the interval on the shaft, said clutch members having opposing wedge teeth interlapping with liberal circumferential clearance to permit lost motion and thereby enable the motor to pick up speed incidental to reversals in driving one of the clutch members before taking the load of the transmission shaft.

1,684,234. SPRING-CUSHION CONSTRUCTION. MORRIS LIPPS, New York, N. Y. Filed Aug. 2, 1924, Serial No. 729,700. Renewed Feb. 8, 1928. 4 Claims. (Cl. 5—351.)

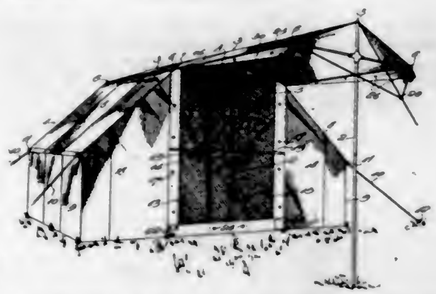
1. In a spring cushion construction, cover members, coil spring members bearing at their ends against the inner surfaces of the cover members, and a cord loop passing through the cover members and surrounding one side of the coil spring member for holding the spring in position.

1,684,235. AUTOMATIC ANTENNA REGULATOR. JOSEPH E. LOVE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 12, 1925. Serial No. 75,112. 10 Claims. (Cl. 250—17.)



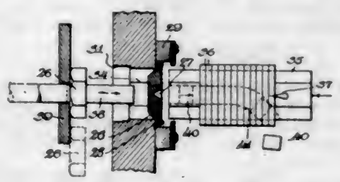
1. In combination, an antenna, a saturated core regulator associated with the antenna, said regulator including a regulating winding, a source of direct current connected to said winding, and means controlled by variations in the impedance of the antenna for varying the current supplied from said source to said regulating winding.

1,684,236. SYSTEM OF ELECTRIC SHIP PROPULSION. CAMPBELL MACMILLAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 14, 1923. Serial No. 624,988. 6 Claims. (Cl. 172—8.)



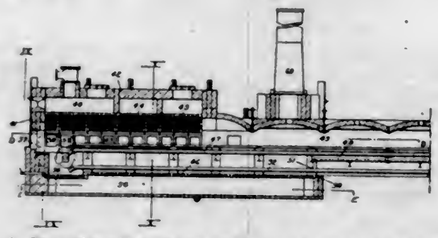
1. A system of ship propulsion comprising a polyphase propeller motor, a plurality of polyphase alternating current generators independently driven by prime movers subject to variations in speed and driving torque, and means for connecting each of the phase windings of said motor in

series with a corresponding phase winding of each of said generators whereby fluctuations of power generation in each prime mover may be absorbed directly by the main



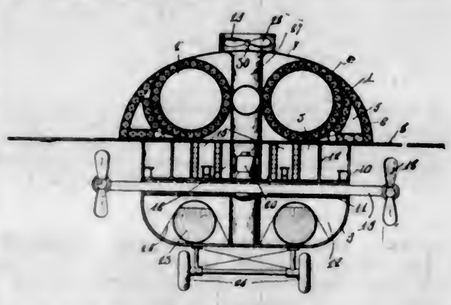
motor and propeller in such manner as to avoid interference with the steady production of power by the remaining generators.

1,684,237. TENT. HERBERT BAYNE MARBURY, Atlanta, Ga. Filed Apr. 8, 1927. Serial No. 182,047. 15 Claims. (Cl. 135—4.)



4. A tent body including a roof portion and an end wall portion having an entrance opening extending to the roof portion, supporting posts adapted to engage each end of the roof portion, a guard cloth suitably secured to the end wall adjacent said opening adapted to extend across the bottom of said opening and having its other end detachably connected to the opposite wall portion, screen netting secured to the roof portion and detachably connected to the end and guard portions to effect screening of said opening and a closure section secured to the roof portion, and adapted when extended to form a continuation thereof, means for supporting the closure in extended position and through said closure exert tension upon the roof portion.

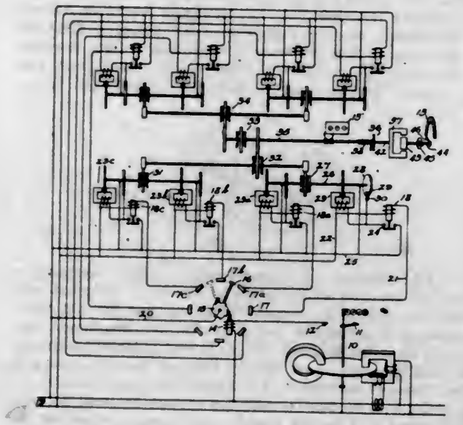
1,684,238. METHOD OF MAKING NUTS. PAUL H. MCCAIN, Chicago, Ill., assignor to Economy Screw Corporation, Chicago, Ill., a Corporation of Illinois. Filed Mar. 17, 1924. Serial No. 699,769. 2 Claims. (Cl. 10—86.)



1. The method of making a nut which consists in subjecting a blank to pressure to shape one face thereof and form a flange upon the edge thereof, positioning said blank upon a die by means of said flange, exerting a pressing force throughout an annular region upon said blank to force said blank into said die to remove said flange and to shape the side walls of said nut, and exerting an opposing force to the region within said annular region to pierce said blank while said blank is disposed within said die.

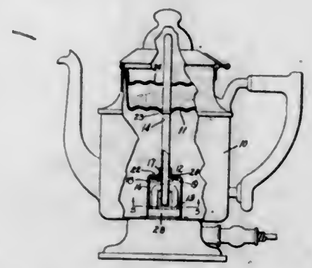
1,684,239. GLASS LEER. WILLIAM A. MORTON, Pittsburgh, Pa., assignor to The Amsler-Morton Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 14, 1925. Serial No. 15,507. 7 Claims. (Cl. 49—47.)

1. In a glass leer of the muffle type having an endless conveyor for carrying wares therethrough, and in which the muffle overhangs the forward end of the conveyor, said leer having passages for the circulation of gases around the sides and under the bottom of the muffle, other passages at the sides of the forward end of the muffle for heating the portion of the muffle overhanging and in advance of the conveyor, and a surface over and in close proximity to which the forward end of the return portion of the conveyor moves, and a circulating passage under said surface through which gases passing through the said passages at the forward end of the muffle to heat the conveyor.



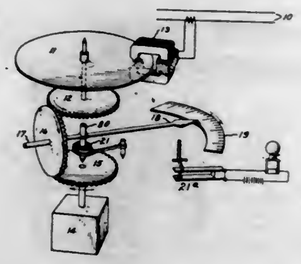
1,684,240. AERONAUTICS. JOSEPH E. PIGEON, Hollywood, Calif. Filed July 12, 1927. Serial No. 205,211. 4 Claims. (Cl. 244—7.)

3. In an airship, a horizontal longitudinally extending plane, a pair of tubular lighter than air sustaining bodies mounted longitudinally on the intermediate portion of the plane, a semi-circular roof covering the said sustaining bodies, and a fuselage secured to and suspended from the intermediate portion of the plane and extending in a longitudinal position thereunder, the sides of the plane projecting laterally beyond the sides of the roof and fuselage to provide longitudinal stabilizing wings.



1,684,241. TELEMETRIC IMPULSE SUMMATION SYSTEM. WILLIAM H. PRATT and DAVID R. PRICE, Lynn, Mass., assignors to General Electric Company, a Corporation of New York. Filed Nov. 16, 1926. Serial No. 148,911. 14 Claims. (Cl. 177—351.)

2. Apparatus for producing an indication in response to electric impulses and proportional to the average impulse rate comprising an impulse responsive relay, differential means for producing rotary motion proportional to the sum of a plurality of separate rotary motions, driving means for said differential mechanism, means responsive to the operation of said relay for causing said driving means to consecutively impart a plurality of predeter-

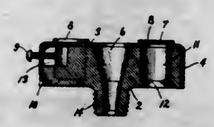


mined individual rotary motions, each of appreciable duration as compared to the duration of an impulse, to said differential mechanism at as many different driving points in response to consecutive impulses, and means driven by said differential mechanism for converting irregular rotary motion into a steady deflection proportional to the average rotary motion rate.

1,684,242. PERCOLATOR. CHARLES P. RANDOLPH, Oak Park, Ill., assignor to Edison Electric Appliance Company, Chicago, Ill., a Corporation of New York. Filed Dec. 13, 1926. Serial No. 154,357. 6 Claims. (Cl. 53—3.)

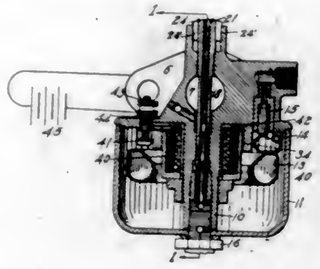
1. A percolator comprising a vessel, an electric heating unit secured to the bottom of said vessel so as to project upward into the interior thereof, a cap member set over said heating unit so as to form a heating space, said cap member being provided with an inlet orifice at the top, a tube secured to said cap member and extending through the top of said cap member into said heating space, and a valve in said heating space mounted on said tube arranged to be lifted to close said inlet orifice to prevent discharge of liquid therethrough from said heating chamber.

1,684,243. MEASURING DEVICE. THEODORE A. RICH, East Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed June 25, 1926. Serial No. 118,583. 10 Claims. (Cl. 171—95.)



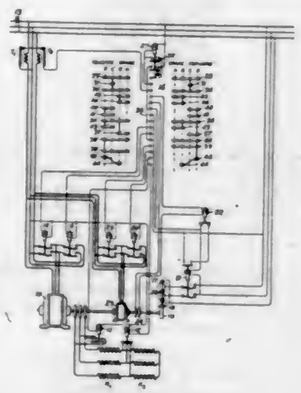
2. A measuring device comprising a rotating induced member and a stationary inducting member for producing a variable flux cutting said induced member, means for driving said induced member, and resilient means through which the induced member is driven for measuring the torque between said members.

1,684,244. CARTON. BESS E. RICHARDSON, Los Angeles, Calif. Filed Nov. 29, 1926. Serial No. 151,474. 5 Claims. (Cl. 229—8.)



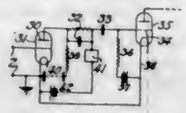
1. A carton cut from a single blank of material comprising a main support formed in the shape of a human figure, and a receptacle associated with said support in simulation of a burden carried by said figure.

1,684,245. CEILING BOX. WILLIAM T. RUETE, New York, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 17, 1923. Serial No. 669,189. 3 Claims. (Cl. 247—15.)



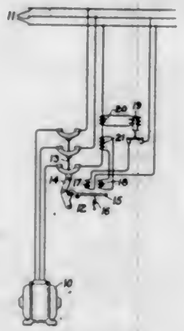
3. A ceiling box comprising a sheet metal outer portion consisting of integral bottom and peripheral side wall, said bottom having plugged conduit holes therein and said side wall having tapped screw holes therein, an oblong cast metal inner portion provided with apertures therein in alignment with the conduit holes of said outer portion and recesses extending from said apertures to the ends thereof in alignment with said screw holes, and means for securing said inner portion in fixed relation to said outer portion.

1,684,246. CARBURETOR. JOHN S. SALVA, Latonia, Ky., assignor to The Salva Carbureter Company, Covington, Ky., a Corporation of Kentucky. Filed Feb. 8, 1926. Serial No. 86,825. 3 Claims. (Cl. 261—12.)



1. In a carburetor comprising a mixing chamber, a float chamber, a standpipe central of the float chamber, a tubular needle valve in the standpipe and central thereof, a heater drum surrounding the standpipe, a helical passage provided in the drum, and passages in the standpipe so provided that they communicate with the passage in the drum in such manner that the mixture is compelled to pass from the float chamber through the helical passage on its way to the mixing chamber.

1,684,247. MOTOR-CONTROL SYSTEM. CARL SCHIEBELER, Berlin, Germany, assignor to General Electric Company, a Corporation of New York. Filed June 20, 1927, Serial No. 200,092, and in Germany July 1, 1926. 2 Claims. (Cl. 172—179.)

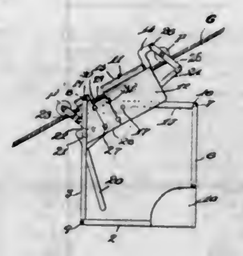


1. The combination of an alternating current motor, an electromagnetic brake therefor, switch mechanism for establishing power connections to release the brake and effect motoring operation of the motor in each direction, said switch mechanism being operable to establish reverse power braking connections for the motor after motoring operation in each direction, an auxiliary motor mechanically connected to be driven by the first motor and connected under the control of said switch mechanism for phase rotation in a direction corresponding to motoring operations of the first motor during both the motoring and reverse power braking of the motor in each direction, and an electro-responsive switch connected under the control of said switch mechanism to be operated responsively to the voltage induced in the rotor windings of the auxiliary motor when the reverse power braking torque of the first motor brings the same substantially to rest for controlling said electro-magnetic brake to maintain the first motor at rest.

1,684,248. CABLE TELEGRAPHY AND THE LIKE AND CIRCUIT THEREFOR. WILLOUGHBY STATHAM SMITH, Benchams, Newton Poppleford, and NORMAN WILLIAM MCLACHLAN and WILLIAM GORDON REED JACOB, London, England. Filed Feb. 23, 1928, Serial No. 256,402, and in Great Britain Aug. 19, 1926. 6 Claims. (Cl. 178—70.)

1. An electron tube amplification system including a pair of electron tubes each having grid, filament and plate electfodes, an output circuit for one of said tubes including a source of potential and an impedance connected in series between the plate and filament electrodes of said tube, an input circuit disposed between the grid and filament electrodes of a succeeding electron tube, an impedance, a conductive coupling system disposed between said input and output circuits, and means connected between said impedance conductive coupling system and a point in the output circuit of said first mentioned tube comprising an independent source of potential and an impedance for selectively compensating for the effects of the source of potential in said output circuit upon the grid of said succeeding tube.

1,684,249. AUTOMATIC CIRCUIT CONTROLLER. ALEXANDER R. STEVENSON, Jr., Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Feb. 9, 1925. Serial No. 7,801. 5 Claims. (Cl. 175—294.)

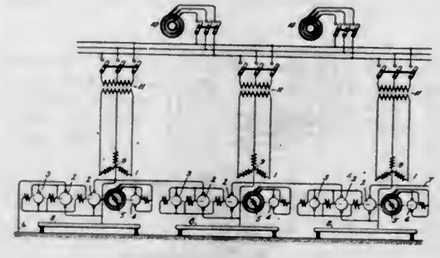


1. An automatic circuit interrupter comprising a movable switch member biased to the circuit opening position, electroresponsive means for holding the member in the circuit closing position, current responsive means arranged to be energized responsively to the current in the circuit controlled by the interrupter for effecting the release of said switch member responsively to predetermined current conditions in the controlled circuit, and electroresponsive means for independently maintaining the switch member in the circuit closing position when the current in the controlled circuit exceeds the safe interrupting capacity of the interrupter.

1,684,250. ROCKING-HORSE TOY. GILBERT H. TEGELBERG, Inglewood, Calif. Filed Nov. 1, 1926. Serial No. 145,566. 5 Claims. (Cl. 208—42.)

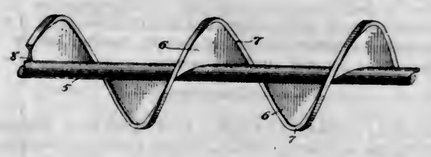
1. A rocking horse toy comprising in combination, a longitudinal frame having a pivotally connected crossbar, a wheel mounted on the rear end of the frame for free rotary movement in one direction, wheels on the crossbar one at each end thereof, a slat hingedly connected to the frame adjacent the crossbar, a saddle mounted on the slat, and a spring connecting the slat and the frame.

1,684,251. SAFETY CARRIAGE FOR DERRICKS. CHARLES E. THOMAS, Long Beach, Calif. Filed Feb. 24, 1927. Serial No. 170,661. 7 Claims. (Cl. 227—12.)



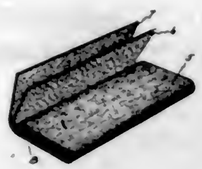
1. A safety carriage comprising in combination a chassis, means for suspending the same from a guy rope, said means comprising pulleys mounted on said chassis, a frame pivoted to said chassis, a brake on said chassis adapted to bear against said guy rope, and means for causing said pulleys to release their engagement with said guy rope.

1,684,252. DENTAL INSTRUMENT. GEORGE W. TODD, Omaha, Nebr., assignor to Rhena Todd, Omaha, Nebr. Filed Apr. 16, 1927. Serial No. 184,288. 4 Claims. (Cl. 32—10.)



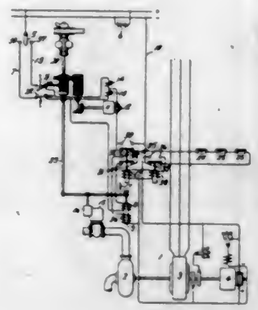
1. In a dental instrument, a pair of pivotally connected handles providing a jaw and a second jaw at their distal ends, the first named jaw having a concaved inner surface and a convergent terminal, a saw-blade mounted on the second jaw, the parts being of such proportion that said convergent terminal will normally be disposed in a plane between the ends of the saw-blade.

1,684,253. DYNAMO-ELECTRIC MACHINE. FRANK P. WHITAKER, Rugby, England, assignor to General Electric Company, a Corporation of New York. Filed July 27, 1925, Serial No. 46,281, and in Great Britain July 31, 1924. 4 Claims. (Cl. 172—239.)



1. In a high voltage direct current system, a plurality of motor generator sets, each motor generator set comprising a motor and a generator, the generators of said sets being connected in series, base plates on which said motor generator sets are mounted, means for insulating said base plates from ground, and means for electrically connecting the stator winding of the motor and the armature winding of the generator of each motor generator set to the base plate on which it is mounted.

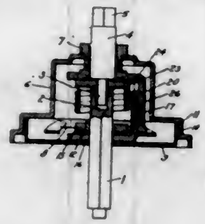
1,684,254. ENDLESS SPIRAL CONVEYER. JOSEPH OSWELL BAILEY, Atlanta, Ga. Filed Apr. 26, 1927. Serial No. 186,791. 4 Claims. (Cl. 198—213.)



1. An endless conveyer comprising a shaft, a continuous spiral blade member helically mounted on and secured to the shaft, said blade having its inner and outer edges thickened.

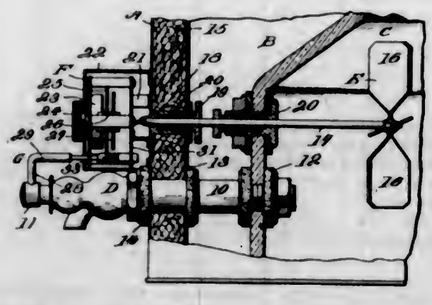
1,684,255. MAGNETIC WEDGE. SVEN R. BERGMAN, Nahant, Mass., assignor to General Electric Company, a Corporation of New York. Filed Feb. 8, 1926. Serial No. 86,694. 2 Claims. (Cl. 171—252.)

1. A dynamo-electric machine comprising a core structure having slots therein, a winding in the slots, and means for closing the slots comprising rolls of magnetic cloth having between the convolutions thereof a roll of fabric impregnated with a resinous condensation product.



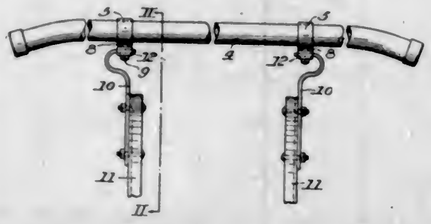
1,684,256. CONTROL SYSTEM. ELMER F. BLISS, Alplaus, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 14, 1924. Serial No. 732,079. 9 Claims. (Cl. 290—7.)

1. In combination, an automatic station comprising a source of current and automatic control means therefor, a remote control station, a control circuit connecting said stations, an auxiliary source of current switching means at said remote control station for controlling the energization of said control circuit from said auxiliary source of current, electroresponsive means at said automatic station connected to said control circuit and arranged, when energized, to effect the operation of said automatic control means to start said automatic station and maintain it in operation, and means responsive to a predetermined condition of said automatic station for disconnecting said electroresponsive means from said auxiliary source and for completing another energizing circuit therefor which is independent of said auxiliary source.



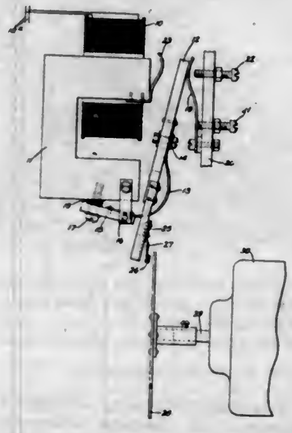
1,684,257. SNAP-SWITCH MOVEMENT. RICHARD BOELTER and ERNST BARTZ, Berlin, Germany, assignors to General Electric Company, a New York Corporation. Filed June 19, 1925, Serial No. 38,362, and in Germany Nov. 7, 1924. 2 Claims. (Cl. 74—14.)

1. A double snap movement for rotary switches comprising spaced stop lugs, flexible stop arms connected to the movable member of the switch and adapted to engage opposite sides of the respective stop lugs, a spring associated with said stop arms, and a rotary actuator having spaced crank legs engaging said spring and said stop arms



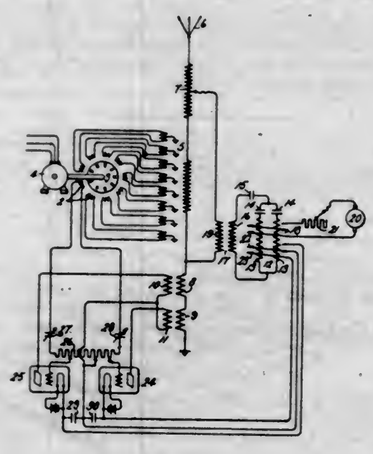
and adapted to tension said spring and thereafter deflect one or other of said stop arms from the instant lug according to its direction of rotation.

1,684,258. DISPENSING APPARATUS. ATWOOD L. BOGGS, Stoughton, Mass. Filed Sept. 13, 1926. Serial No. 135,106. 4 Claims. (Cl. 225—21.)



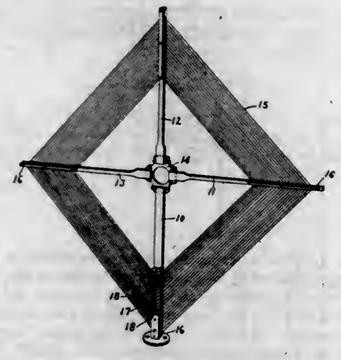
3. An apparatus for dispensing liquids comprising a container for the liquid, a draw-off valve, an agitator mounted upon a horizontal shaft and connected to a motor, a lock member carried by the valve and in engagement with the motor for locking the motor against running when the valve is in closed position.

1,684,259. AUTOMOBILE BUMPER. FREDERICK G. BAEMER, Pittsburgh, Pa., assignor to United States Chain & Forging Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Apr. 19, 1928. Serial No. 271,143. 14 Claims. (Cl. 293—55.)



1. Bumper structure comprising a bumper bar, a riser therefor, a support for the riser, means for connecting the outer end of the riser to the said bar, and means for connecting an inner portion of the riser to the support, the inner end of the riser partially embracing said support.

1,684,260. VIBRATORY DEVICE. HAROLD W. BROWN and ALLEN E. BAILEY, Jr., Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed July 28, 1925. Serial No. 46,686. 8 Claims. (Cl. 175—338.)

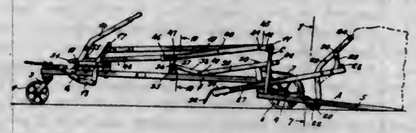


1. A vibratory device comprising a magnet coil arranged to be energized intermittently, an armature movable toward and away from said coil from one position to another, and means for causing said armature to periodically occupy its position remote from said coil when the coil is energized whereby the frequency of vibration of said armature is reduced.

1,684,261. AUTOMATIC ANTENNA REGULATOR. WILLIAM W. BROWN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 29, 1925. Serial No. 78,202. 13 Claims. (Cl. 250—40.)

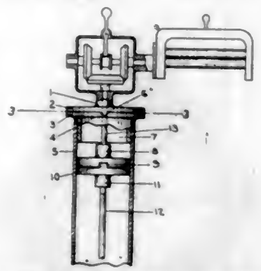
1. In combination, an antenna, means for maintaining the tuning of the antenna substantially constant, said means including a saturated core regulator and means for energizing said regulator in response to variations in said antenna tuning.

1,684,262. ANTENNA. REGINALD CHARLES CLINKER, Bilton, near Rugby, England, assignor to General Electric Company, a Corporation of New York. Filed Feb. 13, 1924, Serial No. 692,463, and in Great Britain Feb. 28, 1923. 12 Claims. (Cl. 250—33.)



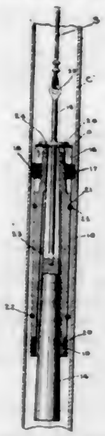
4. A loop antenna frame construction which comprises a plate, a plurality of antenna supporting arms radiating from said plate and pivoted thereto, and means on the arms adapted to automatically lock the arms to the plate when the arms are moved to normal expanded position.

1,684,263. HOT-CATHODE DEVICE. WILLIAM D. COOLIDGE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 17, 1924. Serial No. 738,246. 8 Claims. (Cl. 250—35.)



1. An electrical discharge device containing a cathode which is constructed to permit operation at a temperature of electron emission together with a material having a higher electron emissivity than said cathode and being capable of varying the electron emission at the cathode, the provision of means within the device for limiting the space current therein to a predetermined value for a given impressed voltage.

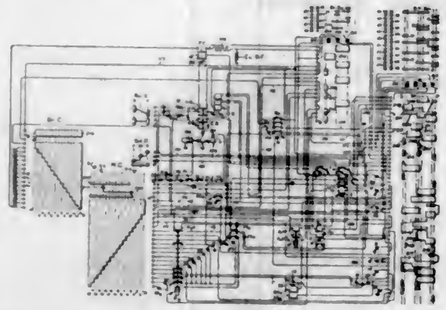
1,684,264. PUSH OFF FOR SWEEP RAKES. JOSEPH H. COPE, Denver, Colo. Filed Feb. 27, 1926. Serial No. 91,053. 9 Claims. (Cl. 56—395.)



1. A sweep rake comprising, in combination, a frame, a rake head tiltably connected to the frame, means for tilting the rake head with respect to the frame, a push off frame having its lower end pivotally connected with the rake head, a push off bar having one end pivotally connected with the push off frame between the pivot point and the free end, the free end of said bar having means for engaging the ground, and means for raising the free end of the bar out of engagement with the ground when the rake head is tilted in one direction.

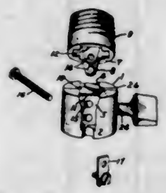
1,684,265. CONTROLLING MECHANISM FOR WRINGERS AND OTHER MACHINERY. HARRY J. CRINER, Clarinda, Iowa, assignor of one-half to A. G. Bush, Davenport, Iowa. Filed Mar. 5, 1925. Serial No. 13,402. 3 Claims. (Cl. 68—32.)

2. An automatic wringer release comprising a driving mechanism, operating mechanism connected to the wringer rolls, a disengageable clutch coupling between the driving mechanism and the wringer roll operating mechanism, and means secured adjacent the roll operating mechanism adapted to automatically disengage the clutch coupling when the wringer rolls are accidentally stopped by becoming clogged with an excess thickness of material fed thereto.



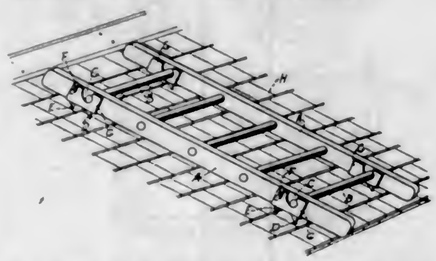
1,684,266. BRIDGING PLUG. RALPH D. FISHER and EDWIN M. REARDON, Long Beach, Calif. Filed Aug. 24, 1927. Serial No. 215,100. 7 Claims. (Cl. 166—13.)

1. A bridging plug comprising means forming a plurality of segments of a cylinder, a mandrel capable of being moved upwardly within the segments to separate them, means attached to the mandrel for lowering the device within a well casing, said means being detachable after the segments have been expanded, so as to be capable of being removed from the well casing, leaving the plug therein, and slips carried by said segments engageable upon the casing, some of the slips being designed to prevent upward movement of the plug within the casing, and others being designed to prevent downward movement of the plug within the casing.



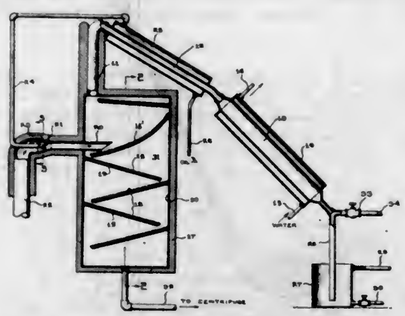
1,684,267. MOTOR CONTROLLER. WILLIAM S. H. HAMILTON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Dec. 10, 1925. Serial No. 74,576. 26 Claims. (Cl. 172—179.)

1. The combination with a plurality of electric motors adapted for operation in a plurality of speed relations, of means for controlling the speed relation in which the motors are to operate, and independently operable means for controlling the operating speeds of the motors and



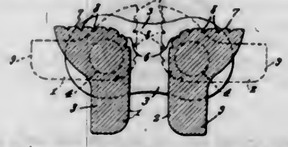
arranged to cooperate with said first means for controlling the interconnection of the motors in a lower speed relation without interrupting the continuity of motor torque when the motors are operating in a higher speed relation.

1,684,268. INCANDESCENT-LAMP SOCKET. DAVID HAYS, Bridgeport, Conn., assignor to General Electric Company, a Corporation of New York. Filed Nov. 3, 1924. Serial No. 747,405. 4 Claims. (Cl. 173—351.)



1. A lamp socket comprising an insulating base having a transverse aperture therein and shouldered lips adjacent said aperture, a screw shell contact having holding ears at one end thereof extending over and beneath said lips and engaging opposite sides of said base, a binding post for said shell contact, and a screw passing through said base, said ears and said binding post and serving to retain them in fixed assembled relation.

1,684,269. FASTENING DEVICE FOR LADDERS. GEORGE J. HEBNER, Rochester, N. Y. Filed Mar. 19, 1927. Serial No. 176,794. 1 Claim. (Cl. 228—60.)



In a device of the character described, in combination with a ladder having side rails and rounds, a substantially U-shaped body member having cut-out portions in its sides thereby to embrace a side rail of the ladder and a round thereof to prevent relative movement of the ladder and body member, and an auxiliary attaching means for preventing such relative movement comprising a thumb screw operative between said body member and rail, said body member having projections on its under side for engaging a roof.

1,684,270. OIL RECLAIMER. ARNOLD L. HENNY, Portland, Oreg. Filed Aug. 12, 1925. Serial No. 49,848. 3 Claims. (Cl. 196—16.)

1. An oil purification apparatus of the distillation type comprising the combination of a casing having an inlet nozzle, a hot vapor supply pipe in communication with said inlet nozzle, an oil supply pipe having a spray tip at its delivery end opening into said vapor supply pipe, and an upwardly curved baffle plate having its lower end immediately adjacent, approximately tangential to and below the axis of said nozzle.

1,684,271. BELT FASTENER. MACK B. HENRY and ARNOLD L. CADENHEAD, Norphlet, Ark. Filed July 8, 1927. Serial No. 204,333. 1 Claim. (Cl. 24—31.)

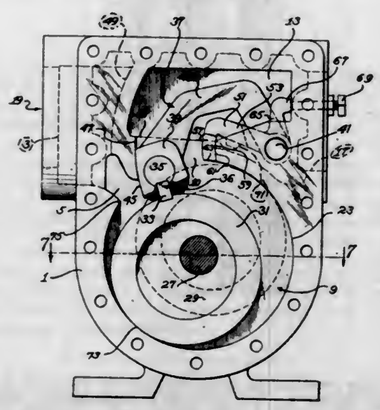
A belt fastener of the character described comprising cam members, pivot pins therefor, links pivotally receiving said pivot pins and securing said cam members for cooperative association, longitudinally toothed cam faces included in said cam members and being provided with arcuate portions merging into straight portions and reduced finger engaging portions formed with said cam members.

1,684,272. DINAPHTHYL-DICARBOXYLIC ACID AND PROCESS OF MAKING SAME. RICHARD HERZ, Frankfort-on-the-Main, and WERNER ZERWECK, Fechenheim, near Frankfort-on-the-Main, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed June 23, 1926, Serial No. 118,081, and in Germany July 2, 1925. 8 Claims. (Cl. 260—108.)

1. A new process for manufacturing dinaphthyl-dicarboxylic acids of the general formula:

$$(C_{10}X_6)_2(COOH)_2,$$

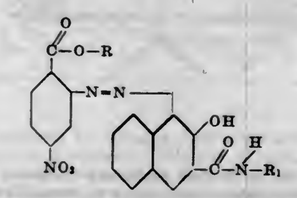
wherein the X's stand for hydrogen atoms of which one or more may be replaced by a monovalent substituent, consisting in treating the diazocompounds of aminonaphthoic acids of the general formula:



wherein the X's stand for hydrogen atoms, of which one or more may be replaced by a monovalent substituent, with a reducing agent.

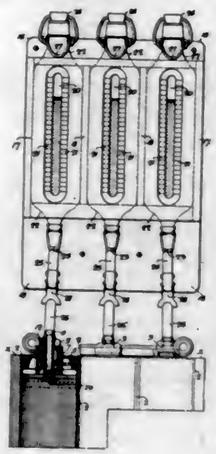
1,684,273. MANUFACTURE OF CHLORIDES OF AROMATIC ORTHO-HYDROXY-CARBOXYLIC ACIDS. ERIC BERKELEY HIGGINS, Brentford, England, assignor of one-half to British Synthetics Limited, Manchester, England, a Company of Great Britain. Filed Mar. 31, 1927, Serial No. 180,069, and in Great Britain July 20, 1926. 6 Claims. (Cl. 260—123.)

3. The process for making 2:3 hydroxynaphthoyl chloride which consists in mechanically grinding together an inorganic salt of 2:3 hydroxynaphthoic acid and thionyl chloride.



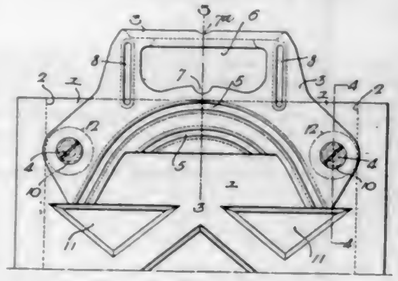
1,684,274. ROTARY PUMP. SHERWOOD HINDS, St. Louis, Mo., assignor to St. Louis Pump & Equipment Company, St. Louis, Mo., a Corporation of Missouri. Filed May 26, 1924, Serial No. 715,849. Renewed Feb. 11, 1928. 8 Claims. (Cl. 103—132.)

1. A pump comprising a casing having intake and discharge chambers and a cylinder, a drive shaft in the cylinder, an eccentric on the drive shaft, a strap on the eccentric, the strap having a close fit within the cylinder whereby rotation of the shaft causes the strap to force fluid ahead of the strap and to draw fluid in behind the strap, the cylinder having an opening, a rocker mounted in the casing, a link connecting the rocker and strap and serving as a seal between the intake and discharge chambers, and an oscillating check valve mounted coaxially with the rocker and forced against the strap by pressure of fluid in the discharge chamber when the grazing point of strap against cylinder reaches the incomplete portion of the cylinder.



1,684,275. AZO DYE AND PROCESS FOR PREPARING THE SAME. ERWIN HOFFA and ERICH FISCHER, Hochst-on-the-Main, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed July 27, 1926, Serial No. 125,326, and in Germany Aug. 1, 1925. 6 Claims. (Cl. 260—95.)

3. As new products, the azo dyes of the following composition

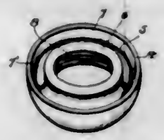


wherein R represents the residue of an aliphatic or aromatic alcohol, R_1=hydrogen, an alkyl-, aryl- or aralkyl-residue.

1,684,276. MEANS FOR REPLENISHING ELECTROLYTIC CELLS. WALTER E. HOLLAND, Philadelphia, Pa., assignor to Philadelphia Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 23, 1920. Serial No. 398,457. 5 Claims. (Cl. 137—68.)

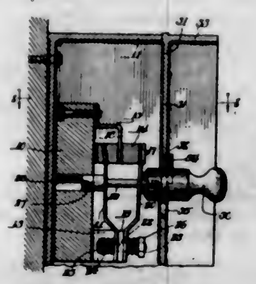
1. The combination of an electrolytic cell; and a barometric device for maintaining a substantially constant liquid level therein, including a filling tube having an outlet smaller than will allow passage of the filling liquid when said tube is connected as for use but without external liquid adjacent said outlet.

1,684,277. BATTERY-REENFORCING HANDLE. WALTER E. HOLLAND, Philadelphia, Pa., assignor to Philadelphia Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 1, 1921. Serial No. 519,169. 6 Claims. (Cl. 16—125.)



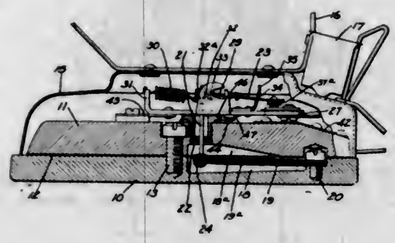
1. A handle for battery containers consisting of a substantially flat body of sheet material formed with a projecting rib having its ends directed downwardly; said rib being adapted to engage with the surface of the container with which the handle is used.

1,684,278. GOLF CLUB. ARCHIBALD B. HORNE, Springfield, Mass. Filed Dec. 14, 1927. Serial No. 239,908. 6 Claims. (Cl. 273—80.)



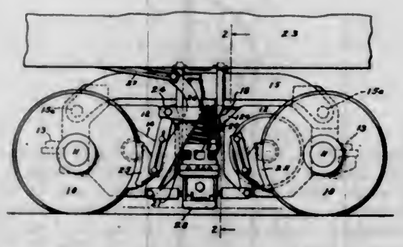
1. A golf club comprising a tubular shaft member, a head to which the shaft is attached, means located within the shaft and connected at its opposite ends to the shaft for preventing the flying off of the head in the event of the breaking of the shaft.

1,684,279. INSECT GUARD FOR FURNITURE. VONNIE D. HUMPHREY, Bishopville, S. C. Filed May 7, 1927. Serial No. 189,655. 8 Claims. (Cl. 43—109.)



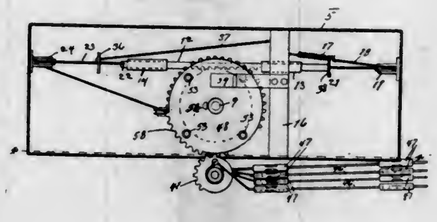
1. An insect guard for the purpose set forth comprising an automatically adjustable body portion in the form of an annulus possessing a clamping characteristic for connection to the leg of an article of furniture, said body formed with an annular trough opening at the top thereof, and said body formed on its inner face with spaced annular ribs.

1,684,280. ELECTRIC SWITCH. DON F. JONES, Beloit, Wis. Filed June 14, 1926. Serial No. 115,711. 7 Claims. (Cl. 200—6.)



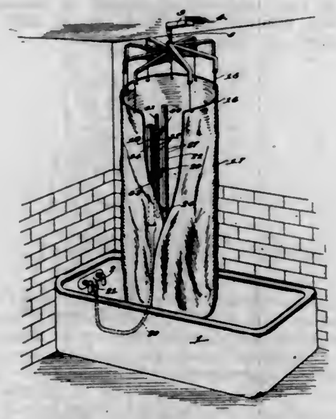
1. An electric switch comprising, in combination, a base, three circuit terminals mounted on said base, each of said terminals having a contact surface in spaced relation from and substantially parallel to said base, two of said terminals being mounted on said base so that their contact surfaces are positioned one ahead of the other, a pair of contact members movably mounted on said third terminal and extending therefrom in the same general direction, a spring cooperating with each of said contact members for holding said members in a predetermined position with respect to said terminal, said contact surfaces of each of said two first mentioned terminals being arranged to be selectively engaged by said contact members.

1,684,281. TEMPERATURE REGULATOR FOR ELECTRIC HEATERS. WILLIAM D. KELLY, Western Springs, Ill., assignor to Edison Electric Appliance Company, Incorporated, Chicago, Ill., a Corporation of New York. Filed Mar. 21, 1925. Serial No. 17,395. 1 Claim. (Cl. 200—139.)



A temperature regulator for electric heaters comprising a movably mounted support, a switch arm pivotally mounted on said support, a helical spring having one end connected to said support, a link connecting the other end of said spring with said switch arm, a thermostat, and a connection between said thermostat and the junction between said spring and said link whereby said switch arm is snapped from one position to another by said thermostat to maintain a predetermined temperature, and means for adjusting said support to change the temperature setting.

1,684,282. RAILWAY TRUCK. OLE K. KJOLSETH, Scotia, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 31, 1927. Serial No. 195,249. 12 Claims. (Cl. 105—139.)



1. A locomotive or car truck comprising wheels and axles, an equalizer supported by said axles, a bolster, a spring seat below said equalizer, means for supporting said spring seat on said equalizer, said supoprting means engaging said bolster for maintaining said spring seat in alignment with said bolster, and a spring for supporting said bolster on said spring seat.

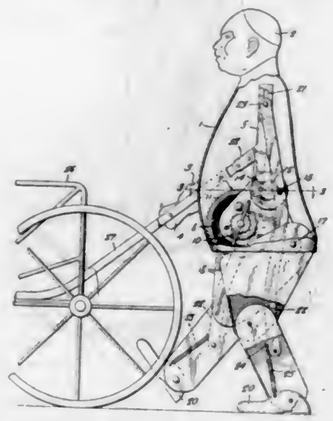
1,684,283. MUSIC-LEAF TURNER. WILHO E. LAHTI, Windsor, Calif. Filed Oct. 3, 1927. Serial No. 223,689. 1 Claim. (Cl. 84—515.)

In a music leaf turner, a box-like structure, a shaft positioned within said structure, a floating gear positioned on said shaft, a ratchet secured to said shaft, a rack engaging said floating gear and adapted to actuate said gear, a dog carried by said gear and engaging said rachet, a plurality of spaced discs secured to said shaft, teeth formed upon a portion of the periphery of each of said discs, a second shaft positioned parallel to said first mentioned shaft, mutilated gears positioned on said second mentioned shaft, and adapted to be engaged by the teeth of said first mentioned discs, arms carried by said mutilated gears and means for intermittently actuating said rack bar, said means including a tension device secured to one end of said rack bar for maintaining said rack bar in its normal position, and a cable extending to a remote point.

1,684,284. BATH-CURTAIN SUPPORT. HARRY MADISON, Council Bluffs, Iowa. Filed Nov. 9, 1926. Serial No. 147,281. 3 Claims. (Cl. 4—152.)

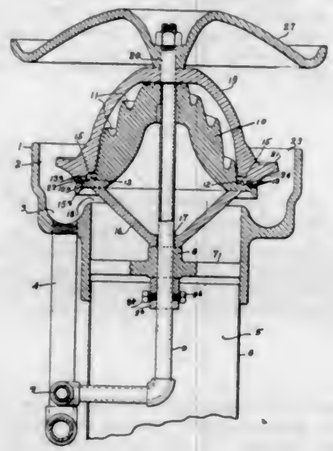
1. In a support for curtains, a pivot element depending from an elevated support, a plurality of supporting arms having vertical openings in their inner end portions through which said pivot element extends, said arms being swingable about the axis of said pivot element, and braces staying said arms to said pivot element and maintaining said arms substantially horizontal.

1,684,285. BOTTLE-CAP RECEIVER. JOHN HENRY MCDONALD, Hamberg, N. Dak. Filed Aug. 30, 1926. Serial No. 132,531. 2 Claims. (Cl. 65—46.)



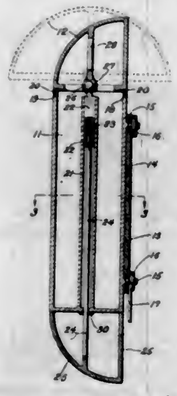
1. A receptacle for receiving bottle closures from a remover, comprising a body part and a spring controlled hinge part at the upper end of the body part for permitting a bottle to be engaged with a remover.

1,684,286. METHOD OF WEIGHTING SILK AND THE PRODUCT THEREOF. ROBERT J. O'BRIEN, Jr., Belleville, N. J., assignor to Collway Laboratories, Inc., Newark, N. J., a Corporation of New Jersey. Filed Dec. 16, 1924. Serial No. 756,365. 5 Claims. (Cl. 8—13.)



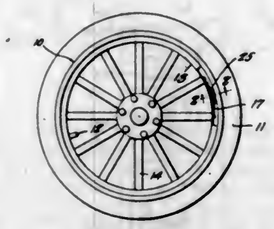
1. The method of treating silk which consists in weighting the same applying to silk threads rubber in solution the rubber at the time of application being in a colloidal state.

1,684,287. FIGURE TOY. ALEXANDER E. PALUCK, Belfield, N. Dak., assignor of one-half to Stanislaus J. Cieslewics, Wibaux, Mont. Filed July 15, 1927. Serial No. 206,067. 3 Claims. (Cl. 46—45.)



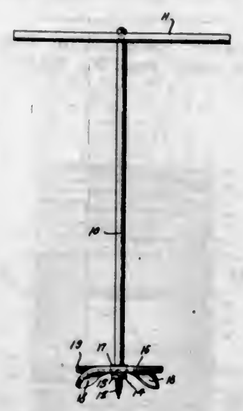
1. A toy of the character described coprprising a body including shoulders and a head, jointed legs pivotally secured to said body, feet pivotally secured to the legs, a frame in said body, parallel arranged uprights included in said frame and having their upper ends bent upon themselves and secured to the shoulders, plates formed with said uprights, a spring motor secured between said plates, levers mounted for reciprocation and connected with said uprights and the legs, means operated by said spring motor to reciprocate said levers for moving said legs, and springs having their end convolutions secured to the lower ends of the levers and feet respectively for moving the feet upon the movement of said legs.

1,684,288. OIL BURNER. RAYMOND H. SMITH and CLEM B. MEYERS, Richmond, Ind. Filed Oct. 23, 1926. Serial No. 143,582. 7 Claims. (Cl. 158—91.)



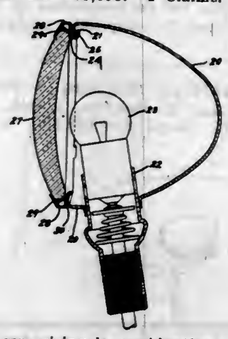
1. An oil burner comprising a casing whose upper end forms a mixing chamber, an oil supply pipe extending upwardly through the casing, a deflector within the casing to direct incoming air into the mixing chamber, an oil distributer at the upper end of the oil supply pipe fashioned with a continuous inclined spiral channel terminating at its base in a circular groove, a plurality of projections having staggered openings between them for the flow of the oil in fine streams into the mixing chamber and a dome-shaped shield extending over the distributer.

1,684,289. WATERPROOF CONTAINER. WARREN A. RAMSAY, Jersey City, N. J. Filed Nov. 19, 1926. Serial No. 149,413. 2 Claims. (Cl. 220—38.)



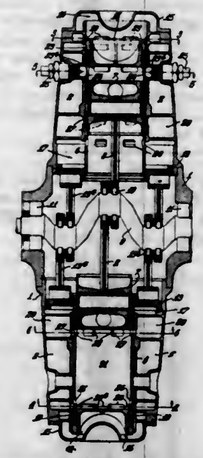
1. A watertight container comprising a hollow body open at its top, a sleeve rising from the bottom of said body, a block slidable within said sleeve, a rod extending through said sleeve and threaded to said block, said rod having a member fixed thereon for engagement with the bottom of said body, a cover for sealing engagement with the open end of said body, a bail provided on the top end of said block and a shank depending from said cover and having a socket on the free end thereof for the reception of said bail.

1,684,290. BALANCING MEANS FOR VEHICLE WHEELS. WILLIAM J. STARLING, Chicago, Ill. Filed Oct. 18, 1926. Serial No. 142,334. 4 Claims. (Cl. 301—5.)



2. A balancing device including a base weight member, a top weight member, and means connecting the top member to the base member permitting relative adjustment between said top member and said base member.

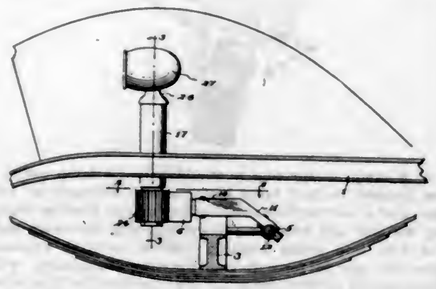
1,684,291. AUGER. FRANK SUMMERS, Memphis, Tenn., assignor of one-half to Leopold Urbancic, Memphis, Tenn. Filed June 2, 1927. Serial No. 196,054. 1 Claim. (Cl. 255—70.)



A post hole digger comprising a handle member provided with a spirally threaded end portion, a propeller blade carried by the handle member immediately above the spirally threaded end and which is helically pitched and curvilinear to dispose the extremities thereof downwardly toward the earth in order that the earth may be readily broken up about the course pursued by the aforementioned end, a disk member mounted upon the handle, said disk having portions removed upon diametrically opposite sides thereof, depending portions upon the disk being extended to greater depths than the ends of said propeller, and an upstanding flange portion provided upon the marginal edges of the disk and depending portions to prevent displacement of the earth deposited upon the disk and from injuring the side walls of the post hole.

1,684,292. ELECTRIC LAMP. EDWARD TURNQUIST, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Feb. 3, 1927. Serial No. 165,698. 4 Claims. (Cl. 240—41.)

1. A lamp, comprising in combination, a lamp body; a rim secured to said lamp body; a lens engaged by said rim; and a contractible molding having one portion engaging the lens and another portion engaging the lamp body and rim, said latter molding portion exerting pressure upon the rim to force it into pressing engagement with the lens and in turn force the lens against the first mentioned portion of the molding when said molding is contracted.



1,684,293. INTERNAL-COMBUSTION ENGINE. WILLIAM ALLAN, Dundee, Scotland. Filed Mar. 3, 1927, Serial No. 172,445, and in Great Britain Oct. 6, 1926. 2 Claims. (Cl. 123—50.)
